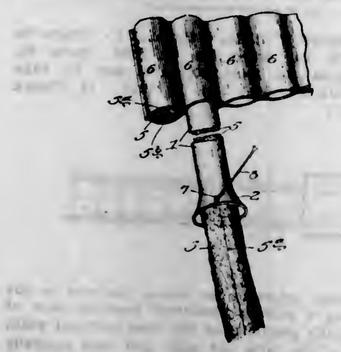
REISSUES



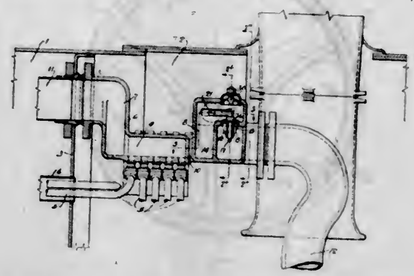
MARCH 9, 1926.

16,282. BLOOMERS. ISADORE LESSON, Brooklyn, N. Y. Filed Oct. 28, 1925. Serial No. 65,500. Original No. 1,523,879, dated Jan. 13, 1925, Serial No. 641,996, filed May 28, 1923. 2 Claims. (Cl. 2—224.)

1. A bloomer made of two approximately hexagonal pieces of material each cut with the top edge sloping to the front edge, the top edge of each piece being considerably longer than required to half-gird the waist of the wearer, the rear edge of each piece having upper and lower edge portions meeting at a point, and the front edge of each piece also having upper and lower edge portions meeting at a point, such two points being spaced apart a distance at least equal to the length of the top edge, the upper rear edge portion being shaped to define a concave curve and having a length greater than the upper front edge portion; the pieces being stitched together by joining, two by two, the curved edge portions of both pieces, the upper front edge portions of both pieces, the lower edge portions of one piece, and the lower edge portions of the other piece; the upper curved portions being of such length that the seam joining them extends beneath and to the front of the body of the wearer and the upper front edge portions of said sections being of such length that when joined their seam is materially shorter than the normal distance from the waist line to the crotch line of the wearer.

16,283. PROCESS AND APPARATUS FOR STUFFING UPHOLSTERY. ALLISTER S. MITCHELL, Oakland, Calif., assignor to California Cotton Mills Company, Oakland, Calif., a Corporation of California. Filed Jan. 29, 1926. Serial No. 84,787. Original No. 1,497,183, dated June 10, 1924, Serial No. 609,608, filed Dec. 29, 1922. 13 Claims. (Cl. 226—43.)

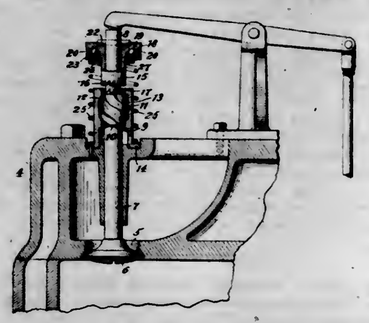
6. The process of forming pleated upholstery which comprises: threading a tubular insertion-tool with the advance end of a continuous wadding-strip and reciprocating the insertion-tool with relation to the pleat, the advance movement of the tool serving to introduce the advance end of the wadding-strip into the pleat and the return movement of the tool serving to reload the tool, the inserted portion of the wadding-strip being held during the return movement of the tool and serving to draw a fresh portion of the wadding-strip into the insertion-tool during the return movement of said tool.



11. In an upholstering operation the process of stuffing pleats which comprises: employing an insertion-tool which envelops and compresses an end-portion of a resilient wadding-strip which is of sufficient length to repeatedly recharge said tool as a means for introducing successive portions of said strip into the successive pleats, pinching the loaded pleat and inserted strip at the advance end to thus retain the introduced portion and withdrawing the tool from the pleat, thus employing the introduced portion as a means for effecting automatic reloading of the tool, and severing the strip at the advance end of the tool after such automatic reloading has been effected.

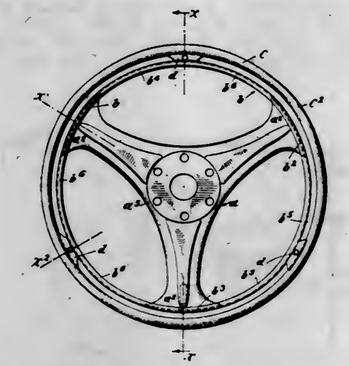
16,284. HOSE NOZZLE. CHARLES SPAETH, Cleveland, Ohio, assignor, by mesne assignments, to The Marvel Equipment Company, Cleveland, Ohio, a Corporation of Ohio. Filed Oct. 31, 1925. Serial No. 66,107. Original No. 1,514,870, dated Nov. 11, 1924, Serial No. 538,265, filed Feb. 21, 1922. 14 Claims. (Cl. 226—129.)

13. A fluid conducting nozzle comprising a tapered member having a passageway through which fluid may pass, and means on said member compensatory in effect to releasably retain the nozzle in openings of different sizes and substantially close said openings.



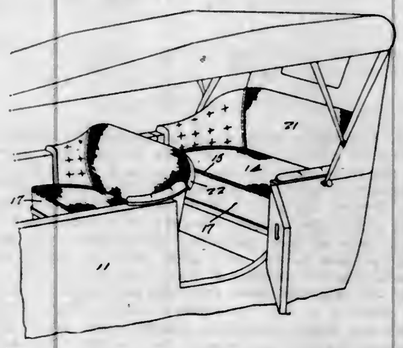
16,285. LOCOMOTIVE. RAY M. BROWN, Yonkers, N. Y. Filed Feb. 2, 1926. Serial No. 85,604. Original No. 1,570,228, dated Jan. 19, 1926, Serial No. 650,850, filed July 11, 1923. 10 Claims. (Cl. 122—462.)

1. In apparatus of the class described, the combination of a superheater comprising an elongated chamber having a series of ports along its length through which superheated steam is delivered to the chamber, and having



an outlet through which the steam is conveyed to the point of use; partitioning means separating the inlet ports from the outlet and provided with a series of relatively small openings distributed opposite said steam delivery ports; and a corresponding series of valves each controlling one of said openings.

16,286. VALVE FOR INTERNAL-COMBUSTION ENGINES. WILMER G. BUCK, Fremont, Nebr., assignor, by mesne assignments, to Continental Engineering Corporation, Omaha, Nebr., a Corporation of Nebraska. Filed July 17, 1920. Serial No. 397,123. Original No. 1,244,287, dated Oct. 23, 1917, Serial No. 156,845, filed Mar. 23, 1917. 8 Claims. (Cl. 123—90.)

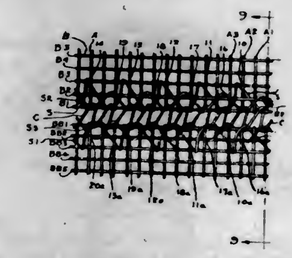


3. In a valve of the class described, the combination of a valve member, a removable separable ball-bearing associated with the valve member to facilitate the turning of the valve, means for imparting a rotating movement to the valve member during the valve movements including a clutch connection, means acting to break the clutch connection, and other detachable means carried by the ball bearing for holding the separable ball-bearing intact when the latter is disassociated from the valve stem, substantially as described.

16,287. VEHICLE WHEEL. FREDERICK WILLIAM BAKER, Stourbridge, England. Filed Sept. 23, 1925. Serial No. 58,182. Original No. 1,524,806, dated Feb. 3, 1925, Serial No. 355,632, filed Feb. 2, 1920. 4 Claims. (Cl. 301—64.)

1. In a wheel of the class described, an outer rim, an inner rim within and spaced from the outer rim, clip bearers between said rims each of greater circumferential dimension than of radial dimension, said clip bearers detachably securing said rims together, and a three armed centre member comprising a hub, and three longitudinally curved spokes arranged in a symmetrical combination of series of arches and between the inner rim and the hub, the ends of the spokes being secured to the inner rim at points substantially midway between the clip bearers, and the centre portions of the spokes being secured to the hub.

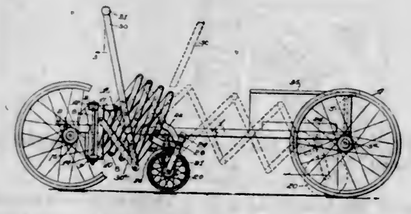
16,288. SLIP COVER FOR AUTOMOBILES. RUFUS R. EDDINS, Marlin, Tex. Filed Sept. 12, 1925. Serial No. 56,100. Original No. 1,544,141, dated June 30, 1925, Serial No. 585,305, filed Aug. 30, 1922. 9 Claims. (Cl. 155—182.)



1. A slip cover for automobile seat cushions comprising separate seat and back sections, each formed from a sheet of matting composed of grass, cane or other vegetable fibers cut to the size and shape required to completely cover the wearing surface of the cushion, and a reenforcement of flexible material extending around and secured to the sheet at its edges, the reenforcement of the back section being made of sufficient width to permit the same to be tacked or otherwise secured at its upper and side edges to the back cushion and straps secured to the lower edge of said reenforcement for passing beneath the front cushion, the reenforcement of the seat section being made of sufficient width to provide a valance for concealing the edges of the seat cushion and a shirring cord secured to the free edge of the valance for securing the seat section in place.

16,289. EXTENSION RAIL. HAROLD P. TOMPKINS, Charleston, W. Va. Filed Jan. 22, 1926. Serial No. 83,151. Original No. 1,486,700, dated Mar. 11, 1924, Serial No. 644,226, filed June 8, 1923. 11 Claims. (Cl. 238—10.)

1. A car track extension for mines, quarries or the like, comprising a pair of channeled members each of a width materially greater than the cross sectional width of the heads of the mine car rails, and each centrally and longitudinally grooved to permit either of the side walls provided by the groove contacting the side of the car rail heads, and wedging means for holding the track extensions in such position.



16,290. SEAM FOR WOVEN-WIRE BELTS. HAMILTON LINDSAY, Cleveland, Ohio, assignor to The Lindsay Wire Weaving Company, Cleveland, Ohio, a Corporation of Ohio. Filed June 5, 1925. Serial No. 35,243. Original No. 1,464,947, dated Aug. 14, 1923, Serial No. 607,557, filed Dec. 18, 1922. 16 Claims. (Cl. 245—10.)

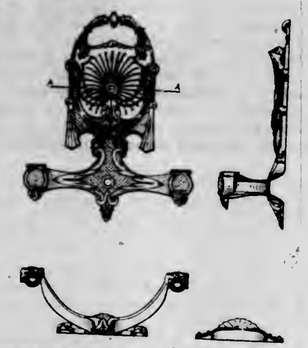
1. A seam for an endless belt wherein the weave comprises warp wires and woof wires, the warp wires having long knuckles on one side of the belt and short knuckles on the other side thereof, having two stitching wires passing through one end of the belt, at least one of the wires passing through the belt adjacent a short warp knuckle and forming loops adjacent the end of the belt, and a closing wire connecting said loops.

15. A seam for an endless belt having a closing wire connecting the ends of the belt, said wire having loops which on one end of the belt are arranged to skip one warp wire and then two warp wires in succession.

16,291. VEHICLE PROPELLING DEVICE. CONRAD DAHL, Chicago, Ill., assignor to Dahl Autocoaster Corporation, Chicago, Ill., a Corporation of Illinois. Filed Feb. 3, 1923. Serial No. 616,801. Original No. 1,368,610, dated Feb. 15, 1921, Serial No. 396,202, filed July 14, 1920. 10 Claims. (Cl. 208—38.)

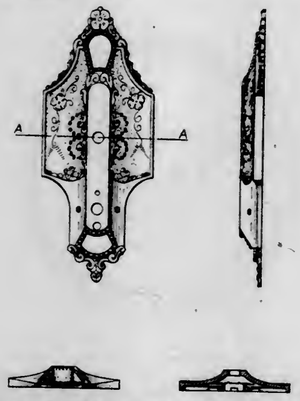
1. A vehicle propelling device, comprising in combination with a vehicle frame, a movement multiplying multiple lever system having its initial pivot at an elevated fixed position on the vehicle frame, and trending thence rearward with freedom for up-and-down movement at its rear end; a ground-engaging member carried by the rearmost operating member of said lever system, and operating means engaging an intermediate pivot of the lever system for rearward movement of said pivot.

DESIGNS



MARCH 9, 1926.

69,622. ENVELOPE MOISTENER. HERBERT WEBSTER AGNEW, Victoria, British Columbia, Canada. Filed Nov. 24, 1925. Serial No. 15,530. Term of patent 3½ years.

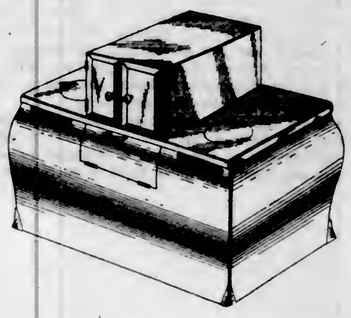


The ornamental design for an envelope moistener as shown.

69,623. BRACKET BACK FOR LIGHTING FIXTURES. SALLY AIRO, Detroit, Mich., assignor to Lincoln Manufacturing Company, Detroit, Mich., a Corporation of Michigan. Filed Jan. 2, 1926. Serial No. 15,939. Term of patent 7 years.

The ornamental design for a bracket back for lighting fixtures, as shown.

69,624. BRACKET BACK FOR LIGHTING FIXTURES. SALLY AIRO, Detroit, Mich., assignor to Lincoln Manufacturing Company, Detroit, Mich., a Corporation of Michigan. Filed Jan. 2, 1926. Serial No. 15,940. Term of patent 7 years.

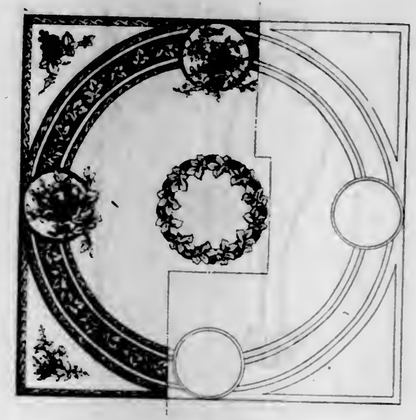


The ornamental design for a bracket back for lighting fixtures, as shown.

69,625. POWDER BOX OR SIMILAR ARTICLE. HARRY S. ANDERSON, New York, N. Y. Filed Oct. 18, 1924. Serial No. 11,108. Term of patent 7 years.

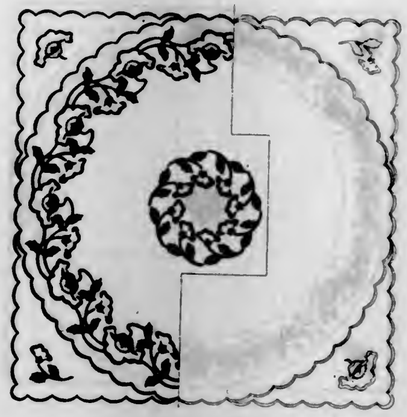
The ornamental design for a powder box or similar article, substantially as shown.

69,626. RANGE. CHARLES H. BARTOW, Lancaster, Ohio. Filed Sept. 29, 1925. Serial No. 14,945. Term of patent 7 years.



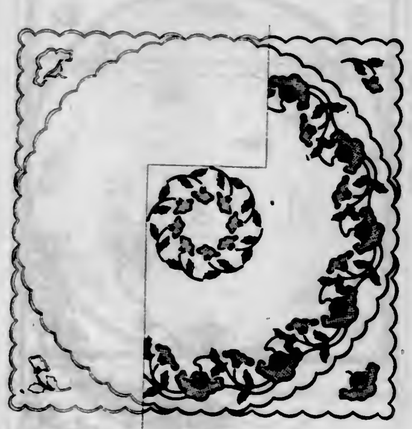
The ornamental design for a range, as shown.

69,627. TABLE COVER OR ANALOGOUS ARTICLE. CARRODUS BASTOW, Allwood, N. J., assignor to T. R. Goodlatte & Sons, Inc., Delawanna, N. J., a Corporation of New Jersey. Filed Nov. 23, 1925. Serial No. 15,511. Term of patent 3½ years.



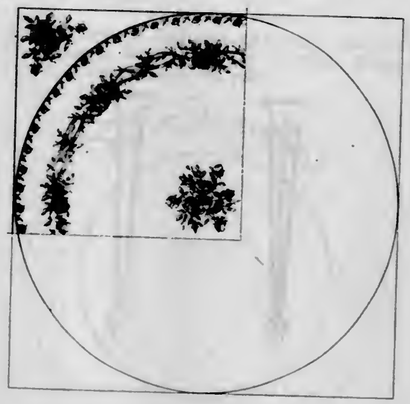
The ornamental design for a table-cover or analogous article, substantially as shown.

69,628. TABLE COVER OR ANALOGOUS ARTICLE. CARRODUS BASTOW, Allwood, N. J., assignor to T. R. Goodlatte & Sons, Inc., Delawanna, N. J., a Corporation of New Jersey. Filed Nov. 23, 1925. Serial No. 15,512. Term of patent 3½ years.



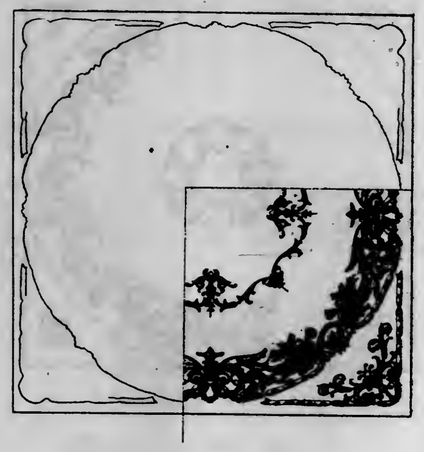
The ornamental design for a table-cover or analogous article, substantially as shown and described.

69,629. TABLE COVER OR ANALOGOUS ARTICLE. CARRODUS BASTOW, Allwood, N. J., assignor to T. R. Goodlatte & Sons, (Inc.), Delawanna, N. J., a Corporation of New Jersey. Filed Nov. 23, 1925. Serial No. 15,513. Term of patent 3½ years.



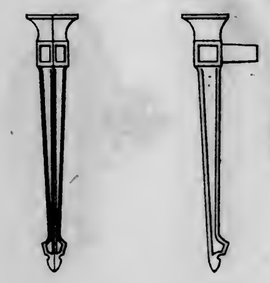
The ornamental design for a table-cover or analogous article, substantially as shown and described.

69,630. TABLE COVER OR ANALOGOUS ARTICLE. CARRODUS BASTOW, Allwood, N. J., assignor to T. R. Goodlatte & Sons, (Inc.), Delawanna, N. J., a Corporation of New Jersey. Filed Nov. 23, 1925. Serial No. 15,514. Term of patent 7 years.



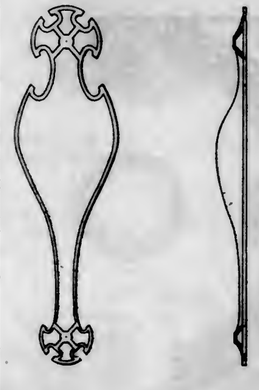
The ornamental design for a table-cover or analogous article, substantially as shown and described.

69,631. TABLE COVER OR ANALOGOUS ARTICLE. CARRODUS BASTOW, Allwood, N. J., assignor to T. R. Goodlatte & Sons, (Inc.), Delawanna, N. J., a Corporation of New Jersey. Filed Nov. 23, 1925. Serial No. 15,515. Term of patent 7 years.



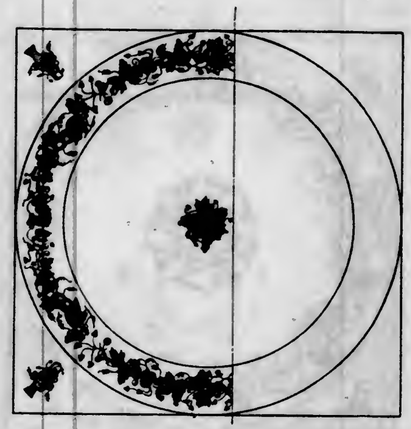
The ornamental design for a table-cover or analogous article, substantially as shown and described.

69,632. TABLE COVER OR ANALOGOUS ARTICLE. CARRODUS BASTOW, Allwood, N. J., assignor to T. R. Goodlatte & Sons, Inc., Delawanna, N. J., a Corporation of New Jersey. Filed Nov. 23, 1925. Serial No. 15,516. Term of patent 7 years.



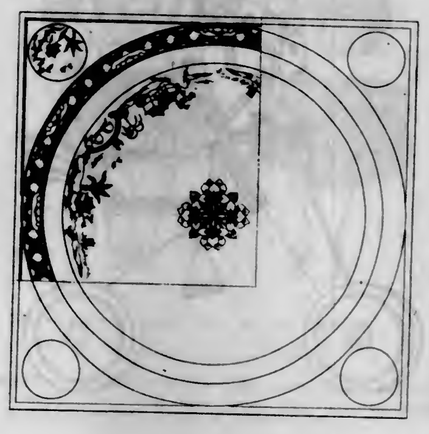
The ornamental design for a table-cover or analogous article, substantially as shown and described.

69,633. BRACKET ARM FOR LIGHTING FIXTURES. JEROME R. BUCHANAN and ROBERT H. ABBOTT, Los Angeles, Calif. Filed Dec. 12, 1925. Serial No. 15,734. Term of patent 7 years.



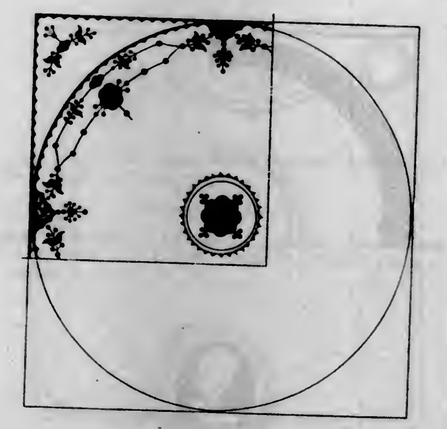
The ornamental design for a bracket arm for a lighting fixture as shown.

69,634. WALL PLATE FOR LIGHTING FIXTURES. JEROME R. BUCHANAN and ROBERT H. ABBOTT, Los Angeles, Calif. Filed Dec. 12, 1925. Serial No. 15,735. Term of patent 7 years.



The ornamental design for a wall plate for a lighting fixture as shown.

69,635. TABLE COVER OR ANALOGOUS ARTICLE. JOHN F. BURROUGHS, Baltimore, Md., assignor to T. R. Goodlatte & Sons, Inc., Delawanna, N. J., a Corporation of New Jersey. Filed Nov. 23, 1925. Serial No. 15,519. Term of patent 7 years.

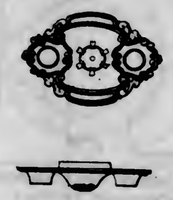


The ornamental design for a table-cover or analogous article, substantially as shown and described.

69,636. TABLE COVER OR ANALOGOUS ARTICLE. JOHN F. BURROUGHS, Baltimore, Md., assignor to T. R. Goodlatte & Sons, Inc., Delawanna, N. J., a Corporation of New Jersey. Filed Nov. 23, 1925. Serial No. 15,520. Term of patent 3½ years.

The ornamental design for a table-cover or analogous article, substantially as shown and described.

69,637. TABLE COVER OR ANALOGOUS ARTICLE. JOHN F. BURROUGHS, Baltimore, Md., assignor to T. R. Goodlatte & Sons, Inc., Delawanna, N. J., a Corporation of New Jersey. Filed Nov. 23, 1925. Serial No. 15,521. Term of patent 7 years.



The ornamental design for a table-cover or analogous article substantially as shown and described.

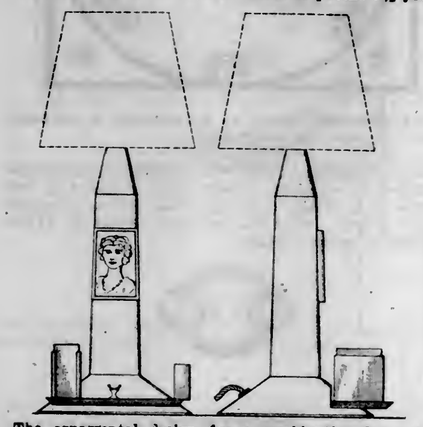
69,638. TABLE COVER OR ANALOGOUS ARTICLE. JOHN F. BURROUGHS, Baltimore, Md., assignor to T. R. Goodlatte & Sons, Inc., Delawanna, N. J., a Corporation of New Jersey. Filed Nov. 23, 1925. Serial No. 15,522 Term of patent 7 years.

The ornamental design for a table-cover or analogous article, substantially as shown.

69,639. CEILING LIGHT FOR LIGHTING FIXTURES. FRANK S. CROWELL, Toledo, Ohio, assignor to The Edward N. Riddle Company, Toledo, Ohio, a Corporation of Ohio. Filed Jan. 31, 1925. Serial No. 12,229. Term of patent 7 years.

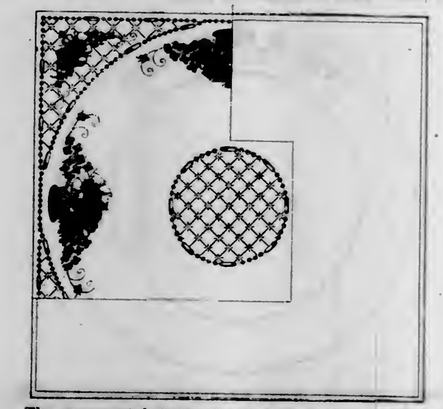
The ornamental design for a ceiling light for lighting fixtures, as shown.

69,640. PLATE OR SIMILAR ARTICLE. VICTOR DESSERT, Spokane, Wash. Filed Dec. 21, 1925. Serial No. 15,800. Term of patent 3½ years.



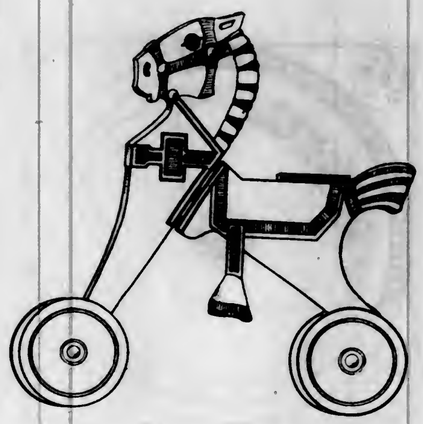
The ornamental design for a plate or similar article, as shown.

69,641. DECALCOMANIA SHEET. WALTER DE VILLE, East Liverpool, Ohio. Filed Feb. 11, 1925. Serial No. 12,342. Term of patent 3½ years.



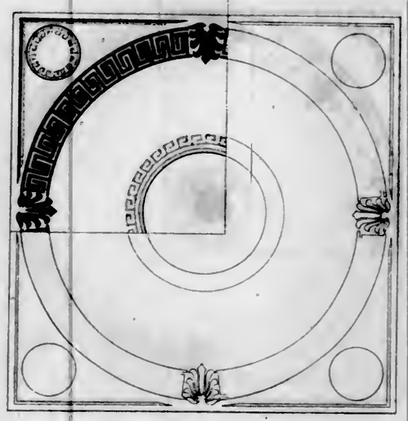
The ornamental design for a decalcomania sheet, as shown.

69,642. COMBINATION LAMP AND SMOKER'S STAND. HARRY V. G. DOHM, Chicago, Ill. Filed July 14, 1923. Serial No. 6,779. Term of patent 3½ years.



The ornamental design for a combination lamp and smoker's stand, as shown and described.

69,643. TABLE COVER OR ANALOGOUS ARTICLE. MARGUERITE W. DORR, East Elmhurst, N. Y., assignor to T. R. Goodlatte & Sons, (Inc.), Delawanna, N. J., a Corporation of New Jersey. Filed Nov. 23, 1925. Serial No. 15,517. Term of patent 7 years.

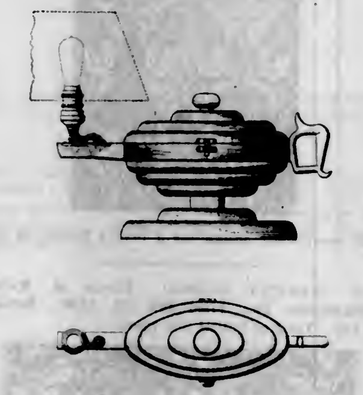


The ornamental design for a table-cover or analogous article, substantially as shown and described.

69,644. CHILD'S VEHICLE. HARRY W. DYER, New York, N. Y. Filed Aug. 21, 1925. Serial No. 14,553. Term of patent 7 years.

The ornamental design for a child's vehicle as shown.

69,645. TABLE COVER OR ANALOGOUS ARTICLE. GUSTAVE M. FAUSER, Ardsley-on-Hudson, N. Y., assignor to T. R. Goodlatte & Sons, (Inc.), Delawanna, N. J., a Corporation of New Jersey. Filed Nov. 23, 1925. Serial No. 15,518. Term of patent 3½ years.

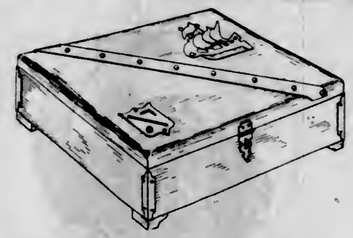


The ornamental design for a table-cover or analogous article, substantially as shown and described.

69,646. DOLL. ELIZABETH HELEN FISHER, Chicago, Ill. Filed Dec. 12, 1925. Serial No. 15,782. Term of patent 14 years.

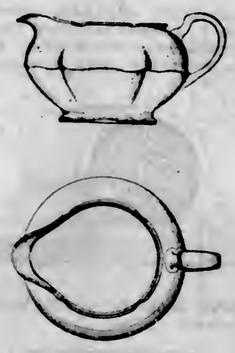
The ornamental design for a doll, as shown.

69,647. COMBINED DESK SET AND LAMP STAND. STEPHAN GOLLOB, Boulder, Colo. Filed Oct. 19, 1925. Serial No. 15,180. Term of patent 14 years.



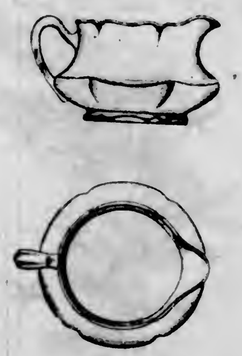
The ornamental design for a combined desk set and lamp stand, as shown.

69,648. BADGE. LAZURE L. GOODMAN, Indianapolis, Ind. Filed June 2, 1925. Serial No. 13,633. Term of patent 7 years.



The ornamental design for a badge, as shown.

69,649. BOX. FRANCIS F. HAMILTON, Indianapolis, Ind. Filed Dec. 24, 1925. Serial No. 15,844. Term of patent 14 years.

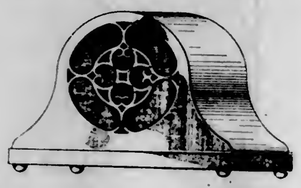


The ornamental design for a box, as shown and described.

69,650. PITCHER OR SIMILAR ARTICLE. GEORGE HAVILAND, Limoges, France. Filed Nov. 4, 1925. Serial No. 15,342. Term of patent 3½ years.

The ornamental design for a pitcher or similar article, as shown.

69,651. PITCHER OR SIMILAR ARTICLE. GEORGE HAVILAND, Limoges, France. Filed Nov. 4, 1925. Serial No. 15,343. Term of patent 3½ years.

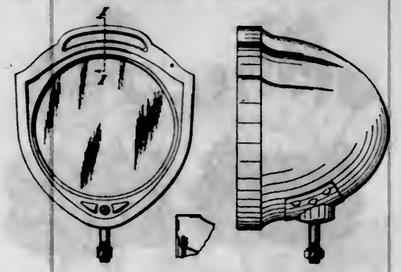


The ornamental design for a pitcher or similar article, as shown.

69,652. RADIO LOUD SPEAKER. OTTO HEINEMAN, New York, N. Y., assignor to General Phonograph Corporation, a Corporation of New York. Filed Jan. 28, 1925. Serial No. 12,171. Term of patent 7 years.

The ornamental design for a radio loud speaker substantially as shown.

69,653. RADIO LOUD SPEAKER. OTTO HEINEMAN, New York, N. Y., assignor to General Phonograph Corporation, a Corporation of New York. Filed Jan. 30, 1925. Serial No. 12,203. Term of patent 7 years.



The ornamental design for a radio loud speaker substantially as shown.

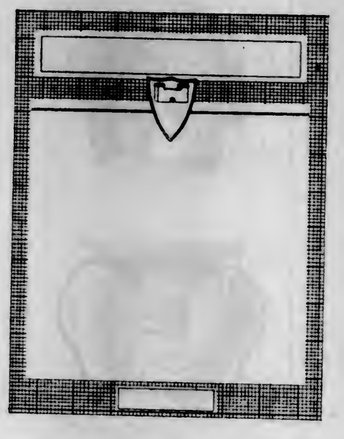
69,654. TEXTILE FABRIC. SANG M. HO, New York, N. Y., assignor to May Chong Co. Inc., New York, N. Y. Filed Nov. 27, 1925. Serial No. 15,560. Term of patent 3½ years.

The ornamental design for textile fabric as shown.

69,655. HEADLAMP. EDWARD E. HUNTINGTON, Toledo, Ohio, assignor to The Willys-Overland Company, Toledo, Ohio, a Corporation of Ohio. Filed Oct. 23, 1925. Serial No. 15,229. Term of patent 14 years.

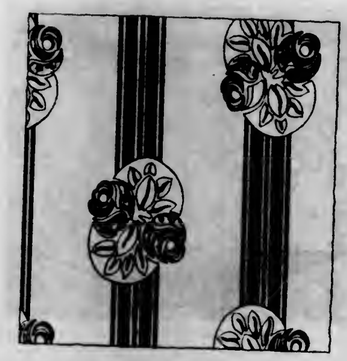
The ornamental design for a headlamp substantially as shown.

69,656. TEXTILE FABRIC. FRANK M. KAUFMAN, Philadelphia, Pa. Filed Jan. 20, 1926. Serial No. 16,183. Term of patent 3½ years.



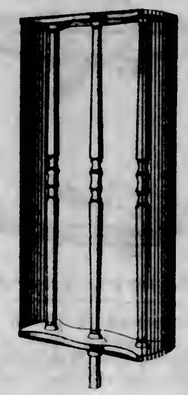
The ornamental design for a textile fabric, as shown.

69,657. TEXTILE FABRIC. FRANK M. KAUFMAN, Philadelphia, Pa. Filed Jan. 23, 1926. Serial No. 16,240. Term of patent 3½ years.



The ornamental design for a textile fabric, as shown.

69,658. FRONT PAGE FOR SERIAL PUBLICATIONS. ARTHUR W. KNIGHT, Los Angeles, Calif., assignor to The Celite Company, Los Angeles, Calif., a Corporation of Delaware. Filed Dec. 28, 1925. Serial No. 15,838. Term of patent 14 years.



The ornamental design for a front page for serial publications, substantially as shown and described.

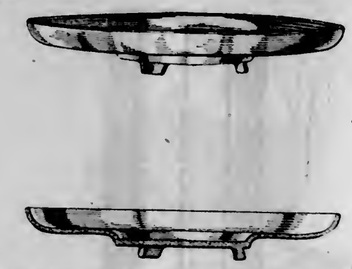
69,659. TEXTILE FABRIC. WILLIAM C. KORZINEK, Cliffside Park, N. J., assignor to Golding Bros. Company, New York, N. Y., a Corporation of New York. Filed Jan. 21, 1926. Serial No. 16,201. Term of patent 3½ years.

The ornamental design for a textile fabric, as shown.

69,660. RECEIVING LOOP. RALPH H. LANGLEY, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Dec. 12, 1925. Serial No. 15,731. Term of patent 14 years.

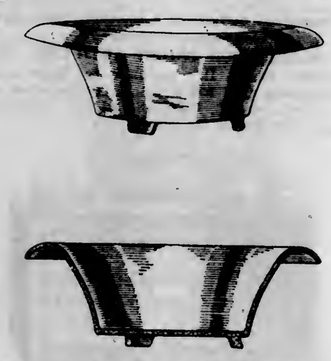
The ornamental design for a receiving loop, as shown.

69,661. HOLDER FOR TOILET ARTICLES. WILLIAM H. LESTER, Elgip, Ill., assignor to Elgin American Manufacturing Co., Elgin, Ill., a Corporation of Illinois. Filed Aug. 13, 1925. Serial No. 14,412. Term of patent 3½ years.



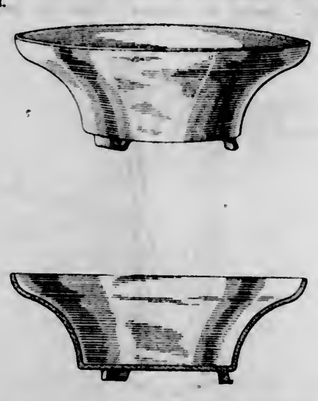
The ornamental design for a holder for toilet articles, substantially as shown.

69,662. VASE. WILLIAM H. MAGEE, Moundsville, W. Va., assignor to Fostoria Glass Co., Moundsville, W. Va., a Corporation of West Virginia. Filed Dec. 28, 1925. Serial No. 15,884. Term of patent 14 years.



The ornamental design for a vase, as shown.

69,663. BOWL. WILLIAM H. MAGEE, Moundsville, W. Va., assignor to Fostoria Glass Co., Moundsville, W. Va., a Corporation of West Virginia. Filed Dec. 28, 1925. Serial No. 15,887. Term of patent 14 years.

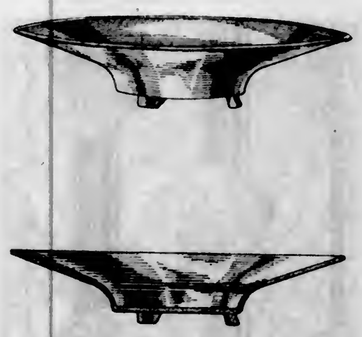


The ornamental design for a bowl, as shown.

69,664. BOWL. WILLIAM H. MAGEE, Moundsville, W. Va., assignor to Fostoria Glass Co., Moundsville, W. Va., a Corporation of West Virginia. Filed Dec. 28, 1925. Serial No. 15,888. Term of patent 14 years.

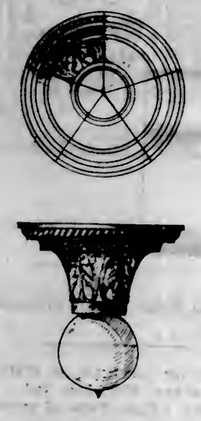
The ornamental design for a bowl, as shown.

69,665. BOWL. WILLIAM H. MAGEE, Moundsville, W. Va., assignor to Fostoria Glass Co., Moundsville, W. Va., a Corporation of West Virginia. Filed Dec. 28, 1925. Serial No. 15,889. Term of patent 14 years.



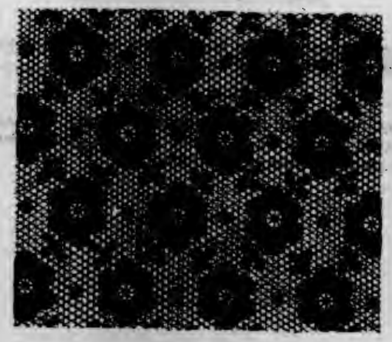
The ornamental design for a bowl, as shown.

69,666. BOWL. WILLIAM H. MAGEE, Moundsville, W. Va., assignor to Fostoria Glass Co., Moundsville, W. Va., a Corporation of West Virginia. Filed Dec. 28, 1925. Serial No. 15,890. Term of patent 14 years.



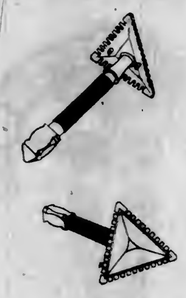
The ornamental design for a bowl, as shown.

69,667. BOWL. WILLIAM H. MAGEE, Moundsville, W. Va., assignor to Fostoria Glass Co., Moundsville, W. Va., a Corporation of West Virginia. Filed Dec. 28, 1925. Serial No. 15,891. Term of patent 14 years.



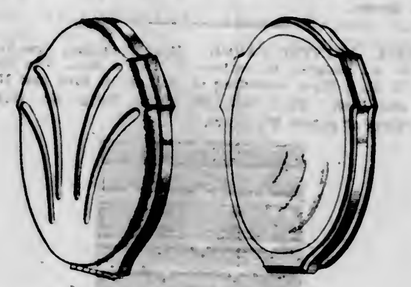
The ornamental design for a bowl, as shown.

69,668. ELECTRIC CEILING FIXTURE. WILLIAM OSTWALD, Chicago, Ill., assignor to Unique Lamp & Casting Company, a Copartnership consisting of Henry Goodfriend, William Christensen, and Alfred E. Larsen, Chicago, Ill. Filed Oct. 14, 1925. Serial No. 15,121. Term of patent 3½ years.



The ornamental design for an electric ceiling fixture, as shown.

69,669. LACE. SAMUEL H. PAGE, Stratford, Conn., assignor to The American Fabrics Company, a Corporation of Connecticut. Filed Dec. 30, 1925. Serial No. 15,907. Term of patent 3½ years.

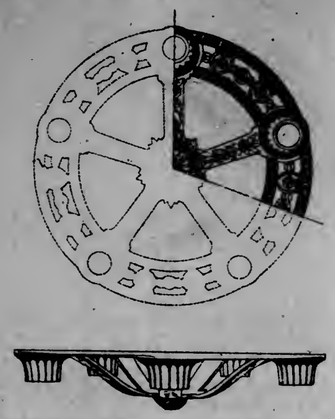


The ornamental design for lace substantially as shown.

69,670. SAFETY RAZOR. HERMAN L. PERLISH, Philadelphia, Pa. Filed Aug. 12, 1925. Serial No. 14,400. Term of patent 14 years.

The ornamental design for a safety razor, as shown.

69,671. VEHICLE HEADLIGHT HOUSING. WALTER D'ARCY RYAN, Schenectady, N. Y. Filed July 9, 1924. Serial No. 10,094. Term of patent 14 years.



The ornamental design for a vehicle headlight housing as shown.

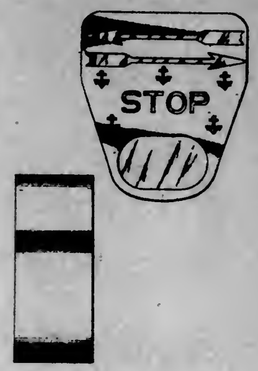
69,672. LIGHTING-FIXTURE BACKPLATE. HERMAN A. SAFION, New York, N. Y. Filed Dec. 5, 1925. Serial No. 15,650. Term of patent 3½ years.

The ornamental design for a lighting fixture backplate, as shown.

69,673. LIGHTING-FIXTURE PLATE. HERMAN A. SAFION, New York, N. Y. Filed Jan. 6, 1926. Serial No. 15,971. Term of patent 3½ years.

The ornamental design for a lighting fixture plate, as shown.

69,674. PRINTED FABRIC. ROBERT SCHEY, New York, N. Y., assignor to Nathan H. Rich & Bro., New York, N. Y., a Firm consisting of Nathan H. Rich and Maurice Rich. Filed Nov. 20, 1925. Serial No. 15,484. Term of patent 3½ years.

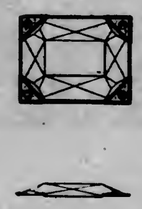


The ornamental design for a printed fabric as shown.

69,675. INCENSE BURNER. ROLAND F. SCHRODER and LOUIS S. SAKOLS, Milwaukee, Wis. Filed Jan. 6, 1926. Serial No. 15,960. Term of patent 7 years.

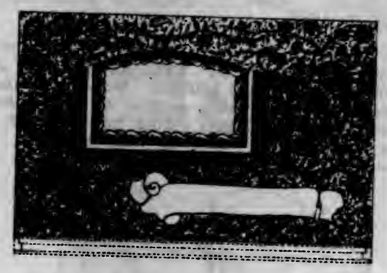
The ornamental design for an incense burner, as shown.

69,676. AUTOMOBILE SIGNAL-LIGHT CASING. IRVIN SHUTT, Bloomington, Ill. Filed Sept. 4, 1924. Serial No. 10,671. Term of patent 14 years.



The ornamental design for an automobile signal light casing as shown.

69,677. BUTTON OR ARTICLE OF SIMILAR NATURE. CHARLES O. SNYDER, Richmond, Ind. Filed Sept. 14, 1922. Serial No. 8,719. Term of patent 3½ years.



The ornamental design for a button, or article of similar nature, substantially as shown.

69,678. SETTING FOR FINGER RINGS. WILLIAM STURM, Newark, N. J. Filed Sept. 17, 1925. Serial No. 14,807. Term of patent 3½ years.

The ornamental design for a setting for finger rings, as shown.

69,679. TOP FOR CANDY BOXES. ALBERT R. THAYER, Boston, Mass., assignor to F. H. Roberts Company, Boston, Mass., a Corporation of Massachusetts. Filed Oct. 15, 1925. Serial No. 15,125. Term of patent 14 years.

The ornamental design for a top for candy boxes as shown.

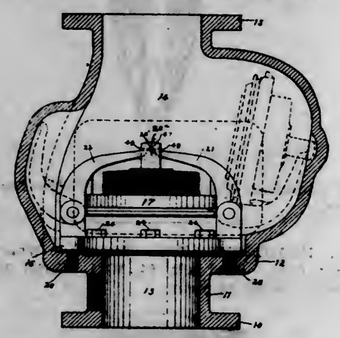
69,680. PLATE FOR LIGHTING FIXTURES. GUSTAVE E. VILLARET, New York, N. Y., assignor to William R. Noe & Sons, New York, N. Y., a Corporation of New York. Filed Nov. 14, 1923. Serial No. 7,763. Term of patent 7 years.

The ornmental design for a plate for lighting fixtures, as shown.

69,681. AUTOMOBILE FLOWER VASE. DAVID WELLER, New York, N. Y. Filed Dec. 31, 1925. Serial No. 15,916. Term of patent 3½ years.

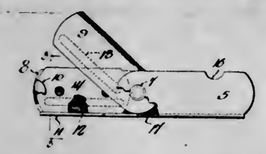
The ornamental design for an automobile flower vase, as shown.

69,682. HEADLIGHT LENS. THOMAS S. WRIGHT, Lancaster, Ohio. Filed Apr. 14, 1924. Serial No. 9,251. Term of patent 14 years.



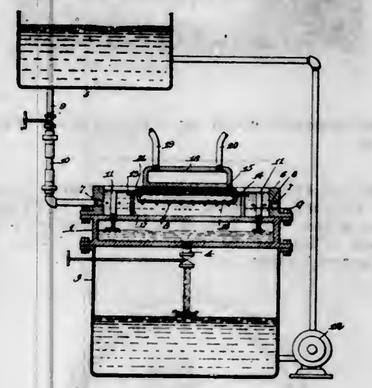
The ornamental design for a headlight lens as shown.

PATENTS



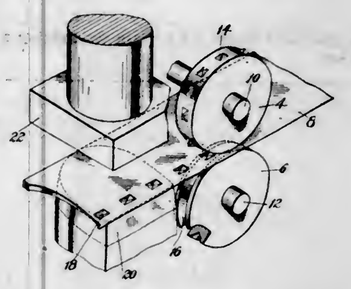
GRANTED MARCH 9, 1926.

1,575,607. DRY-PIPE VALVE. CHARLES ADAMS, Jr., Cliffside Park, N. J., assignor of one-half to Sydney Weston, New York, N. Y. Filed Aug. 13, 1921. Serial No. 492,058. 22 Claims. (Cl. 169—22.)



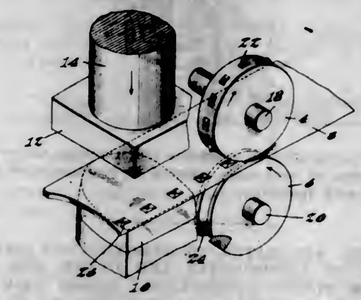
1. In combination, an air pressure chamber; a water pressure chamber; and self-contained valve mechanism for closing or opening communication between said chambers; the valve mechanism comprising a base member for supporting the operative parts of the valve mechanism in operative relation to each other, and for supporting the valve mechanism in operative relation to the water pressure and air pressure chambers; and comprising collapsible and extensible means for retaining when collapsed by pressure of air in the air pressure chamber the valve mechanism in locked position, and for permitting movement of the valve mechanism to open position by pressure from the water pressure chamber upon reduction of the pressure in the air pressure chamber and extension of said means.

1,575,608. BLADE HOLDER. LEON M. ALBERTY and WILLIAM J. FRANZ, Milwaukee, Wis., assignors to Razor Blade Knife Company, Milwaukee, Wis., a Corporation of Wisconsin. Filed Oct. 19, 1920. Serial No. 417,882. 2 Claims. (Cl. 30—10.)



1. A razor blade knife for utilizing razor blades of standard form, said knife comprising blade clamping leaves for embracing and retaining the razor blade in position with one edge exposed, a substantially flat handle forming an envelope for receiving and enclosing said clamping leaves and blade, a pivotal connection between said handle and clamping leaves in close proximity to one end of said blade permitting said leaves to swing relative to said handle and to each other, and means adjacent the other end of said blade for normally maintaining a blade clamping pressure between said leaves.

1,575,609. METHOD OF AND APPARATUS FOR UNITING METALLIC BODIES. WILLIAM G. ALLAN, Toronto, Ontario, Canada, assignor to John P. Scott, Toronto, Ontario, Canada. Filed Nov. 10, 1923, Serial No. 674,047. Renewed Aug. 12, 1925. 23 Claims. (Cl. 113—112.)

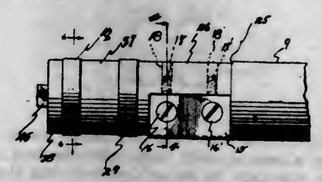


1. A method of securing one body to another, one of said bodies being superposed over the other, which comprises expanding one body relatively to the other, and uniting the bodies while said body is in its expanded condition.

1,575,610. SHOE PART AND THE TREATMENT OF SHOE PARTS. FRED ASHWORTH, Beverly, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Mar. 21, 1919. Serial No. 284,068. 16 Claims. (Cl. 12—147.)

1. That improvement in methods of treating shoe parts having edge portions of different thicknesses which comprises deforming the relatively thin edge portions of the parts to provide spacing members thereon, and positioning the parts with the thick edge portions of adjacent parts in contact one above another and with the thin edge portions of adjacent parts separated by the spacing members.

1,575,611. MACHINE FOR FORMING WEDGE-SHAPED ARTICLES. FRED ASHWORTH, Wenham, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Original application filed Mar. 21, 1919, Serial No. 284,068. Divided and this application filed July 28, 1925. Serial No. 46,586. 11 Claims. (Cl. 12—42.)

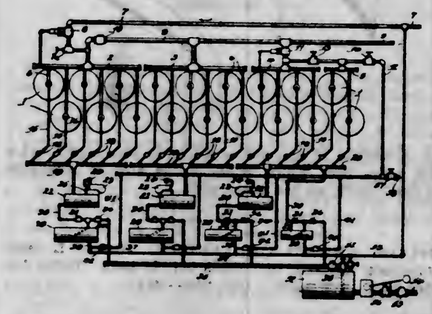


1. In a machine of the class described, a feed roll for feeding sheet material, dies on the feed roll for producing projections along one edge of the sheet material, and means for cutting heel lifts from said material to include one or more projections on each lift, the spacing of the projections being such as to insure that the projections on some of the lifts are positioned differently from those on other lifts.

1,575,612. CAN OPENER. GEORGE M. BATTEY, Jr., Washington, D. C. Filed June 5, 1924. Serial No. 718,111. 3 Claims. (Cl. 30—3.)

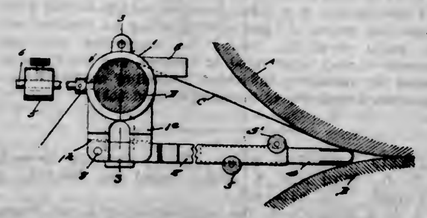
1. A can opener comprising a hand hold block formed of separable upper and lower members, yieldable retaining means for joining said members, a centering pivot mounted on the lower block member, a cutter spaced apart from said centering pivot and adapted to cause the cutter to traverse an arc of a circle during the cutting operation.

1,575,613. REAMER. KARL BECHHEIM, Detroit, Mich. Filed Nov. 19, 1923. Serial No. 675,656. 3 Claims. (Cl. 77—75.)



1. A reamer comprising a shank; a head of less diameter than said shank mounted thereon; a cutting element mounted on said head; yieldable pilot members associated with said head for operating as a pilot for said cutting member; and resilient means for maintaining said pilot members in outwardly pressed position.

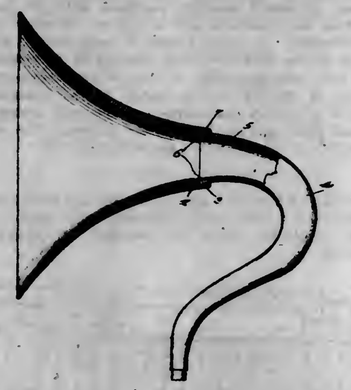
1,575,614. ADJUSTABLE SUPPORT FOR FLAGS. JACOB B. BLAW, Atlantic City, N. J. Filed Sept. 5, 1925. Serial No. 54,716. 2 Claims. (Cl. 248—37.)



1. An adjustable support for flags comprising a plurality of segments, means for fastening the segments together, a socket member provided with an aperture extending therethrough with a lug on its outer surface and extending at right angles to said socket member, the lug of the socket member adapted to be clamped between the adjacent ends of two of said segments, the position of the lug on the socket member permitting a flagstaff to extend completely through said socket member and bear against the surface to which the support is secured to thereby brace the said flagstaff.

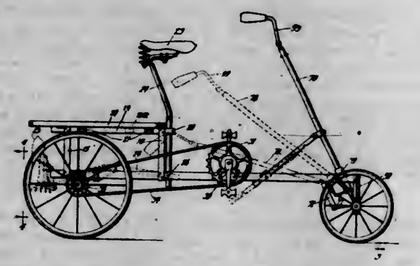
1,575,615. HEATING SYSTEM FOR PAPER DRIERS. ARTHUR E. BROUGHTON, Minneapolis, Minn. Filed Mar. 15, 1924. Serial No. 699,464. 12 Claims. (Cl. 34—48.)

1. The combination with a paper making machine having a plurality of drying rolls arranged in groups, of means for supplying steam at differing pressures to the rolls of the several groups, and means for withdrawing condensate from said rolls comprising, a header, pipes severally communicating at one end with said rolls and at the other end with said header, and check valves arranged in said pipes to prevent back pressure in said pipes and to allow fluid to be drawn by gravity from said rolls to said header.



1,575,616. RUBBER-TRIMMING DEVICE. JAMES W. BRUNDAGE, Akron, Ohio, assignor to The Miller Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed Aug. 3, 1925. Serial No. 47,831. 5 Claims. (Cl. 164—89.)

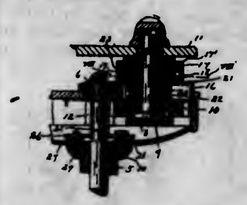
1. The combination with means for applying rubber coatings to fabric strips, including a rotating platen member, of a rotating shaft member, a bracket member



having an internally threaded hub mounted upon a smooth portion of said shaft member, a trimming knife cooperating with said platen member, and means for causing said knife to be pressed against the platen member.

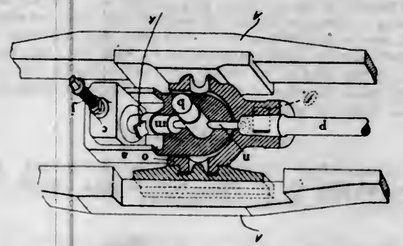
1,575,617. COMPOSITE HORN AND METHOD OF MAKING SAME. GEORGE W. BULLEY, Akron, Ohio, assignor to The Miller Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed Sept. 3, 1925. Serial No. 54,801. 7 Claims. (Cl. 18—59.)

1. A method of assembling a plastic bell mouth and a rigid goose neck which includes the step of shrinking the bell mouth on the goose neck.



1,575,618. CHILD'S TOY VEHICLE. GEORGE L. BURLINGAME, Chicago, Ill. Filed Oct. 1, 1921. Serial No. 504,582. 8 Claims. (Cl. 208—32.)

1. In a child's toy vehicle of the character described, the combination of a pedal propelled vehicle having pedal propelling means and push-car including an elevated seat for pedal propelling, means for supporting said seat whereby it may be elevated or lowered, and clutch mechanism for rendering the pedal propelling mechanism inoperative responsive to lowering of said seat.



1,575,619. FISHING REEL. PLINY CATUCCI, Newark, N. J. Filed Aug. 8, 1924. Serial No. 730,815. 3 Claims. (Cl. 242—84.1.)

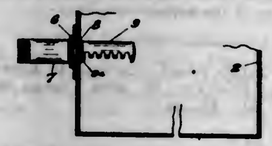
1. In a fishing reel, the combination of a reel frame, a head plate, a back plate a spool mounted to rotate in bearings in said head and back plates, a driving gear upon said head plate, a detachable pinion mounted upon the spindle of said spool for engaging said gear, and means for operatively connecting said pinion with said spool comprising a disc rigidly secured to said pinion and

having a plurality of apertures therethrough, and a pin in the end of said spool adapted to be inserted in any one of said apertures.

1,575,620. APPARATUS FOR REMOVING THE PISTON ROD OF LOCOMOTIVES AND OTHER ENGINES FROM PISTON CROSSHEADS. GILBERT CHAMBON, Paris, France. Filed Dec. 21, 1923. Serial No. 681,967. 4 Claims. (Cl. 29—86.1.)

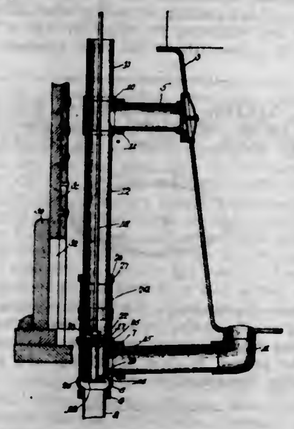
1. An apparatus for ejecting piston rods from crossheads, comprising, in combination, a yoke member adapted to be seated within the crosshead, removable means passing transversely through said yoke and crosshead for securing them together, a member slidable in said yoke and securing means and adapted to contact with the end of the piston rod, a hydraulic device removably carried by said yoke member and adapted to operate said slidable member thereby to exert pressure on the piston rod in the direction of its axis, and means operating at right angles to the direction of movement of said slidable member for actuating said hydraulic device.

1,575,621. LIGATURE FOR CLARINET AND SAXOPHONE MOUTHPIECES. HIPPOLYTE MARIUS CHIRON and FREDERIC PARME, New York, N. Y. Filed Jan. 31, 1923. Serial No. 616,128. 1 Claim. (Cl. 84—383.)



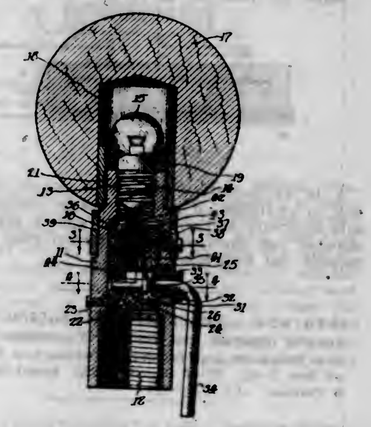
A ligature for clarinet and saxophone mouth pieces comprising a pair of split rings, side members joining said rings, lugs rigid on the split ends of said rings and provided with sockets, said lugs being arranged in pairs, one lug of each pair having a threaded opening, the opposite lug having a plain opening, each pair of lugs having a space therebetween, an arcuate body having a projection thereon, said projections being adapted to be inserted between the pairs of lugs and each projection having an opening therein adapted to align with the openings in the lugs, teeth on the lower surface of said arcuate body extending laterally of the rings, said teeth being adapted to contact with the surface of a reed on the clarinet or saxophone, and a thumb screw passing thru each pair of sockets and the opening in each projection of the body for retaining said body in place above the reed.

1,575,622. CLASP. PATRICK J. COFFEY, Chatham, N. J. Filed Apr. 23, 1924. Serial No. 708,385. 5 Claims. (Cl. 24—241.)



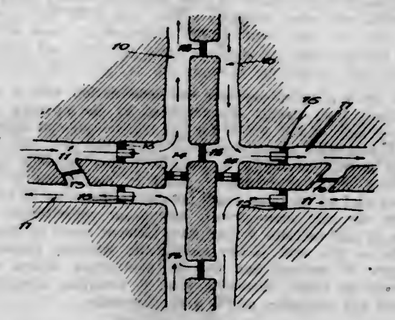
1. In a clasp, a hook, a spring lip normally in contact with the free end of said hook, and a lever for depressing the spring lip, and maintaining the same in depressed condition.

1,575,623. TANK-DISCHARGE DEVICE. RUDOLPH CONRADER, Erie, Pa. Filed July 21, 1921. Serial No. 486,462. 8 Claims. (Cl. 210—170.)



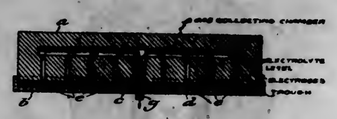
1. A tank discharge strainer having an end adapted to be inserted through a horisontal discharge pipe opening in the tank a distance from the walls of the tank, said strainer being closed at the top and having fingers on the side and being unobstructed at the bottom.

1,575,624. FITTING FOR BATHTUBS AND THE LIKE. HOWARD DE CORBEVONT, Chicago, Ill. Filed Mar. 3, 1923. Serial No. 622,473. 7 Claims. (Cl. 4—199.)



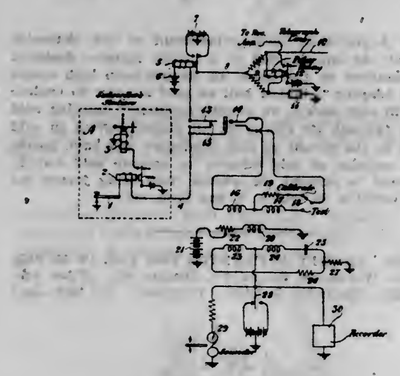
1. In a drain installation, the combination of a drain pipe, a drain valve, an operating connection extending upwardly from the valve, and an overflow pipe connected to the drain pipe comprising a fixed upper pipe section around the operating connection and a lower pipe section adjacent the valve and slidable upwardly on the fixed section, the lower section when raised providing an opening through which the valve may be removed laterally without removing the fixed section or the drain pipe.

1,575,625. ILLUMINATED GEAR-SHIFT-LEVER BALL. HENRY G. DIEBLKA, Chicago, Ill., assignor to The Kingsley-Miller Company, Chicago, Ill., a Corporation of Illinois. Filed Oct. 19, 1925. Serial No. 63,256. 5 Claims. (Cl. 740—7.1.)



1. In a gear-shift lever attachment of the character described, the combination of a hollow adapter designed to be mounted on the lever, an electric-lamp bulb socket on said adapter, a hollow ball on said adapter to enclose a bulb in said socket, an electric-conductor entering said adapter through its side wall, an electric-switch in said adapter in the circuit of said conductor and bulb, means on the exterior of said adapter to operate said switch, and means to prevent the switch from being jarred out of the position in which it has been set.

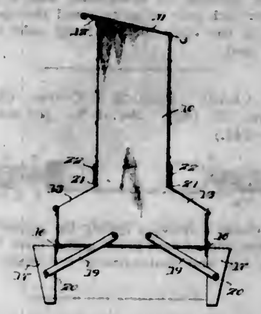
1,575,626. SAFETY APPARATUS FOR USE IN MINES. HENRY WALDEMAR HAAPANEN, Sturgis, Ky. Filed Apr. 1, 1924. Serial No. 703,497. 7 Claims. (Cl. 262—34.)



1. A safety apparatus for use with mines having workings and approaches thereto comprising a door framing in each approach, a door hingedly mounted on said frame, means for limiting the movement of the door to closed position, a control shaft, a frame on which said control shaft is rotatably mounted, door engaging lugs fixedly connected to said shaft, pressure plates fixedly connected to said shaft, oppositely extending arms connected to said shaft, weights and connecting elements between the weights and the arms whereby the shaft is held in such position that the lugs engage the door to hold the same elevated in open position.

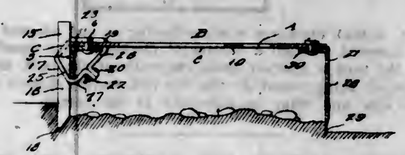
1,575,627. ELECTRODE FOR USE IN THE ELECTROLYTIC EVOLUTION OF GASES. ERNST HEINZE, Leverkusen, near Cologne, Germany, assignor to Farbenfabriken vorm. Friedr. Bayer and Co., Leverkusen, near Cologne-on-the-Rhine. Filed Dec. 10, 1924. Serial No. 755,083. 15 Claims. (Cl. 204—4.)

1. In an electrolytic cell for production of gases, a pair of electrodes in gas-tight spaced relation, one of said electrodes having within the same a gas collecting chamber and passages leading thereto from the space between the electrodes.



1,575,628. TELEGRAPH SIGNALING SYSTEM. JOSEPH HERMAN, New York, N. Y., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed Dec. 7, 1923. Serial No. 679,229. 5 Claims. (Cl. 178—2.)

1. In a telegraph system, the combination with a subscriber's loop circuit characterized by the opening and the closing of the circuit for the transmission of signals, of a polarized monitoring relay connected with the said loop circuit having a sectionalized line winding, each section being substantially equal in magnitude to the other and all sections being normally effectively in series with the said loop circuit, means for substituting for one of said sections a resistance element equal in magnitude to the said section, a biasing winding having a source of current and current controlling means connected in series therewith, and a vibrating circuit to effect the vibration of the relay armature.



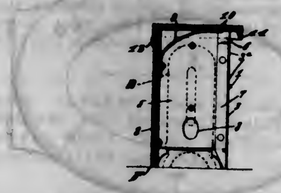
1,575,629. FEED BOX. WILLIAM H. JENKINS, Detroit Park, Mich. Filed Dec. 10, 1923. Serial No. 679,742. 1 Claim. (Cl. 119—52.)

A poultry feeder of the character described comprising a hopper including a relatively narrow upper portion and a relatively wide outwardly and downwardly extending lower portion, longitudinally extending plates hinged to the upper sides of the relatively wide lower portion, a plurality of spaced parallel bars secured to the lower ends of the narrow upper portion and across the width of the lower portion beneath the hinged plates, a pair of substantially wedge shaped legs pivotally secured to the lower and outer sides of the wide lower portion, pairs of braces pivotally secured to the sides of the hopper

and adapted to engage and hold the legs at an upright position, a plurality of spaced parallel bars secured to the outer sides of the legs, and a hinged cover arranged upon the top of the hopper.

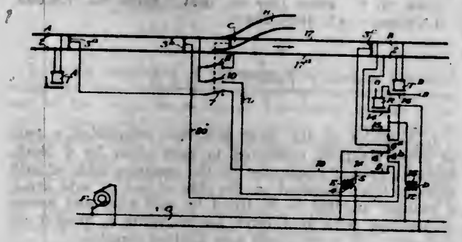
1,575,630. ROAD DRAG. DEVILLO D. KINNEY, Springfield, Ill. Filed Oct. 21, 1924. Serial No. 744,967. 1 Claim. (Cl. 55—94.)

The combination with an angle-bar and a V-shaped in cross section tooth, of a clamp provided with a V-shaped portion adapted to embrace and conform to the tooth, upwardly and downwardly extending arms formed with the clamp and embracing the angle-bar, and a fastening retaining the extremitits of the arms together.



1,575,631. GARTER. ETHEL LARIMORE, Barberton, and VIOLET FRAME, Akron, Ohio. Filed Sept. 25, 1925. Serial No. 58,616. 2 Claims. (Cl. 241—5.)

1. A garter for forming a roll at the top of a stocking, comprising a tube having its ends connected together to form a ring-shaped member, with the tube inflated sufficiently to prevent it from collapsing, and the garter being flexible throughout its length.

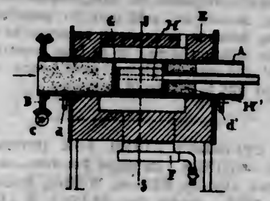


1,575,632. RADIATOR COVER. EUGENE D. LEWIS, Bessemer, Ala. Filed Nov. 21, 1923. Serial No. 676,129. 1 Claim. (Cl. 257—136.)

A radiator cover comprising a casing shaped to conform to the radiator in connection with which it is to be used, said casing having an imperforate rear wall extended to and fitting snugly against the floor while the end walls thereof have openings at their lower ends for the ingress of cold air, a top for said casing overhanging the end and front walls of the casing, said front wall having an opening at its upper end and located under and concealed by the overhanging top, the end, rear, and top walls of the casing being asbestos lined and air-tight to conserve the heat and direct it through the opening in the front wall, a deflector for directing

the heat out through said openings, said front wall having apertures adjacent said opening and imperforate below said apertures, the lower end of said front wall having a draft opening whereby a perfect and complete circulation and draft through the casing is provided.

1,575,633. RAILWAY-TRAFFIC-CONTROLLING APPARATUS. RONALD A. MCCANN, Swissvale, Pa., assignor to Union Switch & Signal Company, Swissvale, Pa., a Corporation of Pennsylvania. Filed Sept. 8, 1925. Serial No. 54,933. 2 Claims. (Cl. 246—34.)

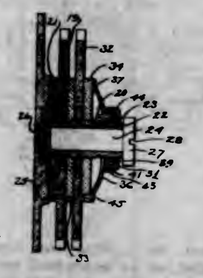


1. In combination, a section of railway track containing a switch, means operating when said switch is in normal position to supply train governing current to the rails of said section in multiple from the entrance end to the exit end if traffic conditions in advance of the section are safe but only from the entrance end to a point in the rear of said switch if traffic conditions in advance of the section are unsafe, said means operating when said switch is reversed to supply train governing current to the rails of said section from said switch to the exit end if traffic conditions in advance of the section are safe but to prevent the supply of said train governing current to any portion of said section when the switch is reversed and traffic conditions in advance of the section are unsafe.

1,575,634. PROCESS OF PURIFYING ALUMINUM NITRATE. THOR MEJDELL, Skoien, near Christiania, and ØYSTEIN RAVNUM, Christiania, Norway, assignors to Norsk Hydro-Elektrisk Kvaelstofaktieselskab, Christiania, Norway. Filed Feb. 27, 1922. Serial No. 539,696. 4 Claims. (Cl. 23—102.)

1. Process of separating aluminum nitrate from iron compounds comprising mixing a hot solution of aluminum nitrate with a relatively cold solution of aluminum nitrate, at least one of said solutions containing an iron compound, said solutions being sufficiently concentrated and at such temperatures that aluminum nitrate crystallizes from the mixture.

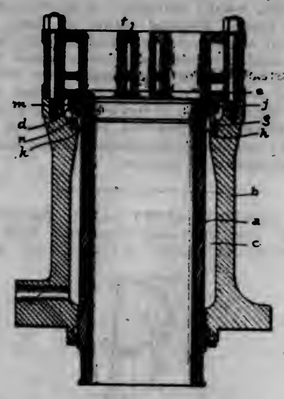
1,575,635. APPARATUS FOR CASEHARDENING SMALL OBJECTS. GEORGES ANTONY HENRI MÉRIEL, Courbevoie, France. Filed Feb. 17, 1925. Serial No. 9,857. 8 Claims. (Cl. 236—7.)



1. Apparatus for case-hardening small objects, comprising a furnace having a heating chamber; a metal tube extending axially through said chamber and having its central portion disposed within the same, said tube being open at one end and constituting, with the furnace, a pair of companion elements, one of which is adapted to be positively rotated; mechanism for driving said rotatable element; a removable cementation basket for containing the objects to be treated adapted to be inserted into and withdrawn from the tube through the open end thereof; and means for positioning said basket in the said central portion of the tube.

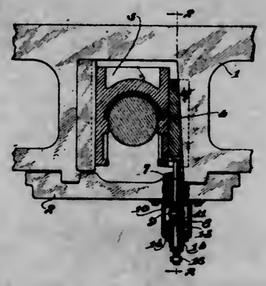
1,575,636. MINER'S SAFETY LAMP. HEINRICH MEYER, Hiddesen, near Detmold, Germany. Filed Mar. 21, 1925. Serial No. 17,271. 3 Claims. (Cl. 240—10.5.)

1. A safety lamp comprising a casing, a transparent hood on said casing, a light source mounted on said casing and located within the hood, a side reflector pivotally mounted on said casing and normally below the light source to allow light to pass in all directions through the hood and means operable from the outside of the hood for moving the reflector into or out of position for reflecting light through one side portion of the hood and covering the opposite portion of the hood.



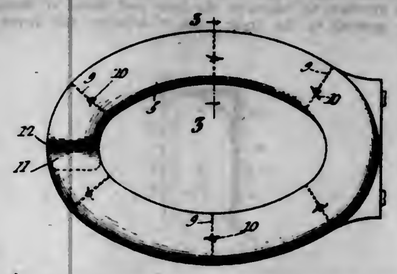
1,575,637. AUTOGRAPHIC REGISTER. GEORGE J. NETH, Dayton, Ohio, assignor to The Egry Register Company, Dayton, Ohio, a Corporation of Ohio. Filed Oct. 6, 1922. Serial No. 592,712. 2 Claims. (Cl. 64—99.)

1. In an autographic register, a clutch consisting of driving and driven gears and clutch plates on opposite sides of the gears, means to support said gears and clutch plates in cooperative relation, means to maintain



said gears and clutch plates in engagement with one another until a predetermined force is applied when they are adapted to slip upon one another including a yielding member mounted on one side of said clutch, an adjustable nut to regulate the compression on said yielding member, means on said nut to positively engage said yielding member to prevent rotation of the latter, means on the yielding means to in turn positively engage with one of the clutch plates, and means to position and lock said nut in adjusted positions.

1,575,638. CYLINDER LINER FOR INTERNAL-COMBUSTION ENGINES. BEDRICH POCHOBRADSKY, Sidcup, and GEORGE ARTHUR MELLOR, Welling, England. Filed Mar. 21, 1925. Serial No. 17,174. 3 Claims. (Cl. 123—173.)

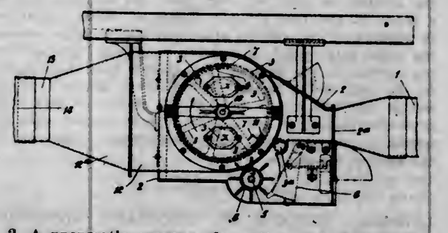


1. An improved cylinder liner for an internal combustion engine having an annular recess in the end thereof to receive the spigot on the cylinder head, and a supporting shoulder having a coaxial flange adapted to rest on an annular projection formed in the cylinder jacket directly below and coaxial with the cylinder head spigot.

1,575,639. EQUALIZING WEDGE ADJUSTER. THOMAS M. PRICE, Raleigh, N. C. Filed July 30, 1925. Serial No. 47,020. 4 Claims. (Cl. 105—81.)

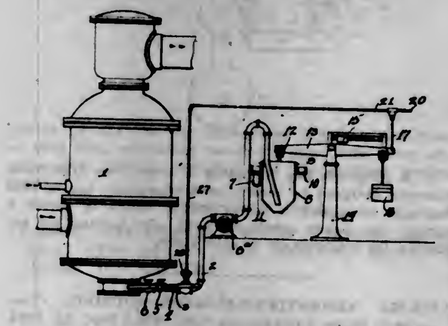
2. A support for driving box wedges including a slidably-mounted rod on which said wedge is secured, an abutment on said rod, a pair of opposed spring devices associated with said rod and abutment, and means for longitudinally adjusting the position of said rod and wedge.

1,575,640. TOILET-SEAT CUSHION. THOMAS H. RAGLAND, Texarkana, Tex. Filed Aug. 14, 1923. Serial No. 657,386. 1 Claim. (Cl. 4—242.)



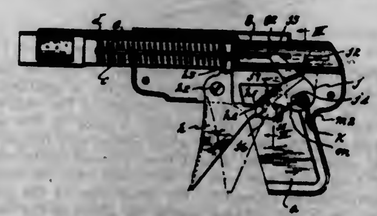
A seat cover comprising a circular split body portion comprising strips of cloth material sewed together at their edges, padding material positioned between the strips of cloth material to provide a cushion, flexible securing members secured to the edges of the body portion and adapted to be secured arodnd a seat to hold the seat cover in position, the ends of the strips at one end of the body portion being sewed together to provide a tongue adapted to fit under the opposite end of the body portion to provide an adjustable protector and cover.

1,575,641. CABIN-DOOR CHECK. KARL RUMRICH, New York, N. Y. Filed July 10, 1924. Serial No. 725,099. 4 Claims. (Cl. 292—263.)



1. A device of the class described comprising a pair of arms pivotally connected to each other by a block, brackets pivotally mounted on the opposing ends of said arms, a lever mounted on the side of one of said arms, a plunger adapted to be lifted by said arm, and means cooperating with said lever for engaging a bracket on the same arm to lock said arm against rotation.

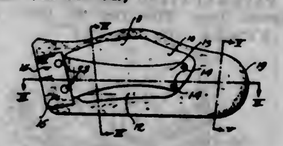
1,575,642. PNEUMATIC CONVEYER FOR COTTON AND SIMILAR MATERIALS. JAMES LEVER RUSHTON, Bolton, England. Filed Aug. 5, 1924. Serial No. 730,167. 2 Claims. (Cl. 19—75.)



2. A pneumatic conveyer for cotton and similar materials having a delivery box, a supply inlet in said delivery box, through which air and material to be treated are drawn, a fixed shaft mounted transversely of said delivery box, a perforated cylinder rotatably mounted on said shaft, a damper fixed upon said shaft and within said cylinder, a guide roller transversely mounted in said delivery box adapted to rotate in contact with said cylinder, and to press the incoming material into contact with said cylinder, a stripping roller below said guide roller rotated oppositely to said cylinder, a pivoted door behind said stripping roller, means for operating said door to allow the ejection of the stripped material from time to time, chambers in said delivery box embracing the ends of said cylinder, air trunks connected to said chambers and to an air exhauster, a clearer roller mounted within said cylinder at the front end of said damper, said clearer roller being in frictional contact with the inside face of said cylinder, and rotated by said frictional contact to remove adhering particles therefrom, hand holes with detachable covers, in the walls of said chambers adjacent the ends of said cylinder.

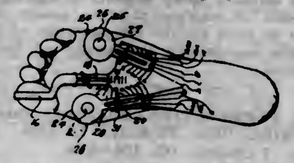
1,575,643. APPARATUS FOR AUTOMATICALLY CONTROLLING THE SPECIFIC GRAVITY OF FLUIDS. EMILE F. SALICH, Chicago, Ill. Filed Oct. 28, 1921. Serial No. 511,031. 12 Claims. (Cl. 159—44.)

1. In an apparatus of the class described, a pivotally supported scale beam, a receptacle supported upon one end of the scale beam, means for balancing said scale beam when said receptacle contains a predetermined quantity of fluid of a predetermined density, an evaporator, a pipe line connected to said evaporator and emptying into said receptacle, a by-path connecting said evaporator and pipe line, a valve in said pipe line, an air line, a diaphragm connecting said air line and valve, a valve in said air line and means connecting said last mentioned valve and scale beam.



1,575,644. PISTOL. WILLIAM F. SCHMIDT, Wyandotte, Mich., assignor to All Metal Products Company, Wyandotte, Mich., a Corporation of Delaware. Filed Apr. 16, 1925. Serial No. 23,578. 5 Claims. (Cl. 124—10.)

1. In an apparatus of the kind described, the combination of a lever, a trigger piece adapted to actuate said lever, said lever being provided with a slot, a pivot pin for said lever extending through said slot, the said lever and trigger piece being relatively so arranged that the trigger piece shall actuate said lever and pass by the same in its motion in one direction and shall contact said lever and force it out of the way to allow the return of said trigger piece on its motion in the other direction, said movements being permitted by the relative movement of the pin in said slot.



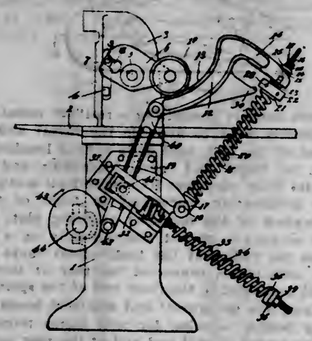
4. In an apparatus of the kind described, the combination of a sheet metal retracting lever and a trigger piece, said lever and trigger piece having pointed projections extending toward each other, the point of the trigger piece being adapted to engage said lever on both sides of said point, the metal of said lever being turned up to form flanges on both sides of said point joining at the point.

1,575,645. ARCH SUPPORT. WILLIAM M. SCHOLL, Chicago, Ill. Filed Apr. 2, 1925. Serial No. 20,050. 2 Claims. (Cl. 36—71.)

1. An arch support comprising a resilient metal spring plate sufficiently wide to underlie the tarsal and metatarsal bones of the foot, said plate curved longitudinally throughout its length and curved outwardly and transversely at its inner edge near its longitudinal mid-portion, said plate terminating rearwardly in front of the tuberosity location of the oscalcis; a spring plate underlying said arch-plate, curved longitudinally on a longer radius than the radius of the longitudinal curve of the arch-plate, said plates connected together at their rear ends; a pad connected to the front end of the spring-plate for underlying the metatarsal and sesamoid bones of the foot and a flexible covering for said plates terminating near the front edge of said pad and at the rear boundary of the shoe heel, said pad and the front edge of said cover-plate enclosing the front ends of said arch-plate and spring-plate.

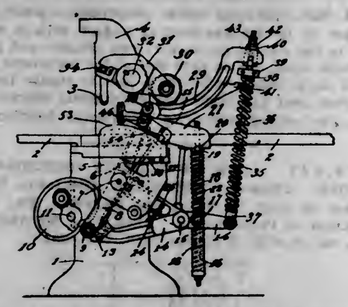
1,575,646. FOOT-MEASURING DEVICE. WILLIAM M. SCHOLL, Chicago, Ill. Filed Apr. 24, 1925. Serial No. 25,481. 3 Claims. (Cl. 33—3.)

1. A shoe measuring device comprising a plate having a socket to receive the heel of a foot with a vertical flange in the rear of the socket; two slidable and pivoted adjustable arms, one on each side of the transverse center of said plate, each arm having a part to engage the sides of a foot near the respective metatarsals thereof; and means for holding said arms in adjusted positions.



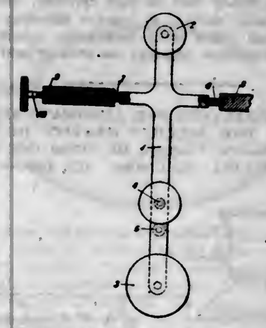
1,575,647. LOCK DEVICE FOR REFRIGERATOR DOORS. THOMAS O. SCHRADER, Allentown, Pa., assignor to Dent Hardware Co., Fullerton, Pa., a Corporation of Pennsylvania. Filed June 30, 1925. Serial No. 40,474. 3 Claims. (Cl. 292—332.)

1. In a device of the character stated a fixed structure having an opening, a door for closing said opening, a keeper having a pin projecting laterally from its



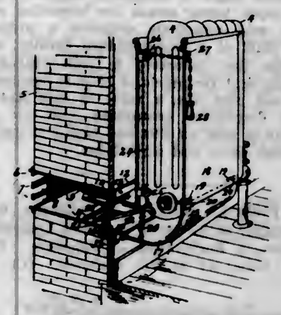
former wall and a rear cam riding surface and a bottom recessed portion, a locking member for said door comprising a pivotal handle having a projected tongue in substantial alignment with the handle, said handle having an upper cam arranged at an angle to said handle and tongue whereby closing of said door causes said cam to be engaged by said pin to tilt said handle and to cause said tongue to engage said bottom recessed portion to automatically lock said door.

1,575,648. PAPER-CUTTING MACHINE. CHARLES SEYBOLD, Dayton, Ohio. Filed Oct. 24, 1923. Serial No. 670,571. 8 Claims. (Cl. 164—51.)



1. In a device of the character specified, a paper support, and a clamp bar to hold the paper pile on the paper support, mechanism for operating the clamp bar to move it to the paper support, power means for actuating said mechanism, a resilient means operating upon said mechanism at one point to hold the clamp under tension on the paper pile and through which resilient means the ultimate clamp pressure is applied, with resilient means at another point to permit the clamp mechanism to yield for the full operation of the power means while maintaining the tension of the first resilient means.

1,575,649. PAPER-CUTTING MACHINE. CHARLES SEYBOLD, Dayton, Ohio. Filed Apr. 12, 1924. Serial No. 706,188. 7 Claims. (Cl. 164—51.)

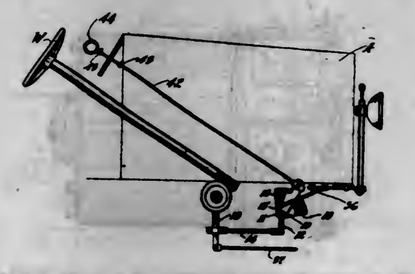


1. In a device of the character specified, a paper support and a clamp bar to hold the paper pile on the support, a rock lever and connection therefor with the clamp to operate same, a spring operating on the rock lever to hold the clamp bar under spring tension and through which the ultimate clamp pressure is applied, a lever pivoted on the rock lever for actuating the same to apply the tension, and a power means to actuate the rock lever, while permitting the full operation of the power means.

1,575,650. TELEGRAPH KEY. ROY B. SHANCK, Woodside, N. Y., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed Apr. 14, 1923, Serial No. 632,147. Renewed Oct. 5, 1925. 14 Claims. (Cl. 178—101.)

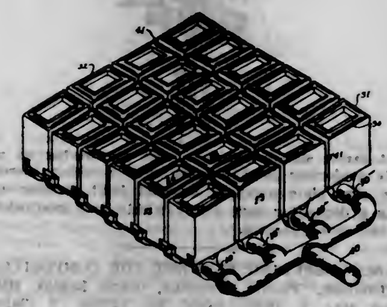
1. A telegraph key including a lever, two trunnions, bearings designed to receive said trunnions, one of said bearings containing a recess within which is seated a spring, and means associated with said bearing for adjusting the compression of said spring.

1,575,651. REHEATING-RADIATOR HOUSING. CLARENCE C. SHIPP, Indianapolis, Ind. Filed Sept. 15, 1924. Serial No. 737,724. 9 Claims. (Cl. 257—135.)



8. The combination, with a radiator, a vertical radiator housing open at its top and bottom, a wall-box, a damper in the box, a box-base connecting the wall-box with the lower end of the housing, a door in the box-base substantially horizontal when closed and hinged at its rear edge to the box, a bent lever pivoted at the bend, a link connecting one arm of the lever with the damper, elastic means connecting the other arm of the lever with the door and manual means for shifting the lever to change the positions of the damper and door.

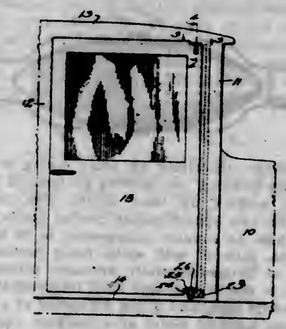
1,575,652. AUTOMOBILE SIGNALING DEVICE. GEORGE M. SNODGRASS, Springfield, Mo. Filed Nov. 6, 1923. Serial No. 673,144. 2 Claims. (Cl. 177—337.)



1. In a direction indicator for automobiles having a battery and a steering mechanism, a pair of direction indicating lamps, a swivelling spot lamp, a circuit for each of said lamps including said battery, manually controlled means for simultaneously shifting the position

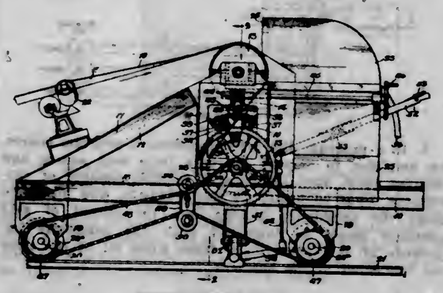
of the spot light and closing the battery circuit thereof, said means also serving to close a circuit through a respective direction indicating lamp, and means con-

trolled by the steering mechanism including a portion of said first mentioned means to open both lamp circuits upon turning movement of the steering mechanism.



1,575,653. GAS BURNER. PHILIP J. SONNER, Moline, Kans. Filed July 27, 1925. Serial No. 46,348. 3 Claims. (Cl. 158—106.)

1. In gas burners, a box-like element including four side members and a bottom member but open at the top, a tubular element centrally and vertically arranged as a part of the bottom of said box-like element and extending above and below said bottom; post elements one for each corner of said box-like element; a cover element having a depressed central portion and upwardly and outwardly flaring edge portions supported by said post elements; gap spacings as gas orifices between the edges of the cover element and the top edge portions of the four sided element; an inverted box-like element integral with the base of said cover element arranged above the tubular portion of the first mentioned box-like element.

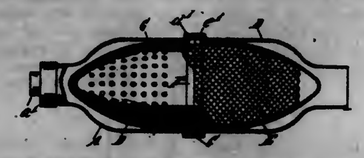


1,575,654. VEHICLE DOOR CONSTRUCTION. VINCENT SOUKUP, Laurens, Iowa. Filed Oct. 10, 1924. Serial No. 742,818. 3 Claims. (Cl. 296—44.)

1. In a vehicle door construction, a vehicle body including a door frame, an outer rearwardly extending flange forming a continuation of the outer surface of the door frame at its forward side, a door hinged to the frame near its forward edge in such manner as to have its forward edge concealed by the flange when it is in closed position, and a flange on the upper, lower and

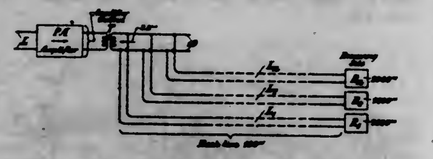
rear edges of the door adapted to overlap the door frame when the door is closed, the flanges on the upper and lower edges terminating short of the hinge axis.

1,575,655. CONVEYING APPARATUS. LEWIS A. STINSON, Oak Park, Ill., assignor of forty-nine one-hundredths to Augustus T. Perkins, Chicago, Ill. Filed Jan. 13, 1923. Serial No. 612,482. 14 Claims. (Cl. 198—186.)



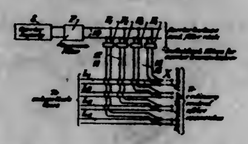
13. The combination with an endless belt conveyer, of a self-propelled tripper comprising a carriage, pulleys journaled thereon around which said belt passes, and means engageable with said belt for transmitting power therefrom to said carriage.

1,575,656. TERMINAL FOR ELECTRICAL CONDUCTORS. NATHANIEL W. STRATFORD and LEO PONDELICK, Chicago, Ill. Filed Nov. 22, 1923. Serial No. 676,233. 1 Claim. (Cl. 173—269.)



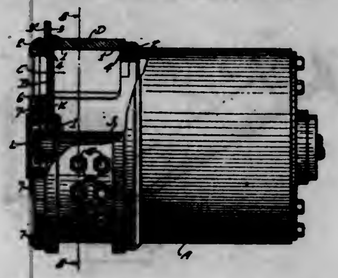
The combination with an electrical conductor wire, of a one-piece clip of sheet metal comprising a pair of flexible jaws and a tongue for connection to a contact, and a soft metal sleeve between the jaws and compressible thereby to force it into firm contact with the clip and the conductor wire, the clip having one or more perforations therein into which the soft metal will be forced when the jaws are contracted, to positively lock the sleeve and clip together.

1,575,657. SILENCER FOR GASEOUS CURRENTS. NICHOLAS STRAUSSLER, London, England. Filed June 3, 1925. Serial No. 34,536. 5 Claims. (Cl. 137—160.)



1. A silencer comprising an outer casing transversely divisible into sections, the meeting portions of which sections form sockets, an inner casing also transversely divisible into two approximately conical shells each having at its base an annular enlargement to fit into one of said sockets, each of said shells being perforated with a number of circumferentially arranged perforations located only in the part of said shell intermediate between its base and its apex, and filling consisting of a permeable homogeneous mass of metal of a resilient character enclosed within said inner casing.

1,575,658. VOLUME CONTROL FOR PROGRAM-DISTRIBUTION SYSTEMS. MAURICE E. STRIBBY, Millburn, N. J., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed Sept. 7, 1923. Serial No. 661,482. 4 Claims. (Cl. 179—171.)

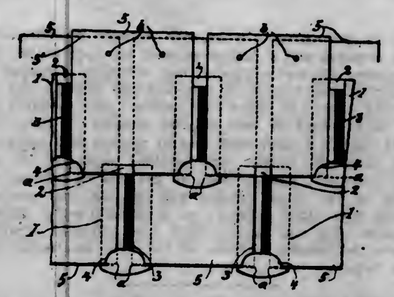


1. In a program distribution system, a program source, an amplifier to amplify currents from said source and impress them upon bus-bars, a variable number of subscribers' lines connected to said bus-bars, and means to make the impedance looking into the output of said amplifier small as compared with the composite impedance of said subscribers' lines when all of the lines are connected to the bus-bars.

1,575,659. FILTER ARRANGEMENT FOR WIRE PROGRAM-DISTRIBUTION CIRCUITS. MAURICE E. STRIBBY, Millburn, N. J., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed Sept. 7, 1923. Serial No. 661,483. 8 Claims. (Cl. 179—15.)

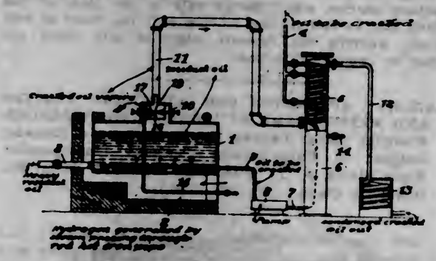
1. A transmission system comprising a common transmission path, a plurality of individual transmission paths associated therewith and means to segregate the individual paths from each other at certain frequencies comprising a common filter element in the common transmission path and individual filter elements in the individual paths, each individual element being so related to the common element that the two cooperate to form a band filter transmitting a band of frequencies through the individual path with substantially uniform attenuation while substantially suppressing the frequencies lying without the band.

1,575,660. MOTOR HOUSING. JOSEPH TRIPEL and WILLIAM F. EKNES, St. Louis, Mo., assignors to Marcha Storage Battery Locomotive Company, St. Louis, Mo., a Corporation of Delaware. Filed Oct. 26, 1922. Serial No. 597,219. 2 Claims. (Cl. 172—36.)



1. A motor housing consisting of a casing having a cylindrical wall provided with an opening, an annular closure for said opening surrounding said wall and provided with a co-operating opening, and guides on the exterior of said cylindrical wall that embrace reduced portions at the edges of said annular closure.

1,575,661. SIGN. RAY A. THOMPSON, Chicago, Ill. Filed July 26, 1924. Serial No. 728,317. 10 Claims. (Cl. 40—145.)

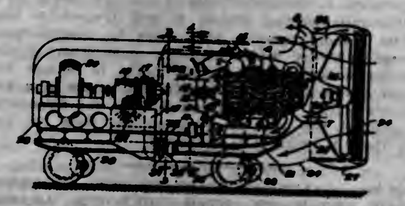


1. A street sign including a post cap having an upwardly projecting joint member with a socket therein, and a sign plate arranged on said joint member and having a depending part fitting within and interlocking with the socket therein.

1,575,662. SECURING ELEMENT FOR COMPOSITION SHINGLES. FRANK VANDEVEN, Grand Rapids, Mich. Filed Mar. 2, 1925. Serial No. 12,659. 3 Claims. (Cl. 108—33.)

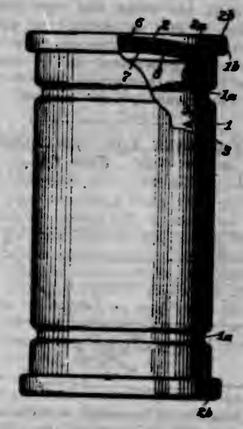
1. In an element for securing composition shingles to a roof, a thin, narrow, oblong sheet of material laid under, and lengthwise of the adjacent edges of the shingles and having curved diagonal slots in the lower end to receive and secure the lower corners of adjacent shingles, and a lip formed at the upper end adapted to interlock with the center of the lower end of the next upper shingle.

1,575,663. APPARATUS FOR TREATING OIL. FRANK C. VANDE WATER and FREDERICK R. SUNDERMAN, Newburgh, N. Y., assignors to Petroleum Laboratories Inc., Newburgh, N. Y., a Corporation of New York. Filed Jan. 16, 1923. Serial No. 613,011. 1 Claim. (Cl. 196—127.)



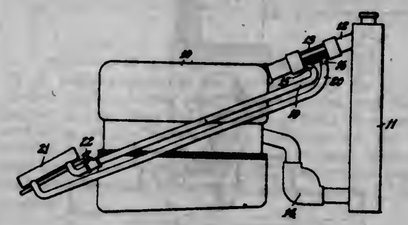
A device of the character described, including a still body having a dome, a supplemental chamber within the dome having a series of diametrically opposed valved openings therein, one set of opposed openings being connected to a gas supply, the other set of openings communicating with the still body.

1,575,664. DETACHABLE HEEL FOR FOOTWEAR. LEOPOLD VAN ROY, Brussels, Belgium. Filed Aug. 9, 1924. Serial No. 731,226. 11 Claims. (Cl. 36—36.)



1. A detachable resilient heel comprising, a heel member, and a support member attachable to a shoe heel, projections of dovetailed transverse section on the heel member, lateral cylindrical-faced grooves in the support member, other grooves in the support member having a dovetailed transverse section which matches that of the projections, the projections of the heel, when placed in one position on the support member, engaging in the cylindrical-faced grooves thereof, and upon rotation of the heel, engaging in said other grooves.

1,575,665. POWER PLANT. RUDOLF WAGNER, Hamburg, Germany, assignor to The Superheater Company, New York, N. Y., a Corporation of Delaware. Filed Nov. 22, 1923. Serial No. 676,453. 2 Claims. (Cl. 60—94.)



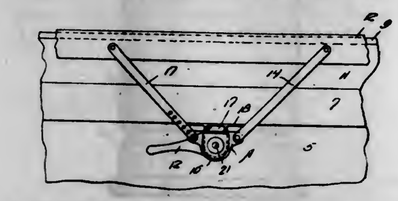
1. A power plant for automotive vehicles comprising a high speed turbine, means connected with and driven by said turbine for propelling the vehicle, a high pressure steam generator for generating steam for said turbine, an air-cooled condensing means, connections between said generator, turbine and condensing means to provide a closed path for the continuous circulation of the working medium, the said high pressure steam generator including a water tube boiler having small pipes, a superheater, a feed water heater, and a preheater for the combustion air, all arranged one behind the other substantially in contracting relationship in the path of the combustion gases, the inlet to the preheater being arranged immediately behind the condensing means, an escape for the combustion gases connected to the preheater, and a fan for conveying the combustion air from said preheater to said generator.

1,575,666. ACID-PROOF CONTAINER. RAYMOND M. WARNER, Akron, Ohio, assignor to The Miller Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed July 14, 1925. Serial No. 43,528. 2 Claims. (Cl. 220—63.)

1. A portable cylindrical acid-proof container comprising a cylindrical body having internal annular shoulders adjacent the ends thereof, said body and said heads having rubber linings, the edges of the body lining being rolled to form annular beads overlying the shoulders, and said heads being secured to the body with the margins of the lining thereof pressed against the beads.

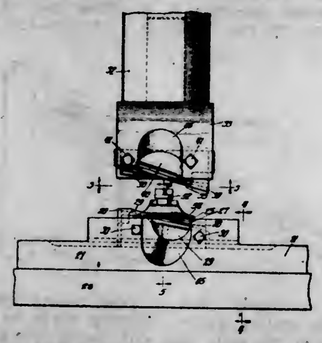
1,575,667. HEATER FOR MOTOR CARS. CHARLES B. WARNER, Montclair, N. J. Filed Dec. 24, 1924. Serial No. 757,797. 8 Claims. (Cl. 237—12.3.)

1. In combination with a water cooling system, a hot water heating system comprising means for diverting part of the water from said cooling system under a circulating pressure built up by the velocity of flow of the water in said cooling system; a radiating member disposed below said diverting means; a feed conduit connecting said diverting means with said radiating member; means disposed above said radiating member



and adjacent said diverting means for returning the diverted portion of water to said cooling system; and a return conduit connecting said last mentioned means with said radiating member.

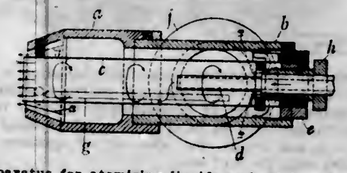
1,575,668. PIANO. WALTER W. WEISER, Chicago, Ill. Filed Oct. 10, 1924. Serial No. 742,775. 2 Claims. (Cl. 84—187.)



2. In a piano, a frame, a sounding-board and a string-plate supported on the frame, spacing-members adjustably mounted in the front and rear portions of the frame adjacent to and supporting the plate in spaced relation to the board, holding-members clamping the plate on the spacing-members, and a combined spacer and pressure member adjustably seated in the frame intermediate the sounding-board bridges.

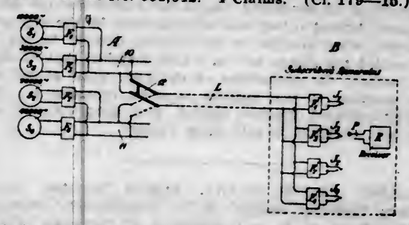
1,575,669. FASTENER FOR CONTAINERS. ALBERT R. WOLF, Snyder, Nebr. Filed Oct. 9, 1925. Serial No. 61,527. 4 Claims. (Cl. 292—140.)

1. In combination, a container, a cover slidably mounted on the container, a cleat on the container, a pair of links engaged with the cover, a casing supported by the links, a shoe, a shank extending from the shoe into the casing, a cam in the casing for pushing the shank therefrom and forcing the shoe into frictional engagement with the cleat, and means for operating the cam.



1,575,670. METHOD OF AND APPARATUS FOR MAKING FUEL VAPORIZERS. JOSEPH WROBLEWSKI, Chicago, Ill. Filed May 5, 1922. Serial No. 558,739. 6 Claims. (Cl. 153—2.)

1. The method of making a serrated baffle plate from a flat metal blank which comprises stamping the lateral edges of the blank in successive steps to form successive offsets, and twisting the blank spirally during said stamping operation.



5. Means for making baffle plates of the class described, comprising a base, a reciprocating member cooperating therewith, means for feeding a blank relative to said base and said reciprocating member, and a pair of offsetting dies carried by said base and said reciprocating member, each of said dies comprising an intermediate portion which moves only to the plane of the blank and an end portion moving past the plane of said blank, whereby the opposite edges of said blank are offset in opposite directions.

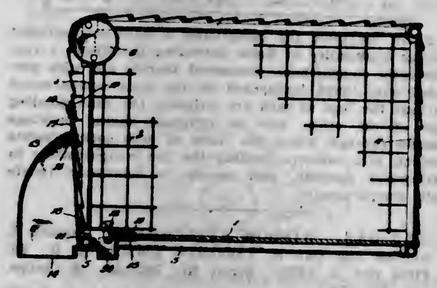
1,575,671. APPARATUS FOR ATOMIZING LIQUIDS AND MIXING SAME WITH GASEOUS SUBSTANCES. WARWICK HENRY BEANES, Kingsway, London, England, assignor to Baker-Perkins Company, Incorporated, White Plains, N. Y. Filed Feb. 20, 1925. Serial No. 10,674. 1 Claim. (Cl. 299—140.)

Apparatus for atomizing liquids and mixing same with air, comprising a cylinder having a plug at one end and an outlet nozzle at the opposite end, a tube nested within said cylinder and extending through said nozzle the said nested parts forming an annular chamber between them, a branch connection admitting compressed air to said chamber, means for admitting liquid to said tube, and means admitting air from the said chamber to the said tube both by way of a tangential port and a port at the inner end of the tube, and a screw in said cylinder plug controlling the quantity of air admitted by way of said end port.

1,575,672. WIRE CARRIER PROGRAM-DISTRIBUTION SYSTEM. OTTO B. BLACKWELL, Plandome, N. Y., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed Sept. 8, 1923. Serial No. 661,642. 4 Claims. (Cl. 179—15.)

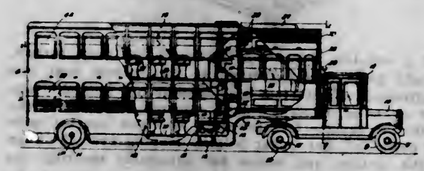
1. In a program distributor system, a plurality of program sources having different characteristic carrier frequencies, a plurality of sets of bus-bars, means to simultaneously impress certain of said frequencies upon certain of said bus-bars and means to simultaneously impress other of said frequencies upon other of said bus-bars, a transmission circuit, means to connect said circuit selectively to said bus-bars and means at a subscriber's station to discriminate between the frequencies transmitted over said transmission line from the bus-bars through which it is connected.

1,575,673. CALENDAR, DIARY, WRITING OR OTHER PAD, AND BLOCK WITH TURNOVER LEAVES. JOHN ALEXANDER CAMERON, Glasgow, Scotland. Original application filed June 29, 1923, Serial No. 648,547. Divided and this application filed Dec. 16, 1924. Serial No. 756,285. 1 Claim. (Cl. 40—119.)



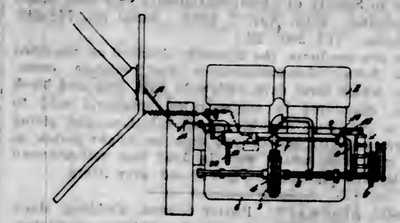
A calendar comprising folded leaves, a folded cardboard forming the back of the calendar, said leaves and

said folded cardboard having an opening in the fold, and a wire arranged longitudinally in the fold of the cardboard, provided at the ends with downwardly extending legs arranged between the folded cardboard and



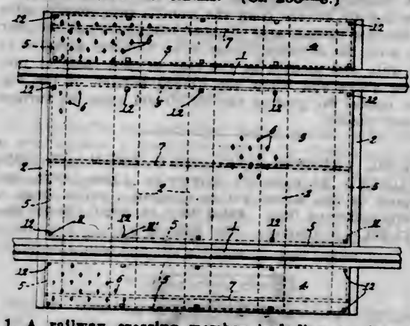
also provided at a point intermediate the ends with a loop projecting upwardly through the said opening in the cardboard and forming means by which the same may be suspended.

1,575,674. POULTRY COOP. LOUIS A. COHEN, Central City, Ky. Filed Sept. 26, 1925. Serial No. 58,915. 4 Claims. (Cl. 119—19.)



1. Feeding and watering means for poultry coops comprising a feed box, a watering trough, means for securing the feed box and the watering trough to the coop along one side of the same, means for supplying water to the trough, and a gate closing the inner side of the feed box and separating the same from the trough, said gate being of a material which deteriorates under moisture.

1,575,675. MOTOR BUS. JESSE D. EGGLESTON, Chicago, Ill. Filed Jan. 17, 1923. Serial No. 613,093. 5 Claims. (Cl. 296—28.)



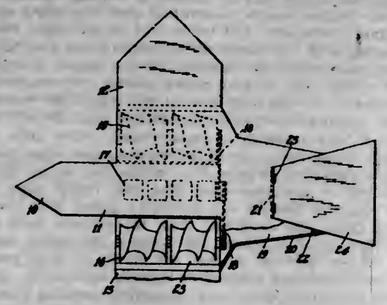
1. A motor bus comprising a compartment unit having lower and upper rear compartment decks, a forward compartment deck in a plane intermediate of the rear compartment decks, an upper forward compartment deck above the plane of the upper rear compartment deck, a door for the lower rear compartment, and a stairway rising forwardly from the lower rear compartment deck to the level of the lower forward compartment deck and thence rising rearwardly to the upper rear compartment deck and thence rising forwardly to the upper forward compartment deck.

1,575,676. SPEED CONTROL. GEORGE P. EVANS, York, Pa. Filed May 2, 1924. Serial No. 710,590. 1 Claim. (Cl. 264—14.)

The combination with an engine and a valve for controlling the supply of fuel thereto, of a pump operating with the engine, means cooperating with the pump and including a receptacle and intake and return pipes communicating with the receptacle, for maintaining a circulation of fluid during the operation of the engine, a valve in the return pipe of said means, means for connecting said valve to the throttle lever of the engine for retarding the circulation of fluid through the pipe, thereby to set up a back pressure, a supplemental return pipe, a normally closed valve therein adapted to open when subjected to excessive pressure from within the return pipe, a cylinder in communication with the return pipe, a piston mounted therein for movement under back pressure, a drain pipe extending from the cylinder back of the piston, yielding means for holding the piston normally in one position against the action of back pressure, and a working connection between said piston and the fuel controlling valve, said connection including means for yieldingly resisting relative movement of the piston and the fuel controlling valve, said valve being shiftable independently of the pressure operated means to accelerate the engine above normal speed determined by the pressure operated means.

1,575,677. RAILWAY CROSSING. ASA GILBERT FARMER, Chattanooga, Tenn. Filed Dec. 14, 1925. Serial No. 75,375. 6 Claims. (Cl. 238—8.)

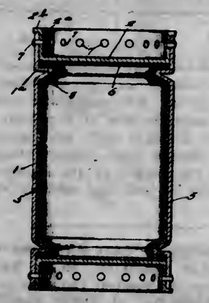
1. A railway crossing member including an inverted box-like casting having continuous side and end flanges adapted to rest upon the ties of a railway, intersecting reinforcing means integral with said member and surrounded by the flanges, and means integral with and projecting below the flanges of the member for engagement with the ties to hold the member against lateral creeping.



1,575,678. DYESTUFFS AND PROCESS OF MAKING SAME. JAROSLAV FRÖHLICH, Basel, Switzerland, assignor to Society of Chemical Industry in Basle, Basel, Switzerland. Filed Oct. 21, 1924. Serial No. 745,022. 10 Claims. (Cl. 260—28.)

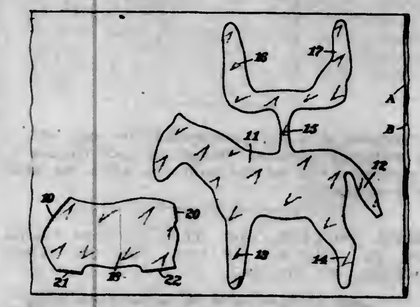
1. As a new process, the manufacture of vat dyestuffs, which consists in causing sulphur dichloride to act upon 2:5-diarylidobenzoquinones.

1,575,679. DYESTUFFS AND PROCESS OF MAKING SAME. JAROSLAV FRÖHLICH, Basel, Switzerland, assignor to Society of Chemical Industry in Basle, Basel, Switzerland. Filed Nov. 7, 1924. Serial No. 748,492. 10 Claims. (Cl. 260—23.)



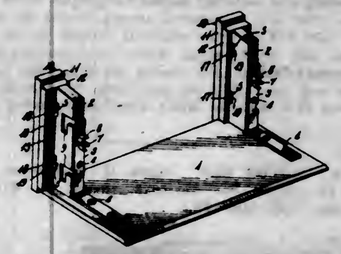
5. As new products, the dyestuffs obtained as described from 2:5-diarylidobenzoquinones and sulphur monochloride, which form dark yellow to dark blue and black powders, dissolving in concentrated sulphuric acid to brown to red-violet and blue-green solutions and giving with hydrosulphite and caustic soda lye bright yellow to brown vats from which wool is dyed fast yellow-brown to red-brown, olive-green, green and grey tints.

1,575,680. AIRCRAFT. PHILIP GIEFER, Fielding, Mont. Filed Dec. 3, 1925. Serial No. 72,931. 3 Claims. (Cl. 244—14.)



1. An aeroplane comprising a stream-line fuselage, sustaining planes extending in opposite directions from the fuselage, a housing beneath each plane forming a wind tunnel, a worm rotatably mounted in each housing, said worms being adapted to rotate in opposite directions, an elevator rudder rearward of the worms, walls on said aeroplane forming a chamber communicating with the wind tunnels, said chamber being open at the rear to guide the air stream from the tunnels into contact with the elevator rudder, said chamber being closed at the rear by a wall, the elevator rudder being hingedly mounted to said wall, and mouths at the rear of said chamber projecting above and below the hinged portion of the elevator rudder for guiding the air stream upon the surface of said rudder.

1,575,681. RUBBER-LINED ACID DRUM OR CONTAINER. RICHARD T. GRIFFITHS, Akron, Ohio, assignor to The Miller Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed May 17, 1924. Serial No. 713,984. 3 Claims. (Cl. 220—63.)

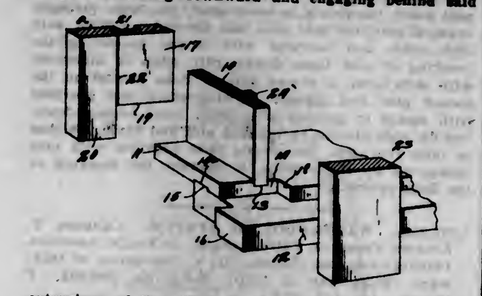


1. A portable cylindrical acid-proof shipping drum, comprising a cylindrical body having inwardly projecting annular shoulders adjacent each end, closure heads secured to said ends, said body having a rubber lining the marginal portions of which overlie said shoulders, and said heads having rubber linings the marginal portions of which overlie said shoulders, said overlapping marginal portions of the linings being clamped between the shoulders and the heads.

1,575,682. INFLATABLE FIGURE TOY. RICHARD T. GRIFFITHS, Akron, Ohio, assignor to The Miller Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed July 8, 1925. Serial No. 42,251. 8 Claims. (Cl. 46—40.)

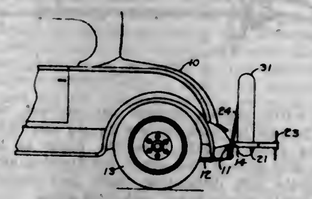
2. An inflatable toy comprising a main compartment having a plurality of limbs extending therefrom, a supplemental compartment connected thereto and also provided with limbs juxtaposed on the main compartment so that the legs of each are adjacent the corresponding legs of the other, and an envelope having openings therein through which the limbs of both compartments project, said envelope holding the two compartments in juxtaposed position, and means to commonly inflate both compartments.

1,575,683. WINDOW ATTACHMENT. ROBERT E. GROVES and ORA B. CARNAHAN, Clarksburg, W. Va. Filed Oct. 3, 1922. Serial No. 592,169. 8 Claims. (Cl. 45—104.)



3. A window attachment having a platform bottom, upright posts fixedly secured to the bottom near one longitudinal edge thereof and opposite one another, two-part cleats of different length adjustably applied to the posts, the shorter lengths being in direct contact with the posts and the longer lengths lapping over the edge of the bottom, and means for adjustably securing the cleats to the posts.

1,575,684. WINDOW FRAME. ANTHONY HABBSHAN, Bogota, N. J. Filed May 26, 1925. Serial No. 33,005. 3 Claims. (Cl. 20—11.)

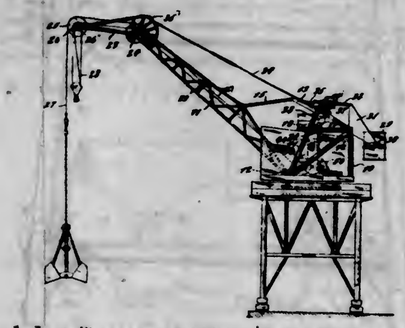


1. A window frame structure including a sill and a sub-sill, pulley stiles engaged with the sub-sill, the sub-sill having a width greater than that of the stiles and having its forward corners cut away to form a rectangular recess extending longitudinally of the sub-sill, blind stops having their lower ends disposed in said cut-away

portions of the sub-sill, the sill being extended laterally beyond the ends of the sub-sill and the blind stops having tongues extending downward and engaging behind said

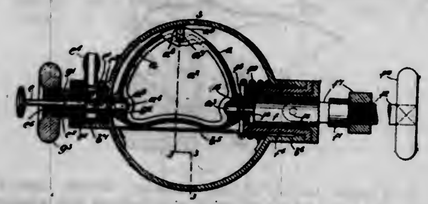
extensions of the sill, and casings, each disposed vertically against the faces of the corresponding blind stops and resting at their lower ends upon the sill.

1,575,685. TIRE-CARRIER SUPPORT. KARL L. HERRMANN, Detroit, Mich., assignor to The Studebaker Corporation, South Bend, Ind., a Corporation of New Jersey. Filed Sept. 20, 1924. Serial No. 738,910. 9 Claims. (Cl. 293—55.)



1. In combination with a motor vehicle provided with rear frame ends having a flat face, and a tire carrier having supporting arms, of means comprising a projecting stud on each of said frame ends to receive the ends of said tire carrier arms, and means to secure said arms against the flat faces on said frame ends.

1,575,686. ABRADING MACHINE. EDWARD F. HODGKINS, Beverly, Mass., assignor, by mesne assignments, to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Oct. 15, 1923. Serial No. 668,661. 11 Claims. (Cl. 51—194.)

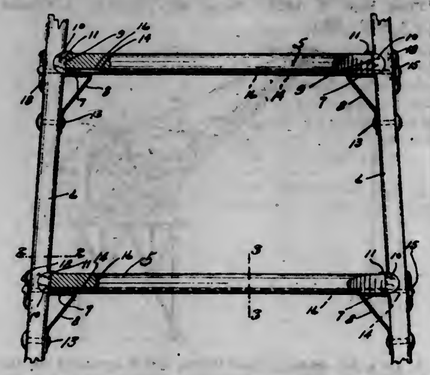


1. A pneumatic buffing and scouring tool comprising a hollow mandrel provided with an air outlet opening near the tool receiving end, an elastic casing for said mandrel formed as an elongated cylinder closed at one end and provided with means for attaching the same to the mandrel at the closed end of the cylinder, and means for clamping the open end of the cylinder to the mandrel at a point beyond the outlet opening.

1,575,687. JIB CRANE. FREDERICK WILLIAM HOLLICK, Gourock, Scotland, assignor to The Babcock & Wilcox Company, Bayonne, N. J., a Corporation of New Jersey. Filed Sept. 7, 1922. Serial No. 586,603. 6 Claims. (Cl. 212—39.)

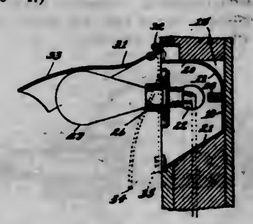
1. In a jib crane, a load-lifting drum mounted on the crane frame, a pulley mounted coaxially with the drum, a load-lifting rope passing from the drum to the end of the jib and the weight to be lifted and returning over the end of the pulley to and partially around said pulley and anchored to the crane frame, and means to change the inclination of the jib.

1,575,688. MANUFACTURE OF DENTAL PLATES AND APPARATUS THEREFOR. CHRISTE JOANNIDES, Constantinople, Turkey. Filed Dec. 13, 1920. Serial No. 430,571. 30 Claims. (Cl. 18—33.)



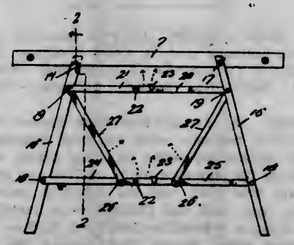
1. Apparatus for producing dental plates, comprising, in combination, a container, means for closing said container, said container being adapted to hold a mould, a vessel adapted to be tight and inclosing said container, a rubber injecting apparatus, and directly a passage between said injecting apparatus and said mould container, and another passage between the interior of said mould container and the exterior of said vessel.

1,575,689. STEPLADDER. JOHN E. KALGREN, Minneapolis, Minn., assignor to J. R. Clark Company, Minneapolis, Minn., a Corporation of Minnesota. Filed Sept. 10, 1924. Serial No. 736,906. 1 Claim. (Cl. 228—58.)



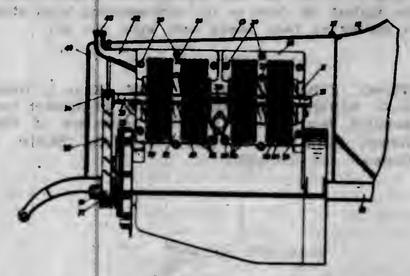
In a ladder, the combination with ladder bars and steps, of metal brackets bent to form step-supporting shelves and oblique depending legs, end plates extending upwardly from the step-supporting shelves and interposed between said side bars and the adjacent ends of the co-operating step, said end plates having laterally bent ears that embrace the ladder bars and further provided with inturned upper flanges that overlap the ends of said steps, said steps having longitudinal channels in their under sides, and tie rods extended in the channels of said steps immediately above the shelf-forming portions of said brackets and passed through perforations in the end plates of said brackets and through perforations in said side bars, fastening devices other than said

tie rods positively securing said brackets to said side bars, said rods serving to tie said side bars, steps and brackets together against lateral movements, said brackets



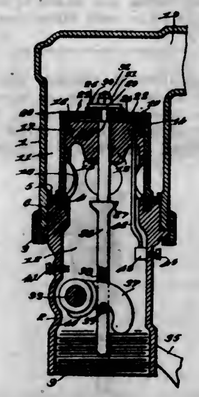
having open ended seats in to which and from which the steps may slide edgewise when said tie rods are removed, the said rods, when applied, serving to positively lock the steps against edgewise displacement.

1,575,690. AISLE CHAIR. JOSEPH B. KAUSAL, Chicago, Ill. Filed Jan. 19, 1925. Serial No. 3,235. 6 Claims. (Cl. 240—4.)



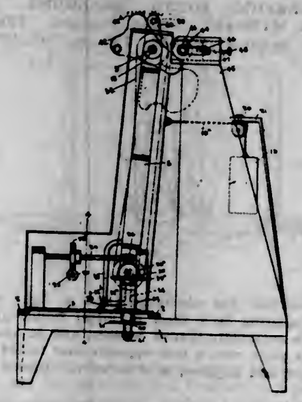
1. A chair having a lamp chamber therein open at one side, a lamp hinged within the chamber and adapted to be swung out through said open side, and a light-directing closure plate hinged to swing outwardly to allow the outward swinging of said lamp, substantially as described.

1,575,691. QUILTING FRAME. ELMER E. KLEE, Triplett, Mo. Filed Jan. 26, 1925. Serial No. 4,891. 1 Claim. (Cl. 45—24.)



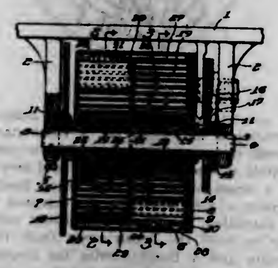
In a quilting structure of the class described, a frame including a pair of side rails, and a pair of knock-down leg structures for said side rails, each knock-down leg structure including two pairs of legs, the legs of each pair being inclined toward each other upwardly, bolts connecting the upper ends of the legs of each pair, the side rails of the frame adapted to rest on said bolts, a pivot pin piercing the legs of each pair below the bolt thereof, a second pivot pin piercing the legs of each pair below the first mentioned pivot pin, links pivotally engaged with the first pins and pivotally engaged with each other and provided with means preventing the breaking of said links downwardly when in alinement with each other, a second pair of links pivoted on the second pins and pivoted to each other and provided with means to prevent them from being broken downwardly, rods pivoted on the first pins and having notches in their free ends, the second links provided with pins engageable by the notches, to prevent the breaking of the links upwardly.

1,575,692. WATER-COOLING SYSTEM. CHARLES Y. KNIGHT, Pasadena, Calif., assignor to Knight American Patents Company, Chicago, Ill., a Corporation of Delaware. Filed Mar. 3, 1919. Serial No. 280,501. 7 Claims. (Cl. 123—173.)



1. A water cooling system for engines comprising cooling jackets for said engines having circulating pipes extending approximately from the upper to the lower parts of said jackets and means for drawing air between said jackets and circulating pipes and throwing said air outwardly into contact with said pipes.

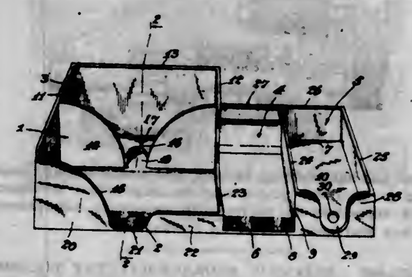
1,575,693. FLUSH VALVE. EMANUEL KROMER, Spokane, Wash. Filed Oct. 13, 1923. Serial No. 668,370. 5 Claims. (Cl. 137—93.)



2. A flush valve comprising a casing, a valve structure in said casing for controlling flow therethrough, said structure including a movable valve member, an operating rod longitudinally journalled in said structure and operatively connected with said member, and manually operable cam means for imparting endwise thrust to said rod and acting to hold the latter against binding in its journal.

1,575,694. GRINDING AND POLISHING MACHINE. FRANK KUHN and LAURENCE H. THOMAS, Detroit, Mich., assignors to American Electrical Heater Company, Detroit, Mich., a Corporation of Michigan. Filed July 24, 1922. Serial No. 577,187. 6 Claims. (Cl. 51—101.)

1. The combination with a fixed frame and a swinging frame, of a rotatable pattern mounted on one of said frames, a cooperating abutment on the other of said frames, means for yieldingly urging said swinging frame in one direction, means for rotating said pattern whereby said swinging frame is oscillated in the opposite direction through a limited distance, means for stopping rotation of said pattern operable by the swinging of said frame in said opposite direction through a distance greater than said limited distance, and manually operable means for swinging said frame through said greater distance, said manually operable means being inoperative to move said frame until the latter is moved a predetermined distance in said opposite direction.



1,575,695. SPRING MOTOR. WILLIAM D. LA RUE, Philadelphia, Pa., assignor to Victor Talking Machine Company, a Corporation of New Jersey. Filed May 14, 1924. Serial No. 713,141. 9 Claims. (Cl. 185—45.)

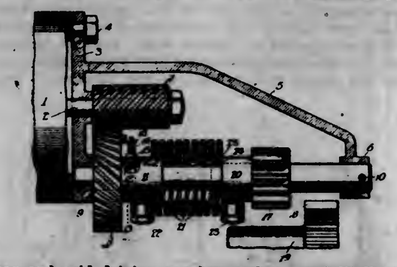
1. In a spring motor, a spring barrel, a power unit mounted within said barrel, with an annular reservoir for lubricant interposed between said unit and said barrel, and means establishing communication between said reservoir and the interior of the unit.

1,575,696. POSTING TRAY. CLARENCE H. LA SELLE, Wabash, Ind. Filed Feb. 12, 1923. Serial No. 618,626. 6 Claims. (Cl. 211—37.)

1. A posting tray comprising a base, a pair of check compartments thereon arranged one behind the other between the forward and rear edges of said base, and occupying a portion of said base at one side thereof, and a pair of inner and outer deposit slip compartments arranged at right angles to the longitudinal axes of said first named compartments and laterally thereof between said forward and rear edges, and occupying the remaining portion of said base at the opposite side thereof; said inner deposit slip compartment and said check compartments having a common wall; and the forward portions of the front check compartment and said inner deposit slip compartment being arranged adjacent to each

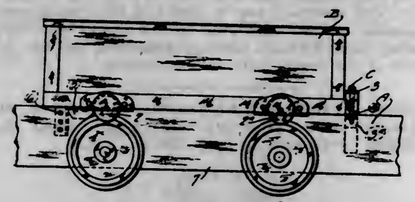
other at said forward edge to permit of the signatures on the slips and checks being placed in juxtaposition when the signatures on said slips are at the bottom thereof, and the adjacent forward portions of said front check compartment and said inner deposit slip compartment being relatively low to permit of the simultaneous inspection of the signatures on the checks and slips therein, said forward portions permitting of the removal of the checks and slips individually.

1,575,697. PAINTBRUSH. SAMUEL JOHN LESSING, St. Joseph, Mich. Filed Mar. 19, 1925. Serial No. 16,598. 8 Claims. (Cl. 15—248.)



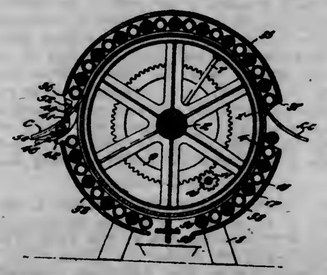
1. A brush for applying liquids, comprising a handle, a bristle knot arranged at one end of the handle, a ferrule surrounding the handle and base of the bristle knot, said ferrule having a single thickness inner wall and a double thickness outer wall, the lower edge of the inner wall being integral with the lower edge of the inner thickness of the outer wall, forming in cross section a trough between the single thickness and the double thickness, shaped to catch any liquid which might otherwise run down the handle on to the hand of the user, when the brush is used with the handle pointing downward.

1,575,698. ENGINE STARTER. WILLIAM L. MCGRATH, Elmira, N. Y., assignor to Eclipse Machine Company, Elmira, N. Y., a Corporation of New York. Filed Aug. 2, 1919. Serial No. 314,952. 3 Claims. (Cl. 74—7.)



1. An engine starter drive comprising a driving spiral gear, a second spiral gear driven thereby, an engine driving member adapted to be moved automatically into operative engagement with a member of the engine to

be started and to thereupon drive such engine member, a shaft on which said driven gear and said driving member are loosely mounted, for both rotary and longitudinal movements, a driving connection between said driven

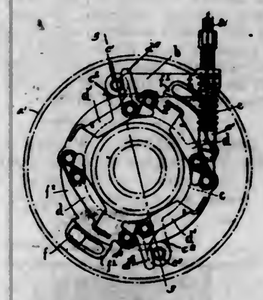


gear and said driving member, and means initially tending to hold the pinion against longitudinal movement and thereafter to assure such movement and prevent rotary movement thereof on the shaft.

1,575,699. ELECTRIC STORAGE-BATTERY LOCOMOTIVE. RAYMOND MANCHA, St. Louis, Mo., assignor to Mancha Storage Battery Locomotive Company, St. Louis, Mo., a Corporation of Delaware. Filed Apr. 14, 1924. Serial No. 706,432. 5 Claims. (Cl. 104—34.)

1. An electric storage battery locomotive, comprising a chassis, a battery box mounted on said chassis, and a device for coupling said box to said chassis consisting of vertically-aligned members on said box and chassis and a removable pin arranged in said members, said pin being long enough to permit said box to move vertically relatively to the chassis high enough to cause the chassis to clear a supporting structure on which the box is sustained.

1,575,700. PROCESS OF AND APPARATUS FOR MAKING RUBBER STRIPS. HARVEY F. MARANVILLE and CHARLES W. STEELE, Akron, Ohio, assignors, by mesne assignments, to The Firestone Tire and Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed Nov. 8, 1920. Serial No. 422,512. 18 Claims. (Cl. 18—6.)

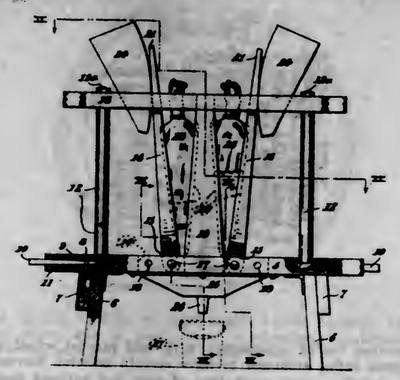


1. Mechanism for curing rubber strip comprising a constantly moving member having a grooved surface, a second constantly moving member opposite said surface and closing the groove therein, means forcing said members yieldingly together at all times, and means for heating both members.

1,575,701. ELECTRIC GAS-DISCHARGE TUBE FOR PHOTOGRAPHIC SOUND RECORDING. HARRY GRINDELL MATTHEWS, London, England. Filed July 10, 1923. Serial No. 650,590. 1 Claim. (Cl. 176—16.)

In an electric gas discharge tube, a light emitting cathode consisting of a sheet of metal folded about its middle with outwardly turned borders, and an anode consisting of a plate with a hole opposite said folded portion of said sheet and adjacent said outwardly turned borders thereof.

1,575,702. ELECTRIC STARTER FOR INTERNAL-COMBUSTION ENGINES. ALBERT HENRY MIDGLEY, Uxbridge, England, assignor to Midgley Car Lighting Company, Limited, London, England. Filed Apr. 3, 1922. Serial No. 549,330. 2 Claims. (Cl. 290—38.)

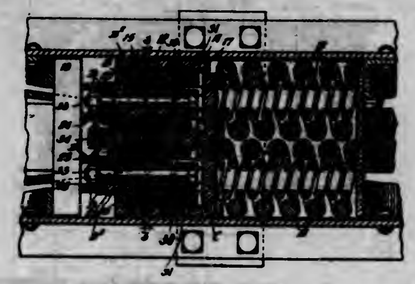


1. In an electric starter for internal combustion engines comprising a motor having a commutator and a movable brush in connection therewith to serve as the starting switch, means for controlling said movable brush comprising a brush-holder for said brush having an extension thereon, a ring having a pin adapted to contact with said extension, a spring controlling said ring so as normally to hold the brush away from the commutator segments and a Bowden wire for overcoming the force of said spring to allow the brush to contact with the commutator segments, substantially as described.

1,575,703. PROCESS FOR THE MANUFACTURE OF A HIGHLY-ACTIVE DECOLORIZING CHARCOAL. HELLMUTH MÜLLER-CLEMM, Mannheim-Waldhof, Germany, assignor to the Firm of Gesellschaft für Chemische Produktion m. b. H., Mannheim-Waldhof, Germany, a Corporation of Germany. Filed May 2, 1924. Serial No. 710,626. 15 Claims. (Cl. 252—8.)

1. The process of producing active carbon which comprises carbonising carbonaceous material in the presence of an alkali metal sulphide.

1,575,704. CHEESE PRESS. WLADISLAW NAYDA, Wilmington, Del. Filed May 28, 1925. Serial No. 33,467. 1 Claim. (Cl. 100—55.)



In a press of the type described, a base, a top plate spaced from the base and said base and top plate having vertically alined openings therein at opposite sides of the centers thereof, a stationary wedge-shaped presser member centrally positioned between the base and top plate, movable presser members having their lower ends adjustably pivoted in the base slots with the reduced upper end extending freely through the adjacent slot in the top plate and manually operable means associated with the upper end of each movable presser member above the top plate for moving the presser members toward the stationary presser member.

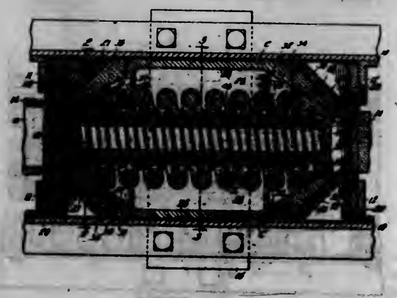
1,575,705. INTERIOR PARTITION. HENRY D. OBERDORFER and FREDERICK W. VOIGHTLANDER, Champaign, Ill.; said Voightlander assignor of his entire right to Circle A Products Corporation, Aurora, Ill., a Corporation of Illinois. Filed Jan. 2, 1923. Serial No. 610,115. 16 Claims. (Cl. 20—4.)

1. A knockdown partition comprising panel sections, means for removably securing the same together in partition formation, a top rail continuous across the top edges of said sections, and face plates secured both to opposite faces of said rail and said sections respectively.

1,575,706. FRICTION SHOCK-ABSORBING MECHANISM. JOHN F. O'CONNOR, Chicago, Ill., assignor, by mesne assignments, to W. H. Miner, Inc., a Corporation of Delaware. Filed Jan. 30, 1922. Serial No. 532,615. 7 Claims. (Cl. 213—33.)

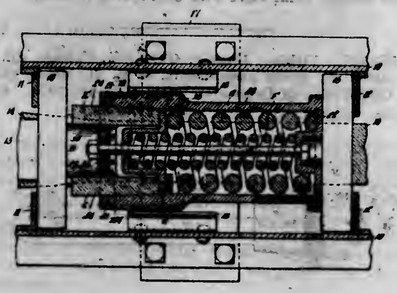
1. In a friction shock absorbing mechanism, the combination with a hollow shell provided with a plurality of interior partitions dividing it into a plurality of chambers, said partitions being responsive to laterally applied pressure; of a spring resistance; a set of longitudinally movable friction elements in one of said chambers and laterally expansive under applied pressure; a spring follower between said spring resistance and the inner end of said set of friction elements; and a longitudinally movable friction member in another of said chambers, said member being rigid with said spring follower.

1,575,707. YOKE. JOHN F. O'CONNOR, Chicago, Ill., assignor, by mesne assignments, to W. H. Miner, Inc., a Corporation of Delaware. Filed Mar. 16, 1923. Serial No. 625,459. 8 Claims. (Cl. 213—48.)



1. In a yoke, the combination with a hollow head adapted to receive and be attached to a coupler butt, said head having opposed lugs; of a pair of yoke arms each having a loop formed at its front end and arranged to detachably fit over one of the lugs of said head; and detachable means for connecting the rear ends of said arms.

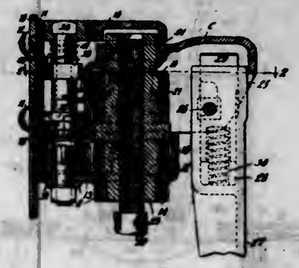
1,575,708. FRICTION SHOCK-ABSORBING MECHANISM. JOHN F. O'CONNOR, Chicago, Ill., assignor, by mesne assignments, to W. H. Miner, Inc., a Corporation of Delaware. Filed Apr. 25, 1923. Serial No. 634,428. 2 Claims. (Cl. 213—37.)



1. In a friction shock absorbing mechanism, the combination with front and rear follower casings, said casings each being provided with a pair of inwardly extending diverging wedge faces arranged at a relatively blunt angle with reference to the longitudinal axis of the mechanism; of a pair of longitudinally arranged friction shoes, each having an inner and outer wedge face at each end thereof, the outer wedge faces of said shoes being adapted to coact with the wedge faces of said followers and correspondingly inclined thereto, said inner wedge faces being inclined at relatively keen angles

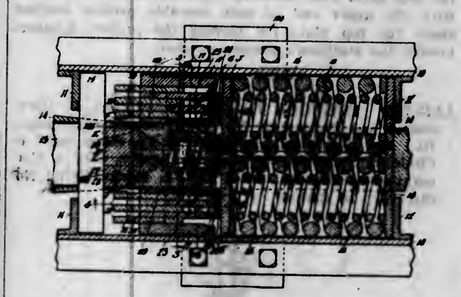
with reference to the longitudinal axis of the mechanism; spring followers at opposite ends of the mechanism normally disposed entirely within said casings, said spring

followers being provided with wedge faces correspondingly inclined to and adapted to cooperate with the inner wedge faces of said shoes; and a spring resistance coacting with said spring followers.



1,575,709. FRICTION SHOCK-ABSORBING MECHANISM. JOHN F. O'CONNOR, Chicago, Ill., assignor, by mesne assignments, to W. H. Miner, Inc., a Corporation of Delaware. Filed May 7, 1923. Serial No. 637,168. 13 Claims. (Cl. 213—31.

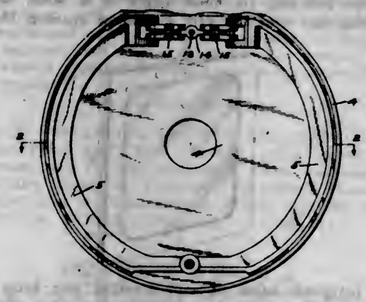
1. In a friction shock absorbing mechanism, the combination with follower acting means; of a friction shell having interior cylindrical friction surfaces, said shell and follower means being relatively movable; a spring resistance; and a friction system composed of a plurality of wedge friction shoes arranged in annular series, certain of said shoes being in direct engagement with said follower means and all of said shoes engaging said shell friction surfaces, said shoes being provided with interengaging wedge faces certain of said faces extending at relatively blunt angles with reference to the longitudinal axis of said mechanism and the remaining faces extending at relatively keen angles with the reference to the said axis.



1,575,710. HAND BRAKE FOR RAILWAY CARS. JOHN F. O'CONNOR, Chicago, Ill., assignor, by mesne assignments, to W. H. Miner, Inc., a Corporation of Delaware. Filed Apr. 3, 1924. Serial No. 703,903. 6 Claims. (Cl. 74—116.)

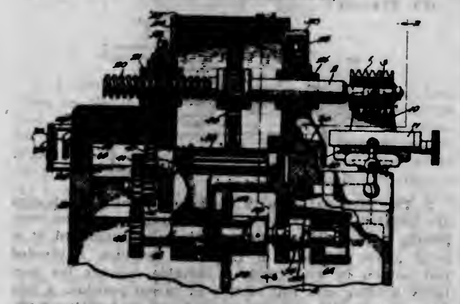
1. In a hand brake, the combination with a rotatable ratchet wheel; of means for rotating said wheel in a chain-winding direction; a release lever; a locking dog integral with said lever and cooperable with said ratchet wheel to hold the same against rotation in a reverse direction and adapted to be actuated by said lever to an inoperative position; and spring-influenced means automatically operable to hold said dog in its inoperative

position out of engagement with said ratchet wheel, said means being arranged to have certain relative movement to permit normal ratcheting of said dog without locking the same.



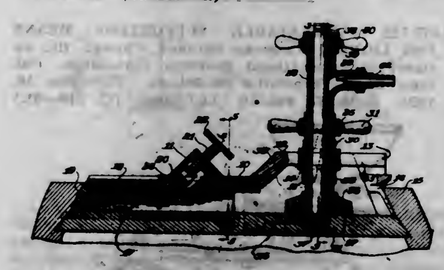
1,575,711. FRICTION SHOCK-ABSORBING MECHANISM. JOHN F. O'CONNOR, Chicago, Ill., assignor to W. H. Miner, Inc., Chicago, Ill., a Corporation of Delaware. Filed Apr. 13, 1925. Serial No. 22,516. 10 Claims. (Cl. 213—22.)

1. In a friction shock absorbing mechanism, the combination with a column element having longitudinally disposed friction surfaces; of a plurality of intercalated, relatively movable friction plates, certain of said plates being stationary with reference to said column element; ateral pressure creating means for compressing said plates and forcing the same against the column friction surfaces, said means including a pair of friction elements cooperating with the friction plates; a preliminary spring initially resisting inward movement of said elements; a main spring resistance adapted to be compressed by movement of said elements after a predetermined compression of said preliminary spring; and a pressure transmitting member movable toward and away from said column and co-operating with said lateral pressure creating means.



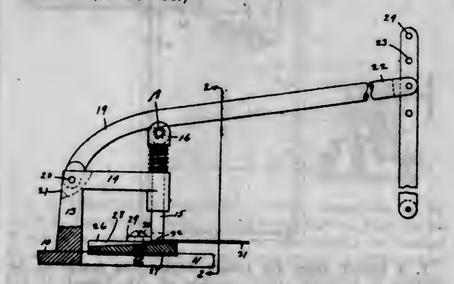
1,575,712. AUTOMOTIVE BRAKE. CLYDE A. OHL, Wilkinsburg, Pa., assignor to The Westinghouse Air Brake Company, Wilmerding, Pa., a Corporation of Pennsylvania. Filed Jan. 11, 1924. Serial No. 686,562. 4 Claims. (Cl. 188—152.)

1. In a vehicle brake, the combination with a brake drum, brake heads mounted in said drum, and a cover plate for said drum, of a brake chamber secured to said cover plate, a movable abutment in said brake chamber disposed in a vertical plane, a rod operable by said abut-



ment having its axis at right angles to the plane of the cover plate, and a toggle lever mechanism operatively connecting said rod with said brake heads.

1,575,713. GRINDING MACHINE. CARL G. OLSON, Chicago, Ill., assignor to Illinois Tool Works, Chicago, Ill., a Corporation of Illinois. Filed Aug. 1, 1923. Serial No. 655,016. 10 Claims. (Cl. 51—225.)

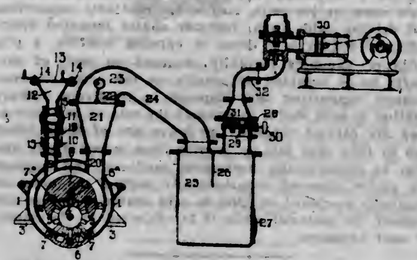


1. A grinder having a framework provided with a track, a tool holder and a work-holder, one of which is adapted to roll upon the track and the other is adapted to bring the tool and the work into contact at a point approximately as far from the plane of the track as the radius of the part which rolls upon the track.

1,575,714. TAP FOR BARRELS. HENRY G. O'REILLY, Joliet, Ill. Filed Mar. 17, 1924. Serial No. 699,831. 1 Claims. (Cl. 225—4.)

1. In a tap for kegs, the combination of a frame having a portion adapted to underlie the chime of said keg, a slide carried thereby adapted to underlie an opposite portion of said chime, a screw carried by said frame, a dog pivoted on the screw and engaging said slide, a stop on said frame adapted to limit the travel of said dog when in engagement with said slide, and means carried by the frame for clamping a discharge conduit over an opening in said keg.

1,575,715. SAW SET. FRED W. ORTH, Ocean Park, Wash. Filed Oct. 16, 1924. Serial No. 743,882. 1 Claim. (Cl. 76—68.)

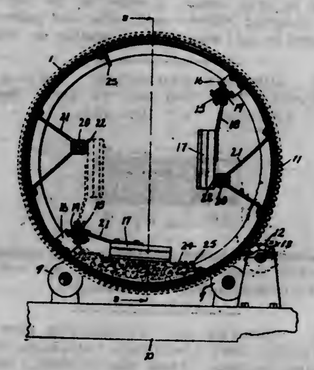


A saw set having, in combination, a slotted base plate having a gooseneck standard on its upper side, said standard having a vertical guide over the slot in said plate; an anvil slidably mounted in said slot, said anvil having a sloping slot formed therein whose sides are parallel with and whose sloping portion is over said plate slot; a transverse bar for clamping said anvil and forming a stop for the saw teeth; a plunger in said guide clearing the front of said clamp; a roller at the top of said plunger; a spring between said roller and guide; and a lever hinged to said standard and resting on said roller.

1,575,716. SHOTGUN CARTRIDGE. WILLIAM J. PAYNE, Chicago, Ill. Filed May 18, 1925. Serial No. 30,906. 12 Claims. (Cl. 102—15.)

1. A shotgun cartridge characterized by having a projectile charge composed in part of soft shot and in part of hard shot, substantially as described.

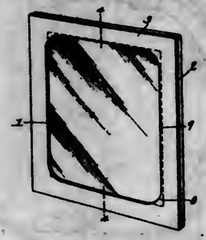
1,575,717. PROCESS AND APPARATUS FOR DISINTEGRATING DRY POWDERS. HERMANN PLAUSON, Hamburg, Germany. Filed Nov. 3, 1922. Serial No. 598,827. 6 Claims. (Cl. 83—11.)



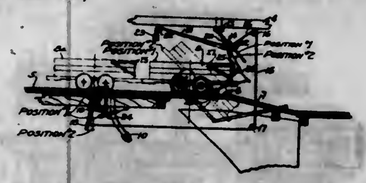
1. The process of disintegrating dry material by impact against moving parts in which (a) the moving parts are rotated at a relative velocity of at least 1000 revolutions per minute and in which the peripheral speed is at least 1000 metres per minute and (b) the operation is performed in vacuo.

1,575,718. STENCIL SHEET FOR ROTARY DUPLICATING MACHINES. RICHARD COBDEN ROGERS, London, England. Filed June 16, 1925. Serial No. 37,561. 5 Claims. (Cl. 41—35.)

1. A stencil sheet for rotary duplicating machines, including a backing sheet capable of attachment to the studs of the carrier of a printing cylinder, and means at one end of said sheet for guiding the same on to said studs.



1,575,719. GRAVEL-SCREENING APPARATUS. CARL SANDBERG, Battle Creek, Mich. Filed Oct. 6, 1924. Serial No. 741,954. 9 Claims. (Cl. 82—11.)

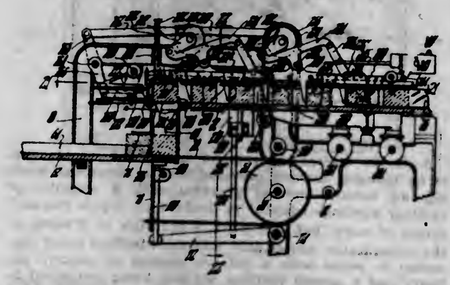


1. In a screening apparatus, the combination of a drum open at its ends, means for rotatably supporting and driving said drum, hammer shafts mounted longitudinally within said drum in opposed relation, a plurality of hammers pivotally mounted on each of said shafts to be actuated by gravity as the drum revolves, hammer supporting bars disposed in relatively forward relation to said shafts to support the sets of hammers as they are carried through the lower arc of their travel and so that they fall by gravity from substantially vertical to substantially horizontal positions, and supporting plates disposed longitudinally within the drum in relatively rearward relation to said shafts to gather and support the material while it is subjected to the impact of said hammers.

1,575,720. LANTERN-SLIDE MOUNTING. JOHN DUER SCOTT, New York, N. Y. Filed June 13, 1924. Serial No. 719,816. 2 Claims. (Cl. 88—26.)

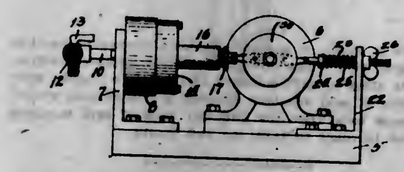
1. A lantern slide mount comprising a polygonal base mat provided with a window opening and having folded over portions of less width than the respective sides of the frame formed by said base mat, the adjacent inner edges of said base mat and folded over portions forming an angular recess around the inner edge of said base mat for receiving the outer edges of a slide, and a covering mat provided with a window opening, the inner polygonal edges of said covering mat being substantially flush with the inwardly presented edges of said folded over portions of said base mat, said covering mat having its inner polygonal corners rounded over the corners of said slide for holding said slide against displacement.

1,575,721. CAR-DOOR MECHANISM. ROY S. SHARPNACK, Dilliner, and JOSEPH P. BENS, Pittsburgh, Pa. Filed Sept. 23, 1924. Serial No. 739,301. 2 Claims. (Cl. 214—54.)



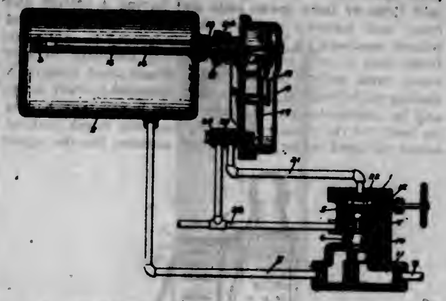
2. The combination with tracks over which dump cars are adapted to move, of door operating mechanism comprising a door lifting member pivotally supported at a point above the path of travel of the cars, a pivoted rail section in said track, a movable member for normally holding said rail section in raised position, a line connected to said movable member and said lifting member at its opposite ends and serving normally to hold said lifting member in inoperative position, and a counterweight tending to move the lifting member to operative position, the connections to the lifting member being so arranged that upon depression of the rail section by a car the said movable member will be moved to raise the door to inoperative position, and when the weight of the car is removed from the rail section, the counterweight will move the lifting member to operative position.

1,575,722. ADJUSTABLE SUPPORTING MEANS FOR LIGHTS. CLIFFORD SKLARSK, Chicago, Ill., assignor to International Spotlight Corporation, Chicago, Ill., a Corporation of Illinois. Filed Feb. 16, 1921. Serial No. 445,310. 14 Claims. (Cl. 240—61.)



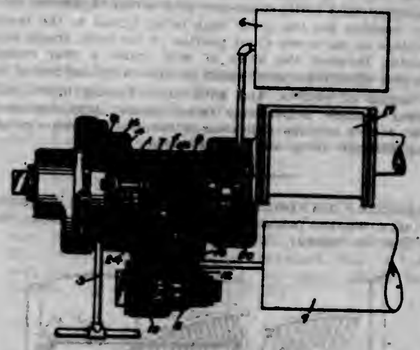
1. In a spot light mounting for vehicles having a windshield, the combination with a support adapted to be secured to part of the windshield structure of the vehicle; of a bracket having a lamp mounted adjacent one end thereof; a universal connection between an intermediate portion of said bracket and said support; and an operating member connected to the other end of said bracket, said member being extended inwardly of the windshield and pivotally and slidably mounted on said support; and means by which said member may be manually adjusted to impart universal movements to said bracket.

1,575,723. WRAPPING MACHINE AND METHOD OF WRAPPING ARTICLES. ELMER LOVELL SMITH and FREDERIC B. FULLER, Springfield, Mass., assignors to Package Machinery Company, Springfield, Mass., a Corporation of Massachusetts. Filed Sept. 26, 1921. Serial No. 503,262. 17 Claims. (Cl. 93—2.)



1. A wrapping machine having, in combination, a feed table, an elevator for raising articles to the level of the feed table, means for supplying an article to the elevator while in its lowermost position, a transporter for engaging the article when the elevator has been raised for transferring the article to the feed table and advancing it across the table, means for feeding a wrapper into position above the article and the elevator while the latter is lowered, means for causing said wrapper to be folded over the sides of the article during the rise of the elevator and the transfer of the article to the feed table, means for causing the wrapper to be held closely against the article adjacent a lower edge at one side thereof while the article is being transferred to the feed table, means separate from the transporter for folding the wrapper against the lower side of the article, and means for completing the wrapper folding operations while the article is being intermittently advanced across the table.

1,575,724. OTOCONCUSSER. MILTON L. SMITH and ROBERT H. SCHWALB, Chicago, Ill. Filed Dec. 31, 1923. Serial No. 683,616. 5 Claims. (Cl. 128—30.)

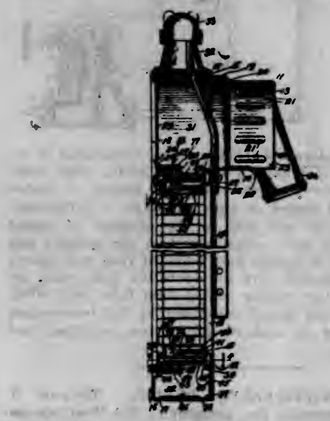


1. A machine of the kind set forth comprising a flexible diaphragm, a reciprocable plunger for operating the diaphragm, a spring adapted to move the plunger in one direction, a shaft rotatable about an axis perpendicular to the axis of the plunger and a cord connection between said shaft and said plunger adapted to retract the plunger against the action of said spring on each revolution of the shaft.

1,575,725. FLUID-TEMPERATURE REGULATOR. CARLTON D. STEWART, Berkeley, Calif. Filed Oct. 19, 1921. Serial No. 508,843. 2 Claims. (Cl. 236—80.)

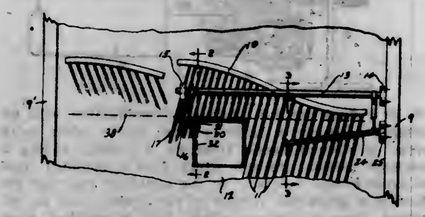
1. A temperature regulating device comprising a receptacle for heated fluid, a source of heated fluid under pressure, a valve for controlling the supply of heated fluid from said source to said receptacle, a differential piston subject on one side to the pressure of heated fluid supplied to the receptacle and on the opposite side to the pressure of heated fluid supplied from said source through a restricted port for operating said valve, an exhaust valve for venting heated fluid from said differential piston, and means controlled by the temperature of heated fluid in said receptacle for operating said exhaust valve.

1,575,726. TRIPLE-VALVE DEVICE. THOMAS H. THOMAS, Edgewood, Pa., assignor to The Westinghouse Air Brake Company, Wilmerding, Pa., a Corporation of Pennsylvania. Filed Apr. 28, 1924. Serial No. 709,323. 3 Claims. (Cl. 303—74.)



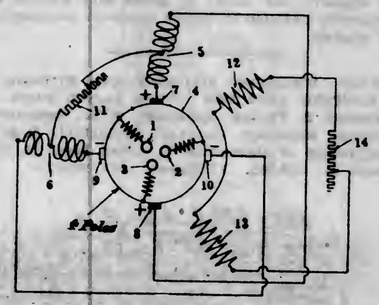
1. In a fluid pressure brake, the combination with an auxiliary reservoir, a brake cylinder, and a triple valve device, of a supplemental reservoir, a passage having a restricted portion, through which fluid is supplied from the supplemental reservoir to the auxiliary reservoir for effecting a graduated release of the brakes, and an additional passage through which fluid is supplied from the auxiliary reservoir side of the triple valve device to the supplemental reservoir for charging the supplemental reservoir.

1,575,727. RADIATOR FOR AUTOMOBILES AND OTHER MOTOR VEHICLES. ANTHONY UHLYARIK, Cleveland, Ohio, assignor to Emanuel J. Uhlyarik, Cleveland, Ohio. Filed May 23, 1922. Serial No. 562,968. 3 Claims. (Cl. 257—125.)



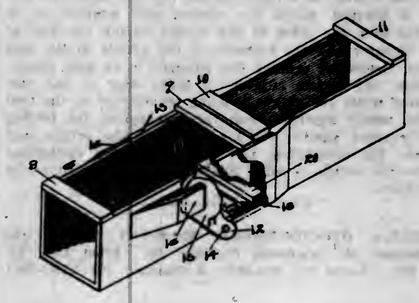
1. A radiator of the character described comprising a main frame in one integral stamping consisting of verti-

cal side members, a top portion connecting said sides at their upper ends and having a top and front and forming in part the upper tank and a bottom portion connecting said sides at their lower ends and having a bottom and front and forming in part the lower tank, back and bottom members for said upper tank secured to said main frame and to each other, back and top members for said lower tank secured to said main frame, and removable cooling units secured between said upper and lower tanks and in communication therewith, said upper tank having an inlet for the circulating water and said lower tank an outlet for said water, said bottom member for the upper



tank being brazed to the lower portion of the upper front part of the main frame and having between the sides of said frame a rear depressed section affording spaced apart parallel walls connected by a series of sleeves, said top member for the lower tank being brazed to the inner surface of the lower front portion of the main frame and having between the sides of said frame a rear raised section affording spaced apart parallel walls connected by a series of sleeves, and said units having upper and lower headers respectively faced against said depressed and raised sections and secured thereto by bolts extending through them and said sleeves.

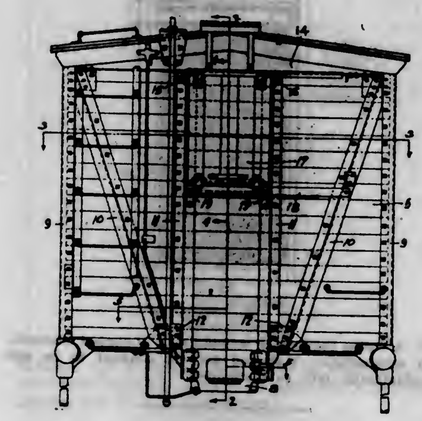
1,575,728. MANDOLIN ATTACHMENT FOR PIANOS. MAX WEBER, Detroit, Mich. Filed Oct. 27, 1924. Serial No. 746,021. 5 Claims. (Cl. 84—224.)



1. A device of the class described adapted for use with stringed musical instruments, comprising a supporting member extending across the strings of said instrument; a plurality of suspension members mounted on said supporting member; and contact buttons mounted on said suspension members in free swingable relation thereto; means for covering the lower portion of said suspension members for preventing sound producing contact with said buttons, said supporting member being adapted for rocking movement for bringing said buttons into engagement with said strings or moving the same out of said engagement.

1,575,729. ALTERNATING-CURRENT MOTOR. HANS WEICHSEL, St. Louis, Mo., assignor to Wagner Electric Corporation, St. Louis, Mo., a Corporation of Delaware. Filed May 15, 1924. Serial No. 713,422. 5 Claims. (Cl. 172—275.)

1. In an alternating current motor, the combination of an inducing member provided with a commuted winding, an induced member provided with a plurality of exciting windings adapted to produce an N-pole magnetization of more than two poles, a plurality of brushes on the commutator, one of said exciting windings being connected in series with a pair of brushes of positive polarity and a second exciting winding being connected in series with a pair of brushes of negative polarity, and means for interconnecting said exciting windings.



1,575,730. JOINT. HENRY J. ALTNOW, Portland, Oreg. Filed Apr. 13, 1925. Serial No. 22,899. 3 Claims. (Cl. 287—92.)

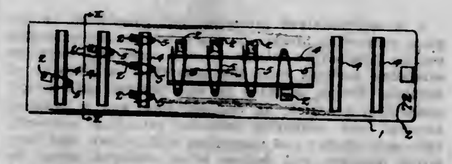
1. In a joint: a pair of pivotally connected box-like members; side wings upon one of said members embracing the other of said members therebetween; hooks upon the other of said members adapted to engage said wings; and cross bars upon the adjacent ends of said members adapted to coact to take the end strain.

1,575,731. END CONSTRUCTION FOR RAILWAY CARS. HARRY T. ANDERSON, Butler, Pa., assignor to Standard Steel Car Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed May 20, 1924. Serial No. 714,657. 2 Claims. (Cl. 105—411.)

1. The combination with a railway car provided with an end wall and a striking plate, of vertical braces extending from a point adjacent to the upper edge of said wall to the lower edge thereof and terminating behind said striking plate, and diagonal braces extending from a point adjacent to the upper corners of said wall to a

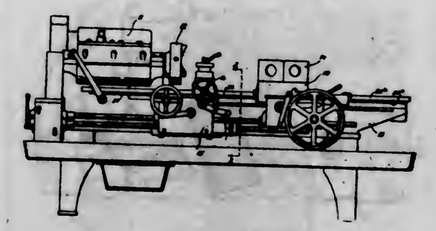
point adjacent to the lower edge of said wall, the lower ends of said diagonal braces being secured to the vertical braces.

1,575,732. SHORT-CIRCUIT SWITCH. FAYETTE H. BACHMAN, Oakland, Calif. Filed Feb. 21, 1924. Serial No. 694,407. 5 Claims. (Cl. 179—158.)



1. A short circuit switch in a telephone transmitter circuit comprising a cup, a conduit extending from said cup and a push button switch in said cup the leads of which extend to the transmitter leads through said conduit and means to secure said cup and conduit to the telephone receiver.

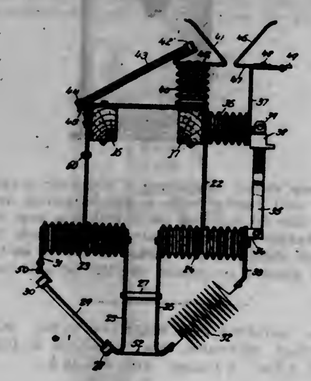
1,575,733. MOP SHAKER. CELIA BERNSTEIN, New York, N. Y. Filed Nov. 7, 1925. Serial No. 67,612. 4 Claims. (Cl. 15—104.)



1. A mop shaker comprising a container provided in one side wall thereof with a slot extending inwardly from the edge for receiving the handle of a mop, whereby the map handle may project laterally away from the container, and slidable means guided upon said wall of the container adapted to restrict the size of said aperture.

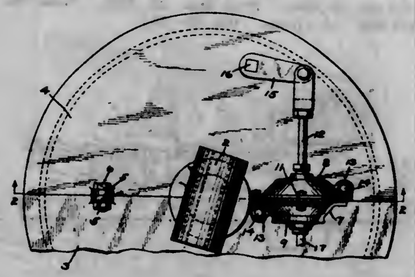
1,575,734. HOLDER FOR MARKING PINS. MATTHEW J. BUCKLEY, Milwaukee, Wis. Filed Jan. 9, 1925. Serial No. 1,379. 5 Claims. (Cl. 40—19.5.)

1. Pin holding means comprising a member having an aperture therein for receiving a pin therethrough, said member having adjacent said aperture a slot, said slot being spaced away from said aperture to receive the guard of said pin when the latter is in open position.



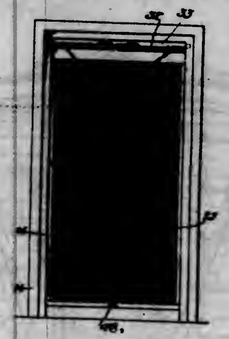
1,575,735. WAY GUARD FOR MACHINE TOOLS. EDWARD P. BURRELL, Shaker Heights, and JOHN J. N. VAN HAMERAVELD, Cleveland, Ohio, assignors to The Warner and Swasey Company, Cleveland, Ohio, a Corporation of Ohio. Filed Mar. 26, 1924. Serial No. 701,909. 16 Claims. (Cl. 82—32.)

1. A machine tool having a bed with ways for a plurality of slidable members, one or more of said ways being common to said sliding members, and guard members extending over the common way or ways and protecting the working surfaces thereof without interfering with



the movements of the sliding members, said guard members being in overlapping relation and one attached to one sliding member and another to another sliding member.

1,575,736. PROTECTIVE APPARATUS. NICHOLAS J. CONRAD, Wilmette, Ill., assignor to Schweitzer & Conrad, Chicago, Ill., a Corporation of Illinois. Filed May 24, 1920. Serial No. 383,822. 2 Claims. (Cl. 175—30.)



1. A self-contained protector unit comprising an angular supporting bracket having a horizontally extending portion adapted to engage a cross arm and vertically extending portions depending therefrom, a plurality of electrical devices mounted on said bracket, said devices comprising a switch, an enclosed fuse, and a lightning arrester, and insulating members extending outwardly from said bracket and supporting said devices, said insulating members and devices being arranged about the bracket to follow the general outline thereof and certain of said devices depending below said bracket whereby a minimum amount of space is required for said unit.

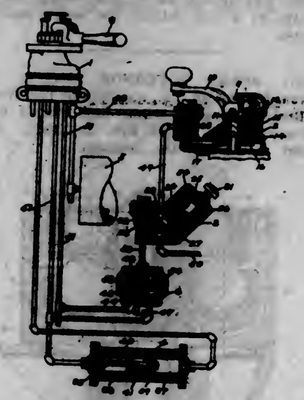
1,575,737. AUTOMOTIVE BRAKE. JOHN F. CRAIG, Edgewood, Pa., assignor to The Westinghouse Air Brake Company, Wilmerding, Pa., a Corporation of Pennsylvania. Filed Jan. 2, 1923. Serial No. 610,114. 3 Claims. (Cl. 188—152.)

1. The combination with a vehicle brake drum, of a cover plate for said drum comprising two half sections and a fluid pressure brake chamber comprising two casing members, one of said members being carried by each plate half section.

1,575,738. SCREEN. WILLIAM N. CROPPER, Lexington, Ky. Filed Jan. 8, 1925. Serial No. 1,284. 5 Claims. (Cl. 156—14.)

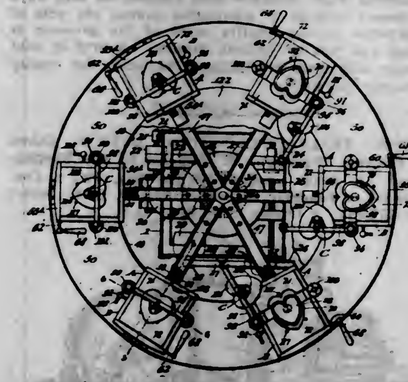
1. A screen comprising substantially V-shaped channels, and substantially V-shaped keepers adapted to be slid longitudinally into said channels.

1,575,739. WHEEL. LEWIS K. DALRYMPLE, Chicago, Ill., assignor of four one-hundredths to Albert H. Adams, Oak Park, Ill., and four one-hundredths to John L. Jackson, River Forrest, Ill. Filed Sept. 20, 1920. Serial No. 411,553. Renewed Aug. 15, 1925. 11 Claims. (Cl. 301—16.)



1. A wheel having a hub, an intermediate portion, a laterally-extending flexible rim flange carried by said intermediate portion and adapted to fit within an outer rim and to be deflected angularly relatively to said intermediate portion into gripping engagement with said outer rim, and means for so deflecting said rim flange.

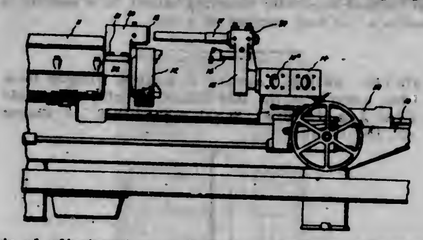
1,575,740. FLUID-PRESSURE BRAKE. JOSEPH M. DAPRON, St. Louis, Mo., assignor to The Westinghouse Air Brake Company, Wilmerding, Pa., a Corporation of Pennsylvania. Filed Apr. 28, 1925. Serial No. 26,403. 3 Claims. (Cl. 303—6.



1. The combination with a door engine having a door opening pipe, a straight air pipe, and a valve device

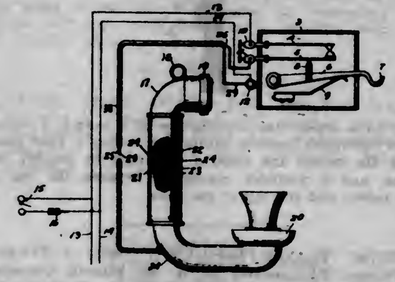
operated by fluid under pressure for preventing an emergency application of the brakes, of a valve for permitting the flow of fluid from the door opening pipe to the brake

cylinder, and a double check valve for controlling communication from the straight air pipe and from the door opening pipe to said valve device.



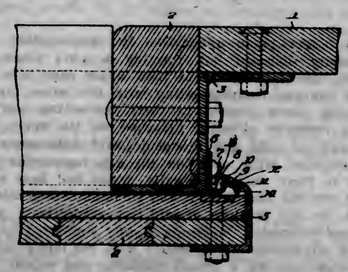
1,575,741. APPARATUS FOR FORMING AND CLAMPING PAPER BOXES IN THE PROCESS OF MANUFACTURE. IRVING A. DELINE, Denver, Colo. Filed Oct. 17, 1925. Serial No. 63,069. 22 Claims. (Cl. 93—55.)

1. In a machine of the character described, a table having an intermittent rotary movement, a series of mechanisms on said table for forming and clamping box bands for the reception of tops and extensions, and means for clamping said extensions to said tops.



1,575,742. PILOT-BAR CONSTRUCTION FOR MACHINE TOOLS. GEORGE W. DRAKE, Cleveland Heights, and MAX E. LANGE, East Cleveland, Ohio, assignors to The Warner and Swasey Company, Cleveland, Ohio, a Corporation of Ohio. Filed Apr. 16, 1924. Serial No. 706,808. 17 Claims. (Cl. 29—57.)

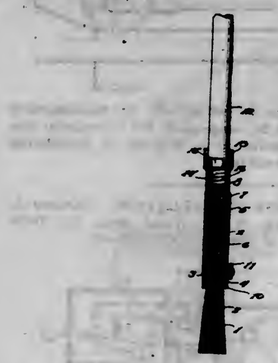
1. In a machine tool, a frame, work and tool holding members one movable toward and from the other along the frame, and means for producing a stiffening or steadying action in the movable member comprising a pilot bar and a co-operating part each associated with one of said members and adapted to have sliding engagement by the relative movement between said members, both the pilot bar and said co-operating part being capa-



ble of adjustment so as to compensate for misalignment of said parts, and also to compensate for an angular displacement thereof relative to a position in parallelism with the axis of the machine.

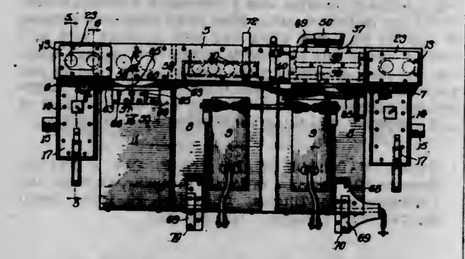
1,575,743. TELEPHONE INSTALLATION. EDWARD A. DRISCOLL, New York, N. Y. Filed Sept. 11, 1924. Serial No. 737,052. 3 Claims. (Cl. 179—81.)

1. In a telephone installation, the combination of a transmitter, a receiver, a contact, an induction coil having a primary winding and a secondary winding, a telephone line including said contact and having two portions in parallel with each other and each in series with said contact, one of said portions including said primary winding, the other of said portions including said receiver and the secondary winding of the induction coil, and a ringer bridged across the line, said ringer and both portions of said telephone line being controllable by said contact.



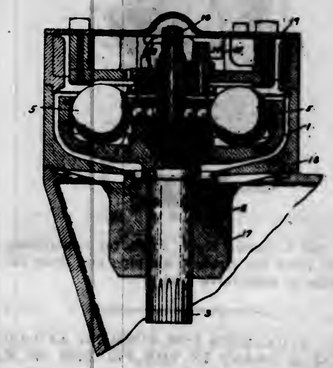
1,575,744. CAR-DOOR GUARD STRIP. CARL E. EKLIND, Berwyn, Ill., assignor to Camel Company, Chicago, Ill., a Corporation of Illinois. Filed Sept. 13, 1924. Serial No. 737,522. 7 Claims. (Cl. 20—26.)

1. A guard strip for freight car doors, comprising in one rolled metal structure, an attaching base, an offsetting web extending rearwardly from said attaching base and providing a wall of an eddy pocket, a deflected portion



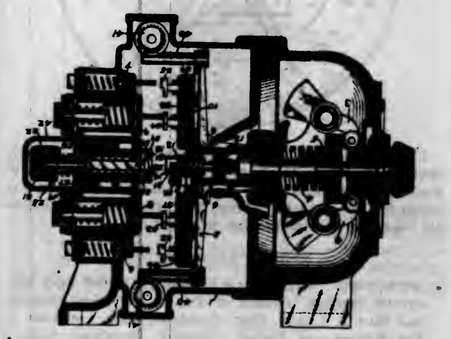
extending inwardly from the rear line of said web, terminating in a striking salient and providing another wall of the eddy pocket, and a sealing lip extending rearwardly but inclined outwardly from said salient, in a position to receive a co-acting member on a door.

1,575,745. BROOM. ARTHUR F. ELKINS, Hanging Rock, Ohio, assignor to Ida May Elkins, Hanging Rock, Ohio. Filed Aug. 7, 1924. Serial No. 730,649. 3 Claims. (Cl. 15—176.)



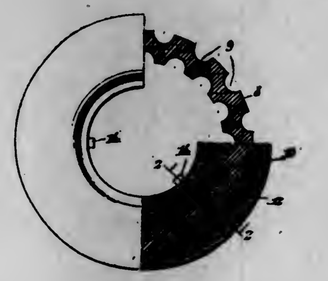
1. In a broom, the combination of a holder, a broom head removably secured within the holder, a yoke spanning the holder and engaged therewith to support the same, and a yieldable connection between the top of the holder and the top of the yoke.

1,575,746. PLAYER-PIANO UNIT. OSCAR A. ERICSON, Chicago, Ill., assignor to W. W. Kimball Company, Chicago, Ill., a Corporation of Illinois. Filed Dec. 11, 1922. Serial No. 606,049. 1 Claim. (Cl. 84—30.)



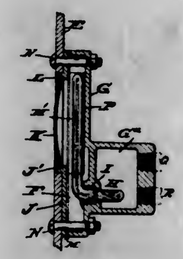
In a player piano apparatus, the combination of a horizontally disposed box forming a wind trunk, exhausters directly attached at their upper ends to a wall of said box and communicating with the latter through registering ports formed in their contacting walls, a vacuum reservoir directly attached at its upper ends to a wall of said box alongside said exhausters and communicating with said box through registering ports formed in their contacting walls, treble and bass action cut-offs directly mounted on and communicating interiorly with the end portions of said box, respectively, treble and bass expression governors rigidly connected to said box and communicating interiorly with the latter through said action cut-offs, a tempo regulator and re-roll valve both directly mounted on said wind trunk and communicating with the latter through registering ports formed in their contacting walls, a pneumatically operated control-valve mechanism mounted on said vacuum reservoir and communicating directly with the latter through registering ports, air conductors connecting said control-valve mechanism with said action cut-offs, expression governors and re-roll valve, and means for mounting said parts as a unit within the lower portion of the piano case.

1,575,747. SPEED-GOVERNOR DEVICE. CLYDE C. FARMER, Pittsburgh, Pa., assignor to The Westinghouse Air Brake Company, Wilmerding, Pa., a Corporation of Pennsylvania. Filed Feb. 25, 1922. Serial No. 539,286. 4 Claims. (Cl. 200—80.)



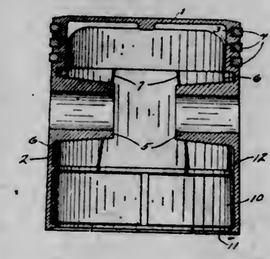
1. A speed governor comprising a rotatable casing having inclined ways, governor balls disposed on said ways and thereby capable of gravitating toward the axis of the governor as the rotative speed of the governor is reduced, and movable contact members operated by said governor balls upon gravitational movement for closing an electric circuit.

1,575,748. TRAIN-SPEED-CONTROL DEVICE. CLYDE C. FARMER, Pittsburgh, Pa., assignor to The Westinghouse Air Brake Company, Wilmerding, Pa., a Corporation of Pennsylvania. Filed June 5, 1924. Serial No. 717,982. 8 Claims. (Cl. 303—21.)



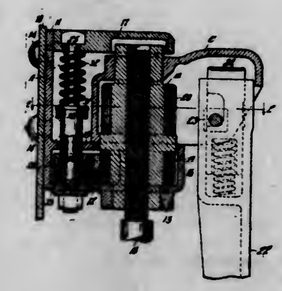
1. In a train control apparatus, the combination with a speed governor operated according to the speed of the train, of a plurality of valves, actuating means associated with said governor for operating said valves, and means for adjusting said actuating means to operate said valves at different train speeds.

1,575,749. CUSHION VEHICLE TIRE. JOSEPH FIELDING, New York, N. Y., assignor of one-half to Luther L. Campbell, New York, N. Y. Filed Feb. 14, 1925. Serial No. 9,221. 2 Claims. (Cl. 152—1.)



2. A tire filler composed of resilient material and having a spiral circular passage extending longitudinally thereof and a strand of more pliable material within said passage.

1,575,750. MEANS FOR DETERMINING THE TEMPERATURE OF INTERNAL-COMBUSTION ENGINES. SHUBEL A. FOSTER, Ferndale, Mich. Filed Mar. 21, 1925. Serial No. 17,188. 1 Claim. (Cl. 73—52.)

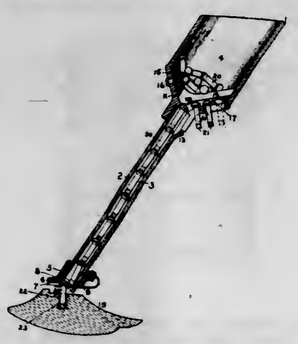


In a device of the character described; an indicator frame adapted for attachment to the instrument board of a motor vehicle having an outwardly projecting closed chamber provided with inlet and outlet orifices; a thermometer tube supported in the wall of the indicator frame with its bulb extending into said closed chamber; means adapted to provide a water seal between the thermometer tube and the wall through which it extends; a cover plate having an opening surrounded by an annular rim; a glass window or lens fitted into said annular rim, through which a reading of the thermometer may be obtained; a split ring lodged in a peripheral groove formed in said rim, adapted to overlap the marginal edge of the window or lens, whereby the latter may be secured against accidental displacement; a graduated sheet lodged in said frame to provide a thermometer reading, and bolts extending through apertures provided in the frame and cover plate, to secure said frame and cover plate to the walls of an instrument board.

1,575,751. PISTON FOR INTERNAL-COMBUSTION ENGINES. LEE FOX, Rock Island, Ill. Filed Nov. 9, 1923. Serial No. 673,784. 1 Claim. (Cl. 74—108.)

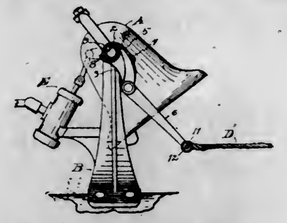
A piston, comprising a head, and a skirt provided with wrist-pin bosses, and having longitudinal slots on opposite sides of said bosses, extending to the open end of said skirt, and converging in that direction, so that the sides of the piston receiving the connecting rod thrust will have greater expansible capacity than the other sides thereof.

1,575,752. HAND BRAKE FOR RAILWAY CARS. WILLIAM A. GEIGER, Chicago, Ill., assignor, by mesne assignments, to W. H. Miner, Inc., a Corporation of Delaware. Filed Apr. 3, 1924. Serial No. 703,842. 6 Claims. (Cl. 74—116.)



1. In a hand brake for railway cars, the combination with a vertical brake staff and a ratchet wheel rotatable in unison therewith; of means for rotating said staff in a step-by-step movement; a locking dog co-acting with said ratchet wheel to prevent accidental reverse rotation thereof; means automatically operable to lock said dog in inoperative position when the latter is moved to said inoperative position, said means including an element operable to effect re-setting of said dog in normal position; and a lever pivoted about an axis at an angle to the axis of said element and adapted to co-act therewith to operate the same.

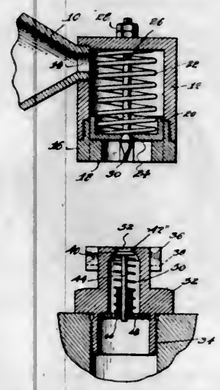
1,575,753. METHOD AND MEANS FOR PLACING PINS IN ARTIFICIAL TEETH. ALBERT E. GIBSON, Springfield, Pa., assignor to The Dentists' Supply Company, a Corporation of New York. Filed July 18, 1924. Serial No. 726,685. 7 Claims. (Cl. 29—86.1.)



1. A tool for inserting headed pins in holes of objects, consisting of a stem having a passage for pins extending through it and to the bottom thereof, means at the

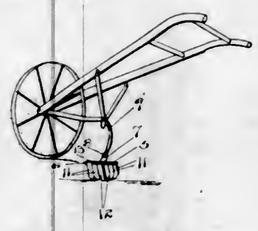
extreme bottom of the stem for holding the head of the pin while permitting its shank to project downward from below the stem so as to be exposed, and

means for guiding the pin with its shank exposed in an approximately horizontal direction to release it from the holding means.



1,575,754. BELL RINGER. GEORGE W. GILL, Battle Creek, Mich., assignor of one-half to Walter E. Knopp, Battle Creek, Mich. Filed Nov. 2, 1925. Serial No. 66,418. 3 Claims. (Cl. 116—150.)

3. In a bell ringer, the combination with a yoke, its supporting shanks, a bracket in which said yoke is journaled to swing, and a bell carried within said yoke, a collar rigidly attached to a shank of said yoke, an arm journaled on said shank between said collar and the supporting bracket for said yoke, said collar having an eccentric-formed tooth on one side and approximately on a plane with its axis, when said bell is idle, a lever pivotally suspended at the free end of said arm and below said collar and having an upper end disposed in close proximity below and to one side of said tooth when said bell is idle, and adapted to be moved into engagement with said tooth and roll said collar and bell yoke and ring said bell, and to release said tooth by gravity suspension when released.

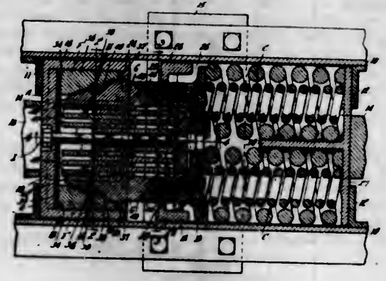


1,575,755. CONNECTION FOR LUBRICATING SYSTEMS. PETER GRESSER, Chicago, Ill. Filed June 15, 1925. Serial No. 37,213. 8 Claims. (Cl. 284—18.)

1. In a connection for a lubricating system, a female part provided with a valve-controlled orifice, a male part provided with a valve-controlled orifice and with a notched external collar, said male part adapted to be received within the female part to bring said orifices into communication, said female part provided with an internal collar notched to permit the collar on the male part to pass therethrough and engage on the rearward side thereof, the meeting faces of said collars having co-operating locking portions adapted to releasably engage each other to prevent relative rotation of said parts said female part provided with a pin adapted to engage and unseat the valve of the male part during the locking movement of said parts, said pin provided with a valve seat, the valve of said female part slidably associated with said pin to provide a lubricant passage-

way therearound and held normally outwardly by a spring against the seat on the pin, said male part having a portion adapted to engage the valve of said female part during the movement of engagement of said parts and unseat the same.

1,575,756. CUTTER. CLESSON S. HARRIS, Newberg, Oreg. Filed Dec. 26, 1923. Serial No. 682,697. 2 Claims. (Cl. 97—201.)

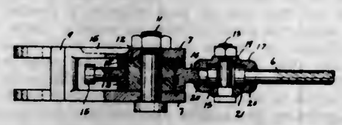


1. In a cutter; a cross bar; a plurality of double-edged cutter knives secured thereto and depending therefrom; centrally directed curved lower extremities upon said knives; a pair of centrally disposed knives similar to said former knives but extending below the same; and a clip for securing said cross bar upon an implement.

1,575,757. FRICTION SHOCK-ABSORBING MECHANISM. STACY B. HASELTINE, Chicago, Ill., assignor, by mesne assignments, to W. H. Miner, Inc., a Corporation of Delawnre. Filed Apr. 30, 1923. Serial No. 635,517. 6 Claims. (Cl. 213—36.)

1. In a friction shock absorbing mechanism, the combination with a column-load-sustaining member; of a main follower movable relatively toward and from said member; a plurality of friction elements mounted on said member; means for holding said elements against movement longitudinally of said member, said means including a fixed abutment wall on said member engaging the rear ends of said elements; a plurality of friction elements intercalated with respect to said first named friction elements, said last named elements being connected to the front follower and movable therewith; a

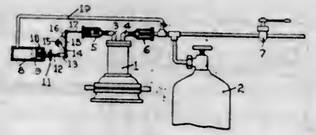
pair of wedges carried by said front follower; a spring resistance; a spring follower co-acting with said spring resistance, said spring follower being arranged in spaced



relation to all of said elements; and a pair of wedge shoes interposed between said spring follower and said wedges, said wedge shoes bearing on the outermost of said elements.

1,575,758. WARPING MACHINE. ALBERT HABLER and EZRA L. PROBERT, Hazleton, Pa., assignors to Dupian Silk Corporation, New York, N. Y., a Corporation of Delaware. Filed July 18, 1925. Serial No. 44,426. 8 Claims. (Cl. 242—74.)

1. In a warping machine, a beam including a body, and means on said body normally projecting beyond the outer surfaces thereof for engaging a warp receiving cylinder thereon and preventing longitudinal movement of said cylinder relative to said body.



1,575,759. CABLE CONNECTION. AMZI F. HAYNIE, Batson, Tex. Filed July 7, 1925. Serial No. 42,109. 12 Claims. (Cl. 74—5.)

1. A connection of the character described including a bracket formed with spaced jaws, a rotatable hub mounted between the jaws at one end, a radiating arm carried by said hub, said arm having an enlarged free end.

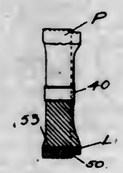
1,575,760. FLUID-PUMP-CONTROLLING DEVICE AND THE LIKE. CHARLES FREDERIC HEYWOOD, Buenos Aires, Argentina. Original application filed Aug. 27, 1921, Serial No. 495,916. Divided and this application filed July 24, 1923. Serial No. 653,608. 3 Claims. (Cl. 230—24.)

1. In a device of the class described, the combination with a fluid receptacle, and a continuously operable pump for supplying fluid thereto under pressure, of a non-return valve associated with said receptacle, an inlet valve admitting fluid into said pump, a valve actuating rod, a snap mechanism operating said rod, and pneumatic

means operable by the pressure of fluid delivered by said pump effecting the direct actuation of said snap mechanism.

1,575,761. MANUFACTURE OF YEAST. CHARLES HOFFMAN, Tuckahoe, NATHAN MINTON CREGOR, New York, and HARRY DAVETT GRIGSBY, Brooklyn, N. Y., assignors, by mesne assignments, to The Fleischmann Company, New York, N. Y. Filed Mar. 22, 1922. Serial No. 545,857. 4 Claims. (Cl. 195—20.)

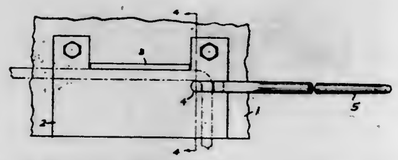
1. A process of manufacturing baker's yeast which comprises preparing a mash by gelatinizing starch-containing materials including cereal germs and polishings, saccharifying the mass with malt and digesting with papain, filtering off the liquid and thereafter propagating yeast therein with aeration.



1,575,762. PREPARING YEAST FOR USE IN FOOD PRODUCTS. CHARLES HOFFMAN, Tuckahoe, N. Y., and CHARLES N. FREY, Warren, Ohio, assignors, by mesne assignments, to The Fleischmann Company, New York, N. Y. Filed Sept. 15, 1923. Serial No. 662,989. 12 Claims. (Cl. 99—5.)

8. The steps in the process of treating yeast which consist in treating the yeast with a saturated solution of ammonium sulphate, heating to substantially 85° C., removing at least a portion of the ammonium sulphate by washing, and then filtering and drying without rupturing the cell walls.

10. As a food product, a devitalized dried yeast with the walls of the yeast cells substantially unruptured.

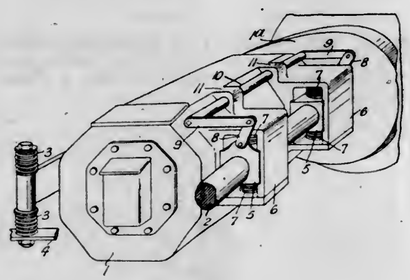


12. As an improved product, a devitalized yeast, with the walls of the yeast cells substantially unruptured and with the protoplasmic material in the cells coagulated, which is admixed with ammonium sulphate.

1,575,763. SOLE TRIMMING AND POLISHING WHEEL. FRED G. HOOKE and JAMES J. FLYNN, Lowell, Mass. Filed July 29, 1925. Serial No. 46,745. 2 Claims. (Cl. 51—195.)

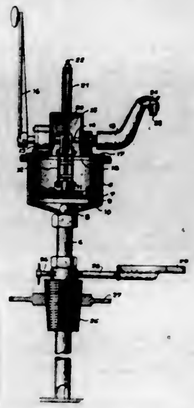
1. In a shoe sole trimming and polishing wheel the combination with a cylindrical body; of a felt band attached to the periphery thereof, said felt band having an annular groove of substantially right angular cross section; and a strip of emery cloth having emery on the inner side, which is cemented and shrunk on to the felt band.

1,575,764. ROD BENDER. THEO BOYD HUBBARD, Houston, Tex. Filed May 24, 1924. Serial No. 715,761. 1 Claim. (Cl. 153—45.)



In combination a rod bender comprising a base formed with a socket bearing therein, a portion of said base being integral and upturned forming a flange spaced from the bearing, a filler block associated with the flange, a handle formed at one end with a spindle adapted to work in said bearing and a depending lug carried by the handle lying in the same plane as said spindle and spaced therefrom.

1,575,765. WASHBOARD. WILLIAM W. HUBBARD, Mendota, Ill. Filed June 9, 1921. Serial No. 476,114. 6 Claims. (Cl. 68—29.)

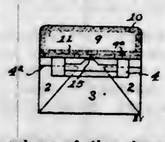


1. A wash board comprising a frame and a plurality of rollers journaled therein, each having a corrugated surface composed of ribs tapering circumferentially in height, and thus having elliptical profiles.

1,575,766. ELECTRICALLY-PROPELLED VEHICLE. ALBERT HENRY JACKSON, London, England. Filed June 15, 1925. Serial No. 37,190. 2 Claims. (Cl. 105—136.)

1. In an electric locomotive, tram car or other electrically propelled vehicle of the type referred to, the combination of an electrically driven motor, an axle driven thereby, a torsion member, and links connecting the motor to the axle through the torsion member in such manner that the axes of the motor and the axle are maintained parallel with one another.

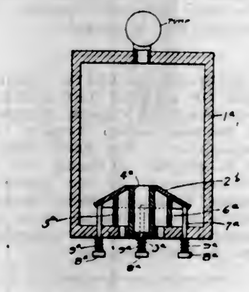
1,575,767. PUMP. HARRY JACKSON, Brooklyn, N. Y. Filed Mar. 16, 1923. Serial No. 625,483. 4 Claims. (Cl. 103—178.)



1. A pump including a piston, a pair of links having one of their ends connected to said piston, a crank having a swinging movement of less than 360° connected with the opposite ends of said links and a casing enclosing said piston, links and crank.

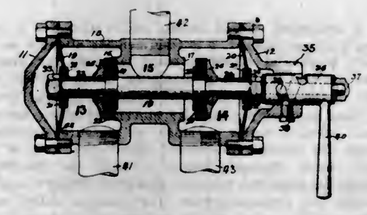
1,575,768. LEAD COVERING OF ELECTRIC CABLES AND THE LIKE BY EXTRUSION. ERNEST EDWARD JUDGE, Gravesend, England, assignor to W. T. Henley's Telegraph Works Company Limited, London, England. Filed Feb. 5, 1925. Serial No. 6,952. 2 Claims. (Cl. 207—4.)

1. A press for the continuous extrusion of lead sheathing on electric cables and the like comprising a cylinder adapted to be charged with molten lead, a supporting ring at the rear end of said cylinder, a tubular point holder supported so as to form an annular space within said cylinder by having its rear end mounted on said supporting ring, a plunger adapted to be reciprocated in said cylinder, said plunger having sector-like guide members adapted to slide through corresponding apertures in said supporting ring and an annular front end filling the annular space between said cylinder and said tubular point holder.



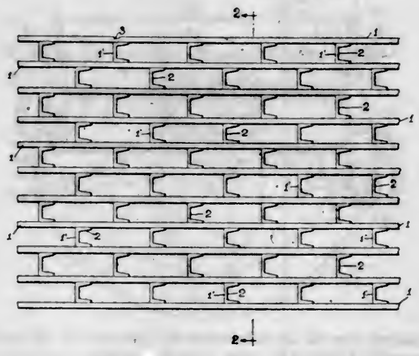
1,575,769. RETURN ENVELOPE. JOHN A. KAYE, Sault Ste. Marie, Ontario, Canada. Filed May 17, 1924. Serial No. 713,894. 3 Claims. (Cl. 229—73.)

1. A return envelope of the character described, including front and back portions, a sealing flap carried by the front portion and provided at marginal portions



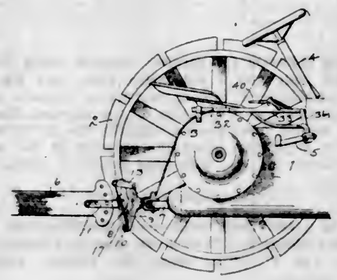
thereof with adhesive by means of which it can be secured to the back portion to initially seal the envelope and will cooperate with the said back portion to form a pocket which is separated from the interior of the envelope by the back portion, and an extension projecting from the upper edge of the back portion and adapted to be secured to the front portion of the envelope upon the second sealing thereof, said extension being compactly folded upon itself and fitted within the pocket between the sealing flap and the back when the envelope is initially sealed, so that the interior of the envelope is not obstructed thereby.

1,575,770. METHOD OF CREATING AND MAINTAINING A VACUUM. GUY L. KENNEDY, New York, N. Y., assignor to Ken-Crip Corporation, New York, N. Y., a Corporation of New York. Original application filed Feb. 23, 1924, Serial No. 694,792. Divided and this application filed Aug. 3, 1925. Serial No. 47,864. 6 Claims. (Cl. 230—18.)



1. The method of producing a substantially constant vacuum in the midst of conditions of varying pressure tending to alter said vacuum, which consists in creating a vacuum of a predetermined degree and utilizing the effect of said varying pressure to maintain the predetermined vacuum substantially constant.

1,575,771. THREE-WAY VALVE. JOHN A. KING, Milwaukee, Wis., assignor of one-half to Walter H. Riley, Milwaukee, Wis. Filed Mar. 27, 1924. Serial No. 702,305. 12 Claims. (Cl. 277—13.)

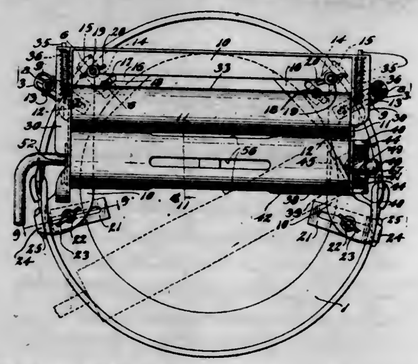


1. In a three-way valve, a casing provided with a chamber at each end and an intermediate central passage connecting such chambers, caps upon the ends of the casing to complete the closure, diaphragms held upon the ends of the casing by the said caps, and a longitudinally movable shaft within the casing and supported at its ends in floating relation by the said diaphragms.

1,575,772. GRATING. MAURICE LACHMAN, New York, N. Y. Filed Jan. 9, 1925. Serial No. 1,369. 7 Claims. (Cl. 94—30.)

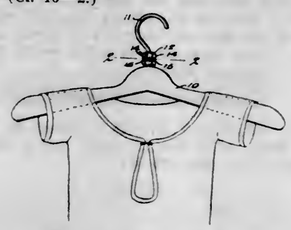
5. As a new article of manufacture, a metal grating comprising parallel spaced members and interposed spacing inserts consisting of transverse sections of rolled flanged metal bars with the web of each section transverse to the plane of the grating and each said section engaging by the flat outer face of each flange against the flat face of said members and being welded thereto as and for the purpose described.

1,575,773. TRACTION HITCH. VERNON H. LAMBERT, Xenia, Ohio. Filed Aug. 27, 1923. Serial No. 659,580. 8 Claims. (Cl. 280—33.16.)



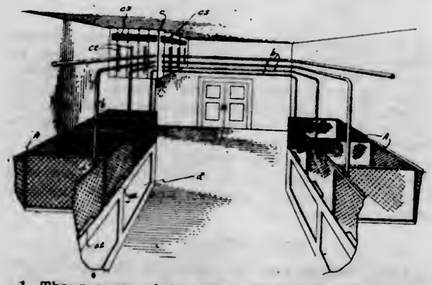
1. A safety coupling including two relatively movable members connected respectively to draft and drawn devices, and tending to separate under influence of pulling strain, two interpivoted members forming a togglelike member, the opposite ends of the interpivoted members being in engagement respectively with the said movable members, the strain of the draft connection tending to oscillate said interpivoted members about their intermediate pivotal connection to permit relative movement of the first mentioned members and means yieldingly resisting such movement.

1,575,774. WRINGING APPARATUS. SIMEON C. LAWLOR, Chicago, Ill. Filed Nov. 12, 1920. Serial No. 423,573. 4 Claims. (Cl. 15—262.)



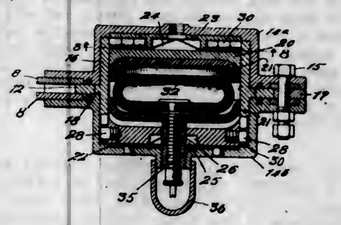
1. In a wringing apparatus, the combination, with a frame adapted to be mounted on a scrubbing pail, of a

roller rotatably carried by the frame, a co-operating, movably-mounted roller, a pivotally mounted journal



bearing for the second-mentioned roller, and a pivotally mounted support for said journal bearing.

1,575,775. SIZE INDICATOR FOR GARMENT HANGERS. BERNARD LESSER, Cedarhurst, N. Y. Filed June 7, 1923, Serial No. 643,970. Renewed July 2, 1925. 1 Claim. (Cl. 40—2.)

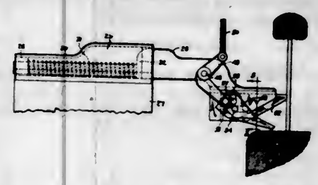


A size indicator for garment hangers which includes a hanger body and a suspension hook, said size indicator comprising a tubular multifaced element having indicia indicative of the size of the garment inscribed on the several faces thereof whereby the device is supported in a position above the garment on the hanger, and whereby the size indicating indicia is visible from any angle.

1,575,776. METHOD AND APPARATUS FOR HANDLING MONEY. SAMUEL M. LONDY, Detroit, Mich. Filed Aug. 12, 1925. Serial No. 49,862. 8 Claims. (Cl. 243—1.)

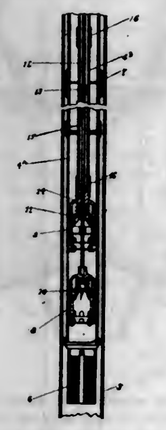
1. The process of handling money, consisting in receiving and paying out money in small lots at one position and transmitting the money as fast as received to a robber proof compartment.

1,575,777. SHOCK ABSORBER. JASPER A. MCCASKELL, Salt Lake City, Utah. Filed Nov. 16, 1922. Serial No. 601,229. 8 Claims. (Cl. 267—8.)



1. A shock absorber comprising a tubular chamber, a piston in each end of said chamber, an air drum between said pistons, packing means between each piston and the air drum, and means to move the pistons toward or away from each other when the relative position of the vehicle and the running gear is changed.

1,575,778. CELLULOSE ACETATE COMPOSITION AND METHOD OF MAKING THE SAME. LESTER J. MALONE and STEWART J. CARROLL, Rochester, N. Y., assignors to Eastman Kodak Company, Rochester, N. Y., a Corporation of New York. Filed Aug. 2, 1920. Serial No. 400,703. 10 Claims. (Cl. 106—40.)

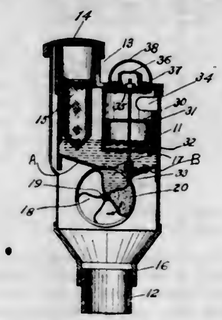


1. A flowable composition for the manufacture of transparent flexible films, comprising acetone-soluble cellulose acetate, a solvent therefor, castor oil, and a transparency-inducing substance, said composition being substantially free from nitrocellulose.

1,575,779. COMBINED THREAD CLAMP AND CUTTER. THOMAS A. MARSHALL, Rosemary, N. C., assignor to Crompton & Knowles Loom Works, Worcester, Mass., a Corporation of Massachusetts. Filed May 31, 1924. Serial No. 716,891. 1 Claim. (Cl. 139—263.)

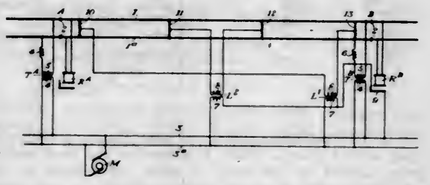
In a combined thread clamp and cutter for a loom having a lay, a support, a cutter member slidable on the support, a pivoted cutter element mounted for angular motion on the support, a clamping member fixed with respect to the support, a pivotal clamping element mounted on said support for angular movement about the axis of said pivoted cutter member, a pressure distributor mounted for pivotal movement about the axis of the pivoted cutter element, means to hold the distributor yieldingly against the pivoted clamping element, and an actuating pin extending from the slidable cutter member through the fixed clamp member and through slots formed in the pivoted elements and distributor, the slots in the elements and distributor being oblique with respect to the direction of movement of the sliding cutter, the rear end of the sliding cutter projecting rearwardly beyond the clamping member when th cutter is to operate to be engaged by the lay when the latter moves forwardly, and the actuating pin moving the pivoted elements and distributor with respect to the slidable cutter member and fixed clamping member as the lay advances.

1,575,780. DEEP-WELL PUMP. WILLIAM A. MINOR, Rochester, N. Y., assignor to Luitweiler Pumping Engine Company, Rochester, N. Y., a Corporation of New York. Filed Nov. 1, 1924. Serial No. 747,238. 1 Claim. (Cl. 103—200.)



A deep well pump comprising a cylinder having a discharge at its upper end, two pistons operating in the cylinder, each provided with a valve, and two rods, each connected to one of the pistons, the rod connected to the uppermost piston being hollow throughout its length and extending to the top of the pump above the discharge opening and having openings at different levels communicating with the cylinder below the discharge outlet of the pump and above the uppermost piston to provide a free flow between the interior of the hollow rod and the chamber of the cylinder above said uppermost piston to permit a free surging action throughout the length of the hollow rod.

1,575,781. ELEVATING TRUCK. FRANK A. MORAN, Springfield, Mass., assignor to National Scale Corporation, Chicopee Falls, Mass., a Corporation of Massachusetts. Filed Oct. 13, 1924. Serial No. 743,284. 14 Claims. (Cl. 254—10.)

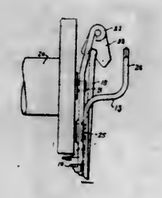


1. An elevating truck having a body frame and a lifting platform, a swiveled wheel, a shaft by which said wheel is mounted in the body frame, a lifting block arranged to slide on said shaft and connected to said lifting platform so as to raise the latter when raised itself, a lock block mounted to slide on said shaft beneath said lifting block, a lock carried by said lock block and adapted to interlock with said shaft when placed in a given position, a lifting cam pivoted to said lock block, and a cam abutment independently connected to the swivel shaft and arranged to receive the thrust of said cam.

1,575,782. LIQUID-MEASURING DEVICE. WILLIAM F. MOWRY, Attleboro, Mass. Filed July 5, 1924. Serial No. 724,387. 5 Claims. (Cl. 73—37.)

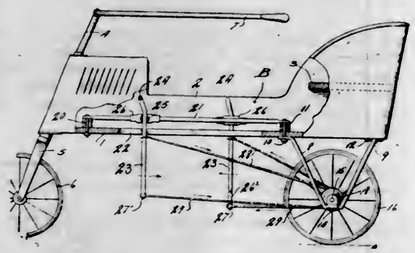
1. A liquid measuring device for a storage receptacle, comprising a receiving tank having an inlet and a passageway therein placed above and communicating with the receptacle, a bucket wheel beneath said passageway, an indicator operatively related to the wheel, a float in said tank and means actuated by said float for automatically locking the wheel against rotation when there is no liquid flowing through the passageway.

1,575,783. RAILWAY-TRAFFIC-CONTROLLING APPARATUS. BERNARD E. O'HAGAN, Swissvale, Pa., assignor to The Union Switch & Signal Company, Swissvale, Pa., a Corporation of Pennsylvania. Filed Oct. 14, 1924. Serial No. 743,524. 6 Claims. (Cl. 246—34.)



1. In combination, a stretch of railway track, and means for simultaneously supplying train controlling loop current to the two rails of said stretch in parallel throughout the same portion of the stretch from two sources.

1,575,784. MAGNIFIER. DENIS HENRY O'MEARA, Detroit, Mich., assignor to American Optical Company, Southbridge, Mass., a Voluntary Association of Massachusetts. Filed July 16, 1924. Serial No. 726,317. 6 Claims. (Cl. 88—14.)

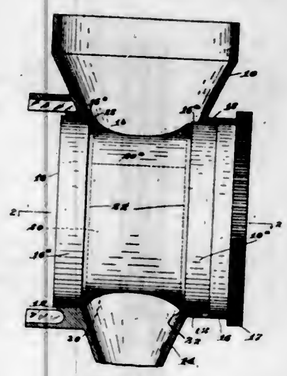


1. In a device of the character described, a base plate having a plurality of recesses at one end, an arm having a pointer pivoted at the other end of the base plate, said pointer being adapted to travel over the recesses in the end of the base plate about its pivot, a second arm pivoted on the same pivot with the first arm and having a lens aligned with the pointer.

1,575,785. TUBE-FRAME BRACKET. ARTHUR P. PAINE, Worcester, Mass., assignor to Crompton & Knowles Loom Works, Worcester, Mass., a Corporation of Massachusetts. Filed July 19, 1924. Serial No. 727,072. 6 Claims. (Cl. 139—10.)

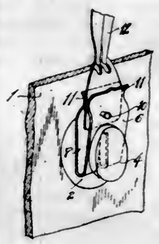
1. A tube frame bracket comprising a chain engaging member effective to locate the tube frame laterally and a spool bearing member, both of said members extending above the chain when operatively connected therewith, a depending rigid latch pivoted to the upper part of said spool bearing member, and means to move said latch to operative and inoperative positions relative to the chain.

1,575,786. VELOCIPEDE. JOHN E. PARR, Connell, Wash. Filed Apr. 16, 1925. Serial No. 23,656. 6 Claims. (Cl. 208—36.)



1. A velocipede comprising, in combination, a body provided with a floor, a shaft, bearings for the shaft operatively carried by the body, a drive wheel fixed to the shaft, two pairs of spools loosely mounted on the shaft, a pinion fixed to the shaft adjacent to each pair of spools, a dog carried by one of each pair of spools engaging the adjacent pinion, two pedals supported by the floor of the body for reciprocating movement, a flexible member secured to each of the pedals and winding around a spool of one pair, and a second flexible member secured to each pedal and winding around a second spool of each pair, the spool coacting with one of the second flexible members being comprised in one pair of spools and the spool associated with the other of said second named flexible members being comprised in the other pair of spools.

1,575,787. TOBACCO PIPE, CIGAR, CIGARETTE, OR HOLDER THEREFOR. JACQUES PERL, Berlin, Germany. Filed Dec. 29, 1921. Serial No. 525,759. 2 Claims. (Cl. 131—12.)

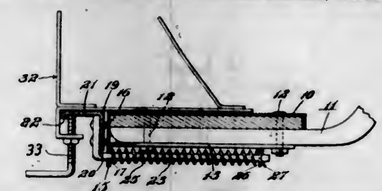


2. As an article of manufacture, a cartridge for cooling tobacco smoke comprising a porous carrier impregnated with a refrigerating substance capable of absorbing heat when dissolved in water.

1,575,788. MOLDING MACHINE. GUNTHER H. PETRI, Boston, Mass. Filed Oct. 24, 1923. Serial No. 670,574. 2 Claims. (Cl. 107—14.)

2. In a molding machine for plastic masses, the combination of a hollow casing with an inlet hopper on one side, a discharge tube on the other side, a block rotatable in said casing having a diametrical hole therethrough, and a reciprocating plunger within said hole adapted to suck a charge of the plastic mass from the hopper into the hole and to eject it into said tube; there being a shallow peripheral groove in the surface of said block, extending between its hole openings, constituting a passageway for films of said plastic mass clinging to the relatively-oppositely-moving adjacent surfaces which form the walls of said passageway, whereby the block may be rotated with slight friction losses.

1,575,789. SUPPORT. FRANK M. PHELPS, Usk, Wash. Filed Apr. 20, 1925. Serial No. 24,439. 8 Claims. (Cl. 248—39.)

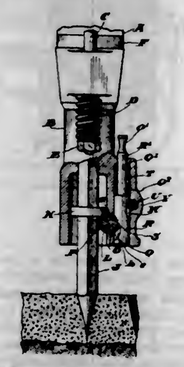


1. The combination with a vacuum cup having a neck wedge shaped in cross section, and a head, of a spring clip having slotted arms to engage over said neck and adapted to frictionally engage said cup and head.

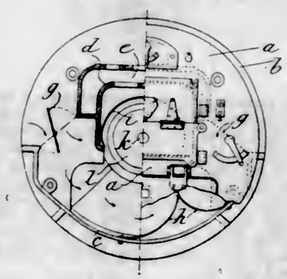
1,575,790. LUGGAGE-CARRIER MOUNTING. ERNEST J. PICKERELL, Eddyville, Iowa. Filed Aug. 1, 1925. Serial No. 47,563. 8 Claims. (Cl. 224—29.)

1. In a luggage carrier support, a bar confronting the outer edge of the running board, guides secured to the under surface of the running board, rods secured to said bar and directed through openings formed in said guides

including rigid rods guiding and supporting the first named bar in its extended position and pivoted ratchet rods preventing return movement of the bar, means normally tending to move the bar in confronting relation to the outer edge of the running board and means upon the bar permitting attachment thereto of a luggage carrier.

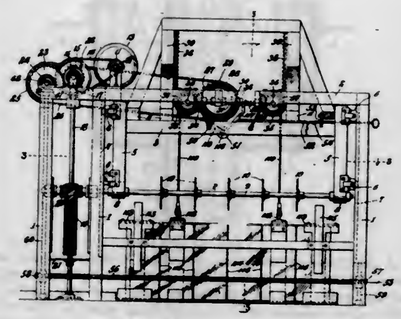


1,575,791. MOP. JACOB HENRY POSTEL, San Mateo, Calif. Filed Nov. 28, 1924. Serial No. 752,644. 3 Claims. (Cl. 15—229.)



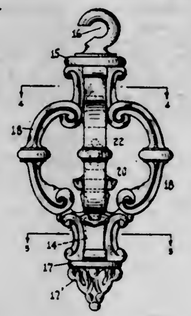
1. A mop comprising a casing having a filler unit mounted therein, said unit comprising a frame carrying cleaning elements, said unit and casing having registering apertures in their opposed side walls, a handle connector having clamping arms provided with inturned fingers engaging said apertures to securely connect the casing and the unit with each other and with the handle.

1,575,792. STEEL RETAINER. WILLIAM PRELLWITZ, Easton, Pa., assignor to Ingersoll-Rand Company, Jersey City, N. J., a Corporation of New Jersey. Filed Mar. 26, 1925. Serial No. 18,360. 2 Claims. (Cl. 121—82.)



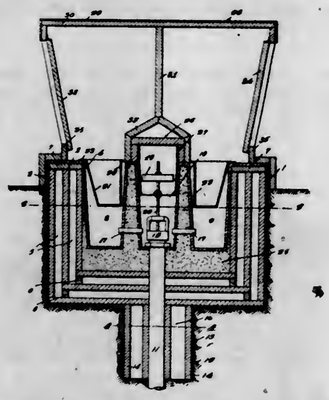
2. A steel retainer for rock drills, comprising in combination with a front head having an enlargement at one side, a collared drill steel adapted to be inserted into the front head, a cylindrical removable stop slidable transversely through the front head and offset from the longitudinal axis of the drill to cooperate with the collar on the steel for preventing ejection of the steel from the front head, said stop being insertable from opposite sides of the front head, heads on the ends of said stop, a spring pressed plunger in the enlargement constantly in contact with the stop and cooperating with the inner faces of the heads to prevent removal of the stop, said plunger paralleling the longitudinal axis of the drill, a recess in one side of the plunger, and a pin in the enlargement to cooperate with said notch for limiting longitudinal movement of the plunger.

1,575,793. FURNACE. JOHN REID, London, England. Filed May 10, 1924. Serial No. 712,382. 6 Claims. (Cl. 110—172.)



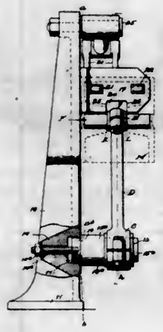
1. In a furnace front having a circular air pocket therein, a ceratoid cusp shaped device adapted to gradually divert air admitted thereto from either side of said device so that it flows in the desired direction to said pocket, substantially as described.

1,575,794. MACHINE FOR SCORING ICE. ROBERT H. ROARK, Waco, Tex. Filed Nov. 29, 1924. Serial No. 752,905. 17 Claims. (Cl. 125—13.)



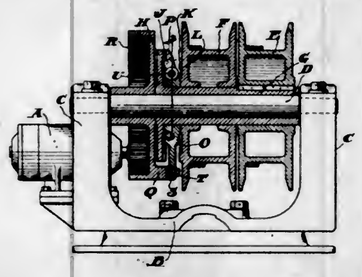
1. In a machine for scoring ice, the combination of a saw carriage with saws mounted therein, a cage adapted to receive a block of ice, and means for moving the carriage and cage simultaneously in opposite directions to cause the saws to score a block of ice carried in said cage.

1,575,795. PENDANT FOR LIGHTING FIXTURES. JOHN H. SAMPLE, Maumee, Ohio, assignor to The Edward N. Riddle Company, Toledo, Ohio, a Corporation of Ohio. Filed Mar. 20, 1925. Serial No. 16,892. 4 Claims. (Cl. 41—10.)



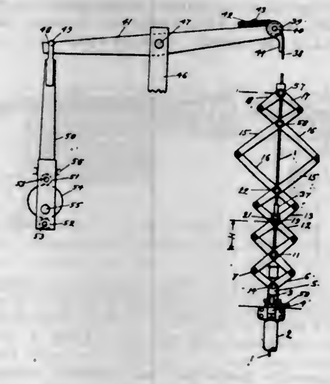
1. A loop formed with an enlarged portion at its top and bottom, flattened faces on said portions diametrically opposite to each other, the sides of said loop abutting the enlarged portions at the edges of said faces; one of said enlarged portions having a recess adjacent the point of union of the sides with said portions, a removable member formed with curving sides corresponding to the sides of said loop, a bar which connects said sides, said bar being fitted to said recess, the inner surface of the ends of said sides being fitted to the faces on said enlarged portions.

1,575,796. WATER FOUNTAIN. GEORGE SCHEIHING, Morning Sun, Iowa. Filed May 4, 1925. Serial No. 27,894. 1 Claim. (Cl. 119—78.)



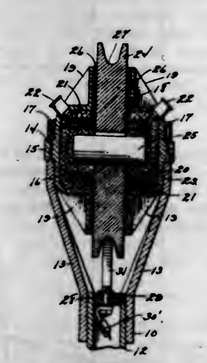
A fountain of the class described comprising an insulated water tank a float compartment having a water supply pipe opening thereinto and provided with an inlet valve connected with said float whereby the valve is opened and closed on the rising and falling of the water in said compartment, a pipe connecting said compartment with said tank, a protective covering for said tank, a door affording access to said tank and mounted to swing inwardly at its upper end, whereby the stock may open the door and drink from the tank, and a cap-like cover mounted over said float chamber, and a protective covering for the fountain having a depending member resting on said cap and holding it closed.

1,575,797. CONNECTING-ROD JIG. LOUIS E. SHAW, New York, N. Y. Filed June 27, 1922. Serial No. 571,290. 23 Claims. (Cl. 33—180.)



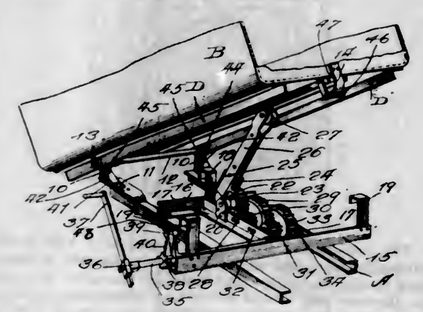
1. A device for testing parallelism of the axis of a piston pin at one end of an engine connecting rod with the axis of the crank shaft bearing at the other end, comprising a standard having one side flat to provide a reference plane, an arbor having its axis extending at right angles from said plane and adapted to have the crank shaft bearing of the rod to be tested fitted thereto, and a gauge block engaging said reference plane and movable into a plurality of operable positions thereon, said block provided with means defining a testing line extending perpendicular to said reference plane in all operable positions of the block and in each of the different operative positions of the block adapted to engage different places on the pin carried by the piston pin bearing of the rod to be tested when the piston pin is parallel to the axis of the crank shaft bearing.

1,575,798. DOUBLE-DRUM HOIST. FRED M. SLATER, Easton, Pa., assignor to Ingersoll-Rand Company, Jersey City, N. J., a Corporation of New Jersey. Filed June 24, 1925. Serial No. 39,167. 2 Claims. (Cl. 254—185.)



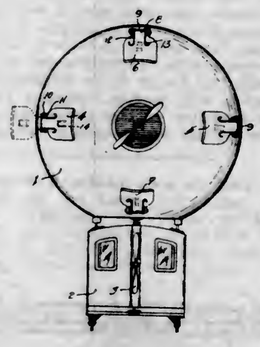
1. In a hoist, the combination of a main shaft, standards for supporting said main shaft, a pair of drums rotatable about said main shaft, opposed drum drivers at one end of one drum and adapted to rotate through different transverse planes, a main driver at one end of the shaft and connected to be rotated by a reversible source of power, and a pawl carried by the main driver for connecting one or the other of the drums with the main driver in accordance with the direction of rotation of said main driver.

1,575,799. PUMPING APPARATUS. VLADIMIR B. SOUNITZA, New York, N. Y. Filed Feb. 17, 1925. Serial No. 9,764. 6 Claims. (Cl. 74—14.)



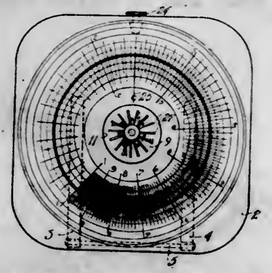
1. In a pumping mechanism, the combination with a pump plunger, a casing pipe, a rod extending from said plunger through the top of said casing pipe, a plurality of links pivoted together and forming an expansive system, means to support one end of said system, means to impart a reciprocating movement to said system, and means to connect said rod with different links of said system.

1,575,800. TROLLEY HARP. MERLE D. STALDER, Lincoln, Nebr. Filed Mar. 14, 1925. Serial No. 15,562. 2 Claims. (Cl. 191—61.)



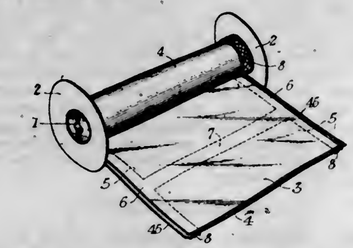
1. In a trolley harp, the combination of supporting means included upon the upper portion of a trolley pole, auxiliary supporting means included upon the supporting means, insulating means included within the auxiliary supporting means, bushings interposed between the insulating means, lubricating means connected with the bushings, insulating means interposed between the bushings, auxiliary supporting means and trolley wheel, and of electric conducting means having frictional engagement with the trolley wheel in order that the mechanism of a trolley car and the like may be energized.

1,575,801. DUMPING TRUCK. GILBERT L. STIEFEL, Galion, Ohio, assignor to The National Grave Vault Company, Galion, Ohio, a Corporation of Ohio. Filed Sept. 4, 1923. Serial No. 660,812. 4 Claims. (Cl. 298—19.)



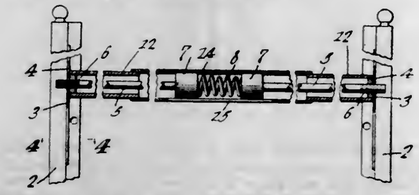
1. In a dumping truck, a chassis, a truck body pivotally mounted at its forward end upon the chassis for oscillation in a vertical plane, the truck body being formed with a medially disposed, longitudinally extending channel iron and with laterally disposed angle irons having downwardly extending flanges, a lifting member oscillatably mounted upon the chassis and having a roller adapted to operate within the channel iron, manually operable means for oscillating said member and holding it in adjusted positions, a bracket disposed forwardly of said member and adapted to engage within said channel iron when the truck body is lowered to a horizontal plane, and rearwardly disposed upwardly projecting brackets carried by the chassis and adapted to engage against the base flanges of said angle irons and laterally of the depending flanges of the lateral angle irons when the truck body is lowered.

1,575,802. STEERING MECHANISM. EBER H. VAN VALKENBERG, Monroe, Wash., assignor of one-half to Oscar Silverstein, Spokane, Wash. Filed Apr. 27, 1925. Serial No. 26,080. 3 Claims. (Cl. 244—29.)



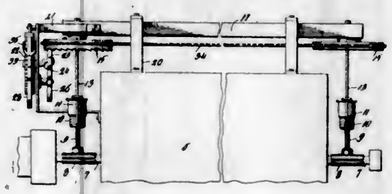
1. The combination with an airship of a pair of diametrically arranged, hinged steering blades, longitudinally extending channel guide plates on said blades, a diametrically disposed operating bar slidably supported between said blades, anti-friction rollers on the opposite ends of said bar for engagement with said channel plates, and means for actuating said bar.

1,575,803. CALCULATING MACHINE. JOHN I. TUTTLE, Spokane, Wash. Filed Apr. 20, 1925. Serial No. 24,310. 1 Claim. (Cl. 235—83.)



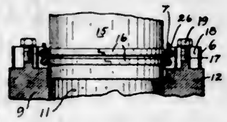
The combination with a center pin, of a disk having tangential slots and mounted to rotate thereon, a second disk having coacting radial slots and mounted to rotate on the first disk, means for locking these disks together, and means for turning selectively the second disk or the pair of disks.

1,575,804. PHOTOGRAPHIC CARTRIDGE. HENRY E. VAN DERHOEF, Rochester, N. Y., assignor to Eastman Kodak Company, Rochester, N. Y., a Corporation of New York. Filed Mar. 2, 1925. Serial No. 12,710. 3 Claims. (Cl. 95—9.)



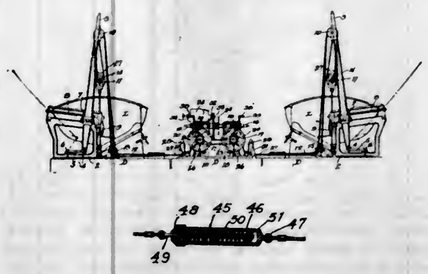
1. A photographic roll film cartridge comprising a flanged spool, a strip of film, at least one face of which bears a light-sensitive coating, a strip of protecting backing material, said strips being coiled on said spool between said flanges, with said backing material between the convolutions of the film, the margins of said backing material being thickened to hold said material from deleterious contact with said coating, and sealing means in contact with said flanges at the margins of said protective material, said margins remaining thickened to prevent said deleterious contact throughout the stresses applied to the backing during manufacture and use.

1,575,805. CURTAIN AND SHADE HANGER. GEORGE E. WEST, Dallas, Tex. Filed Feb. 28, 1925. Serial No. 12,366. 2 Claims. (Cl. 156—27.)



1. In a device of the class described, tracks, brackets slidably engaged with the tracks, thrust members threaded in opposite directions into the brackets, and spring means for moving said members in opposite directions to cause the brackets to remain in adjusted positions on the tracks, said threading providing for an adjustment of the spring means when the thrust members are rotated.

1,575,806. AUTOMATIC LUBRICATING DEVICE. NOAH R. WHITE, Delta, Colo. Filed Feb. 9, 1922. Serial No. 535,316. 3 Claims. (Cl. 184—37.)

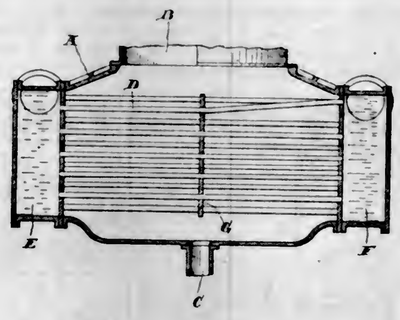


1. An automatic force feed lubricator comprising a lubricant receptacle, a cap follower associated therewith for ejecting lubricant therefrom, a rotary member having a pair of apertures, said follower having a pair of spaced apertures, and a removable U-shaped follower operating member having its arms extended through the spaced apertures in said rotatable member and said follower.

1,575,807. PISTON-INSERTION DEVICE. TIMOTHY WINDLE, Oakland, Calif. Filed July 15, 1924. Serial No. 726,105. 9 Claims. (Cl. 29—86.4.)

1. A piston insertion device for cylinders, comprising mutually separable blocks of solid material arranged to have their inner faces fixedly held symmetrically positioned with respect to the axis of said cylinder, and spring members fixed to said blocks and arranged to extend therefrom into said cylinder to contact with and define a guideway for said piston.

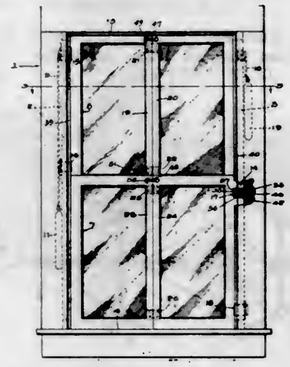
1,575,808. BOAT-HANDLING APPARATUS. SOLOMON EDWARD AARON, Boston, Mass. Continuation of application Serial No. 415,406, filed Oct. 7, 1920. This application filed Dec. 16, 1921. Serial No. 522,800½. 10 Claims. (Cl. 9—22.)



1. A boat handling apparatus for ships, docks and the like comprising in combination, a fall, a windlass fixed relatively to the ship, dock or the like, a normally inoperative brake for the windlass, means detachably secured to the boat for operating the brake and means for maintaining an operative tension on said brake operative means during the movement of the boat from inboard to outboard position.

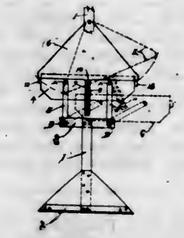
1,575,809. FOUNTAIN BRUSH. FRED OLIVER ANDERSON, Minneapolis, Minn. Filed June 30, 1923. Serial No. 648,791. 4 Claims. (Cl. 15—128.)

1. In a device of the class described, a handle, a bristle carrying core having both ends thereof secured to the handle, the body of the core being bent into two continuously formed substantially U-shaped portions, said portions being arranged in spaced opposed relation so as to form an opening between the four arms thereof.



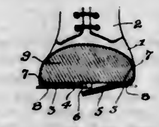
1,575,810. SURFACE CONDENSER. PAUL A. BANCEL, Nutley, N. J., assignor to Ingersoll-Rand Company, Jersey City, N. J., a Corporation of New Jersey. Original application filed Oct. 15, 1924, Serial No. 743,695. Divided and this application filed June 30, 1925. Serial No. 40,512. 3 Claims. (Cl. 257—43.)

1. A condenser having tubes with different temperatures along their length resulting in unequal capacities for condensing steam in vertical sections along their length, said tubes being bunched in one of the sections for obtaining substantially equal depths of penetration of steam in all sections along the length of the condenser.



1,575,811. WINDOW CONSTRUCTION. JOHN J. BRIDLER, San Francisco, Calif. Filed Jan. 19, 1925. Serial No. 3,304. 2 Claims. (Cl. 20—50.)

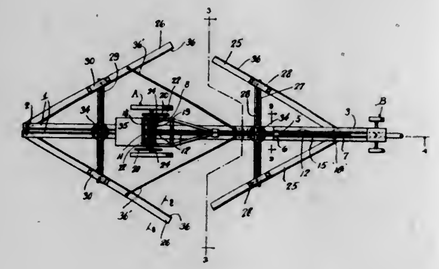
1. In a window construction, the combination of a casement and pulley stiles, elongated guide-slots in said pulley stiles, upper and lower sash members slidably mounted between the pulley stiles and comprised, respectively, of a pair of centrally hinged panels provided with tongue and groove abutting edges, counter-weights for each of said sash members, sash hinge-members secured to the edges of said sash members and having offset butts and extensions adapted to engage in said guide-slots, guide-shoes adapted to maintain said hinges in slidable relation with the casement stiles, keys adapted to extend through said extensions and maintain said shoes in place, and hooks mounted at the parting lines of said hinged panels opposite the hinge-members thereof and adapted to maintain said panels in a common plane and, when released, to allow said sash-member panels



to break inwardly at their parting lines and to swing upon the sash-member hinges and clear of the casement parting strips.

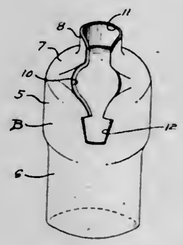
1,575,812. PRODUCE BIN. GEORGE W. BROOKS, Topeka, Kans. Filed Apr. 18, 1925. Serial No. 24,158. 1 Claim. (Cl. 211—6.)

In a produce bin, supporting standards having laterally disposed bars functioning as bearings, bars pivotally mounted at the ends of the first of said bars, the second of said bars being pivotally connected to the ends of a bin so that said bin will rock, engaging pins centrally positioned near the top edge of the ends of said bin, a cover pivotally mounted between said standards in vertical alignment with the normal position of said bin, slotted laterally extending bars on the ends of said cover, said slot engaging said pins on the ends of said bin so that the rocking of said bin will rock said cover simultaneously as shown and described.



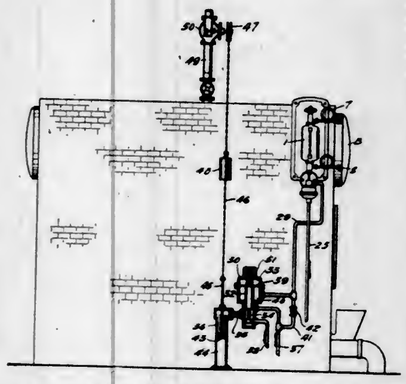
1,575,813. METHOD OF SIDE LASTING BOOTS, SHOES, AND SLIPPERS. LAWRENCE A. BURKE and THOMAS F. LITTLETON, Montello, Mass. Filed Mar. 14, 1924. Serial No. 699,276. 1 Claim. (Cl. 12—145.)

A method of side lasting boots, shoes and slippers consisting of forming an upper with an inwardly turned flange adjacent the lower edge thereof, forming a sec-



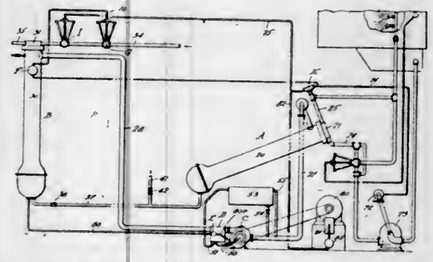
tional insole with interlockable adjoining edges, attaching the outer edges of the insole sections to said flange, and locking the adjoining edges of said insole sections together.

1,575,814. GRADER. PRESTON V. BURSON, Marysville, Ohio. Filed May 23, 1924. Serial No. 715,453. 2 Claims. (Cl. 37—153.)



1. An apparatus of the class described comprising a pair of trucks, a main beam, a draft beam pivotally connected with the main beam, and rotatably connected with the front truck, shafts rotatably mounted in the rear truck, a cable connected with one shaft and with the front end of the main beam, pulleys on the main beam under which the cable passes, a cable on the draft beam over which the cable passes, a second cable connected with the other shaft, a pulley on the main beam under which the cable passes, the other end of the cable being attached to the truck, manually operated means for rotating the shafts, blade carrying members adjustably connected with the main beam and means for adjusting the blade carrying members to a predetermined angle.

1,575,815. COVER FOR ELECTRIC SOCKETS. JOSEPH C. CARLSON, Tulsa, Okla. Filed May 3, 1924. Serial No. 710,816. 6 Claims. (Cl. 173—362.)

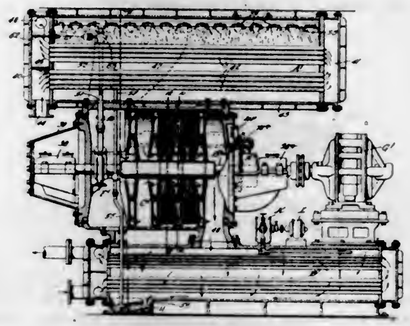


1. A cover for that type of electric socket formed with a reduced cord receiving end, comprising a hollow elastic body conforming to the general configuration of the socket, said cover being slit from its reduced end portion to a point adjacent its greatest dimension for permitting of the reduced end portion being spread to a position whereby the cover may be readily slid over the socket from the bulb receiving end thereof and snugly embrace the sides of the socket.

1,575,816. LIQUID-LEVEL REGULATOR. RAGNAR CARLSTEDT, Stockholm, Sweden, assignor, by mesne assignments, to Arca Regulators, Incorporated, New York, N. Y., a Corporation of Virginia. Filed June 10, 1924. Serial No. 719,219. 9 Claims. (Cl. 137—101.)

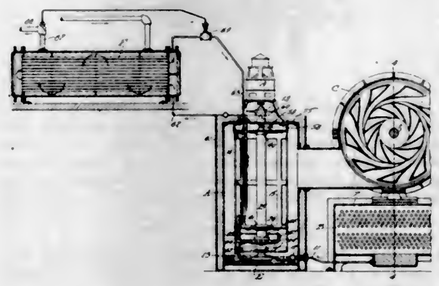
1. A liquid level regulator comprising a valve, a continuously flowing stream of liquid to control said valve, and a movable receptacle to control said continuously flowing stream of liquid.

1,575,817. REFRIGERATING SYSTEM. WILLIS H. CARRIER, New York, N. Y., assignor to Carrier Engineering Corporation, New York, N. Y. Filed Feb. 2, 1921. Serial No. 441,876. 11 Claims. (Cl. 62—4.)



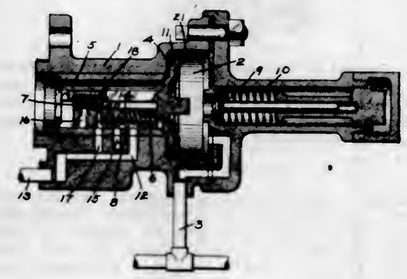
1. In a refrigerating system in which a volatile liquid refrigerant is employed, the combination of an evaporator in which the refrigerant liquid is adapted to vaporize, a condenser including means for condensing the refrigerant vapor, a compressor which withdraws the refrigerant vapor from the evaporator and delivers it to the condenser, said compressor being of a non-positive type adapted to produce a greater or less difference in pressures in the evaporator and condenser depending upon the speed of the compressor, and means responsive to the temperature produced in the evaporator for limiting the pressure difference produced by said compressor.

1,575,818. REFRIGERATING SYSTEM AND METHOD OF REFRIGERATION. WILLIS H. CARRIER, New York, N. Y., assignor to Carrier Engineering Corporation, New York, N. Y. Filed Apr. 5, 1921. Serial No. 458,679. 18 Claims. (Cl. 62—115.)



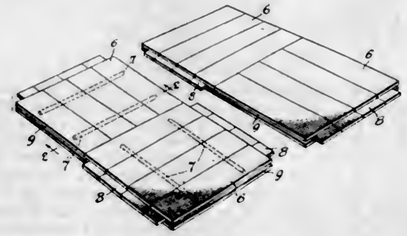
2. In a refrigerating system in which a volatile liquid refrigerant having a low vapor pressure and a high specific density is evaporated, compressed and condensed,

the combination of an evaporator having evaporating surfaces over which the refrigerant flows and which surfaces are not submerged in the liquid refrigerant, a condenser for condensing the refrigerant vapor, a centrifugal compressor which delivers the refrigerant vapor from the evaporator to the condenser and maintains a relatively low difference of pressures in the evaporator and in the



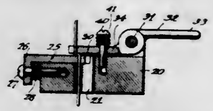
condenser, means for circulating a larger volume of liquid refrigerant through the evaporator than is evaporated therein and withdrawn by the compressor, means for evacuating air from the system to maintain a partial vacuum in at least a portion of the system, and regulating means for controlling the minimum temperature produced by the evaporator without changing the speed of the compressor.

1,575,819. REFRIGERATING SYSTEM. WILLIS H. CARRIER, New York, N. Y., assignor to Carrier Engineering Corporation, New York, N. Y. Filed Apr. 5, 1921. Serial No. 458,680. 8 Claims. (Cl. 62—115.)



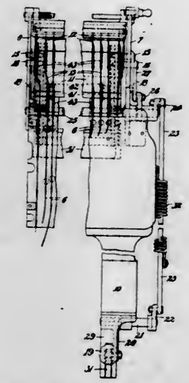
1. In a refrigerating system employing a volatile liquid refrigerant, the combination of a vaporizing chamber, a condenser for the vaporized refrigerant, a centrifugal compressor which delivers the refrigerant vapor from the vaporizing chamber to the condenser, means for returning the liquefied refrigerant from the condenser to the vaporizing chamber in which a body of refrigerant liquid is maintained, a refrigerating coil, a rotary pump located in said vaporizing chamber for circulating the refrigerant liquid from the vaporizing chamber through said coil and discharging it into the vaporizing chamber, and an atomizing device in said vaporizing chamber and connected to rotate with said pump for atomizing the refrigerant liquid in the vaporizing chamber whereby it rapidly expands and lowers the temperature in said chamber by direct expansion.

1,575,820. FLUID-PRESSURE BRAKE. JOHN W. CLOUD, London, England, assignor to The Westinghouse Air Brake Company, Wilmerding, Pa., a Corporation of Pennsylvania. Filed June 5, 1924. Serial No. 717,919. 4 Claims. (Cl. 303—74.)



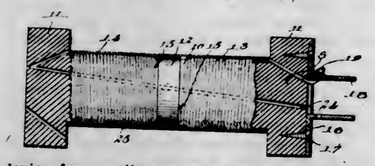
1. In a fluid pressure brake, the combination with a brake pipe, of a triple valve device having a main valve, a graduating valve having a movement relative to the main valve, a piston subject to brake pipe pressure for operating said valves to effect a graduated release of the brakes, and a spring interposed between the main valve and said piston.

1,575,821. PARQUET-FLOOR COMPOSITE SECTIONS. ERNEST STUART DANIELS, West Point, Va., assignor to John Alexander Hugh Cameron, trustee, Montreal, Canada. Filed Mar. 13, 1925. Serial No. 15,271. 2 Claims. (Cl. 20—75.)



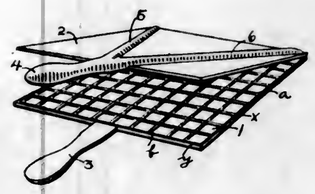
1. A parquet flooring comprising individually formed composite sections of flooring material inter-connected and held together in assembled relation by tongue and groove connections on their sides and ends with the grain of the wood in each section running substantially at right angles to the grain of the wood in adjacent sections, the tongues extending along opposite ends of the sections and the grooves extending along opposite sides thereof, the individual sections being composed of a plurality of wooden pieces of equal lengths placed edge to edge and having registering transverse holes therethrough intermediate the ends of the sections and transverse wooden binder rods forcibly inserted through said holes while said pieces are held together under lateral compression so as to form the sections in inseparable composite structures with the grain of the wood in the several pieces running in substantially the same direction, the extremities of said rods and the tongues of each section terminating flush with the countersunk edges of the grooves in opposite sides thereof.

1,575,822. STRIPPER MECHANISM. JOSEPH F. DAVIS, Portsmouth, Ohio. Filed Sept. 4, 1925. Serial No. 54,584. 7 Claims. (Cl. 91—58.)



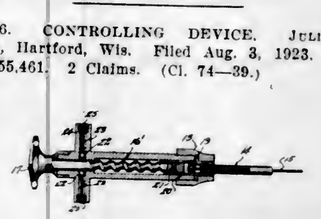
1. A device of the class described, comprising slidable, and pivoted elements, each element having a guide aperture, said elements superposed with the apertures relatively offset, and said elements adjustable toward and away from one another in planes at right angles.

1,575,823. ESCAPEMENT-ACTUATING MECHANISM OF TYPOGRAPHICAL COMPOSING MACHINES. TOM DRAKE, Altrincham, England, assignor to Linotype and Machinery Limited, London, England. Filed Oct. 18, 1922. Serial No. 595,259. 10 Claims. (Cl. 199—20.)



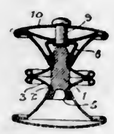
1. In a typographical composing machine, the combination of a plurality of magazines each provided with a set of escapements, a set of striker-lever operating devices and a set of striker levers adjustable relatively to said devices to operatively connect them with the escapements of one or other of the magazines, the shape of the striker levers being such as to compensate the variations of the ratio of movement between said devices and the operative ends of the strikers and maintain a uniform effective stroke of the said ends throughout the range of adjustment.

1,575,824. RECEIVING ANTENNA FOR WIRELESS TELEGRAPHY OR TELEPHONY. CHARLES H. EIFFERT, Roanoke, Va. Filed Oct. 27, 1922. Serial No. 597,387. 1 Claim. (Cl. 250—16.)



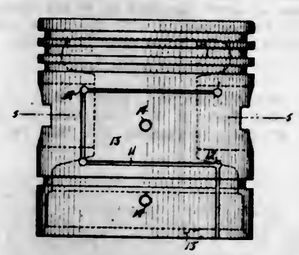
A device for coupling a radio receiving apparatus to an electric power system comprising a primary winding consisting of two disconnected sections arranged in axial alinement and wound in opposite directions, means whereby the remote ends of said coil sections may be connected to an electrical power system, a secondary winding about the two primary winding sections, and means whereby one end of the secondary winding may be connected to a radio receiving apparatus.

1,575,825. COMMUNION-BREAD BAKER. WILLIAM H. EVANS, Dallas, Tex. Filed Jan. 25, 1923. Serial No. 614,806. 1 Claim. (Cl. 53—10.)



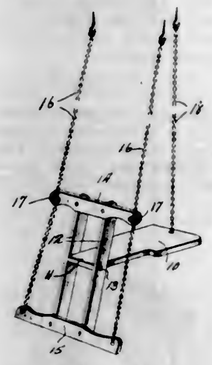
In a communion bread baker, the combination of two plates, one of said plates having an edge trimming flange around its periphery and a plurality of crossing subdividing elevations within said periphery and of less height than said peripheral flange, the other of said plates being free of elevations, each of said plates having a flat faced handle member, the second named plate being adapted to contact with the peripheral elevation of said first named plate with the flat faces of the handle members in contact with each other.

1,575,826. CONTROLLING DEVICE. JULIUS F. GOETZ, Hartford, Wis. Filed Aug. 3, 1923. Serial No. 655,461. 2 Claims. (Cl. 74—39.)



1. In a control device of the class described, a tubular casing; a cylindrical operating member provided with a helical groove slidably mounted within said casing, yielding detent members carried by said casing for engaging said groove; and swiveled connections between said operating member and the device to be controlled.

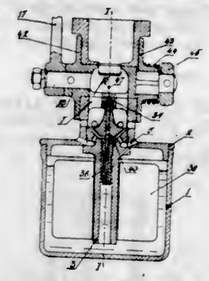
1,575,827. CUFF BUTTON. AARON A. GOLDSTEIN, Buffalo, N. Y. Filed June 12, 1924. Serial No. 719,561. 3 Claims. (Cl. 24—110.)



1. In a cuff button, the combination with a button member having a tapering convergent throat, of a stud having a hollow end swaged outwardly to engage for its entire length the tapering inner wall of the throat in locking contact to secure the stud rigidly therein and against movement relative thereto.

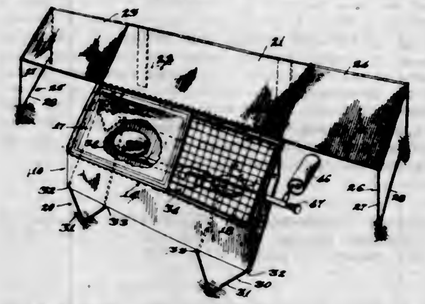
1,575,828. PISTON AND METHOD OF MAKING SAME. ELBERT J. HALL, Berkeley, Calif. Filed Apr. 18, 1923. Serial No. 632,916. 2 Claims. (Cl. 74—108.)

1. In a piston for internal combustion engines having a wrist pin mounted in the skirt portion, that side of the skirt opposite the power stroke thrust being cut to form a tongue, said skirt portion being also cut from its bottom to the base of the tongue and a piston ring retaining groove formed below the tongue.



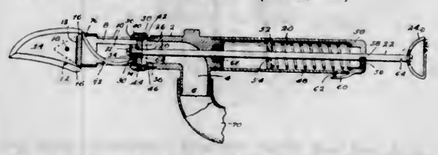
1,575,829. SWING. WILLIAM A. HAMBIDGE, Upland, Ind. Filed July 7, 1925. Serial No. 42,059. 2 Claims. (Cl. 155—65.)

1. A swing of the character described comprising a seat having a forward prolongation, a lever pivoted to the forward prolongation and extending above and below the seat, a handle cross bar mounted upon the upper end of the lever, a foot cross bar mounted upon the lower end of the lever, a pair of flexible connections extending downward from a suitable support and engaged with the ends of the handle bar and with the ends of the foot bar, and a flexible connection extending downward from the support and engaged with the rear end of the seat.



1,575,830. CARBURETING APPARATUS. JEAN PIERRE HEUCHEL, Rouen, France. Filed May 4, 1923. Serial No. 636,677. 4 Claims. (Cl. 261—41.)

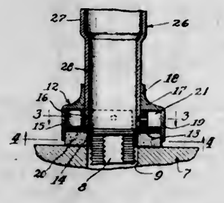
1. In a carburetor, the combination of a float feed chamber; a casing or body mounted thereon and providing a mixing chamber and air inlets opening into the same; a main fuel tube fitting at its upper end in the casing immediately below the mixing chamber and projecting at its lower portion into the fuel in the float chamber, said tube having an enlarged mouth at the upper end of its bore; a sprayer tube having its lower portion projecting into the main tube and also having an enlargement which is disposed in said mouth but spaced from the wall thereof to form an intermediate annular fuel passage of large diameter communicating at its lower end with the bore of the main tube and opening at its upper end into the mixing chamber; a partition in said casing forming the top wall of the mixing chamber and provided with conduits opening thereinto; a



throttle valve mounted in the casing immediately above said partition and having an aperture individual to each conduit and adapted to be brought into and out of registration therewith, and another aperture adapted to be brought into and out of registration with the end of the bore of the sprayer tube; and means for operating said throttle valve.

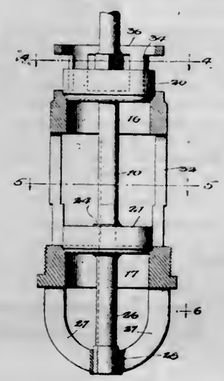
1,575,831. FOLDING STOVE. JOHN HIGHAM, Los Angeles, Calif. Filed Aug. 18, 1922. Serial No. 582,631. 5 Claims. (Cl. 126—38.)

1. In a folding stove, a box-like burner housing having bottom, side and end walls, a demountable top member for said housing comprising a one piece plate portion and grill portion, and a double burner arranged in said housing with one burner disposed beneath the plate portion and the other burner located beneath the grill portion of the top member; said top member being adapted to be disposed to locate the plate portion or the grill portion over either burner.



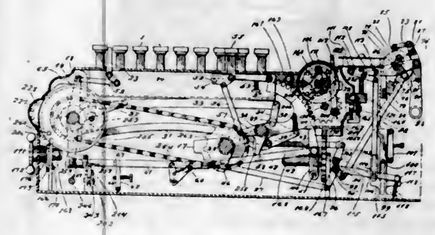
1,575,832. SLAUGHTERING DEVICE. ELMER E. HIGMAN, Kansas City, Kans. Filed Mar. 24, 1924. Serial No. 701,386. 9 Claims. (Cl. 17—1.)

7. A slaughtering device consisting of a tubular body having inlet and outlet ports, a valve operably mounted in said body to open and close communication between



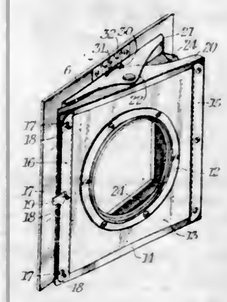
said ports, a stem connected to said valve to control the same, a handle connected to the rear of the tubular body and through which said stem extends, latch means mounted in said handle for holding said stem in retracted position and thereby holding the valve to its seat, a disk within said handle and fixed to the stem, and a coil spring within the handle and interposed between the rear end thereof and said disk to effect the opening of the valve when the latch is disengaged from said stem, and a knife at the forward end of said body.

1,575,833. DUST CAP AND THE LIKE. EDWARD E. HOLT, Chicago, Ill., assignor to Edward Holt Co., Chicago, Ill., a Corporation of Illinois. Filed Aug. 16, 1924. Serial No. 732,552. 3 Claims. (Cl. 152—12.)



1. A dust cap comprising a base member and a cylindrical cap member, the base member including a nut member having a horizontal flange, a depending internally threaded collar of proper size to thread onto the valve stem, and an upstanding collar of larger size, and the base member also including a shell having a depending flange of proper size to receive the horizontal flange of the nut member and having an upstanding flange of internal bore the same size as the upstanding collar of the nut member, there being a through opening in the upstanding collar of the nut member and a corresponding recess in the neck portion of the cap member, and a spring element in conjunction with the base member and working through the opening of the upstanding collar, substantially as described.

1,575,834. FEED-WATER REGULATOR. HENRY A. HURCKES, Chicago, Ill. Filed Apr. 16, 1924. Serial No. 706,977. 5 Claims. (Cl. 137—101.)



1. A feed and water regulator comprising upper and lower valve rings having seats, spaced parallel connecting ties joining said rings, upper and lower valves of the same diameter adapted for contacting with said seats, a stem permanently connected to the upper valve and passing through the lower valve, said stem being provided with an annular shoulder contacting with the lower valve, and a sleeve of the same diameter as said stem above said annular shoulder threaded on to the lower portion of the stem and contacting with the under side of the lower valve to hold the lower valve in position.

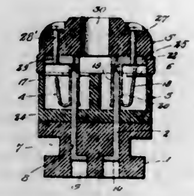
1,575,835. MULTIPROCESS REGISTER. JUSTIN T. HURLEY, New York, N. Y. Filed Oct. 30, 1923. Serial No. 671,754. 24 Claims. (Cl. 235—79.)

1. In a machine such as described, in combination, multiple order key-driven differential mechanism, a reversible totalizer, multiplier dials fixedly alined with said orders, a normally disengaged individual operating element for each dial, and devices to move transversely with said totalizer, but with relatively reduced motion and in a direction opposite thereto for successively engaging said operating elements.

1,575,836. ADJUSTABLE LENS BOARD FOR CAMERAS. CHARLES E. HUTCHINGS, Rochester, N. Y., assignor to Eastman Kodak Company, Rochester, N. Y., a Corporation of New York. Filed Apr. 14, 1924. Serial No. 706,581. 6 Claims. (Cl. 95—50.)

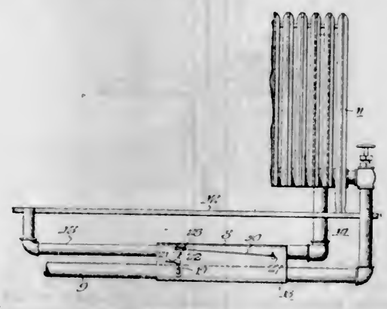
1. An adjustable lens board for cameras including a pair of spaced frames, each frame having side flanges extending toward each other and pivoted together at their center portions, and a flexible wall extending between the two frames.

1,575,837. ELECTRIC SWITCH. WILLIAM ILE, Jackson, Mich. Filed May 26, 1925. Serial No. 33,048. 8 Claims. (Cl. 200—67.)



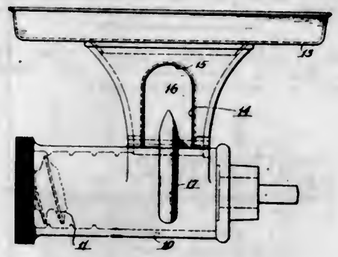
1. An electric switch including a support, a switch blade carrying yoke pivoted to the support, a lever composed of an approximately inverted U-shaped lower portion pivoted to the support, an upper portion interlocked with the lower portion and a pin securing the upper portion to the lower portion and having projecting terminals

adapted to have push buttons connected with them for enabling the lever to be operated by push buttons, the upper portion of the lever being also adapted to receive



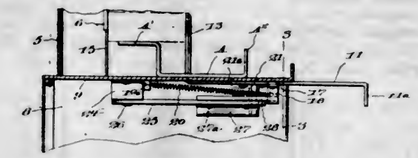
a handle for operating the switch, and spring toggle means connecting the lever and the yoke to produce a snap movement of the latter.

1,575,838. ELECTRICAL CONNECTER. WILLIAM ILE, Jackson, Mich. Filed Aug. 18, 1925. Serial No. 50,922. 9 Claims. (Cl. 173—343.)



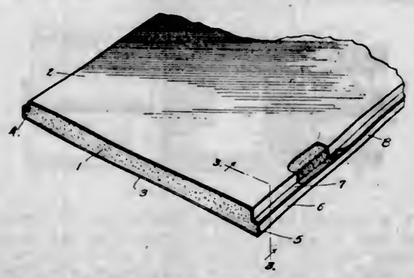
1. An electrical connecter of the class described comprising a cap section, an intermediate section and a base section of molded insulating material, spring contacts carried by the cap section and extending into the intermediate section, means mounted on the intermediate section and engaging with the spring contacts to interlock with the same and knife contacts mounted on the base section and extending into the intermediate section and detachably engaging the spring contacts for maintaining the latter in their interlocked relation.

1,575,839. HUMIDIFYING SYSTEM. THOMAS H. IRELAND, Rockville Center, N. Y. Filed Apr. 26, 1924. Serial No. 709,318. 9 Claims. (Cl. 237—1.)



2. In a humidifying system, in combination with a heat distributor in a room to be heated thereby and a heating medium supply pipe thereto, a water tank connected with said pipe whereby the water in the tank may be heated out of contact with said heating medium, an air inlet pipe leading into said tank, and an air outlet pipe leading from said tank terminating adjacent said heat distributor within said room.

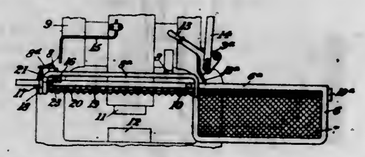
1,575,840. CROWDER FOR MEAT CHOPPERS. WILLIAM HAMILTON JEANS, Dayton, Ohio, assignor to Dayton Scale Company, Dayton, Ohio, a Corporation of New Jersey. Filed Aug. 19, 1924. Serial No. 732,928. 4 Claims. (Cl. 146—182.)



1. In a meat chopper, in combination with a bowl, a worm and a pivoted crowder member disposed in the side wall of the bowl and normally forming a closure for an opening therein, said crowder member upon inward displacement being adapted to crowd the material in the bowl into contact with the worm.

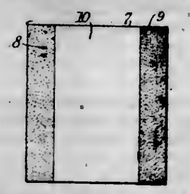
1,575,841. COIN-CONTROLLED VENDING MECHANISM. HENRY S. JEWELL and FREDERICK C. JEWELL, Chicago, Ill. Filed Jan. 22, 1923. Serial No. 614,285. 10 Claims. (Cl. 194—58.)

1. A coin-controlled mechanism comprising a supporting member having a coin receiving slot, a sliable bar beneath said supporting member, a coin receiver and carrier movable with and rigidly secured to the under side of said bar and adapted for registration with said slot, an arm pivotally supported beneath said bar and having a coin supporting member beneath said coin receiver and carrier to hold the coin in said carrier during a portion of the movement of said bar, said arm being provided with ratchet teeth, and a lug on said bar to engage said teeth, said arm being provided with a coin engaged cam surface whereby the arm is swung on its pivot during the movement of the bar in one direction.



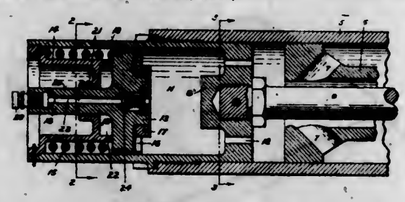
1,575,842. WALL PLASTER BOARD. ROBERT J. JOHNSTON, Kansas City, Mo. Filed Oct. 8, 1923. Serial No. 667,240. 1 Claim. (Cl. 154—45.)

As a new article of manufacture, a plaster board unit, comprising a relatively thick rigid sheet having lap tongues at its edges and relatively thin flexible facing



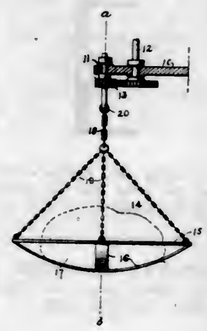
sheets on the opposite faces of the first named sheet, one of the flexible sheets being bent inwardly and outwardly to face the lap tongue, the other flexible sheet having its edge lying against the outer edge of the lap tongue and substantially abutting against the edge of the first named flexible sheet.

1,575,843. PRESS GUARD. ALFRED JONES, Birmingham, England. Filed June 12, 1924. Serial No. 719,630. 6 Claims. (Cl. 192—134.)



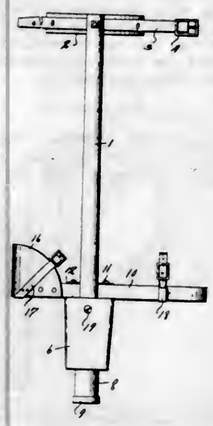
1. In a power press, the combination of a lever for controlling the operation of the press, and a member adapted to be traversed across the front of the press to prevent access thereto, said member having a section thereof so disposed within the path of the actuating lever that the operation of the said lever is prevented unless the member is in its completely traversed position.

1,575,844. STICKER BAND FOR PHOTOGRAPHIC CARTRIDGES. JOHN G. JONES and HAYWOOD G. DEWEY, Rochester, N. Y., assignors to Eastman Kodak Company, Rochester, N. Y., a Corporation of New York. Original application filed May 24, 1922, Serial No. 563,447. Divided and this application filed May 20, 1924. Serial No. 714,747. 3 Claims. (Cl. 24—67.)



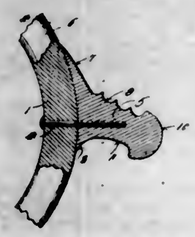
1. A sticker for use in roll film cartridges comprising a strip of flexible material having along one edge a band of waterproof adhesive capable of being affected by water and along the opposite edge a band of waterproof adhesive material.

1,575,845. REPLENISHER. BRYAN P. JOYCE, Davenport, Iowa, assignor to Thomas A. Conlon, Silver Spring, Md. Filed Dec. 3, 1924. Serial No. 753,605. 3 Claims. (Cl. 89—43.) (Granted under the act of Mar. 3, 1883, 22 Stat. L., 625.)



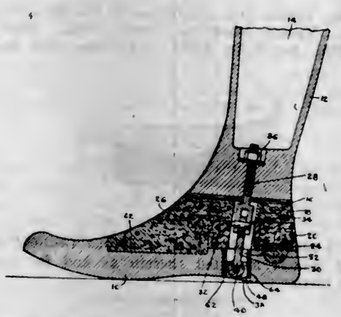
3. A cylinder, an apertured head in one end thereof, said head including a tubular extension to form an expansion chamber, a plunger and a plunger spring in the chamber, a one-way valve in the plunger, said plunger provided with a longitudinal passage for admission of a fluid, and the position of the plunger adapted to indicate the pressure in the cylinder.

1,575,846. CENTRIFUGAL MACHINE. KARL G. KARSTEN, New York, N. Y. Filed Dec. 17, 1921. Serial No. 523,241. 2 Claims. (Cl. 210—63.)



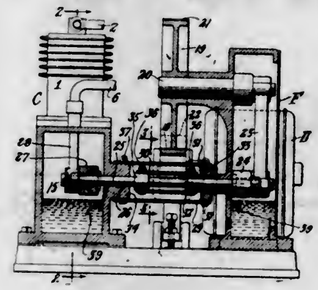
1. In a machine for separating adhering particles from a unitary body, the combination of a container for the body having a freedom of movement in all horizontal directions, a pendulous suspension for the container a support for the suspension mounted for rotary movement about a vertical axis and means for rotating the support thereby to cause the container to rotate about a vertical axis while free to swing laterally thereby to bring the center of mass of its contents in said vertical axis.

1,575,847. JUMPER. JAMES KING, LUTHER SNIDER, and CHARLES HAMILTON, Poplar Bluff, Mo. Filed Nov. 19, 1925. Serial No. 70,122. 4 Claims. (Cl. 272—70.1.)



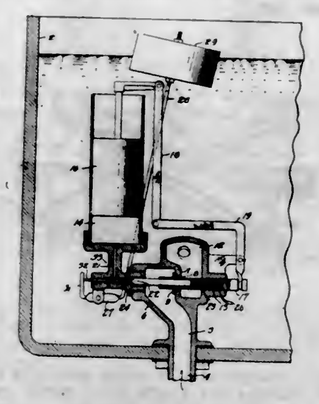
1. A device of the class described comprising, in combination, a block, an elongated brace having one end portion secured to said block, leg attaching means carried by the brace, an opening disposed through the block, a plunger extending within the opening through an end thereof, a pedal secured to the block and having an opening registering with the opening of the block, a plate secured to the pedal and overlying the opening in the pedal, an expansible member within the openings in the block and pedal and interposed between the inserted end of the plunger and the plate, and foot engaging means carried by the pedal.

1,575,848. STEERING WHEEL. CLINTON E. E. LAUBACH, Pottsville, Pa. Filed July 13, 1925. Serial No. 43,365. 1 Claim. (Cl. 74—33.)



In combination with a steering wheel, having a periphery convex in cross section, of a plurality of gripping knobs secured to said steering wheel, each knob provided with a concave surface at one end for contact with said steering wheel and snugly fitting the periphery of the steering wheel, a securing screw passing transversely through the steering wheel rim and longitudinally through each knob, each knob provided with finger-receiving sockets formed therein, and an enlarged outer end to facilitate the gripping of the knobs by the hand of the operator, and the inner end of each knob provided with outwardly spread portions, merging into the periphery of the wheel to form a continuous surface from the periphery of the wheel on to the outer surface of each knob.

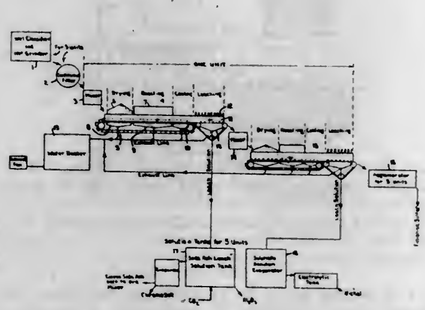
1,575,849. ARTIFICIAL LIMB. GEORGE W. LEHRMANN, Minneapolis, Minn. Filed July 11, 1925. Serial No. 42,919. 3 Claims. (Cl. 3—6.)



1. An artificial limb comprising a leg member, a foot member having an opening therethru, resilient blocks placed between said members, a pair of spaced metallic members secured to said foot member adjacent said opening, a pivot pin secured to said metallic members, a jointed ankle bolt extending into said opening and pivoted at its lower end on said pivot pin, a pivot pin extending at right angles to said first pivot pin connecting the two members of said bolt, and means for securing the upper bolt member to said leg member.

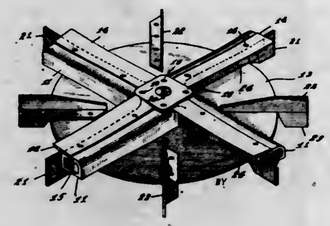
1,575,850. SEALING DEVICE FOR REFRIGERATING APPARATUS. ALEXANDER S. LIMPERT and SYLVESTER A. LIMPERT, Bay Shore, N. Y., assignors to Limpert Ice Machine Corporation, New York, N. Y., a Corporation of New York. Filed Apr. 21, 1923, Serial No. 633,571. Renewed Oct. 30, 1925. 5 Claims. (Cl. 286—11.)

1. A sealing device for an oscillating refrigerant compressor shaft comprising in combination a plurality of flexible tubes, one within the other surrounding the shaft, one end of the outside tube being secured to the compressor, one end of the tube next to the shaft being secured to the shaft, and rigid means at the free ends of tubes for connecting them together to form a continuous enclosure from compressor to shaft.



1,575,851. MEANS FOR CONTROLLING THE ADMISSION OF WATER TO TANKS. WILLIAM H. LONG, Berkeley, Calif. Filed Feb. 12, 1921. Serial No. 444,393. 10 Claims. (Cl. 137—104.)

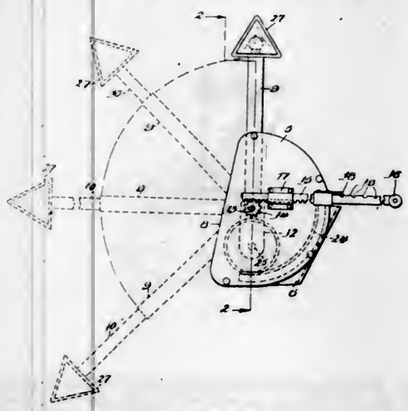
5. In a device of the character described, a tank having a fluid inlet passage, a valve in said passage adapted to be normally held in shut position, a fluid container arranged to communicate with said inlet by a branch passage of less cross sectional area than that of the container, a piston reciprocatively mounted in said container, connecting members between said piston and said valve whereby the latter may be displaced upon the reciprocation of the piston, a valve for controlling the flow of the fluid to said container arranged to be normally held in



shut position, and a float member in said tank adapted to displace the second valve upon the discharge of the fluid from the tank whereby said piston will be reciprocated.

1,575,852. BENEFICIATION OF ORES. CLYDE P. MCCORMACK, Cleveland, Ohio. Filed May 5, 1925. Serial No. 28,090. 18 Claims. (Cl. 75—18.)

4. In a method of beneficiating an oxidized iron ore or metal-bearing product containing aluminum, the step which consists in roasting such ore with soda ash, whereby a controlled amount of such aluminum is converted into a water-soluble sodium salt.

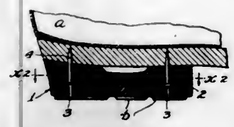


1,575,853. ENSILAGE CUTTER. WALLACE F. MACGREGOR, Racine, Wis., assignor to J. I. Case Threshing Machine Company, Racine, Wis., a Corporation. Filed Sept. 21, 1925. Serial No. 57,553. 4 Claims. (Cl. 146—106.)

1. In an ensilage cutter, a casing embodying inlet and discharge openings, and a knife wheel therein comprising a disk, a plurality of arms on said disk, knives on said arms, fan blades on said arms, means for securing said disk, arms and knives together, and fan blades on said disk intermediate said arms.

1,575,854. AUTOMOBILE SIGNAL. WILLIAM P. MACMICKING, St. Paul, Minn. Filed Apr. 20, 1925. Serial No. 24,316. 5 Claims. (Cl. 116—47.)

1. In a signal, a telescoping arm adapted to be mounted in substantially vertical position on a motor vehicle, said arm having tubular sections fitting one within another, a member of said arm adapted to be extended and retracted, a signal on the normally outer end of



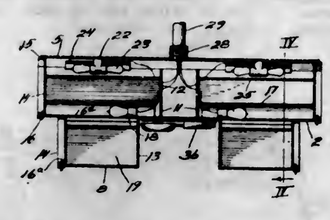
said member, means for tilting said arm to substantially horizontal position and means for positively extending said arm member when said arm is tilted.

1,575,855. BREAD AND THE LIKE AND PROCESS OF MANUFACTURING THE SAME. HARRY E. MALI, Chicago, Ill. Filed Oct. 1, 1924. Serial No. 740,946. 8 Claims. (Cl. 99—10.)

1. Bread and other baked articles, comprising a body portion, and a crust spaced from the body portion.

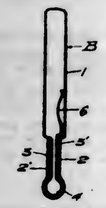
8. The method of manufacturing bread and other baked articles, including the steps of forming the loaves from dough, surrounding each loaf with a thin layer of dough provided with a fatty substance on the inner surface, permitting the loaves to rise, and baking the loaves.

1,575,856. HEEL FOR BOOTS AND SHOES AND THE LIKE. FAGGIO MARTINO, Perris, Calif. Filed Jan. 15, 1925. Serial No. 2,543. 3 Claims. (Cl. 36—35.)



1. In a resilient shoe heel, a fibrous resilient quilted layer of canvas mounted therein as and for the purpose set forth.

1,575,857. CROSSING SIGNAL. GEORGE S. MATTHEWS, Kansas City, Mo., assignor to Matthews O'Bryan Signal Company, Kansas City, Mo., a Trust Association. Filed Feb. 13, 1922. Serial No. 536,099. 2 Claims. (Cl. 177—329.)

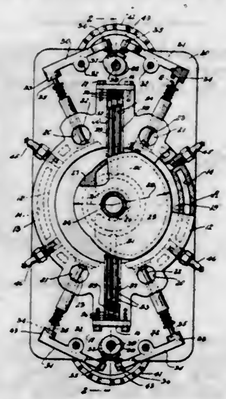


1. A crossing signal, comprising two hollow arms, in superposed relation, one arm having side wall openings as "danger" signals and the other corresponding openings as "safety" signals, the arms also having permanent closures at one end and removable closures at their other ends, and the upper arm having a bottom opening establishing communication with the lower arm; an arched reflector in the lower part of the upper arm to reflect light into the lower arm and through the

signal openings of the latter, a non-reflecting opaque partition extending longitudinally within the lower arm between the sides thereof from a point spaced from the

opening in the bottom of the upper arm to a point below the signal openings in the sides of the lower arm, and an electric lamp between said partition and said arched reflector.

1,575,858. KEY-RING HOLDER. ROBERT F. MENKE, Bessmay, Tex. Filed Oct. 3, 1925. Serial No. 60,284. 3 Claims. (Cl. 24—3.)

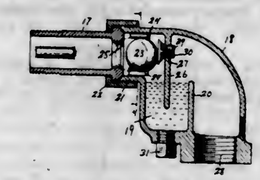


1. A holder of the class described comprising a loop member formed from a single blank of material, said loop member at one end being provided with outwardly extending arms terminating in returned portions, the returned portion of one of the arms overlying the outer face of the second arm and the returned portion of the second arm overlying the inner face of the first arm and extending within the loop member to provide a spring for close frictional contact with the portion of the belt disposed through the loop member, holding means disposed through the arms and through the returned portions, and means carried by said arms and their returned portions for retaining a key ring.

1,575,859. MANIFOLD FOR INTERNAL-COMBUSTION ENGINES. EZEKIEL J. MILES, Detroit, Mich., assignor to Studebaker Corporation, a Corporation of New Jersey. Filed Oct. 14, 1921. Serial No. 507,787. 7 Claims. (Cl. 123—122.)

1. In an internal combustion engine, an exhaust manifold, an intake manifold, a plurality of fixed baffles within said exhaust manifold and a movable baffle cooperating with all said baffles both for directing the exhaust gases toward and for directing the exhaust gases away from said intake manifold.

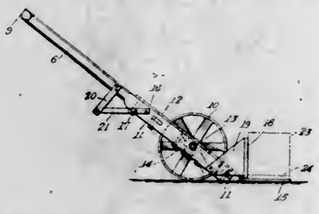
1,575,860. INTERNAL-COMBUSTION ENGINE. TRAVIS B. MONK, Crete, Ill. Filed Apr. 5, 1922. Serial No. 549,912. Renewed Oct. 21, 1925. 9 Claims. (Cl. 123—14.)



3. In an engine of the class described, the combination with the cylinder and drive shaft thereof, of a rotor eccentrically mounted on said shaft; combustion chambers formed in the inner wall of said cylinder, there being intake openings for introducing a charge of explosive fuel to said chambers; openings to permit explosion of the impure gases after the explosion of said explosive fuel; means controlled by said drive shaft for opening and closing said intake and exhaust openings; ignition means at opposite ends of each of said combustion chambers.

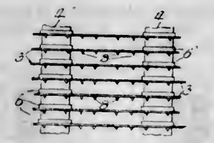
1,575,861. VEHICLE BUMPER. JAMES A. NOMICOS, Chicago, Ill. Filed Apr. 9, 1925. Serial No. 21,743. 3 Claims. (Cl. 293—55.)

3. In a bumper construction for vehicles, semi-elliptical springs; mounting plates fitting the inner faces thereof; pairs of cramping sections having expanded half-round portions intermediate their ends, a half-round member of each pair of clamping sections fitting against the outer face of a spring, bolts connecting each pair of clamping sections on opposite sides of said half-round portions; and bolts on opposite sides of said springs connecting the mounting plates with the spring-fitting clamping sections, substantially as described.



1,575,862. RETURN FITTING FOR VAPOR-HEATING SYSTEMS. LEWIS F. OSTRANDER, Milwaukee, Wis. Filed July 22, 1920. Serial No. 398,228. 5 Claims. (Cl. 182—11.)

1. In a vapor heating system, the combination with a radiator and a return pipe therefor, of a trap interposed in said return pipe near said radiator, said trap



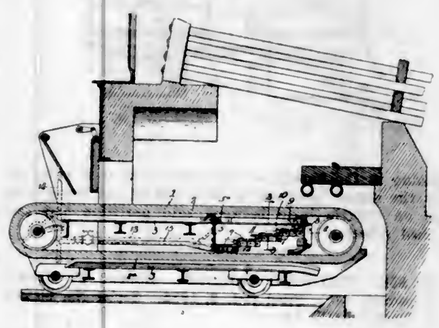
having a well formed therein, a wall depending into said well, a check valve on the radiator side of said wall, the wall being provided with an aperture for the passage of air, and means for restricting said aperture.

1,575,863. SPECIAL TRUCK FOR CEMENT BLOCKS. DOMENICO OTTAVIANI, Brooklyn, N. Y. Filed Oct. 21, 1924. Serial No. 745,017. 1 Claim. (Cl. 280—58.)

A cement block truck comprising side bars, a shaft supported thereby, a single wheel on said shaft midway between said bars, spaced-apart pick-up extensions secured to said side bars and extending forwardly therefrom at an obtuse angle, brackets secured to said side bars and extending upwardly and forwardly therefrom, and a back plate secured to said brackets at right-angles to said extensions and in front of said wheel.

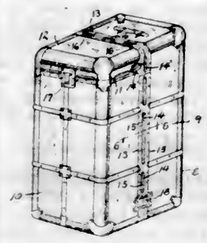
1,575,864. AUTOMOBILE RADIATOR CORE. CHARLES WM. OWSTON, Detroit, Mich., assignor, by mesne assignments, to McCord Radiator & Mfg. Co., Detroit, Mich., a Corporation of Maine. Filed Oct. 19, 1922. Serial No. 595,488. 5 Claims. (Cl. 257—129.)

1. A radiator core, having spaced flat sheet metal heat radiating plates, and water tubes extending through the flat portions of the plates and in contact therewith, said plates being provided with a plurality of relatively small conical projections forced out from the metal of the plates and distributed over substantially the entire area thereof and between and about the tubes to roughen the plates and increase the heat radiating points thereon, said projections having their apexes pointed and closed.



1,575,865. ACCELERATOR FOR THE VULCANIZATION OF RUBBER. PAUL MELVIN PAULSON, Perth Amboy, N. J., assignor to The Roessler and Hasslacher Chemical Company, New York, N. Y., a Corporation of New York. Original application filed Feb. 6, 1925. Serial No. 7,237. Divided and this application filed June 17, 1925. Serial No. 37,868. 26 Claims. (Cl. 18—53.)

3. A process of vulcanising rubber or similar material which comprises combining with the rubber a vulcanizing agent and an accelerator represented by the general formula

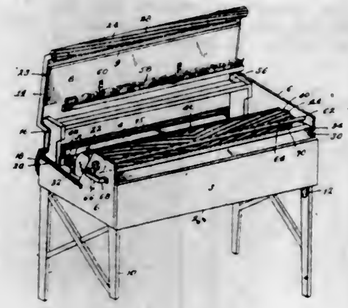


wherein R and R′ are dissimilar organic groups, and vulcanizing the rubber.

1,575,866. DROPPAGE-REMOVING MECHANISM FOR STOKERS. HERMAN A. POPPENHUSEN, Hammond, Ind., and ARTHUR P. STRONG, Chicago, Ill., assignors to Green Engineering Company, East Chicago, Ind., a Corporation of Illinois. Filed Apr. 2, 1921. Serial No. 458,036. 3 Claims. (Cl. 110—40.)

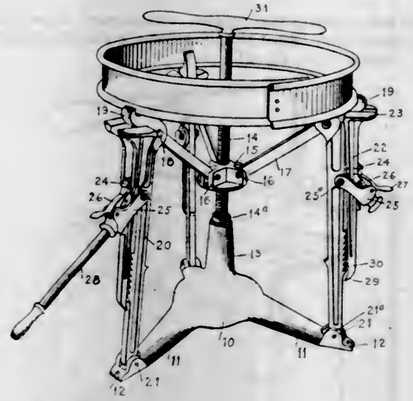
1. The combination with an endless chain grate, of means forming a droppage collecting compartment between the top and bottom leads of said grate and adjacent the rear end of the same, said compartment being open toward said top lead and having a front opening, a damper controlling said opening, and means in said compartment for blowing droppage therefrom toward the front end of the grate and into the space between said leads when the damper is open.

1,575,867. TRUNK CONSTRUCTION. JULIUS RITTER, Jr., Racine, Wis., assignor to Hartmann Trunk Company, Racine, Wis., a Corporation of Wisconsin. Filed Oct. 22, 1923. Serial No. 670,060. 5 Claims. (Cl. 190—19.)



1. A trunk construction, comprising trunk sections having meeting edges, and strips of material mounted on side portions of said edges and having portions shaped to form hinges connecting the ections together and having other portions shaped to form elongated dowel pins and dowel pin recesses extending substantially the length of the edges, which are entered by the dowel pins to reinforce the meeting edges of the trunck sections and form a continuous dust proof connection therebetween.

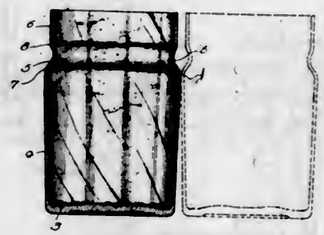
1,575,868. WALL-PAPER-PASTING MACHINE. WILLIAM J. ROLES, Kansas City, Mo. Filed Apr. 11, 1923. Serial No. 631,322. 8 Claims. (Cl. 91—51.)



1. In a machine of the character described, a paste receptacle, a roller associated with said receptacle for

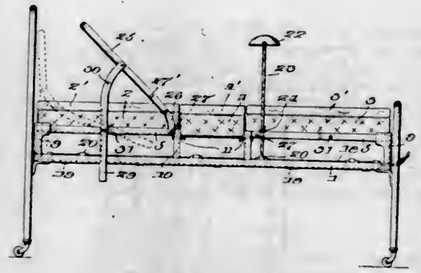
applying paste to paper, means associated with said roller for reducing the applied paste to a uniform coating of

desired thickness, and means for further reducing the thickness of said coating at the longitudinal margins of the paper.



1,575,869. RIM PULLER. CHRIST P. SCHMIDT, Havana, Ill. Filed Dec. 19, 1921. Serial No. 523,252. 3 Claims. (Cl. 157—6.)

1. In a rim puller, in combination, a base plate, a feed screw, toggle mechanism including rim clutching jaws, said toggle mechanism having operable connection between the feed screw and base portion whereby said jaw members may be expanded or retracted, and jack members in connection with said toggle mechanism for applying force exteriorly of a rim clutched by the jaw members.

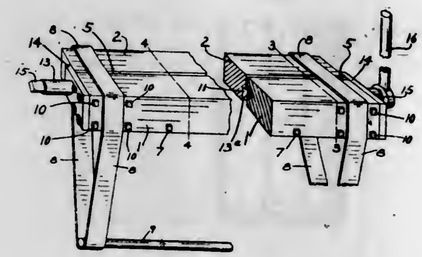


1,575,870. DRINKING GLASS. ALBERT E. SEHLBACH, Chicago, Ill., assignor to Albert Pick & Company, Chicago, Ill., a Corporation of Illinois. Filed July 3, 1925. Serial No. 41,259. 3 Claims. (Cl. 65—13.)

1. A drinking glass having a bottom and an integral thin tubular side wall comprising a lower portion extending upwardly from the bottom, an annular concave portion joined to and extending inwardly from said upwardly projecting portion and a portion above the grooved

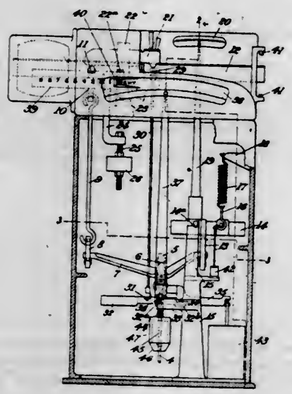
portion, forming a mouth-engaging rim, and being less in diameter than the diameter of said lower portion below the grooved portion so as to be protected thereby.

1,575,871. BED. SAMUEL B. SKLAR, Memphis, Tenn. Filed Apr. 21, 1924. Serial No. 707,959. 10 Claims. (Cl. 5—60.)



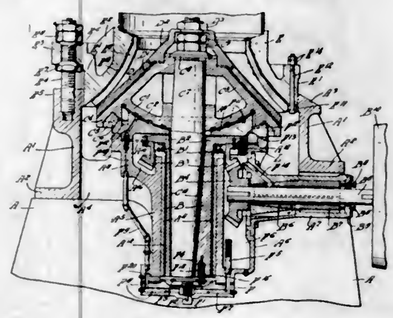
1. In an invalid bed, the combination of a mattress formed of separate sections or units, and one of said units being relatively short measured in the direction of the length of said bed, separate-supporting frames, one for each unit, adapted to support said units by the unattached disposal of said units thereon, said supporting frames being separately mountable upon and removable from the side rails of the bed and slidable along said side rails, and a heater unit of dimensions adapted for its substitution for said relatively short mattress unit upon the supporting frame for said mattress unit in making up said bed.

1,575,872. CLAMPING DEVICE. HARRY B. STROHL, Sidney, Ohio, assignor to The Anderson Body Company, Sidney, Ohio, a Corporation of Ohio. Filed July 3, 1925. Serial No. 41,449. 4 Claims. (Cl. 81—17.)



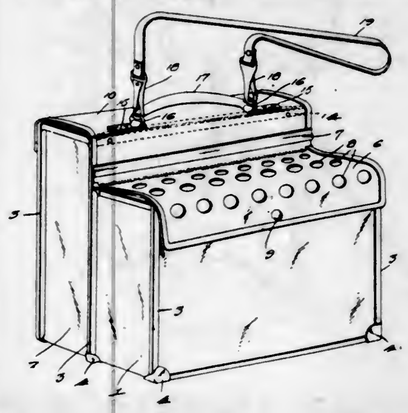
1. A clamping device comprising two parallel members with a sheet receiving space between them, one of said members having its inner face formed with a semicircular recess and the other one of said members having its inner face formed with a recess opposite the semicircular one in the first member, a shaft having a half-

round portion rotatable in the semi-circular recess, and means for turning said shaft to bring one edge of its half-round portion into engagement with the end of a



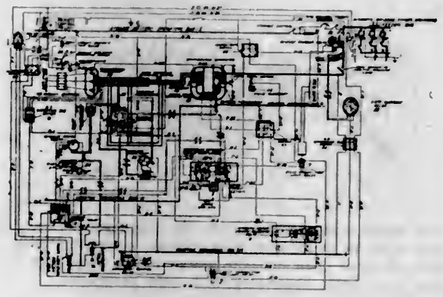
sheet inserted into the space between said members, to press it firmly into the second recess, for the purpose specified.

1,575,873. SEMIAUTOMATIC WEIGHING APPARATUS. CAMERON MCGREGOR SYKES, Birmingham, England, assignor to W. & T. Avery, Limited, Birmingham, England. Filed May 21, 1924. Serial No. 714,898. 4 Claims. (Cl. 265—58.)



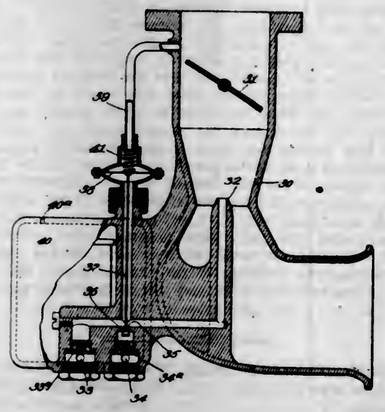
1. A weighing mechanism comprising in combination a steelyard, a poise weight mounted on and traversable along the side steelyard, an automatic resistant, an indicator connected to said resistant, a chart coordinated with the graduations of the steelyard and adapted to co-operate with said indicator said chart affording an indication of the required setting of the poise weight to counterbalance the major order of the load, a pendulous resistant in connection with said steelyard, an indicator connected to said pendulous resistant, a chart adapted to co-operate with said indicator and affording an indication of the minor order of the weighment, means whereby the load acts independently upon each of said resistants, and means connected to said poise weight for indicating the major order of the weighment, the weight indication being disposed in co-relation with the chart for indicating the minor order of weighment.

1,575,874. CRUSHING HEAD. EDGAR B. SYMONS, Los Angeles, Calif., assignor to Symons Brothers Company, Milwaukee, Wis., a Corporation of South Dakota. Original application filed Jan. 24, 1925, Serial No. 4,377, which is a continuation of applications Serial Nos. 662,636 and 662,638, filed Sept. 14, 1923. Divided and this application filed Apr. 4, 1925. Serial No. 20,601. 21 Claims. (Cl. 83—10.)



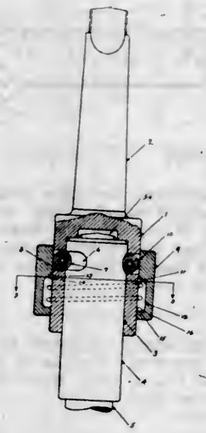
1. In a crushing machine, a gear case, having a circular top opening, a circular closure therefor having an upwardly extending bearing surface, lubricating passages contained within the wall of the housing and the closure, pins unequally spaced interposed between the closure and housing, one of said pins being hollow and adapted to complete the connection between said oil passages.

1,575,875. ANGLER'S CREEL. STANISLAW SZEWCZYK, Passaic, N. J. Filed Feb. 20, 1925. Serial No. 10,545 3 Claims. (Cl. 43—31.)



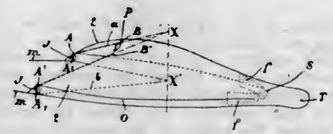
1. A creel comprising a substantially U-shaped frame, front, end, and rear walls on said frame, and a bottom forming with said walls, a substantially foldable fish pouch, an upper extension carried by said rear wall, a tool kit formed integral with the rear wall of said pouch, a reinforcing strip carried by said extension, said extension forming a cover for said tool kit, means for closing said cover over said tool kit, a flap on the intermediate portion of said extension having a plurality of openings formed therein and adapted to cover said pouch, means for securing said cover over said pouch, a handle secured to said reinforcing strip, and means adapted to be attached to said handle for suspending said creel from the shoulders of a user.

1,575,876. AUTOMATIC SUBSTATION. VICTOR E. THELIN, Chicago, Ill. Filed June 25, 1921. Serial No. 480,302. 39 Claims. (Cl. 171—118.)



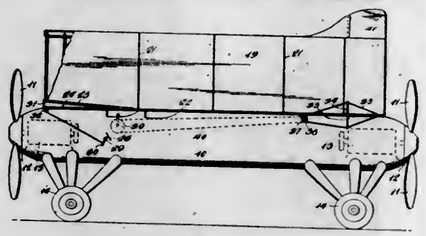
1. In an automatic electric power substation a rotary converter, a time member (1), automatic means (3 and 6) responsive to said time member (1) for starting said converter, automatic means (8) responsive to the normal operation of the station to connect said converter to said direct current distribution circuit, automatic means (9) responsive subject to a time limit to stop said converter in case of abnormal conditions, and means (21) responsive to said means (9) to successively restart said converter until normal conditions prevail.

1,575,877. CARBURETOR. PERCIVAL S. TICE, Chicago, Ill. Filed Apr. 9, 1920, Serial No. 372,884. Renewed Aug. 5, 1925. 4 Claims. (Cl. 261—41.)



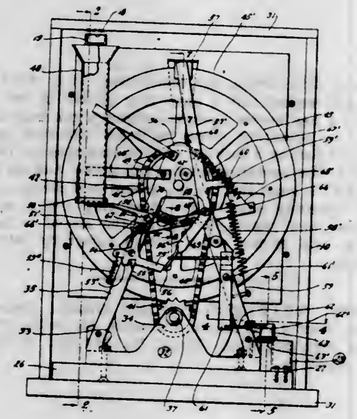
1. In a carburetor in combination with an air intake passage, a fuel discharge passage discharging within the air intake passage; means for throttling the air intake passage; a supplemental fuel supply passage; a valve which controls it; an expansible and contractible chamber having a wall which moves in the expansion and contraction of the chamber; a pressure duct leading from a point in the air intake passage beyond the throttling valve for communicating pressure to said expansible and contractible chambers, the moving wall being located for operating said valve upon change of pressure in the chamber beyond a predetermined degree.

1,575,878. DRILL DEVICE. FRANK A. VEITH, Erie, Pa., assignor to Titan Tool Company, Erie, Pa., a Corporation of Pennsylvania. Filed Jan. 31, 1921. Serial No. 441,233. 2 Claims. (Cl. 279—75.)



1. In a drill device, the combination of a chuck having a tool socket and a snap ring groove in its outer surface; a key device operating through the wall of the chuck; an operating sleeve slidingly mounted on the chuck and having a locking surface operating on the key device; a cam operating on the key device and an annular recess; a snap ring in the groove and recess; and a spring operating against the snap ring and a wall of the recess and yieldingly holding the sleeve in locking position, said spring being formed integrally with the snap ring.

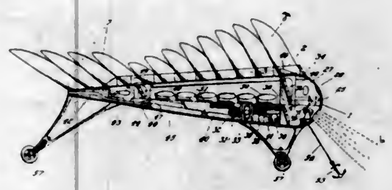
1,575,879. TRAWLING FISHING GEAR. JEAN-BAPTISTE JOSEPH ALPHONSE VIGNERON, Marseille, France. Filed Sept. 29, 1922. Serial No. 591,321. 6 Claims. (Cl. 43—9.)



1. A drag net for ground fishing comprising in combination a substantially conical shaped net body two lateral wings extending forwardly from the body, a head rope of trapezoidal shape, means on said head rope for lifting the same in the water whereby swelling upwards the mouth of the net, and a ground rope of pointed shape, the lateral side portions of the head and ground ropes respectively intersecting on the same vertical line which constitutes a common vertical pivoting axis for both the top and bottom portions of the said wings.

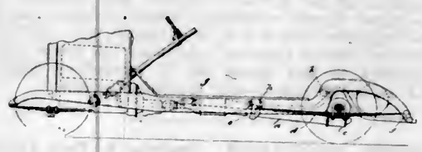
1,575,880. AEROPLANE. WILLIAM WALL, Cleveland, Ohio. Filed May 21, 1925. Serial No. 31,835. 3 Claims. (Cl. 244—14.)

1. A wing structure for aeroplanes comprising, an inverted substantially V-shaped portion having an open lower side, a set of ribs extending transversely of the open lower side and beyond said portion, and substantially horizontally disposed wings formed on the extended portions of said ribs.



1,575,881. COMBINATION VENDING MACHINE AND AMUSEMENT DEVICE. WILLIAM D. WATLING, Chicago, Ill. Filed June 8, 1923. Serial No. 644,158. 4 Claims. (Cl. 194—28.)

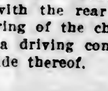
1. A device of the class described including a housing having two openings therein, a rotatable disc member for each opening, arranged within the housing and having portions visible through its opening, means for manually operating said disc members, a spring-drawn shutter, a coin controlled trip device for holding the shutter against the action of its spring in position to obstruct the view of one disk member, means within the casing for actuating said trip device to allow the opening of the shutter, and means actuated upon rotation of the disc members adapted to re-engage the shutter with said trip device after each opening operation.



1,575,882. AEROPLANE. WILLIAM G. G. WEIDINGER, Chicago, Ill. Filed Jan. 28, 1925. Serial No. 5,239. 2 Claims. (Cl. 244—14.)

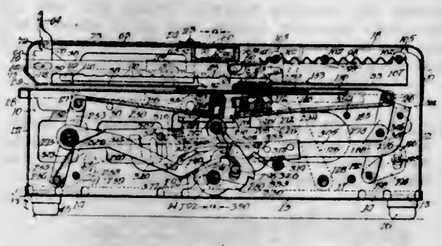
1. In an aeroplane, a streamline perforate cigar-shaped body, supporting wheels for said body, tapered tubular ribs terminally secured to opposite sides of said body, wings and tail planes adjustably arranged upon said ribs, manually controlled pistons arranged within said body and formed with serrations, gear segments fast to

said wings and extending into the perforate portions of said body in mesh with said pistons, streamline propellers arranged upon opposite sides of said body, and motors operatively associated with said propellers.



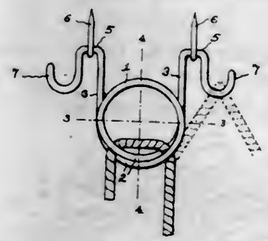
1,575,883. AUTOMOBILE CONSTRUCTION. D'ORSAY MCCALL WHITE, Detroit, Mich. Filed June 16, 1923. Serial No. 645,730. 2 Claims. (Cl. 180—57.)

1. In an automobile, the combination of a pair of front wheels and front axle, a pair of rear driving wheels and driving axle and axle housing, a chassis provided with one or more cross bars and a frame kick up at the rear over the rear axle housing to give the usual necessary clearance and having a relatively deep drop just forward of the rear axle housing so that the dropped portion of the chassis frame has its lower side below the center of the rear axle when the same is in its normal position, springs for suspending the chassis frame on the front axle and on the rear axle housing, a motor supported immediately behind the front axle on the chassis frame and largely above the chassis frame, supported below said cross bar or bars and a propeller shaft supported below said cross bar, or bars, and connecting the said motor with the rear axle housing, and under-slung where it connects with the rear axle housing thereby permitting the lowering of the chassis frame, said propeller shaft having a driving connection with the rear axle on the under side thereof.



1,575,884. ACCELERATOR FOR THE VULCANIZATION OF RUBBER. CARL STUART WILLIAMS, Woodbridge, N. J., assignor to The Roessler and Hasslacher Chemical Company, New York, N. Y., a Corporation of New York. Original application filed Feb. 6, 1925, Serial No. 7,237. Divided and this application filed June 17, 1925. Serial No. 37,876. 22 Claims. (Cl. 18—53.)

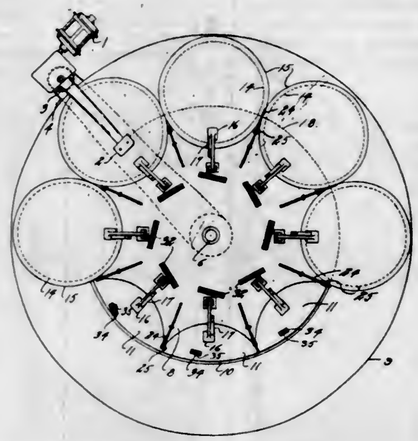
17. A process of vulcanizing rubber or similar material which comprises combining with the rubber a vulcanizing agent and an accelerator charncterized by the group



in which R is a hydrocarbon radical.

1,575,885. CHECK WRITER. ARTHUR H. WOODWARD, Winnetka, Ill., assignor to International Register Co., Chicago, Ill., a Corporation of Illinois. Filed Oct. 22, 1924. Serial No. 745,047. 38 Claims. (Cl. 101—20.)

1. In a device of the class described, a shaft adapted for rocking movement in opposite directions, an oscillating cradle, and an arm for shifting said cradle in opposite directions by means of said shaft.

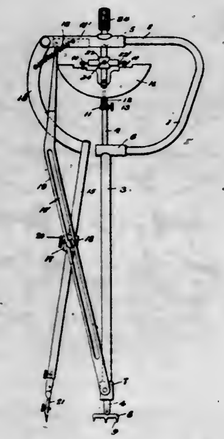


1,575,886. ROPE CLAMP. HENRY WURM, Cleveland, Ohio. Filed Mar. 23, 1925. Serial No. 17,557. 3 Claims. (Cl. 24—131.)

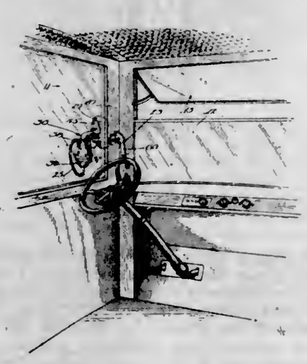
1. A rope clamp formed of a single length of wire and comprising a looped jaw, a pair of spaced arms forming a complemental jaw and crossed strands connecting the arms and looped jaw, said crossed strands providing V-shaped rope gripping notches on opposite sides of their intersection and the arms terminating in laterally bent portions, a base, and pivot members projecting from the base and pivotally receiving the laterally bent portions of the arms, whereby the rope clamp is free to swing with respect to the base.

1,575,887. MULTIPLY-FABRIC BUFFER-SECTION MANUFACTURE. HARRY ZIMMERMAN, Fremont, Ohio. Filed June 4, 1924. Serial No. 717,910. 2 Claims. (Cl. 112—2.)

1. The method of producing multiply-fabric buffer-sections comprising the step of grouping plies in superposed relation, each superposed grouping to form a set, said groupings to provide a plurality of sets; the step of disposing the groupings in a lineally extending series, having an intermediate set in approximately abutting relation with adjacent sets in said series; the step of stitching through one set for securing the plies thereof together, and continuing such stitching in the region of said abutting relation to form stitching connection with said intermediate set, and still further continuing such stitching in the succeeding set in completing such stitching through said series of sets; the step of severing the stitching connecting adjacent sets; the step of shifting a severed stitched set relatively to an adjacent set to obtain a different abutting relation; and the steps of repeating in sequence said stitching, severing and shifting steps, whereby a plurality of sections forming sets of plies receive partial stitching operations thereon in recurring succession.

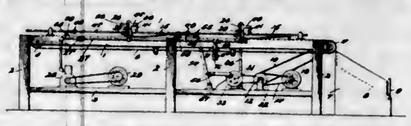


1,575,888. WELL PUMP. JOHN A. ZUBLIN, Los Angeles, Calif. Filed Jan. 25, 1923. Serial No. 614,776. 4 Claims. (Cl. 103—225.)



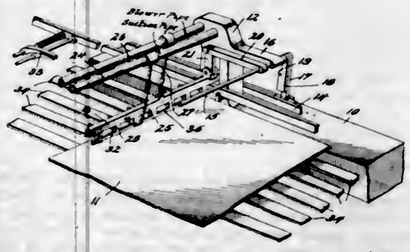
1. A well pump unit including a tubular plunger forming a longitudinal fluid passage and having a valve seat, a sucker rod comprising a special section having a valve element and a guide collar, both interfitting within reduced ends of the plunger to maintain the rod and plunger in relative axial alignment, and an abutment near the upper end of said special section, the rod having an initial independent movement relative to the plunger whereby during an up stroke the valve element first engages the valve seat to close the fluid passage and then translates the plunger, and during a down stroke the valve first opens the fluid passage and the abutment then translates the plunger.

1,575,889. INSTRUMENT FOR DRAWING ELLIPSES. PIETRO ZULIANI, Lonato, Italy. Filed May 21, 1923. Serial No. 640,525. 2 Claims. (Cl. 33—30.)



1. An instrument of the class described including a spindle, a frame pivoted to and movable about said spindle and having a marking element connected thereto, a pair of semi-circular plates, means pivoting said plates on a common axis, said means having therein an opening through which the spindle passes, means connected to said plates and slidable upon said spindle whereby said plates are adapted to assume various angles of inclination, a bar connected to said frame and means for resiliently holding said bar against the periphery of said plates during the movement of the frame about the spindle, said bar being adapted to control the movement of said marking element.

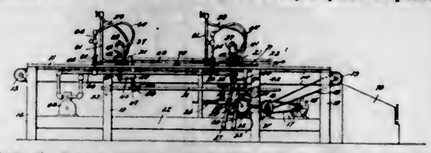
1,575,890. ADJUSTABLE SPOTLAMP. ERNST G. K. ANDERSON, Chicago, Ill., assignor, by mesne assignments, to Appleton Electric Co., Chicago, Ill., a Corporation of Illinois. Filed Dec. 23, 1920. Serial No. 432,663. 15 Claims. (Cl. 240—61.)



6. The combination with a wall member and a controlling member for a universal lamp mount, comprising a tube extending through and having rotative bearing in said wall member, a support for a universal adjustable lamp structure arranged on the outer end of said tube, an angular member having one arm connected to said support so as to be rotatable around the long axis of said arm, means for supporting a lamp on the other arm of said angular member, a swinging and rocking hand piece on said tube inwardly beyond said wall, and a second controlling member loosely connected to said angular member and extending inwardly through said tube and operatively connected to said hand piece, whereby said tube can be turned about its long axis and said second controlling member can be axially displaced.

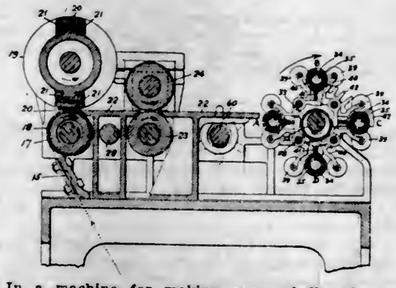
1,575,891. COLLATING DEVICE. HARRY V. ASHBY, Erie, Pa., assignor of one-half to Edward B. Ashby, New York, N. Y. Filed Apr. 13, 1923. Serial No. 631,920. 21 Claims. (Cl. 270—58.)

4. A collating machine, comprising a frame, a plurality of sheet receiving trays mounted on said frame at longitudinally spaced points thereof, sheet conveying means mounted vertically below said trays adapted to convey sheets to a common point, a set of sheet lifting devices above each tray mounted to reciprocate up and down, means for reciprocating said devices and means operating in timed relation thereto for transferring sheets therefrom to said conveying means.



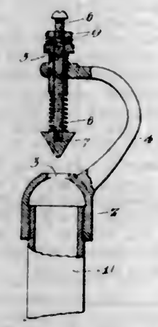
1,575,892. SHEET-FEEDING DEVICE. HARRY V. ASHBY, Erie, Pa., assignor of one-half to Edward B. Ashby, New York, N. Y. Filed July 6, 1923. Serial No. 649,964. 15 Claims. (Cl. 271—26.)

1. In sheet feeding mechanism, a frame having means for supporting a pile of sheets, a transverse bar mounted to reciprocate up and down above said support, mechanism for reciprocating said bar including a one-way connection adapted to positively raise said bar and permit it to fall by gravity, said bar having two interior separated conduits extending longitudinally thereof, flexible connections for supplying suction in one of said conduits and compressed air in the other, a plurality of nozzles extending downwardly from said bar communicating with said suction conduit, and a plurality of nozzles communicating with said compressed air conduit directed at different angles to deliver air blasts obliquely and horizontally against the edges of the sheets.



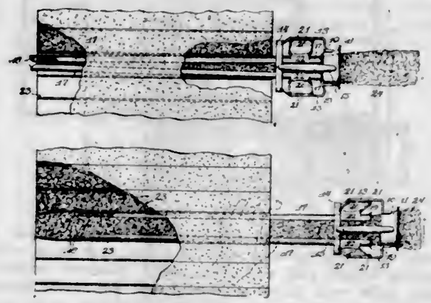
1,575,893. COLLATING DEVICE. HARRY V. ASHBY, Erie, Pa., assignor of one-half to Edward B. Ashby, New York, N. Y. Filed July 22, 1924. Serial No. 727,516. 15 Claims. (Cl. 270—59.)

1. A collating machine including in combination, a frame, a transverse horizontal roller journalled in said frame adjacent each end thereof, endless tapes passing around said rollers, means for rotating one of said rollers, a plurality of longitudinally spaced tables mounted on said frame slightly above the upper runs of said tapes, each adapted to hold a pile of sheets, and a single means associated with each pile of sheets for lifting sheets singly therefrom and depositing them simultaneously on said tapes at longitudinally separated points



thereof, the velocity of said tapes being so timed with respect to the operation of said means that all sheets simultaneously deposited on said tapes will be moved past the last said means in the direction of movement of the upper runs of said tapes before a second set of sheets is deposited thereon.

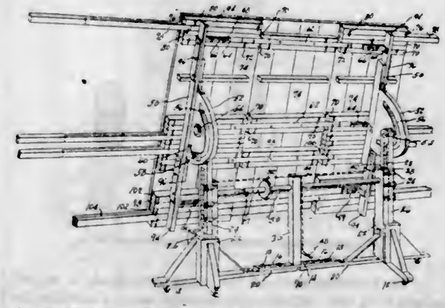
1,575,894. MACHINE FOR MAKING PAPER SHELLS. WILLIAM T. AYER, Wilmington, Del., assignor to Hercules Powder Company, Wilmington, Del., a Corporation of Delaware. Filed Sept. 18, 1923. Serial No. 663,387. 15 Claims. (Cl. 93—81.)



1. In a machine for making paper shells, the combination with a rotary device for cutting diagonally an advancing sheet of paper into a series of blanks, of a rotary mandrel adapted to be engaged by the advanced part of the cut edge of the paper before the cutter has completed the next cut.

1,575,895. COOLING SPRAY. EDWIN A. BAKER, Los Angeles, Calif. Filed Jan. 30, 1922. Serial No. 532,620. Renewed Sept. 9, 1925. 4 Claims. (Cl. 299—130.)

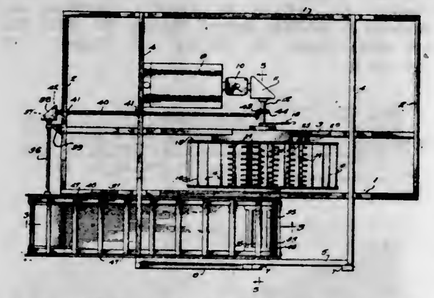
1. In a spraying device, the combination of a body having a discharge port, and a rigid fixedly mounted arm extending upwardly above the discharge port, an elongated stem mounted to slide through the arm and projecting downwardly therefrom toward the discharge port, said arm having means constituting the sole guide for the stem, means for limiting the downward movement of the stem, a baffle member carried at the lower end of the stem in the path of the jet for spreading the same, and a spring on the stem located in the space between the arm and the baffle member, and yieldingly holding the baffle member in position near the discharge port.



1,575,896. PADDING NEEDLE. MARTEN BALCKER, Chicago, Ill., assignor to George J. Goldman and Nicholas N. Goldman, both of Chicago, Ill. Filed Aug. 19, 1925. Serial No. 51,198. 14 Claims. (Cl. 226—43.)

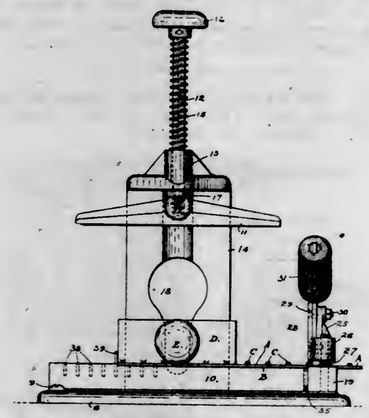
1. A padding needle for inserting filling into upholstery, said needle embodying opposed elongated members between which the material is held, and means supporting said members for movements laterally one toward and away from the other and for movement longitudinally one with relation to the other, and means for guiding the material between the said members.

14. A padding needle for inserting filling into upholstery and which contains and grips the material, and means mounting the parts of said needle with respect to each other in a manner that the friction created between the wall of the piping and the said parts of the needle will operate to cause the needle to release the material whereby the material will remain in said piping when the needle is withdrawn from the piping.



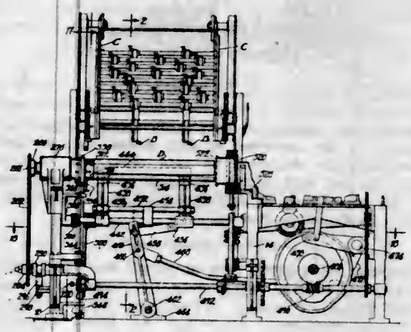
1,575,897. SIGN-PAINTER'S TABLE. GEORGE R. COLE, Port Huron, Mich. Filed Aug. 22, 1925. Serial No. 51,737. 5 Claims. (Cl. 45—111.)

1. In a table of the character described, a portable base having uprights provided with transverse supports, stringers detachably secured to said supports, top sections removably receivable upon said stringers having guides extending therealong, turn buttons carried by the guides adapted to be locked over said stringers to fasten the top sections to the stringers, additional guides on said top sections, extension stringers receivable between said last



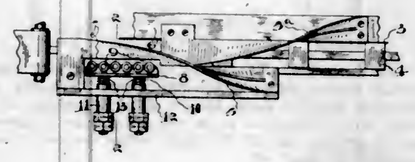
named guides and the stringer guides, means for releasably fastening said extension stringers in position between said guides, supplemental top sections detachably fastened to said extension stringers, a transverse brace detachably fastened to said extension stringers, and a leg support detachably hinged to said transverse brace.

1,575,898. DITCHING MACHINE. THOMAS LEE COLLINS, Sarasota, Fla. Filed Sept. 29, 1925. Serial No. 59,392. 4 Claims. (Cl. 37—96.)



1. In a device of the character described, a frame, a drum rotatably mounted on said frame, said drum comprising spaced side walls and plates arranged between said walls and extending beyond the peripheral edges of said walls, the outer edges of said plates being provided with knife edges, a cutting element carried by one of said walls on the exterior and projecting beyond the edge of the wall, a conveyer arranged beside said drum, and a second conveyer extending axially of said drum and adapted to deliver material from said drum to said first conveyer.

1,575,899. MEANS FOR MOUNTING AND CUTTING LABEL-HOLDER CHANNELS. JAMES COOKE, Omaha, Nebr. Filed July 14, 1924. Serial No. 725,926. 8 Claims. (Cl. 164—45.)

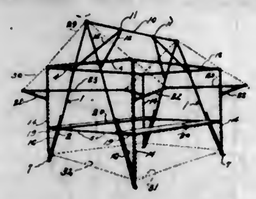


1. In a mechanism of the class described, a mandrel adapted to fit within the channel-bar, a holder-block carrying said mandrel and grooved to receive the flanges of the channel-bar, clamping means engageable with the back of the channel-bar, said means and the holder-block and mandrel having faces alined in a plane transverse to the channel-bar and said members fitting about all sides of the channel-bar in said plane, and a shear-blade having a cutting edge movable in said plane to cut off portions of the channel-bar projecting therefrom.

1,575,900. SHEET-WINDING APPARATUS. SIMON COOPER, Brooklyn, N. Y., assignor to The McCall Company, New York, N. Y., a Corporation of New York. Original application filed Nov. 18, 1922, Serial No. 601,858. Divided and this application filed Aug. 27, 1924. Serial No. 734,386. 23 Claims. (Cl. 242—55.)

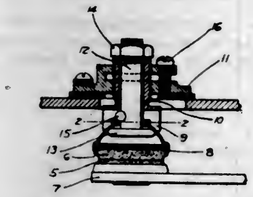
1. A folding machine including a collapsible arbor adapted to simultaneously wrap a multiplicity of sheets and flexible means movable across the arbor for exerting a tension on the sheets being wrapped.

1,575,901. FOLDING MECHANISM FOR CARTON FLAPS. RUDOLF D. DELAMERE and VICTOR G. WILLIAMS, Toronto, Ontario, Canada. Filed Dec. 1, 1924. Serial No. 753,148. 2 Claims. (Cl. 93—6.)



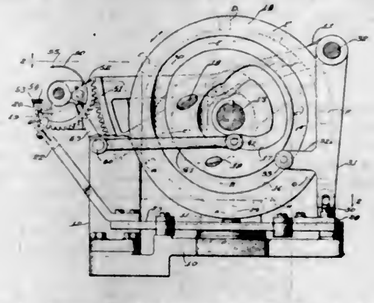
1. In a machine for folding cartons which comprise four connected sides, each provided with an end flap, the forward and rear flaps each being substantially one half the length of the open end of the carton and the lateral flaps each being substantially the width of the said open end, the combination of a driven carrier for the carton; means adapted to fold and secure the flaps to close the end of the carton while it is in motion, the lateral flaps being folded one over the other, a frame; a plurality of anti-friction rollers carried by the frame and adapted to engage one side of the carton at the turned edge of the flap connected thereto; resilient means tending to hold the rollers in engagement with the carton; and means for engaging the other side of the carton at the turned edge of the flap connected thereto whereby the pressure of the rollers increases the overlapping of the lateral flaps and forces the sides of the carton toward one another and into close contact with the edges of the forward and rear flaps until sealing of the lateral flaps takes place.

1,575,902. TENT FRAME. GEORGE H. DIAL, Columbus, Ohio. Filed Nov. 17, 1924. Serial No. 750,281. 4 Claims. (Cl. 135—4.)



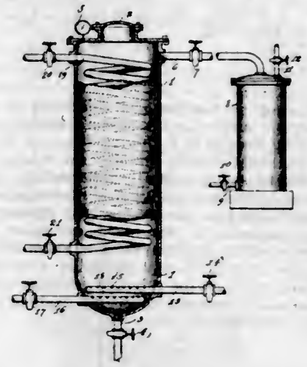
1. A device of the class described, comprising a pair of spaced end sections consisting of a pair of pivotally

connected standards, brace bars pivotally connected to the standards and to each other, portions of said bars



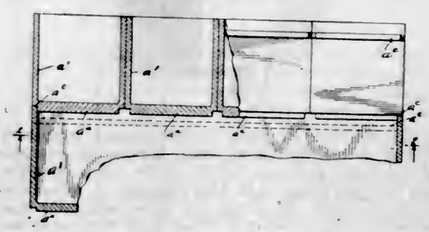
constituting supports, rods connected with the standards and supports, and counters disposed between the sections and engaged with the supports.

1,575,903. CONTACT SUPPORT FOR RELAYS. FARNUM F. DORSEY, Rochester, N. Y., assignor to North East Electric Company, Rochester, N. Y., a Corporation of New York. Filed Aug. 27, 1923. Serial No. 659,566. 4 Claims. (Cl. 200—166.)



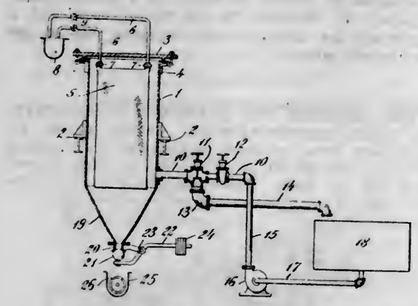
1. The combination, with a wide, flat contact, of a shell embracing the contact and having a spherically-curved, centrally-perforated rear portion; a stem axially perforated and provided with a head recessed to provide a seat for the spherical portion of the shell; and a bolt passing through the perforations in the stem and the shell and having a head within the latter and a nut at the remote end of the stem.

1,575,904. THREAD-LOOPING MECHANISM FOR STITCHING MACHINES. LEO J. DU MAIS and FLOYD E. MINER, Chicago, Ill., assignors to Chicago Shoe Machinery Company, Chicago, Ill., a Corporation of Illinois. Filed Jan. 22, 1924. Serial No. 687,862. 1 Claim. (Cl. 112—55.)



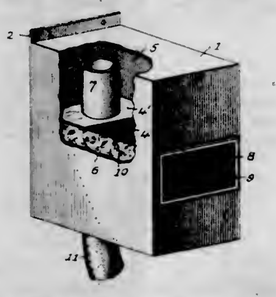
In a stitching machine, the combination with a barbed needle and the work-plate, said work-plate having a slot for the passage of the needle therethrough, of a thread looper movable in a horizontal plane, and a thread hook movable in an upwardly inclined plane with respect to said horizontal plane, said looper and the said thread hook co-operating to positively engage the thread upon the barb of the needle, means for operating the thread looper, said means including a cam-groove wheel, rollers engaging said grooves, one of said rollers being mounted upon a vertically mounted lever and the other of said rollers being mounted upon a longitudinally swinging lever, both of said levers co-operating to impart a differential movement to the said thread looper, an arm mounted for pivotal movement in a vertical plane and operatively connected to the thread hook, and a roller carried by said arm and engaging one of the grooves of said wheel.

1,575,905. PROCESS FOR BLENDING AND PURIFYING LIGHT HYDROCARBONS. GUSTAV EGLOFF, Independence, Kans., assignor to Universal Oil Products Company, Chicago, Ill., a Corporation of South Dakota. Filed Dec. 31, 1920. Serial No. 434,184. 7 Claims. (Cl. 196—12.)



3. A process of blending light gasoline-like hydrocarbons contained in uncondensable gas with a heavier absorbing oil consisting in mixing the two and simultaneously purifying them by passing them through a solution of a base of caustic soda and litharge.

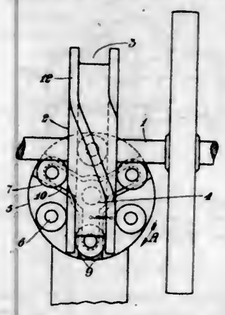
1,575,906. CONTAINER FOR ICE BOXES OR THE LIKE. FANNY FREY, Brooklyn, N. Y. Refile of abandoned application Serial No. 566,678, filed June 8, 1922. This application filed June 27, 1925. Serial No. 40,074. 4 Claims. (Cl. 217—13.)



1. Open topped containers for storing food in ice boxes or the like made in sets of different sizes, of which the smallest set form units and the larger sets are multiples of said units, each container being formed at its bottom with as many reduced portions or pads as the number of units it is a multiple of, the reduced portion of each container being peripherally shaped and sized to snugly fit in the open top of a unit container, whereby differently sized containers may interchangeably be stacked on top of one another and the upper ones serve as covers for the lower ones.

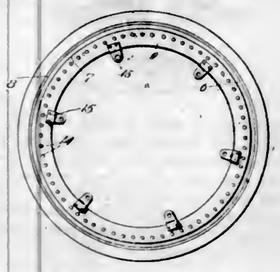
1,575,907. FILTERING AND THICKENING PROCESS AND APPARATUS. ALBERT LEGRAND GENTER, Salt Lake City, Utah, assignor of one-half to The General Engineering Company, Salt Lake City, Utah, a Corporation of Utah. Filed Apr. 11, 1921. Serial No. 460,187. 5 Claims. (Cl. 210—182.)

1. The process of filtering and thickening a mixture which comprises subjecting the mixture while in contact with a filtering medium to a filtering action in the course of which the liquid passing through the medium forms a filtrate column, and periodically interrupting the filtering action and lowering the level of the mixture being filtered with respect to the level of the filtrate in said column by producing a downward movement of the greater portion of the mixture which is above the bottom of the filtrate column, thereby producing a reverse flow of the filtrate through the filtering medium which discharges the solids accumulated on the medium into the mixture and thickens the same.



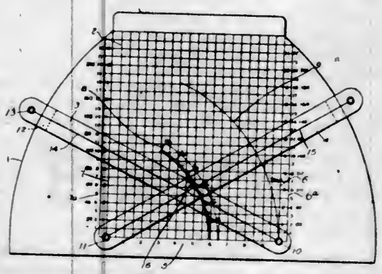
1,575,908. AIR FILTER ATTACHMENT FOR MOTOR VEHICLE ENGINES. GEORGE J. GILMORE and CHARLES A. ROMMEL, Chicago, Ill. Filed Apr. 1, 1925. Serial No. 19,774. 2 Claims. (Cl. 183—45.)

1. An air filter for motor vehicle engines, comprising a closed casing having an inlet opening at one side and a distance above the bottom of the casing, a foraminous shutter fitting said inlet opening, a foraminous partition dividing the casing into upper and lower communicating compartments, a filling of elastic porous material in the lower one of said compartments, and an air outlet duct connected to the upper compartment a distance above said dividing partition.



1,575,909. MOVING-PICTURE MACHINE. MATTIAS JONATAN GISELSON, Orsten, Tronodal, Sweden. Filed Mar. 10, 1924. Serial No. 698,023. 3 Claims. (Cl. 74—36.)

1. In a mechanism of the kind described the combination of a driving wheel provided with a camway, a driven wheel, and pins carried by said driven wheel and adapted to cooperate with said camway, some of said pins being rigidly attached to said driven wheel and the other

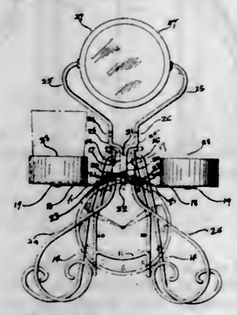


pins being resiliently attached to said driven wheel and spring-actuated in a direction towards an adjacent rigid pin.

1,575,910. DEMOUNTABLE RIM FOR CUSHION TIRES. WILLIAM F. J. GOERSCH, Cleveland, Ohio. Filed Mar. 21, 1925. Serial No. 17,275. 4 Claims. (Cl. 152—7.)

3. A demountable rim for cushion tires comprising, a band transversely divided into sections, transverse ribs integrally formed on each section, said ribs having bolt holes, retaining rings at opposite sides of the band, and bolts extending through the holes and rings to secure the elements together.

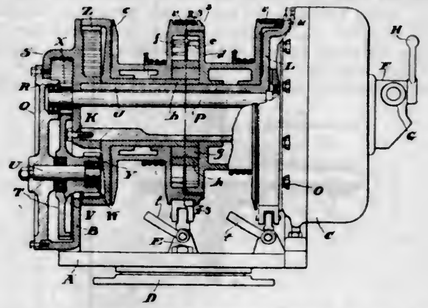
1,575,911. CALCULATING DEVICE. ALIBO H. GÓMEZ, Wilkinsburg, Pa. Filed Nov. 20, 1923. Serial No. 675,824. 16 Claims. (Cl. 235—61.)



1. A calculating device having a plurality of transversely-extending scales, one of said scales being divided into parts corresponding to the numerals 0 to 10, inclusive, and a plurality of intercrossing members respectively having pivotal points corresponding to the ends of said one scale.

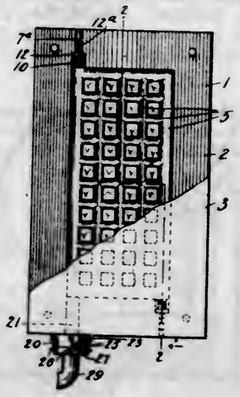
1,575,912. SANITARY TOILET SEAT. ULYSSES R. GRANT, Alameda, Calif., assignor to Hygienic Seat Company, San Francisco, Calif., a Corporation of California. Filed Dec. 18, 1923. Serial No. 681,354. 1 Claim. (Cl. 4—234.)

A toilet seat comprising a pair of cooperating sections of sheet material formed to provide a hollow substantially elliptical seat, one of said sections forming a bottom part of relatively wide flat form, said bottom part having an area of substantially semi-circular shape extending from the inner edge of the seat forwardly, said area extending upwardly in curved relation from the juncture with the flat adjacent portion of the part, to the central portion of said area at the inner edge thereof and terminating in a plane contiguous to the horizontal plane of the upper edge of the seat, and the other of said sections forming the upper part having the edge portions curved downwardly from the central portion in a predetermined manner, the forward portion of said upper part being formed with an area extending substantially above the horizontal plane of the upper edge of the seat and spaced above the area of the bottom part, said last-mentioned area having the portion of greatest height adjacent the inner edge of the seat and having the remaining portions of the area curving downwardly in all directions into the curvature of the remaining portion of the part to provide a body receiving contour in said seat, the edges of said sections being formed into interlocking cooperation to retain the sections in seat forming relation.



1,575,913. TOILET BACK. FRANCIS C. HALL, New York, N. Y. Filed Jan. 16, 1924. Serial No. 686,573. 5 Claims. (Cl. 211—24.)

1. In an article of the class described, the combination of a central supporting member provided with a horizontal and vertical portion, a leg member hinged to the upper end of the vertical portion, and a leg member hinged to the outer end of the horizontal portion, said leg members being each provided with a lug adjacent the respective pivots to engage the central supporting member to limit and hold the said legs in their outward supporting positions.

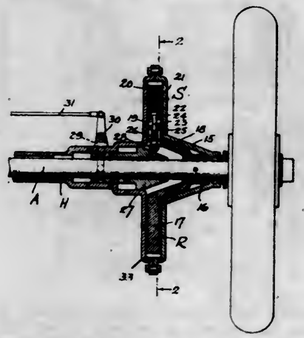


1,575,914. DOUBLE-DRUM HOIST. CHARLES C. HANSEN, Easton, Pa., assignor to Ingersoll-Rand Company, Jersey City, N. J., a Corporation of New Jersey. Filed Oct. 10, 1925. Serial No. 61,635. 3 Claims. (Cl. 254—185.)

1. In a hoist, the combination of a base plate, a frame on one end of the base plate, a reversible motor at the opposite end of the base plate, a main driving shaft connected to be rotated by the motor, a center bearing encircling the driving shaft, drums rotatable about the center bearing, an eccentric main driver connected to be rotated by the driving shaft and rotatable about the

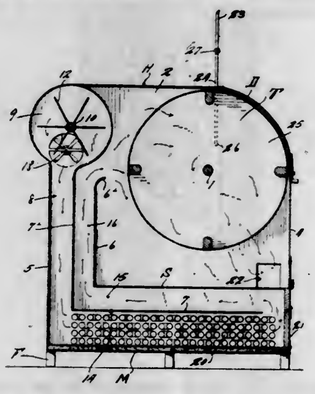
center bearing, and means mounted rotatably about the main driver for connecting the main driver with one or the other of the drums in accordance with the direction of rotation of the main driver.

1,575,915. RADIATOR. AUSTIN H. HART, Montclair, N. J., assignor, by mesne assignments, to Rome Radiation Company, Inc., a Corporation of New York. Filed May 1, 1922, Serial No. 557,742. Renewed Jan. 30, 1926. 1 Claim. (Cl. 204—8.)



The method of forming tubular shells for connection to conduits comprising preparing a core of material having a relatively low fusing point, attaching exposed metal bushings to said core at points corresponding to those where connections are desired, electroplating a metallic coating upon the core and bushings to the desired thickness, and then removing the core by fusing it below the fusion point of the bushing and electrodeposited metal, thereby leaving a shell of the electrodeposited metal reinforced by the bushings where connections are to be made.

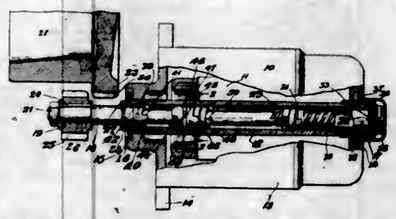
1,575,916. FLUID BRAKE. GUSTAVE E. HEDSTROM, Long Beach, Calif. Filed Mar. 17, 1924. Serial No. 699,905. 6 Claims. (Cl. 188—90.)



1. A fluid brake comprising a sectional casing adapted to contain a fluid, an axle passing through the central portion of the casing, a cam, and means to permit the cam to be moved longitudinally on the shaft and to rotate therewith, a rotor functioning in said casing and secured to the shaft at one side of the vertical center of the casing, the position of the cam being to the op-

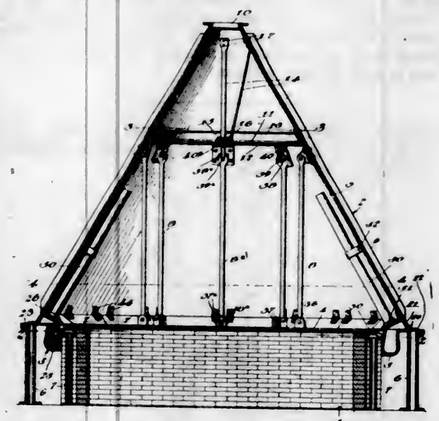
posite side of the vertical center of the casing, the rotor mounted in eccentric relation to the casing so as to provide a constant restricted space between the rotor and the inner face of the peripheral walls of the casing

at one point of the latter, and a series of radially movable vanes in said casing adapted to coact with said cam so as to be moved with respect to the inner face of the peripheral wall of the casing, and means for retracting said vanes on moving the cam in one direction.



1,575,917. DRYING TUMBLER. CHARLES J. HUNT, Barnsdall, Okla., assignor of one-half to William L. Clem, Barnsdall, Okla. Filed Oct. 20, 1925. Serial No. 63,740. 6 Claims. (Cl. 34—5.)

5. A drying tumbler comprising, in combination, a housing, a rotating tumbler drum mounted within the upper portion of the housing, an air chamber disposed across the housing, an air duct leading therefrom and disposed in a tortuous path and discharging toward the drum, a blast fan arranged within the air chamber, an air feeding fan delivering to the air chamber, and means for discharging steam into the housing adjacent to the opposite ends of the drum.

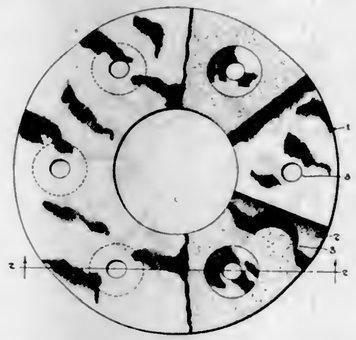


1,575,918. ENGINE-STARTING MECHANISM. ERNEST R. HUNTLEY, Los Angeles, Calif., assignor to Industrial Research Corporation, Toledo, Ohio, a Corporation of Delaware. Filed Sept. 9, 1920, Serial No. 409,141. Renewed June 4, 1924. 8 Claims. (Cl. 74—7.)

1. In a motor starter for engines, in combination an engine member; a motor having a hollow shaft; a drive shaft secured within the hollow shaft and adapted for axial and rotative movement relative thereto; a pinion on one end of the drive shaft adapted for connection with the engine member; a screw thread at the other end of the drive shaft having co-operative engagement with an internally threaded nut mounted within the hollow shaft; a jaw clutch within the hollow shaft concentric with and loosely mounted on the drive shaft; a coiled spring surrounding the drive shaft, the ends of

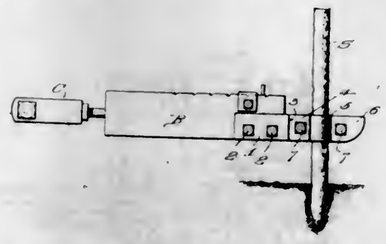
said spring being operatively connected to said clutch and nut respectively; and a clutch member fixed to the drive shaft; said pinion and engine member, clutch members, and spring and hollow shaft being adapted to form automatically a positive driving connection between the motor and the engine member when the motor is initially energized and to disengage automatically when the engine member is driven by the engine.

1,575,919. STILL. GEORGE HENRY HURSHMAN, Graybull, Wyo. Filed Feb. 28, 1925. Serial No. 12,381. 9 Claims. (Cl. 196—133.)



1. In a still of the character described, a body portion, a bottom, means for supporting the bottom while leaving it free to expand and contract, and expansible and contractible means connecting the bottom and the body portion.

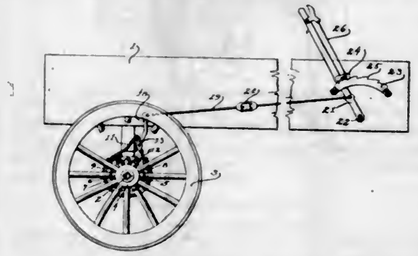
1,575,920. PISTON RING. WILLIAM H. KEYS, Clayton, Mo. Filed June 1, 1925. Serial No. 33,957. 3 Claims. (Cl. 74—109.)



1. A piston ring having a circumferential oil groove and a groove in its lower side edge, and passages from each of said grooves through the ring to the inner periphery of the ring.

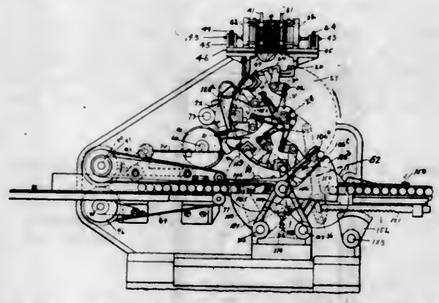
1,575,921. FLEXIBLE COUPLING. ELMER G. KIMMICH, Akron, Ohio, assignor to The Goodyear Tire & Rubber Company, Akron, Ohio, a Corporation of Ohio. Original application filed Sept. 5, 1922, Serial No. 586,280. Divided and this application filed Sept. 27, 1924. Serial No. 740,267. 4 Claims. (Cl. 64—96.)

1. A composite disc for flexible couplings comprising a plurality of superposed alternated layers of rubber and fabric in a flexing zone of the disc and fabric washers interposed between adjacent layers of fabric in the zone of the driving holes of the disc.



1,575,922. ANCHORING MEANS FOR WIRE TENSIONERS. JOHN W. LENLING, Groton, S. Dak. Original application filed Aug. 1, 1924, Serial No. 729,657. Divided and this application filed Feb. 21, 1925. Serial No. 10,921. 2 Claims. (Cl. 248—2.)

2. In an anchor for a body, a pair of elongated metal plates having flat laterally spaced parallel end portions adapted to be secured to opposite sides of the body near one end thereof, said plates being bent laterally inward at right angles on transverse lines to abut said end of the body and then directed laterally at right angles in a direction parallel to said parallel end portions to provide a pair of stake-clamping arms, said arms having outwardly bowed stake-embracing portions between their ends, the free terminals of said arms projecting beyond said stake-embracing portions and being adapted to be engaged by the user's foot to permit him to force the stake into the ground, and clamping bolts passing through said arms at opposite sides of said stake-embracing portions to clamp said portions against the stake.

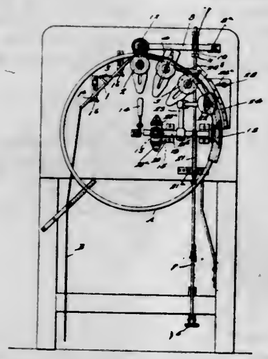


1,575,923. VEHICLE BRAKE. CHARLES LOETHER, Lafontaine, Kans. Filed Apr. 13, 1923. Serial No. 631,857. 1 Claim. (Cl. 188—77.)

In a vehicle brake, the combination with the wheel hub of a vehicle and a brake drum thereon; of a friction strap encircling the periphery of said drum, a pair of plates connected to the ends of said strap, the opposite ends of said plates being bifurcated and the furcations looped to provide sockets, a pair of links having their one ends looped to form sockets adapted to fit between the sockets of the ends of said plates, means for hingedly securing the last mentioned ends of the links to said plates, one of said links being of greater length than the other and having its outer end extending to a plane above the plane of the outer end of the shorter link, the outer ends of said links being also bifurcated and the furcations looped

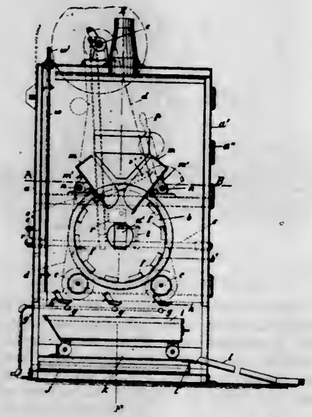
to form sockets, a horizontally disposed shaft mounted for oscillation on the vehicle and having a squared end disposed in a plane between the outer ends of said links, a crank arm keyed to the squared end of said shaft having its ends hingedly connected between the sockets of the outer ends of said links, whereby to draw the ends of said links toward one another when the shaft is turned in one direction, an arm keyed to the squared end of said shaft, and means in connection with said arm for manually actuating the latter and correspondingly actuating said shaft, as and for the purposes described.

1,575,924. MACHINE FOR BANDING CIGARS. THEODORE G. MCGIRR, Brooklyn, N. Y. Filed Mar. 28, 1925. Serial No. 18,970. 6 Claims. (Cl. 131—61.)



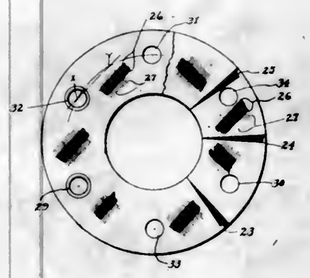
1. In a cigar banding machine, the combination with cigar holding and band feeding mechanism, of means for bending the ungummed ends of the bands inward before they are applied to the cigars, said bending means comprising two moving members one of which has a friction surface and the other of which has a sharp edge over which the band is drawn while pressed against by said friction surface.

1,575,925. APPARATUS FOR APPLYING FLIPPER STRIPS TO TIRE BEAD CORES. HARVEY F. MARANVILLE, Akron, Ohio, assignor to The Miller Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed Jan. 12, 1922. Serial No. 528,746. 6 Claims. (Cl. 154—9.)



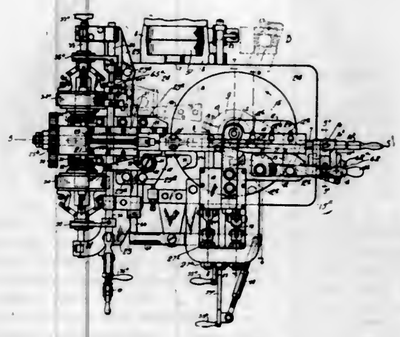
3. Apparatus for applying fabric strips to bead core rings, comprising a roller having a bead ring receiving groove, means for feeding a fabric strip thereto, a mov-

ably mounted roller for progressively pressing a superposed head ring and the underlying strip into said groove, a pair of deflecting devices for deflecting the margins of



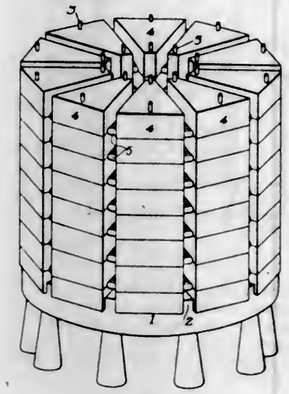
the strip radially outward, one of said deflecting devices including a stationary deflector and the other a cooperating presser roller, and a pair of devices for subsequently pressing said margins together.

1,575,926. PLATING DEVICE. NIKOLAUS MEURER, Berlin-Tempelhof, Germany, assignor to Metallogen Gesellschaft mit beschränkter Haftung, Berlin-Neukolln. Filed Nov. 19, 1921. Serial No. 516,489. 5 Claims. (Cl. 91—12.2.)



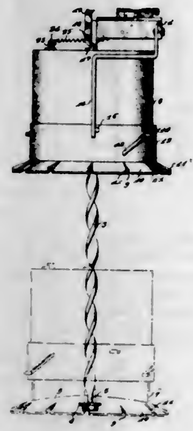
1. A device for producing metallic coatings comprising a chamber with a plating compartment and a preheating compartment above the plating compartment, two perforated hinged plates between the said compartments, means for tilting the said plates down from a horizontal position in which they form a support for the objects to be plated into oblique positions, and a rotatable drum arranged in the plating compartment and adapted to receive the said objects.

1,575,927. FLEXIBLE COUPLING. HERMAN E. MOSER, Akron, Ohio, assignor to The Goodyear Tire & Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed Oct. 21, 1920. Serial No. 418,491. 5 Claims. (Cl. 64—66.)



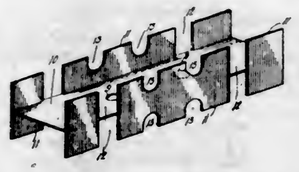
1. A flexible member for driving connections comprising superimposed layers of fabric united by a binder and arranged with the warp and weft elements of one layer respectively registering with the weft and warp elements of the adjacent layers.

1,575,928. PIPE OR TUBE BENDING MACHINE. PHILIP MUELLER, CLARENCE W. LUCAS, and ANTON C. SCHUERMANN, Decatur, Ill., assignors to Adolph Mueller, trustee, Decatur, Ill. Filed Mar. 16, 1922. Serial No. 544,133. 48 Claims. (Cl. 153—40.)



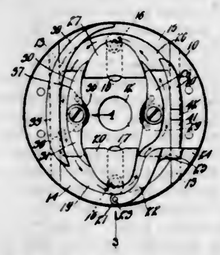
1. In a tube bending machine, the combination of a pivotally mounted tube carrier, a mandrel having a flexible section, means for moving the mandrel to and from a position where the flexible section is within the end of a tube in the carrier adjacent the axis of the carrier, means for turning the tube carrier about its axis, automatically acting means for applying pressure to the tube and mandrel at the opposite side of the axis of said carrier from the body thereof during the bending operation, and automatically acting means for applying pressure to the bent tube adjacent said axis while the mandrel is being withdrawn.

1,575,929. MOLDING CONCRETE STRUCTURES. JOSEPH B. MURRAY, Brooklyn, N. Y. Filed July 23, 1924. Serial No. 727,608. 6 Claims. (Cl. 25—155.)



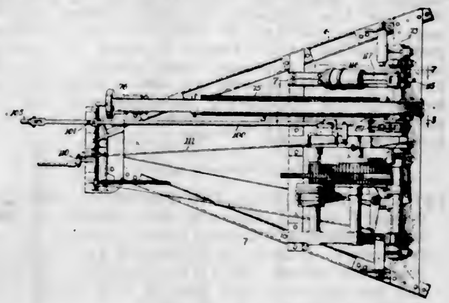
1. In the building of a reactor, the method which consists in first setting up a plurality of coils of the cable with removable cores at intervals and then casting plastic material in a monolithic structure about said plurality of coils and said cores and thereafter removing the cores.

1,575,930. FEED DISTRIBUTOR. ROBERT CARL OLSON, Zion, Ill. Filed Oct. 29, 1924. Serial No. 746,645. 7 Claims. (Cl. 119—56.)



1. The combination with a spiral guide stem and a support therefor, of a container mounted to slide and rotate upon the stem, a broadcasting disk spaced from but rotatable with the bottom portion of the container, means for holding the container against rotation, time-controlled means for releasing the container, means for imparting an initial impulse to the container, when released, a closure for the container, and means for opening the closure during the actuation of the container.

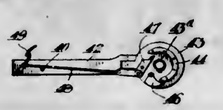
1,575,931. FORM TIE AND SPACER CONSTRUCTION. HARRY A. ORLOPP, Venice, Calif., assignor to David Baker Smith, Los Angeles, Calif. Filed Nov. 6, 1923. Serial No. 673,060. 13 Claims. (Cl. 25—131.)



1. A concrete tie and spacer embodying a flat metal plate adapted to lie between abutting edges of form boards or the like and extending between opposite boards of the form, and flanges extending on opposite sides of the plate and at right angles thereto, said flanges having form board receiving notches.

1,575,932. KNITTING MACHINE. NAPOLEON J. PERRY, Nashville, Tenn., assignor to May Hosiery Mills, Nashville, Tenn., a Corporation of Tennessee. Filed Dec. 19, 1919, Serial No. 345,956. Renewed May 29, 1925. 10 Claims. (Cl. 66—24.)

7. In a dial cap for rib knitting machines, a pivoted needle retracting cam having an opening, a radially movable needle projecting cam and a pivot pin fitting in the opening in the needle retracting cam and movable with the needle projecting cam, substantially as set forth.

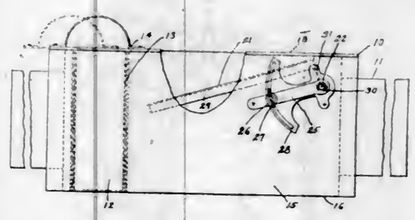


1,575,933. WARPING APPARATUS. BURT A. PETERSON and PRESTON W. CUMMINGS, Rockford, Ill., assignors to Barber-Colman Company, Rockford, Ill., a Corporation of Illinois. Filed Dec. 31, 1923. Serial No. 683,563. 12 Claims. (Cl. 28—51.)

1. A trip mechanism having, in combination, a spring-actuated arm provided with a socket, a ball in said socket, an adjusting screw carried by the socket to support the ball, said socket comprising a cylindrically con-

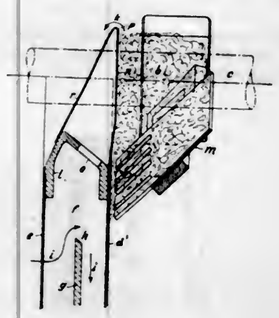
cave wall against which the ball bears, a lever pivoted between its ends, said ball bearing against one arm of said lever, and an electromagnet normally holding the other arm of said lever.

1,575,934. HARROW. JAMES PICK, Marriott, Saskatchewan, Canada. Filed Dec. 29, 1923. Serial No. 683,398. 5 Claims. (Cl. 55—19.)



1. A harrow lift of the character described, a frame mounted on land wheels, a drawbar fixedly secured to the frame, axle-supporting brackets for the drawbar, a pair of axles, field wheels rotatably mounted on said axle, pulleys on the axles operatively connected to the harrows, disc head pieces loosely mounted on the inner ends of said axles, guideways on the head pieces, ratchet members on the land wheel, means extending through the pulleys designed to engage the ratchet members and guideways to cause the pulleys to rotate, and means for engaging and automatically disengaging said means.

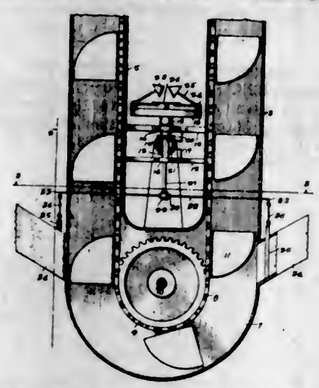
2. In a device of the character described, the combination with a frame and a pair of axles rotatably supported in said frame and provided with field wheels and a draw-bar, of a plurality of harrows chain-connected to said draw-bar and means for raising and lowering the harrows comprising lifting pulleys fixedly mounted on the machine axles, a longitudinally extending and bent rod through said pulleys, ratchet wheels fixedly mounted adjacent the outer ends of the axles and trip engaging means provided with a guideway loosely mounted on the inner ends of the axles, means on said rod for engaging the ratchet wheels, the inner end of said rod being designed to travel in said trip receiving member and means operated from the driver's seat for disengaging the rod from said member and comprising a trip lever operatively connected to a trip member designed to open and close the guideway on the trip receiving member, whereby, on the guideway being closed, the rod is operated to raise the harrows and whereby, on reaching a predetermined point, the rod is disengaged to automatically lower the harrows.



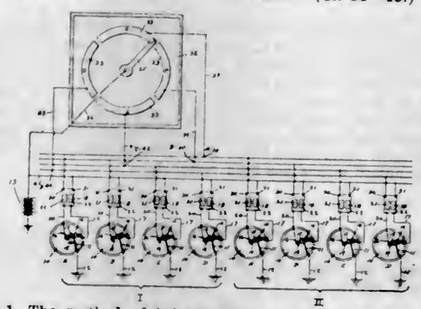
5. A device of the character described, comprising a frame, a pair of axles square in cross-section and formed with spindles at each end, a pair of slotted frame members designed to engage with the inner pair of spindles, a pair of land wheels loosely carried on the outer pair of spindles, pulleys fixedly mounted on said axles and flexibly connected with a plurality of harrows, ratchet members on said wheels, disc head pieces connected to the slotted frame members and loosely mounted on the inner spindles, guideways on said pieces, rods extending through the pulleys and adapted to engage the ratchet members and the guideways, means operable from the driver's seat to engage with said rods to wind the pulleys, means for automatically disengaging said rods to unwind said pulleys, and means for returning the rods to starting position.

1,575,935. AIR MIXING AND FILTERING DEVICE. GEORGE T. RANDLE, Saylesville, R. I., assignor to The Motor Protection Company, Central Falls, R. I., a Corporation. Original application filed Jan. 18, 1923. Serial No. 613,545. Patent No. 1,530,619. Divided and this application filed Mar. 18, 1925. Serial No. 16,548. 4 Claims. (Cl. 183—44.)

1. An air mixer for being connected into an air conduit system and having a box-like body structure, said body structure having a relatively extended side opening for air in one of the lateral walls, a plate-like damper housed within said body structure and fitting against the opposed inner border walls of said opening, a shaft extending across the interior of said body structure and operatively supported by other of said lateral walls, said shaft being spaced inwardly from said border walls, supporting means intermediate said shaft and damper, and said supporting means being constructed and arranged to compensate for the spacing of the shaft and damper, whereby notwithstanding such spacing the damper will fit flatwise against the border walls of the opening.



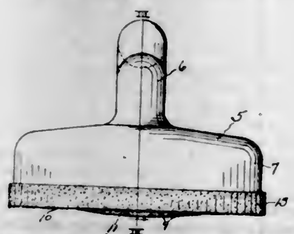
1,575,936. MULTICHAMBER APPARATUS FOR CONDUCTING LEACHING, WASHING, OR LIKE OPERATIONS ON SOLID OR SEMISOLID MATERIAL. WALTER RAABE, Cothen, Anhalt, Germany. Filed Feb. 7, 1925. Serial No. 7,576. 8 Claims. (Cl. 127—7.)



1. A multichamber leaching apparatus for solid and semi-solid material and more particularly for removing sugar from sacchariferous plant cuttings on the counter-current principle comprising, a drum, partitions in the drum forming leaching chambers therein, lifting members for lifting the non-liquid material over the partitions, and liquid pervious surface members positioned adjacent the partitions so that the non-liquid material passes over the pervious surfaces in being lifted over the partitions.

1,575,937. GRAIN-ELEVATING CONVEYER. CARL L. RHOTEN, Arriba, Colo. Filed Sept. 8, 1925. Serial No. 55,146. 3 Claims. (Cl. 198—207.)

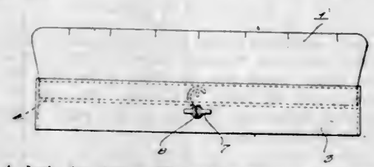
1. In combination, a grain elevating conveyer including a casing having a boot and embodying a transverse driven foot shaft journaled in the boot, an endless conveyer member movable in the casing and operatively associated with said foot shaft, and governor operated means operatively connected to said foot shaft for controlling flow of grain into said boot, said controlling means including dump bin chutes discharging into the boot and provided with controlling gate valves, and a slidable governor operated vertical rod connected to said valves, the connection between said vertical rod and said valves embodying a horizontal rod having rigid lateral arms respectively connected to said vertical rod and said valves.



1,575,938. CONTROL DEVICE FOR DRY KILNS. FREDERICK W. RUBIN, Indianapolis, Ind. Filed Apr. 6, 1925. Serial No. 21,251. 7 Claims. (Cl. 34—19.)

1. The method of bringing into successive action the steam control devices for a battery of kilns wherein the relative humidity of each kiln is individually controlled by its respective device, consisting of electrically controlling said individual steam control devices in timed relation with respect to each other, whereby said control devices will be caused to operate in rotation relative to each other so as to distribute therebetween a common steam supply for said kilns.

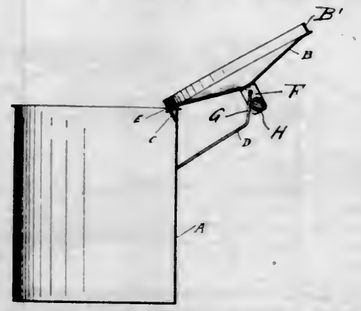
1,575,939. RESILIENT CLEANING ATTACHMENT. VIRGIL SATTERWHITE and WELCOME A. DILLE, Kansas City, Mo. Filed Apr. 3, 1925. Serial No. 20,383. 2 Claims. (Cl. 15—158.)



1. A cleaning attachment of the class described comprising, in combination, a hollow head having annular depending sides, a network partition within said head and a porous resilient body embraced by said depending sides and extending beyond the edge thereof, said extended portion having an outwardly disposed flange extending beneath and beyond said edge.

1,575,940. PROTECTED PAPER CURRENCY AND PROCESS OF MAKING SAME. PHILIP A. SAWYER, Hasbrouck Heights, N. J. Filed Nov. 11, 1924. Serial No. 749,344. 8 Claims. (Cl. 91—67.9.)

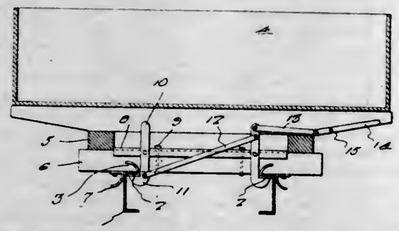
3. The paper currency comprising a paper body upon which the design has been printed and a thin coating containing sensitizing coloring material applied to both sides of the paper currency, the design material and coating material both containing a substantial portion of a common binding ingredient, thereby uniting the coating to the design and to the exposed portions of the paper body to promote the strength and waterproof properties thereof.



7. The process of making paper currency, bonds or other instruments of value which comprises printing the desired design on the paper body with ink adapted to give strong adherence with the protective coating employed, substantially drying the design and successively spraying on both sides of the paper currency a thin solution of cellulose ester dissolved in volatile solvent and drying the same to secure permanent union of the thin substantially transparent colloidal coating with the design and with the exposed paper body to promote the strength and impermeable character thereof.

1,575,941. LOCKING DEVICE FOR AUTOMOBILE CUSHIONS. RALPH SCHABER, Detroit, Mich. Filed Oct. 21, 1925. Serial No. 63,926. 4 Claims. (Cl. 155—178.)

1. A lock for automobile seat cushions comprising a rod carried by the bottom of a seat cushion and spaced therefrom, a rotatable shaft mounted in the seat cushion supporting frame and being directly below said rod, and hooks formed on said shaft and adapted to extend over the rod for preventing the removal of the seat cushion from its supporting frame.



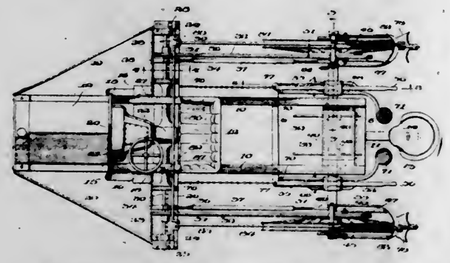
1,575,942. WASHBOILER COVER AND DRAINAGE BOARD. BROR MAX SCHAUMAN, Atlantic Highlands, N. J., assignor to an Association comprising Grandin V. Johnson, Otto Gautschy, and Harry W. Johnson, all of Highlands, N. J., William Koch, Long Branch, N. J., and Bror Max Schauman, Atlantic Highlands, N. J. Filed Mar. 22, 1921, Serial No. 454,459. Renewed June 8, 1925. 3 Claims. (Cl. 68—30.)

1. In combination with a wash boiler, a cover for the same having a flange on its lower or inner face and an outwardly extending projection on its outer face parallel

to one edge thereof, a brace pivoted on the outside of the cover having its free end resting against the boiler, and means for limiting the pivotal movement of the brace.

1,575,943. DUMP TRUCK. ARTHUR W. SPENCE, Assumption, Ill. Filed Feb. 15, 1924. Serial No. 693,037. 1 Claim. (Cl. 298—38.)

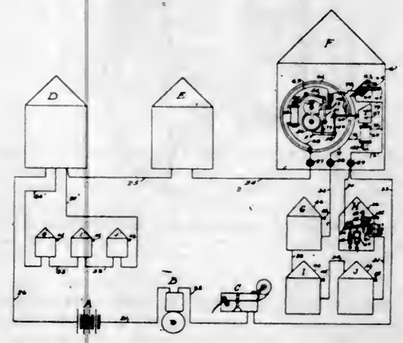
In combination with a vehicle frame provided with flanges, a body mounted for movement relative to the frame, hooks pivotally mounted at points between their ends upon the body and adapted to engage under the flanges of the frame, a rod pivotally connecting the hooks on opposite sides of their fulcrums for causing them to swing simultaneously toward and away from each other, a link connected to one of the hooks, and a lever pivoted intermediate its ends upon the body and operatively connected with the link.



1,575,944. APPLICATION OF MUD-LADEN FLUIDS TO OIL OR GAS WELLS. BEN K. STROUD, Los Angeles, Calif. Filed Apr. 6, 1923. Serial No. 630,399. Renewed Dec. 16, 1925. 8 Claims. (Cl. 166—1.)

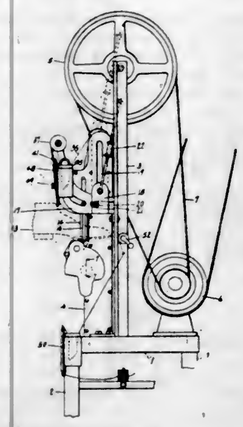
5. A mud laden fluid for oil or gas wells comprising iron oxide in suspension.

1,575,945. APPLICATION OF MUD-LADEN FLUID TO OIL OR GAS WELLS. BENJAMIN K. STROUD, Los Angeles, Calif., assignor to National Pigments & Chemical Company, St. Louis, Mo., a Corporation of Missouri. Filed Dec. 17, 1924. Serial No. 756,624. 21 Claims. (Cl. 255—1.)



1. A mud-laden fluid for oil or gas wells characterized by the fact that it is slimy and has a specific gravity which is substantially in excess of that of clay-laden fluids of the same viscosity.

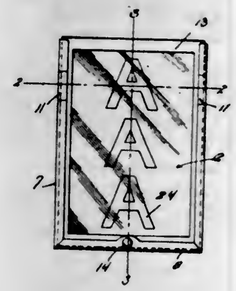
1,575,946. POWER CULTIVATOR. MANLEY S. SULLIVAN, Charleston, S. C. Filed Feb. 9, 1925. Serial No. 8,051. 8 Claims. (Cl. 97—135.)



1. A cultivator of the type described including a frame, a rear axle, wheels on the axle spaced from the frame sides, brackets slidably mounted on the axle between the frame and wheels, hand controlled means to shift the brackets on the axle, cultivator bars depending from the brackets, cultivator implements, and heads to which the implements are attached, adjustably mounted for vertical movement on the said cultivator bars.

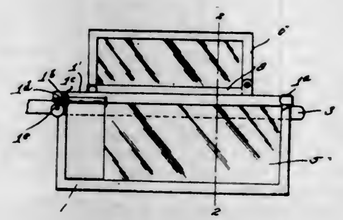
1,575,947. STARTING ATTACHMENT FOR SIGNAL TRANSMITTERS. NATHAN H. SUREN, Needham, Mass., assignor, by mesne assignments, to The Gamewell Company, Newton, Mass., a Corporation of Massachusetts. Filed July 8, 1921. Serial No. 483,222. 10 Claims. (Cl. 177—369.)

1. An attachment comprising means for functional operation in response to an auxiliary circuit to cause starting of a main line transmitter only when said means is preconditioned for such operation, an indicator movable from set to unset position upon functional operation of said means, and latch means for said indicator so governed by said first named means as to prevent resetting of said indicator other than when such preconditioning of said first named means has been restored.



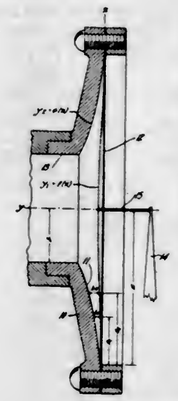
1,575,948. SOLE-STITCHING MACHINE. NEIL D. SWEET and THOMAS A. SWEET, Colon, Mich. Filed Mar. 14, 1922. Serial No. 543,667. 2 Claims. (Cl. 112—28.)

1. In a structure of the class described, the combination with a supporting upright, a driving wheel mounted at the top thereof, a sewing machine comprising a frame, work rest, presser foot, needle-bar, shuttle, said frame being mounted on said upright below said driving



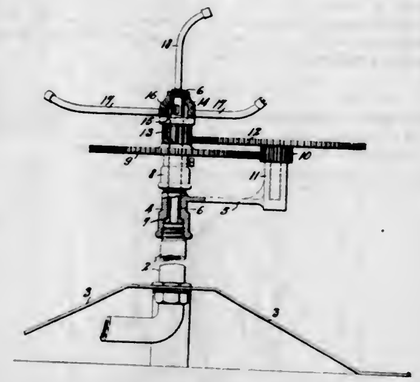
wheel, and means for operating said needle-bar comprising a rocker member operatively associated therewith, a slide vertically reciprocating on said frame, a pitman connecting said slide to said driving wheel, and a roller on said slide, said rocker member being slotted to coact with said roller.

1,575,949. TAG HOLDER FOR VEHICLES. LAWRENCE T. THORN, Harrisburg, Ark. Filed Feb. 19, 1924. Serial No. 693,813. 2 Claims. (Cl. 40—16.)



1. A tag holder of the class described comprising a metallic backing plate formed with inturned edges at the sides and bottoms to slidably receive a tag, a protecting transparent cover for said tag received in said edges, an open retaining frame slidably mounted in the inturned edges outwardly of the protecting cover and having a rearwardly directed downturned lip formed on the upper end engaging over the upper end of the backing plate to prevent entrance of dirt and water to the tag, and means on the backing plate for securing it to a support.

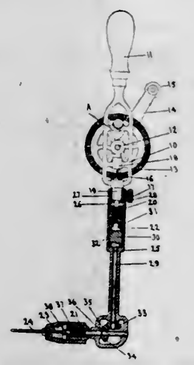
1,575,950. CITY LICENSE AND IDENTIFICATION CARD HOLDER FOR MOTOR VEHICLES. LAWRENCE T. THORN, Harrisburg, Ark. Filed Mar. 6, 1925. Serial No. 13,561. 1 Claim. (Cl. 40—125.)



In combination, a city license tag holder having a projection on the lower end, a license bracket, a license plate holder having a bulged portion on the rear side forming a channel within the bulged portion, the said city license tag holder, license bracket, and plate holder having aligned openings therein, securing members passed thru said openings, fastening means within the channel engaging said securing members for mounting the several parts in associated relation, whereby a license plate sealed in the license holder encloses said fastening means for preventing disassemblage of the parts without breaking the seal between the license and its holder.

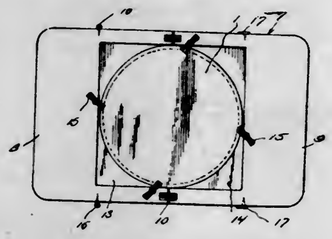
1,575,951. ACOUSTICAL INSTRUMENT. ALBERT L. THURAS, East Orange, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Dec. 20, 1924. Serial No. 757,277. 4 Claims. (Cl. 181—31.)

1. In an acoustic apparatus, a sound chamber, and means for setting up sound vibrations in said chamber, said chamber being shaped to cause the instantaneous vibrational velocity of the air to be substantially constant throughout the chamber.



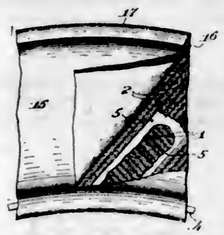
1,575,952. WATER SPRINKLER. WILLIAM CHARLES TODD and JAMES WILLIAM POMEROY, Victoria, British Columbia, Canada. Filed Feb. 3, 1923. Serial No. 616,670. 1 Claim. (Cl. 299—70.)

A sprinkler, comprising the combination with a hollow head to which a water supply under pressure is delivered, a central tubular stem rotatably mounted in the head to project from its upper end and retained against endwise movement therein, said stem having a nozzle secured to its upper end to angularly project therefrom, a reaction sprinkler head rotatably mounted on the central stem and deriving its water supply therefrom, a pinion secured on the sprinkler head, a wheel rotatably mounted adjacent to said pinion, the teeth of which mesh with



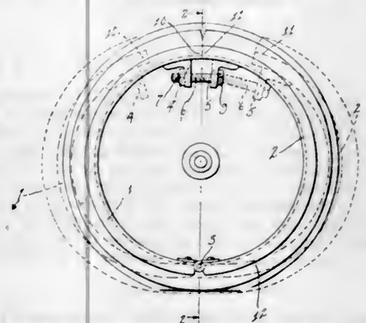
those of the pinion, a second pinion secured to rotate with the wheel, and a second wheel secured on the central stem the teeth of which wheel mesh with those of the second pinion, whereby the central stem is positively rotated from the reaction sprinkler head.

1,575,953. ATTACHMENT FOR DRILLING MACHINES. PETER TOORKS, Boston, Mass. Filed Mar. 31, 1925. Serial No. 19,602. 1 Claim. (Cl. 77—7.)



An attachment for a hand drill comprising a supplemental frame, having means for attachment to the frame of said drill, after the removal of the chuck from the latter; a shaft rotatably mounted in said supplemental frame, and constructed at one end with a threaded socket to receive the threaded extremity of the drill spindle, vacated by the chuck; a supplemental spindle rotatably mounted in the supplemental frame at an angle with relation to the axis of said shaft, said spindle having a threaded extremity which is a counterpart of the threaded extremity of the drill spindle, and to which the chuck is transferred from the drill spindle; and means by which said socketed shaft operates to drive the supplemental spindle, for the purpose of rotating the chuck on the supplemental spindle.

1,575,954. TABLE-TOP ATTACHMENT. SAMUEL J. WALASCHEK, New York, N. Y. Filed June 16, 1924. Serial No. 720,349. 1 Claim. (Cl. 45—75.)



In combination, a circular table top, an auxiliary top including complementary sections hinged together at their adjacent ends, each section including a pair of superposed laminations, the hinged edges of the top laminations being arcuate in formation and beveled, and the same ends of the bottom lamination being of rectangular U-shape in formation, and means for securing the auxiliary top of said table top.

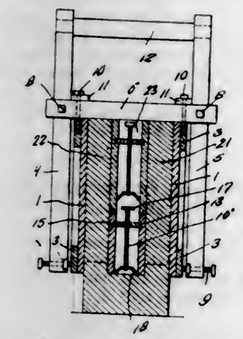
1,575,955. CORD TIRE. WALTER R. B. WHITTIER, Chattahoochee, Ga. Filed Nov. 8, 1919. Serial No. 336,590. 15 Claims. (Cl. 152—13.)

1. A tire having therein a layer of round textile cordage characterized by a structure preventing rotative surface motion of the cord under longitudinal strain tending to break it away from adhesions or plastic attachments, and a covering mass in plastic attachment to the cordage layer.

1,575,956. AUXILIARY RIM AND TIRE. LELA EARL WILLIAMS, Benton, Ill. Filed May 11, 1925. Serial No. 29,513. 5 Claims. (Cl. 301—39.)

1. An auxiliary rim and tire of the character described comprising a pair of semi-annular members hingedly secured to one another, a solid resilient vehicle tire disposed on the peripheral walls of said semi-annular members each having portions thereof fashioned to engage with and partially receive the flange of a standard pneumatic tire bearing rim, and means for locking said hingedly connected semi-annular members with their free ends in close contact with one another, whereby said auxiliary rim may be securely held against movement relative to said standard tire bearing rim.

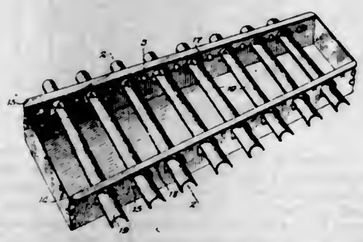
1,575,957. COMPOSITION FOR HIGHWAY SURFACING AND THE LIKE. JOSEPH HAY AMIES, Philadelphia, Pa. Filed Mar. 4, 1924. Serial No. 696,908. 1 Claim. (Cl. 94—23.)



The herein described process of manufacturing compositions for highway surfacing and the like, which consists, first, in placing soil (common earth) and mineral materials in a standard rotating heating cylinder and heating the same to about 2,000 degrees F. secondly, placing soil (common earth) and mineral materials in a standard mixing machine, or upon a float for ready hand manipulation, then, thirdly, placing thereupon from ten to fifteen pounds of the oxide of calcium in an already slaking condition to each ten to fifteen cubic feet batch quantity of the said soil and mineral materials, then adding from one to two cubic feet of the highly heated soil and mineral material, then adding about twelve per cent of the highly heated bituminous material whilst the oxide of calcium is slaking, all as particularly and in detail herein specified.

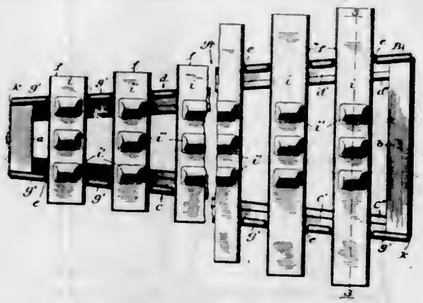
1,575,958. PROCESS OF DYEING AND PRINTING OF TEXTILE GOODS AND OTHER MATERIALS ADAPTED TO BE IMPREGNATED. MARCEL BADER, Mulhouse, France, THÉODORE LOMBARD, Basel, Switzerland, CHARLES SUNDER, Mulhouse, France, and CHARLES VAUCHER, Basel, Switzerland, assignors to Society Durand & Huguenin S. A., Basel, Switzerland. Filed July 24, 1923. Serial No. 653,567. 8 Claims. (Cl. 8—5.)

1. A process for dyeing and printing with vat-dyestuffs, consisting in applying to the goods a water-soluble ester-like derivative of a vat-dyestuff and then developing the dyeing thereon by reforming the dyestuff by action of a suitable oxidizing agent.



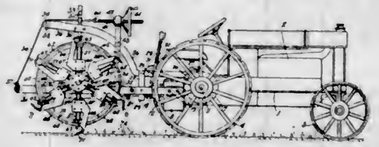
5. A process for dyeing and printing with vat-dyestuffs, consisting in applying to the goods a water-soluble ester-like derivative of a vat-dyestuff with an oxidizing agent, printing thereon a suitable agent for neutralizing the effect of the oxidizing agent, in combination with a fixable dyestuff capable of withstanding the reserving agent, steaming and passing through acid, for the purpose of producing a colored effect on a colored ground.

1,575,959. CONCRETE WALL MOLD. ADOLF BARSTAD, Smiley Township, Pennington County, Minn. Filed Oct. 6, 1925. Serial No. 60,864. 5 Claims. (Cl. 25—131.)



1. A mold for forming a concrete wall with an air duct comprising outer and inner forms, means for securing the outer forms, means for locking the inner forms in their assembled position, and means associated with the inner forms for forming a connection between the portions of the walls formed by the aforementioned forms.

1,575,960. XYLOPHONE. WILLIAM BARTHOLOMAE, Brooklyn, N. Y., assignor to Bar-Zim Toy Mfg. Co., Inc., New York, N. Y., a Corporation of New York. Filed Feb. 8, 1923. Serial No. 617,832. 7 Claims. (Cl. 84—403.)

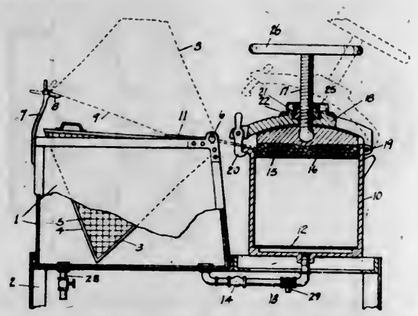


1. In a xylophone, a metallic side plate formed with a bent portion for presenting a string receiving and supporting groove.

1,575,961. MUSICAL TOY. WILLIAM BARTHOLOMAE, Brooklyn, N. Y., assignor to Bar-Zim Toy Mfg. Co., Inc., New York, N. Y., a Corporation of New York. Filed June 1, 1925. Serial No. 34,208. 4 Claims. (Cl. 84—402.)

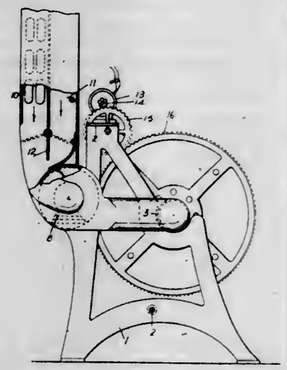
3. A musical toy including a base-support formed with recesses; music-emitting elements arranged in the recesses, said elements being U-shaped in cross-section, forming lateral walls which are perforated; and a cord that is rove through the holes in the lateral walls of the elements and that secures the latter to the base-support and supports them in the recesses.

1,575,962. SPADING APPARATUS. AURELIO CRUS BELLO, Sagua la Grande, Cuba. Filed Feb. 24, 1925. Serial No. 11,266. 3 Claims. (Cl. 97—216.)



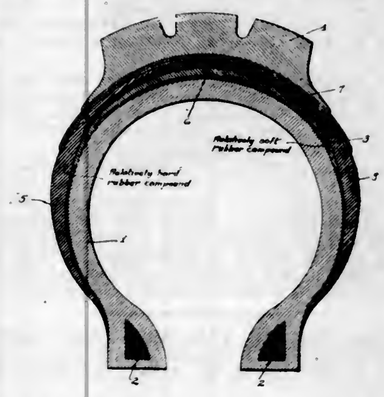
1. A spading apparatus, comprising a transverse shaft, wiper wheels fixed on said shaft one at the side of the other, a circular saw blade fixed at the periphery of each wheel, and grass cutting members slidably mounted respectively on the spokes of said wheels so that the cutting blades of these grass cutting members be out of the saw blade.

1,575,963. BRACKET. EDWARD H. BISPHAM, Maumee, Ohio. Filed Dec. 27, 1921. Serial No. 524,909. 4 Claims. (Cl. 45—97.)



3. A first mirror member to be mounted provided with one pair of clips and a third clip, and a spring arm U-shaped second bracket member with which the pair of clips may be engaged for holding the first member fixed with the second member and with which the third clip may be engaged independently of the holding of the first pair of clips, said third clip engaging for swingably mounting the first member as to the second member, said first member being provided with a strut pivoted thereto for engaging the second member when mounted by the third clip for adjustably coacting with the second member to hold the first member against swinging.

1,575,964. STARCH EXTRACTOR. CHARLES L. BRALEY, Chicago, Ill., assignor of one-half to Charles F. Noftzger, Chicago, Ill., and one-half to The American Laundry Machinery Company, Cincinnati, Ohio, a Corporation of Ohio. Filed Aug. 11, 1921, Serial No. 491,528. Renewed Jan. 21, 1926. 2 Claims. (Cl. 68—28.)

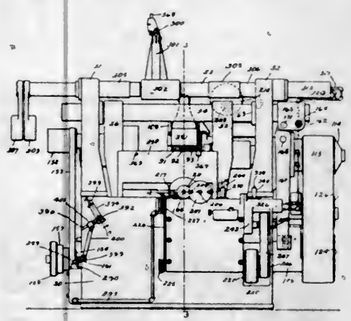


1. In an apparatus of the class described, the combination of a receptacle, a foraminated basket mounted in said receptacle to be lowered therein or raised therefrom for discharging the contents, an extractor cylinder disposed at the side of said receptacle whereby the articles may be discharged from the basket to said cylinder, a foraminated inner bottom in said extractor cylinder, a return pipe connecting said cylinder below its said inner bottom to said receptacle, said return pipe being provided with a check valve, a plunger for said cylinder adapted to force the extracted liquid from said cylinder to said receptacle, and means for actuating said plunger.

1,575,965. LAUNDRY DRIER. CHARLES L. BRALEY, Chicago, Ill., assignor of one-half to Charles F. Noftzger, Chicago, Ill., and one-half to The American Laundry Machinery Company, Cincinnati, Ohio, a Corporation of Ohio. Filed Feb. 2, 1923. Serial No. 616,587. 2 Claims. (Cl. 34—5.)

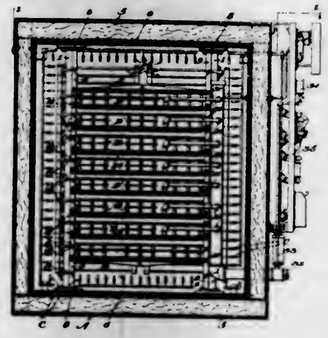
1. In a laundry drier, the combination of a supporting frame provided with tubular bearings, a drying cylinder having tubular journals coacting with said tubular bearings, said journals opening within said drying cylinder, spaced foraminate partition walls in said cylinder, means for driving said cylinder, and a blower connected to deliver to one of said tubular bearings and a discharge conduit connected to the other.

1,575,966. PNEUMATIC TIRE. HAROLD A. BRITTAIN, Akron, Ohio, assignor to The Goodyear Tire & Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed Aug. 5, 1921. Serial No. 490,056. 3 Claims. (Cl. 152—13.)



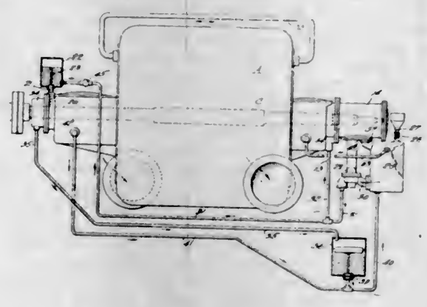
3. A pneumatic tire comprising a carcass, a rubber tread member vulcanized thereto, a relatively soft rubber covering upon the side walls of the carcass and relatively thick rubber pads of substantially crescent shape in cross section formed of a rubber compound of greater hardness than the remaining rubber composition of the tire vulcanized to the side walls thereof.

1,575,967. FLUID FOR INDUSTRIAL PURPOSES. EDWARD R. BRODTON, Philadelphia, Pa. Filed Feb. 20, 1925. Serial No. 10,690. 2 Claims. (Cl. 252—1.)



1. A fluid that consists substantially of methylene chloride, is non-inflammable, non-corrosive of brass, copper, aluminum and iron and has a boiling point below that of water and above 100° F.

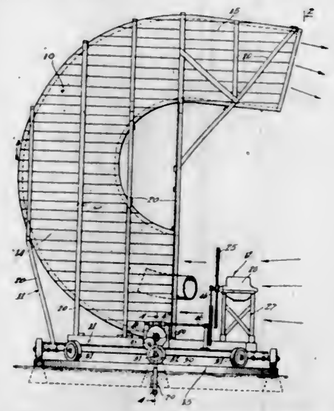
1,575,968. GRINDING MACHINE. WILLIAM LE ROY BRYANT, Springfield, Vt. Filed July 20, 1921. Serial No. 486,080. 94 Claims. (Cl. 51—95.)



1. A grinding machine comprising a bed, a tool carriage thereon, a grinding wheel journaled on said carriage, a work carrier movable about an axis substantially parallel to the axis of the grinding wheel, and power-actuated mechanism for automatically swinging said work carrier about its axis to advance the work from a remote position to and against the grinding wheel and then to withdraw the work from said grinding wheel to such remote position.

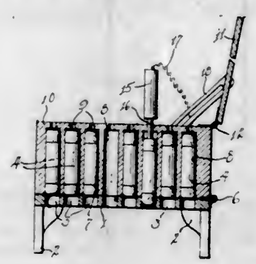
1,575,969. APPARATUS FOR FABRICATING REENFORCED GLASS. WILLIAM C. BULL, Brooklyn, N. Y. Filed June 26, 1924. Serial No. 722,519. 24 Claims. (Cl. 18—17.)

8. In an apparatus of the class described, a casing, a multiple press device arranged within said casing and including a plurality of superposed press units, means for setting said units to the desired spacing, a flexible diaphragm carried by each unit, and means for simultaneously applying pressure to each diaphragm.



1,575,970. ROTARY PUMP AND THE LIKE. WILLIS H. CARRIER, Essex Fells, N. J., assignor to Carrier Engineering Corporation, Newark, N. J. Filed Sept. 2, 1922. Serial No. 586,000. 16 Claims. (Cl. 230—11.)

1. The combination with a fluid pump having a rotary shaft extending through an opening in the pump casing, of a valve and valve seat which cooperate to form a closure for said shaft opening when the pump is not running, said valve being held off of its seat when the pump is running, and mechanism which maintains a sealing liquid between said valve and valve seat and forms a liquid seal for said shaft opening when the pump is running.

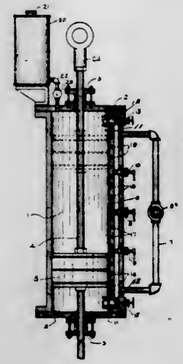


1,575,971. FROST PREVENTER FOR ORCHARDS. EDWARD S. COBB, Whittier, Calif., assignor to Cobb Temperature Regulator Company, Los Angeles, Calif., a Corporation of California. Filed Aug. 31, 1921. Serial No. 497,231. 5 Claims. (Cl. 47—2.)

1. Apparatus for protecting orchards and the like, comprising air circulating means movable to receive air from the atmosphere in different directions, and air delivery and directing means directing the outflowing air into the atmosphere in the direction opposite to the direction of its inflow.

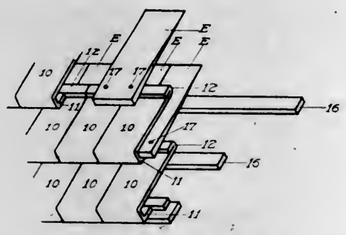
3. Apparatus for protecting orchards and the like, comprising a semi-circular flue with its ends open to the atmosphere, supported with one end above the other and rotatable about a vertical axis, means to rotate the flue, and means to blow air through the flue.

1,575,972. DISPENSING DEVICE. BURT B. COCHRAN, Chicago, Ill., assignor to Goblin Mint Company, Chicago, Ill., a Corporation of Illinois. Filed Mar. 14, 1925. Serial No. 15,702. 2 Claims. (Cl. 211—8.)



1. A device of the character described comprising a base member, a body member normally resting upon said base member and hingedly mounted thereto, compartments formed in said body member and open at that portion adjacent the base member, said base member having openings therethrough in registration with the mouths of the compartments in said body member, a replaceable fragile closure disposed between said body member and said base member, whereby articles of merchandise may be confined in said compartments and may be projected from said compartments when said closure is broken, and manually actuated means for projecting the articles of merchandise through said fragile closure.

1,575,973. SHOCK ABSORBER, DASHPOT, AND THE LIKE. WILLIAM R. COLEMAN, Birmingham, Ala. Filed Jan. 3, 1922, Serial No. 526,849. Renewed May 8, 1925. 19 Claims. (Cl. 188—88.)

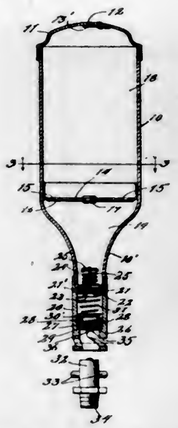


1. In a device of the character described, a cylinder having a series of ports lengthwise thereof and a by-pass

with which said ports communicate, a check valve controlling a port at one end of the cylinder, and a piston

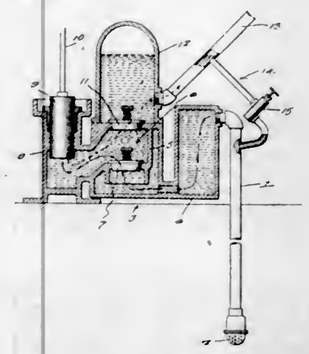
movable in the cylinder and adapted to control its terminal movements by automatically varying the port area for the by-passing of fluid around it.

1,575,974. SHINGLE AND SHINGLE CONSTRUCTION. GEORGE E. CONWAY, Tenafly, N. J. Filed Apr. 28, 1924. Serial No. 709,339. 15 Claims. (Cl. 108—8.)



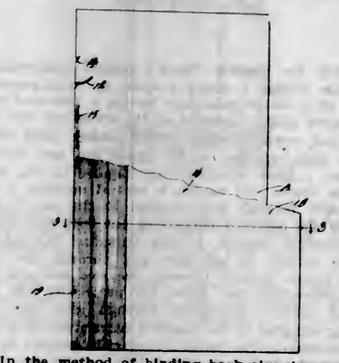
1. A shingle comprising a middle body portion, a hook portion at one end thereof adapted to engage anchoring means on the surface to be covered and a shouldered portion of substantial thickness for spacing and supporting other anchoring means on said surface.

1,575,975. PRODUCTION OF CEREAL SUGAR IN LOAF OR BLOCK FORM. RAYMOND E. DALY, Homewood, Ill., assignor to American Maize-Products Company, Roby, Ind., a Corporation of Maine. Filed Dec. 30, 1924. Serial No. 758,875. 3 Claims. (Cl. 127—30.)



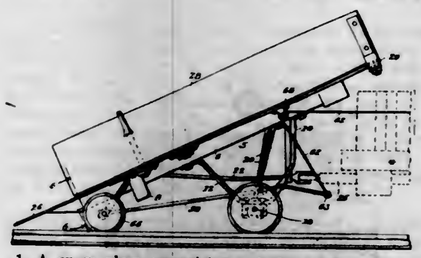
2. The method of converting granular dextrose sugar into loaf or block form which consists in taking the sugar from a centrifuge, the moisture of the sugar ranging from 12% to 14%, placing the granular sugar in a mold or form having a removable top and bottom, subjecting the sugar to pressure which is gradually increased up to an effective compressing point which may range from about 200 to about 2000 pounds depending on the desired hardness of the finished product, releasing the pressure, removing the bottom of the mold, using the press in which the sugar is pressed to force the slab of compressed sugar out of the mold, placing the slab of sugar in a drying chamber until the moisture is reduced to about 8% to 10%, and then cutting the slab of sugar into blocks of the requisite size.

1,575,976. LUBRICATING SYSTEM. ERNEST W. DAVIS, Oak Park, Ill., assignor to The Bassick Manufacturing Company, Chicago, Ill., a Corporation of Delaware. Filed Jan. 14, 1924. Serial No. 686,061. 7 Claims. (Cl. 221—47.4.)



1. The combination with a fitting having a projection extending from one side thereof, of means for supplying lubricant to said fitting, comprising a barrel having a discharge opening at one end, a partition extending across said barrel adjacent said discharge opening, said partition forming a priming chamber adjacent said discharge opening and a reservoir remote therefrom, said partition having a valved opening permitting the passage of lubricant from said reservoir to said priming chamber, a sleeve secured to said barrel and communicating with said discharge opening, an outwardly opening spring pressed valve controlling the passage of lubricant from said discharge opening into said sleeve, a centrally apertured cup leather slidably mounted in said sleeve, and a spring for yieldingly urging said cup leather in an outward direction, the outer end of said sleeve being provided with an inclined cam slot for receiving the projection on said fitting, the inner end of said cam slot terminating adjacent the bottom of said cup leather.

1,575,977. PUMP STRUCTURE. RICHARD C. DAVIS and OLLIE ROBERT MITCHELL, Fort Edward, N. Y. Filed Dec. 9, 1924. Serial No. 754,802. 1 Claim. (Cl. 103—41.)

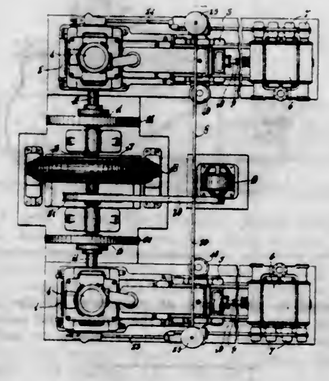


A pump structure of the class described comprising a suction pipe adapted to depend into a source of supply, a body divided into valve chambers and connected with the upper end of said suction pipe, said body including a cylinder, a plunger reciprocable in said cylinder for unseating said valves and transferring the fluid from one chamber to another, a fluid trapping reservoir, a discharge pipe connected with said reservoir, and a valved by-pass between said discharge pipe and suction pipe.

1,575,978. PROCESS OF BOOKBINDING. ARTHUR D. DAYTON, Los Angeles, Calif. Filed Nov. 19, 1924. Serial No. 750,941. 8 Claims. (Cl. 281—21.)

1. In the method of binding book signatures together consisting in aligning the book signatures to form a book unit cutting diagonally extending kerfs in the back of the book units and anchoring binding cords in the kerfs.

1,575,979. SNOWPLOW. JOHN EADY, Fife Lake, Mich. Filed Oct. 3, 1924. Serial No. 741,378. 2 Claims. (Cl. 37—33.)



1. A snow plow comprising a body, a wheel mounted standard located under the rear portion of the body, a wheel mounted standard located under the forward portion of the body, the said body being disposed in an inclined position with relation to both standards, means for varying the angle of inclination of the body with relation to the standards, and a push-bar connected with the body at a point between the standards.

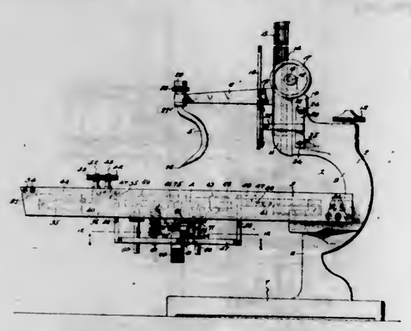
1,575,980. WIRELESS COMMUNICATION. WILLIAM SHAW FERDON, Omaha, Nebr. Filed Aug. 8, 1923. Serial No. 656,328. 7 Claims. (Cl. 250—17.)

1. A transmitting antenna comprising a vacuous enclosure and an insulated plate only disposed within said enclosure, said plate being adapted to be utilized for radiating high frequency currents.

1,575,981. POWER PLANT. ALEXANDER D. FERGUSON, Oak Park, Ill., assignor to Sullivan Machinery Company, a Corporation of Massachusetts. Filed Feb. 8, 1922. Serial No. 534,898. 11 Claims. (Cl. 290—4.)

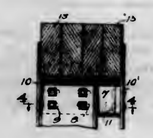
4. In a power plant, a plurality of steam driven compressors, and a dynamo intermediate said compressors, said compressors and dynamo having alined releasably connected shafts.

1,575,982. SECTIONAL BOAT. GEORGE L. FERRIS, deceased, late of Wellston, Ohio, by Otto E. Vollenweider administrator, McArthur, Ohio, assignor to The Wellston Metal Products Company, Wellston, Ohio. Filed May 10, 1924. Serial No. 712,367. 1 Claim. (Cl. 9—2.)



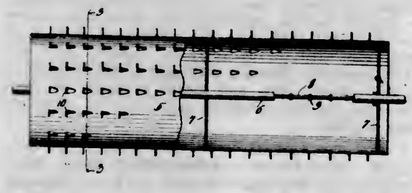
A boat comprising separate sections each capable of use as a boat, and means for fastening the sections together end to end to provide a single sectional boat, said means including apertured plates upon the meeting ends of the section, recessed ears upon one of the plates, a slotted yoke upon the other plate, a bolt adjustably connected to the yoke, an angular head upon the bolt insertable through both plates into engagement with the recessed ears, and means engaging the bolts for drawing the plates toward each other to clamp the sections together.

1,575,983. SURVEYING INSTRUMENT FOR MAPPING SOLID BODIES. GILBERT D. FISH, Washington, D. C., assignor to Frederick L. Stanton, New York, N. Y. Filed Nov. 20, 1920. Serial No. 425,526. 11 Claims. (Cl. 33—174.)



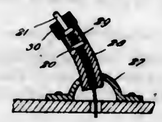
1. A surveying instrument provided with means for holding a model to be surveyed, means for shifting the model holding means in a plane in two different direc-

tions extending at an angle to each other, means for determining the exact amount of such moving in each direction, a pointer adapted to shift perpendicularly



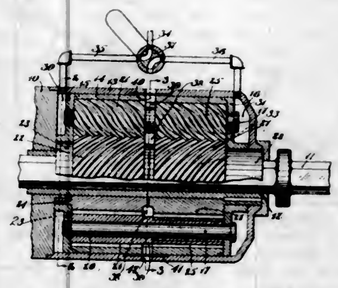
with regard to the plane of movement of the model, means for raising or lowering the pointer and means for exactly determining its elevation or change in elevation.

1,575,984. BULL WHEEL AND THE LIKE. THOMAS JOHN FLESHER, Parkersburg, W. Va., assignor to The Parkersburg Rig & Reel Company, Parkersburg, W. Va., a Corporation of West Virginia. Filed Jan. 30, 1925. Serial No. 5,821. 3 Claims. (Cl. 64—17.)



1. In a device of the character described, a hub, spokes secured to said hub, rim plates connected to said spokes and adapted to be adjusted laterally, a band of circumferentially extending wooden blocks arranged on said rim plates, and a pair of side plates secured to the side edges of said spokes and said rim plates respectively whereby adjustment of said rim plates will vary the distance between said side plates.

1,575,985. CLEANER DRUM FOR COTTON-GIN FEEDERS. GEORGE P. GALVIN and FRANK L. SWENEY, Dallas, Tex. Filed Apr. 15, 1925. Serial No. 23,357. 5 Claims. (Cl. 19—97.)

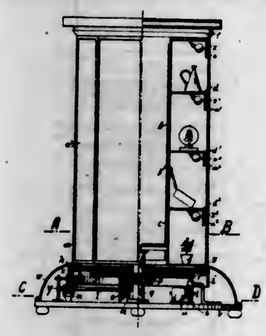


1. A cleaner drum for cotton gin feeders comprising a sheet metal cylinder having outwardly projecting radial spurs stamped therefrom and provided with means for mounting the same upon and in concentric relation to a driving shaft.

1,575,986. CIRCUIT CLOSER FOR BACK SIGNALS. BURTON L. GAMBLE, Jr., St. Petersburg, Fla. Filed Aug. 29, 1923. Serial No. 659,875. 1 Claim. (Cl. 200—59.)

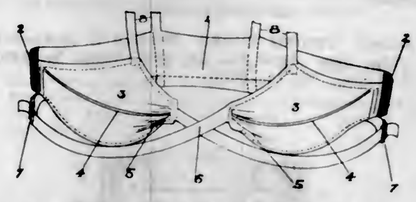
A switch for electric "back" signals comprising a hollow base having a flange adapted for attachment to the floor of a vehicle said base having a threaded opening, a curved nipple threaded at its lower end into said opening and constituting a switch casing, said nipple having a bore enlarged at its upper end and forming a shoulder, a screw threaded cap disposed on the upper end of the nipple and having a central opening, a contact movable through said opening in the cap, a fixed contact in the enlarged portion of the bore and resting on the shoulder therein, a lead extending through the remaining portion of the bore and through the base, yieldable means engaged between the two contacts electrically connecting the same for projecting the first mentioned contact outwardly through said cap, said base being adapted to be mounted rearwardly of a gear shift lever whereby the movable contact is engaged by said lever when the latter is shifted into reverse gear position, and means to provide a ground connection for the gear shift lever.

1,575,987. ROTARY FLUID-PRESSURE MOTOR. GEORGE H. GILMAN, Claremont, N. H., assignor to Sullivan Machinery Company, a Corporation of Massachusetts. Filed Sept. 30, 1918. Serial No. 256,829. 13 Claims. (Cl. 121—7.)



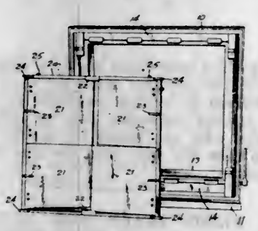
1. A fluid pressure motor comprising a compound gear reduction consisting of a plurality of cooperating elements having a different number of teeth, and means for supplying motive fluid to said elements in different ways to cause operation of said gear reduction in either direction.

1,575,988. ADVERTISING APPARATUS. CHRISTIAN GLEERUP-MÖLLER, Solyst, Horsens, Denmark. Filed Mar. 29, 1924. Serial No. 702,927. 5 Claims. (Cl. 211—20.)



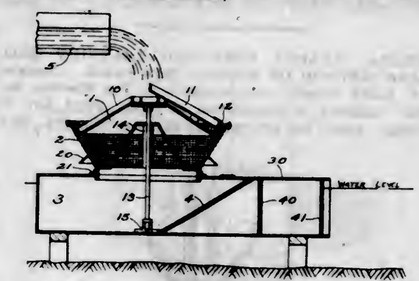
1. A rotary advertising apparatus comprising, in combination, a vertical drum divided into compartments, semi-transparent mirrors forming the peripheral walls of

said compartments and adapted to serve as mirrors showing the surroundings of the drum when the compartments are dark but displaying the inner of the com-



partments when the latter are illuminated; a source of light alternately illuminating and darking said compartments and means to rotate said drum.

1,575,989. BRASSIÈRE. GRACE VAN ALLEN HAVEN, Berkeley, Calif. Filed Dec. 16, 1924. Serial No. 756,802. 2 Claims. (Cl. 2—42.)

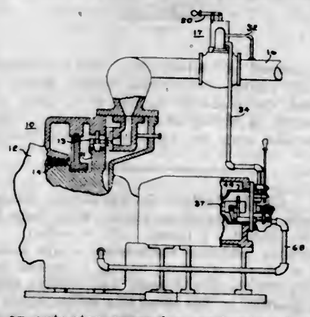


1. A brassière, comprising a horizontal back portion having a pair of buckles and a pair of elastic bands attached to its ends, a pair of cup-shaped front pieces attached to the elastic bands for supporting, enveloping and maintaining the natural shape of the busts of the wearer, and a pair of straps attached to the ends of the front pieces, which said straps are adapted to cross each other between the front pieces and engage with the buckles, whereby the said front pieces may be maintained in their proper positions on the wearer.

1,575,990. MULTIPLE ATTACHMENT FOR CAMERAS. HOWARD R. HAYS, Philadelphia, Pa., assignor to Howard S. Levy and Lionel Levy, Philadelphia, Pa. Filed Mar. 28, 1925. Serial No. 18,946. 2 Claims. (Cl. 95—36.)

1. A removable multiple attachment for the screen carrying box of a process camera, comprising a frame, four doors hinged to the upright sides of the frame, means carried by the frame and doors to limit movement of the latter to one face of the frame, and spring members disposed on two adjacent edges of the frame to yieldably hold the latter in position in the screen box.

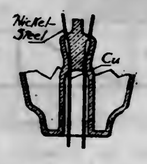
1,575,991. SCREENING DEVICE. RICHARD D. HELLER, Boise, Idaho. Filed Apr. 25, 1925. Serial No. 25,905. 5 Claims. (Cl. 210—149.)



1. A seed screen for irrigation water comprising a conical deflector mounted to turn upon its axis and having blades upon its top curved to produce rotation of the deflector by the action of water pouring thereon, and a screen of circular outline surrounding and spaced slightly from the outer periphery of the deflector.

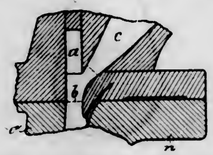
1,575,992. LOCKING LAMP. HARVEY HUBBELL, Bridgeport, Conn. Filed Mar. 26, 1925. Serial No. 18,443. 17 Claims. (Cl. 176—31.)

1. An electric lamp comprising a bulb and a filament, end and screw shell terminals, connections from said terminals to the filament, a support for the end terminal arranged to support the terminal in a position to be engaged by a contact in a lamp socket, and means for moving said terminal into the support where it cannot engage said contact, said means constructed and arranged to come into operation upon and by the removal of the lamp from the socket.



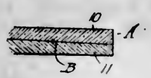
1,575,993. AUTOMATIC STOP FOR TURBINES. JOSIAH F. JOHNSON, Swarthmore, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed June 9, 1924. Serial No. 718,959. 5 Claims. (Cl. 137—158.)

1. In an auto-stop governing mechanism for a turbine having a casing, a rotor, a throttle valve and releasable means for closing said throttle valve, the combination of



means responsive to axial movement of the rotor, and means responsive to a predetermined pressure in the turbine for releasing said releasable means.

1,575,994. LEAD-IN WIRE AND GAS-TIGHT SEAL AND METHOD OF MAKING THE SAME. CLEMENS A. LAISS, Toledo, Ohio, assignor to The Electron Relay Company, a Corporation of Ohio. Filed Nov. 9, 1923. Serial No. 673,781. 15 Claims. (Cl. 176—36.)



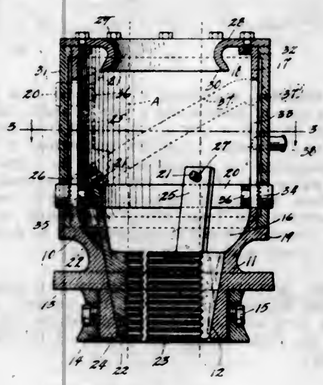
1. In a device of the type described, a lead-in wire comprising a metallic core, a sleeve of metal of a different co-efficient of expansion surrounding said core and an intervening layer of metal between said core and said sleeve having a different thermal conductivity than that of said sleeve the thickness of said intervening layer being such as to cause a bright, copper colored surface on said outer sleeve when sealed in glass.

1,575,995. CASTING MOLD. ADOLF LEINWEBER, Munich, Germany. Filed Aug. 9, 1924. Serial No. 731,228. 3 Claims. (Cl. 22—2.)

1. In a mold for casting printing plates for rotary printing presses, the combination with the ingate funnel in said mold, of a reciprocable pressure plate movable in a path in said mold adjacent to said funnel.

1,575,996. METHOD OF DETERMINING AND CORRECTING THE RULED PLANE OF A HALFTONE PROCESS SCREEN. HOWARD S. LEVY, Philadelphia, Pa. Filed Oct. 18, 1923. Serial No. 669,362. 3 Claims. (Cl. 95—81.)

1. The method of determining and correcting the plane of the ruling of a process screen, which consists in adjusting the plane of rulings to a point of focus and thereafter providing about the screen a supporting surface parallel with the adjusted plane of rulings.

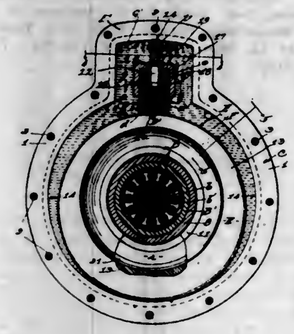


1,575,997. CHANGEABLE EXHIBITOR. CHARLES J. MCDONALD, San Francisco, Calif. Filed June 9, 1925. Serial No. 35,844. 1 Claim. (Cl. 40—64.)

A changeable exhibitor comprising, a sign holder consisting of a framed structure having a smooth backplate and retaining racks on the plate, and stencils adapted to be slid to position in the racks and substantially contact the smooth surface of the plate, the said surface having a color to contrast with the color of the stencils to effect the legibility of the stencils, and each of said racks having a glass in front of and substantially contacting the stencil therein, said stencils extending from the inside

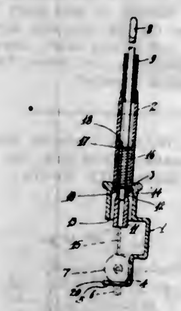
of the frame at one side of the plate to the outside edge of the frame at the other side of the plate, and the plate provided with means to facilitate the removal of the stencils.

1,575,998. TUBING SPIDER. WILLIAM H. MCKISSICK, Tulsa, Okla. Filed Jan. 29, 1925. Serial No. 5,651. 8 Claims. (Cl. 14—263.)



1. In a spider, a base collar having a conical bore, an enlarged cylindrical housing supported above the collar, a carrier mounted for vertical movement in the housing, a plurality of slips suspended from the carrier and engaging in the bore, and means for moving the carrier vertically to raise the slips from the bore of the collar into the housing.

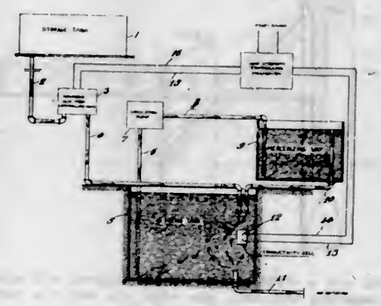
1,575,999. FLUID BRAKE FOR AUTOMOBILES. LUTHER L. MACK, South Pasadena, Calif. Filed Dec. 15, 1923. Serial No. 680,883. 51 Claims. (Cl. 188—90.)



1. A fluid brake mechanism embodying a driven member, a relatively stationary member, one of said members being enclosed by the other, a fluid receiving space provided adjacent the periphery of the inner member having

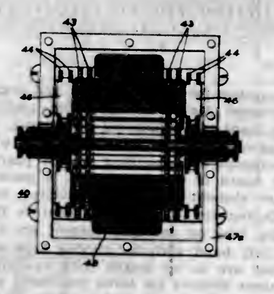
a width of variable dimension at different points on the periphery of the driven member, and a manually operable member movable in a plane at right angles to said

variable dimensions for varying the area of a portion of said space corresponding to the successive positions of and during the rotation of the driven member.



1,576,000. PET-COCK WRENCH. ROY CECIL MAJORS, Reno, Nev., assignor to Standard Oil Company, San Francisco, Calif., a Corporation of California. Filed July 20, 1925. Serial No. 44,817. 6 Claims. (Cl. 137—139.)

5. The combination with a case, having a petcock secured thereto, of a petcock wrench comprising a body adapted to be engaged with the said petcock, means rotatably mounted in the body and adapted to be engaged with the handle of the petcock to rotate the same to an open position, and means on the body adapted to engage the case so as to prevent the removal of the said wrench from the said petcock when the said petcock is open.



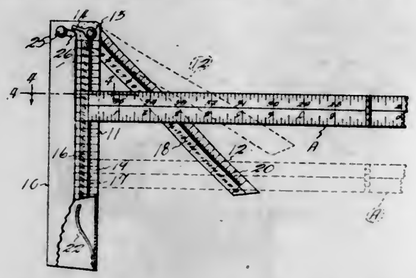
1,576,001. ACID-STRENGTH-MAINTAINING APPARATUS. FRANK H. OLDEN, Chester, Pa. Filed Aug. 1, 1924. Serial No. 729,441. 11 Claims. (Cl. 23—253.)

1. Acid strength controlling apparatus including a feed-controlling valve; an electric circuit whereby the valve may be actuated; a rock shaft; a disk of non-conducting material loosely mounted thereon; a plate of conducting material carried by the disk; a conducting member in the valve circuit, engaging the disk and normally out of contact with the plate, and a member fixed

to the rock shaft and adapted to impart movement to the disk to make or break contact between the conducting plate and the conducting member thereby closing or opening the valve circuit.

1,576,002. ELECTRIC MOTOR. GRANVILLE F. PACKARD, Wilkinsburg, Pa. Filed Mar. 13, 1923. Serial No. 624,739. 14 Claims. (Cl. 172—278.)

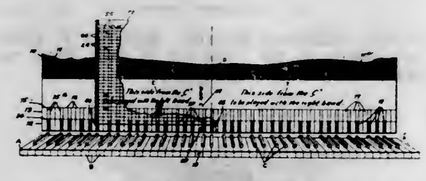
1. An electric motor comprising a primary member having a plurality of pairs of polar projections and a rotor comprising a disc having a plurality of separate members of magnetic material extending therethrough, the number of said last-named members being a multiple of the number of pairs of polar projections.



2. An electric motor comprising a primary member having a plurality of polar projections and a disc inductively related thereto, said disc having a plurality of perforations extending at an angle relatively to the corresponding polar projections.

11. A motive device having a primary member provided with longitudinally-extending polar projections and a secondary member comprising a plate member having openings through which said projections extend to provide shading coils for certain of said projections.

1,576,003. MEASURING DEVICE. JOHN W. REDDY, Bowie, Tex. Filed May 12, 1924. Serial No. 712,504. 3 Claims. (Cl. 33—97.)



1. In a measuring instrument, a support having a transverse slot at one end and a scaled guide for engag-

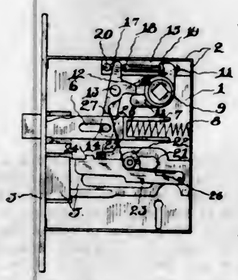
ing the end of a separate rule when cooperating therewith, retaining means upon the support for engaging said rule when disposed in said slot at a right angle to the

guide, and a blade pivoted on the support and adapted to cooperate with said rule when the latter is used in connection with the scaled guide.

1,576,004. INDICATOR FOR PIANO OR ORGAN KEYBOARDS. EDWARD ROSENBERG, Brooklyn, N. Y. Filed Feb. 2, 1925. Serial No. 6,301. 6 Claims. (Cl. 84—478.)

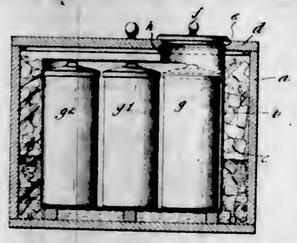
2. In a system for playing pianos and organs, a guide surface element for being removably positioned above the finger board of the musical instrument, said surface element having white and black sections of widths and in related positions corresponding to the playing keys of the finger board of the instrument, a guide symbol on the surface element for being registered with a given central playing key of the instrument to indicate that the playing keys on one side thereof are to be played with the left hand and the playing keys on the other side thereof are to be played with the right hand, a separate sheet element for being removably positioned on the surface element and having white and black sections of widths and in related positions corresponding to a determined number of white and black sections of the surface element, a guide symbol on one of the sections of the sheet element for being registered with the guide symbol of the surface element to also register determined sections of the sheet element with determined sections of the surface element, consecutive indicating symbols on the sections of the sheet element representing the consecutive notes of a given composition of music corresponding to the respective keys of the instrument for playing the music, and said note symbols including associate symbols for indicating the counts of the note symbols.

1,576,005. DECOMPOSING FATS, OILS, AND WAXES. WALTHER SCHRAUTH, Rossiau, Germany. Filed Apr. 12, 1924. Serial No. 706,107. 6 Claims. (Cl. 87—4.)



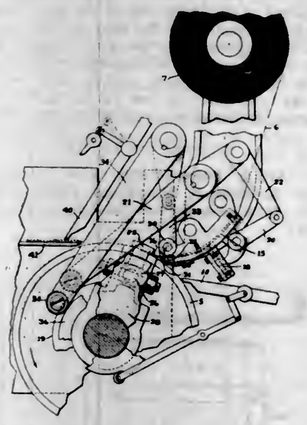
1. The process of decomposing fats, oils, or waxes by means of sulphoacids which consists in mixing a sulphoacid of aromatic hydrocarbons substituted in the nucleus by one hydrocarbon radicle with the fat to be decomposed and water and heating the mixture so long to the temperature at which the splitting of the fats into fatty acids and glycerine is effected, that the desired degree of splitting of the fat is obtained.

1,576,006. RETOUCHING MACHINE. RAYMOND B. SHOEMAKER, New York, N. Y., assignor to Photographers Retouching Service Inc., New York, N. Y. Filed May 14, 1924. Serial No. 713,174. 7 Claims. (Cl. 95—101.)



1. A retouching pencil comprising a tubular body having a cone seat in its rear end and a spherical seat in its front end, a shaft having a ball bearing in said spherical seat and a cone slidable on said shaft to coact with the rear seat, a rear driving extension having an elongated recess for the end of said shaft, means for adjusting said cone longitudinally and means for tilting said shaft when said cone is unseated.

1,576,007. LOCK. WILLIAM CHARLES SPRINGER, Belleville, Ontario, Canada. Filed Nov. 28, 1924. Serial No. 752,630. 7 Claims. (Cl. 70—75.)



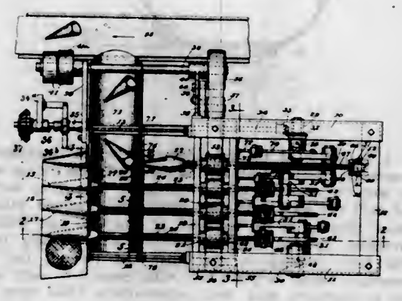
1. In a lock the combination of a casing; a latch bolt slidable in the lock casing; a spindle hub journalled in the lock casing, provided with latch lever actuating projections; a latch lever fulcrumed intermediate of its ends; a pivotal connection between one end of the lever and the latch bolt; a sliding link forming an operating connection between the opposite end of said lever and one of the hub projections; and an arm on said lever adapted for engagement by the other hub projection.

1,576,008. ICE-CREAM CABINET. ROSCOE R. STITT, Detroit, Mich. Filed Apr. 9, 1924. Serial No. 705,157. 1 Claim. (Cl. 62—87.)

In an ice cream cabinet for storing relatively large containers, the combination of an outer shell provided with an opening in the top having a diameter slightly greater than the diameter of the container to permit the same to just pass therethrough, an elongated inner shell provided with an opening at one end registering with the opening in the outer shell, the said inner shell arranged to hold several containers in a row, one of which may rest beneath the said opening to permit one to have access therewith but which prevents tampering with the remaining containers until the container at rest beneath the opening is removed from the cabinet, and means for providing a cooling medium for cooling the contents of the inner shell.

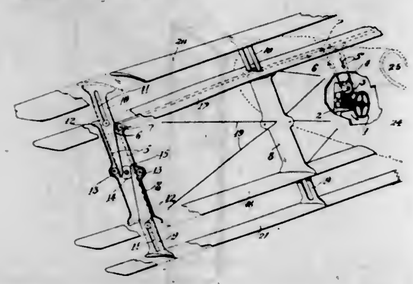
1,576,009. REENFORCEMENT-APPLYING MECHANISM. JAY G. SWAB, Brooklyn, N. Y., assignor to Henry Trenchard, jr., New York, N. Y. Filed May 5, 1923. Serial No. 636,808. 17 Claims. (Cl. 93—61.)

1. In apparatus for use in the manufacture of envelopes, in combination means for affixing reenforcement to the blank at a predetermined point on a seam forming area and means for folding the blank to form an envelope with the affixed reenforcement within the seam.



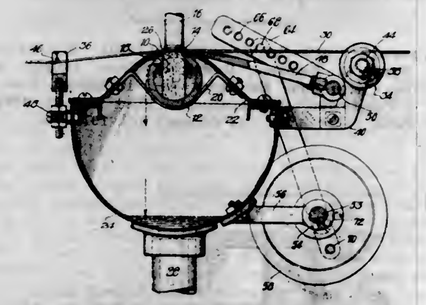
1,576,010. PACKAGE-DISPENSING CONTAINER. WILLIAM G. SWARTZ, Philadelphia, Pa. Filed Jan. 17, 1922. Serial No. 529,854. 2 Claims. (Cl. 211—9.)

2. A container having side, back and front members formed from a single strip of material and having parts of the front and side members cut away to form an open mouth at its lower forward end, the lower portion of said back being slit to form members to support articles and a curved tongue bent upwardly between said members to move said articles into said mouth, and a



cover pivotally connected to said container to close the top thereof, said cover being arranged to swing outwardly from said container and extend therefrom to provide a supporting shelf; substantially as described.

1,576,011. ICE-CREAM-CONE-ROLLING MACHINE. HARRY G. TATOSIAN, Bridgeport, Conn., assignor to Ice Cream Cone Machinery, Inc., Bridgeport, Conn., a Corporation of Connecticut. Filed May 23, 1924. Serial No. 715,283. 14 Claims. (Cl. 107—58.)

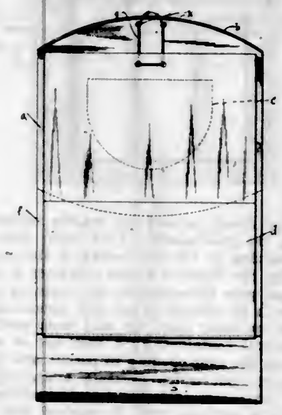


13. In a cone making machine, the combination of a plurality of spindles having conical mandrels, a plurality of conical molds, continuously rotating means for longitudinally shifting said mandrels into and out of engagement with said molds one after the other, a continuously driven belt beneath said spindles for rotating them individually and independently, and normally out of operative relation therewith, and means carried by said first rotating means adapted to intermittently press portions of said belt into respective operative relation with said spindles to rotate the same.

1,576,012. VARIABLE AREA WING STRUCTURE FOR AIRPLANES. BENJAMIN DOUGLAS THOMAS, Ithaca, N. Y., assignor of one-tenth to Thomas-Morse Aircraft Corporation, Ithaca, N. Y., a Corporation of New York. Filed Apr. 26, 1923. Serial No. 634,688. 7 Claims. (Cl. 244—12.)

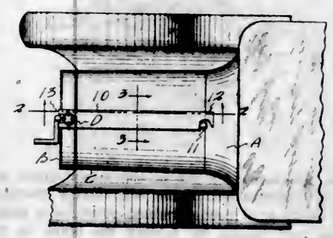
1. In a variable area wing structure for airplanes, the combination with a fixed plane and hollow struts, of a movable plane, extension struts therefor telescoping into the hollow main struts, and pulleys within said hollow struts for guiding said extension struts.

1,576,013. YARN-DYEING DEVICE. GEORGE T. THOMAYER, Albany, N. Y., assignor, by mesne assignments, to Economy Dyeing Machine Corporation, Albany, N. Y., a Corporation of New York. Filed Feb. 2, 1925. Serial No. 6,253. 3 Claims. (Cl. 8—19.)



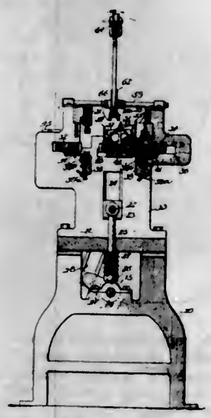
1. A device of the type described which comprises, a horizontal dyeing tank having an opening in its top wall, a wick in said opening extending to the upper surface of said top wall, said tank being also provided with an inlet opening in its top wall at one end, and with an overflow opening also in its top wall slightly below the inlet opening at the other end thereof, the said openings being so positioned with respect to each other as to maintain said tank substantially filled with dye liquor.

1,576,014. PROCESS OF MANUFACTURING BARBITURIC-ACID DERIVATIVES. LAMBERT THORP, Cincinnati, Ohio, assignor to The Lambert Thorp Company, Cincinnati, Ohio, a Corporation of Ohio. Filed Mar. 20, 1925. Serial No. 17,112. 9 Claims. (Cl. 260—33.)



1. The process of manufacturing barbituric acid derivatives by condensing malonic esters with urea in absolute alcoholic solution by means of metallic sodium by distilling the alcohol out of the mass without preliminary refluxing.

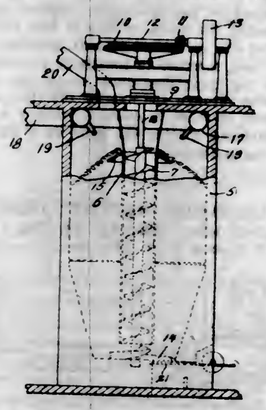
1,576,015. DRESS HANGER. EMILY TRUMPLER, Brooklyn, N. Y. Filed Oct. 19, 1922. Serial No. 595,513. 1 Claim. (Cl. 223—61.)



In a garment hanger, a body portion on which the garment is supported and comprising a substantially rectangular section having a curved upper edge, a rim conforming to and projecting laterally from said curved edge to provide a garment shoulder receiving member, a rectangular cover section of a size and shape approximating that of the body portion, and a flexible connector in loop form connected to the upper edge of the cover and passing loosely through openings in the body portion immediately below the rim, the connector being of a length to permit the cover to be arranged to cooperate with the face or overlie the back of the body portion, said loop serving to draw the cover more or less tightly against the body portion when the device is suspended by the loop.

1,576,016. SEAM PROTECTOR FOR AUTOMOBILE HOODS. SOLOMON H. WEINSTEIN, Dallas, Tex. Filed Apr. 11, 1924. Serial No. 705,735. 2 Claims. (Cl. 180—69.)

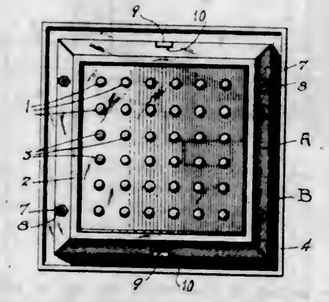
1. A protector for the hinge seam of a hood comprising an elongated flexible strip having furcations at its front end, inturned hooks fastened to the furcations of the strip and disposed to engage the front of a radiator casing, and an inturned hook fastened to the strip adjacent its rear edge to engage the inner edge of the inner edge of the hood and hold the strip in contact with the hinge seam.



1,576,017. CANDY-MOLDING MACHINE. THEODORE WELSAND, Chicago, Ill., assignor to Vacuum Candy Machinery Co., Waukegan, Ill., a Corporation of Illinois. Filed Apr. 18, 1921, Serial No. 462,295. Renewed July 27, 1925. 40 Claims. (Cl. 107—4.)

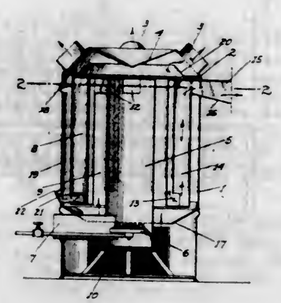
7. In a candy molding machine the combination of candy molding devices, means for continuously feeding candy to said molding devices, said feeding means including an endless flexible element carrying means for grasping the candy at an end to introduce the same into said molding devices.

24. In a candy molding machine the combination of a plurality of alternately operable molding devices, a reciprocable element arranged between the molding devices, said reciprocable element being arranged to provide a rest for the candy prior to its introduction to the molding devices and having a face which cooperates to mold the candy into form having means for feeding said candy by gravity to said molding devices.



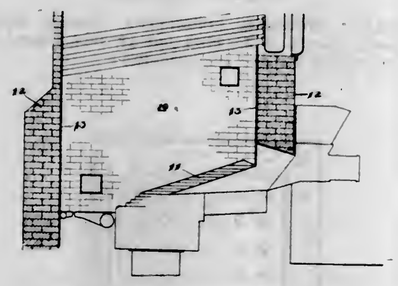
1,576,018. CONTROLLING BLEACHING OPERATIONS. ROBERT B. WOLF, New York, N. Y. Filed July 28, 1925. Serial No. 46,533. 29 Claims. (Cl. 8—2.)

4. The method of controlling the bleaching of paper pulp, which comprises causing the mixture of pulp and bleaching agent to pass in a relatively thin layer in contact with air substantially free from the gaseous decomposition products of the bleaching reaction directed thereon in streams.



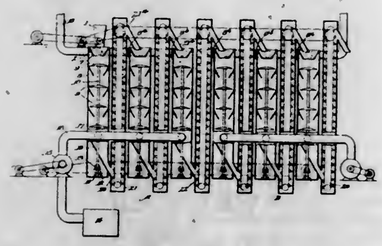
29. In an apparatus for bleaching paper pulp, the combination of a bleaching chamber, an elevator therein to lift the mixture of pulp and bleaching agent, an apron at the top of the elevator over which the pulp is discharged, a pipe in the bleaching chamber and nozzles connected thereto to direct streams of gas upon the pulp as it passes over the apron.

1,576,019. MOLDING APPARATUS. SAMUEL ZIMETBAUM, Newark, N. J. Filed July 18, 1924. Serial No. 726,741. 8 Claims. (Cl. 107—19.)



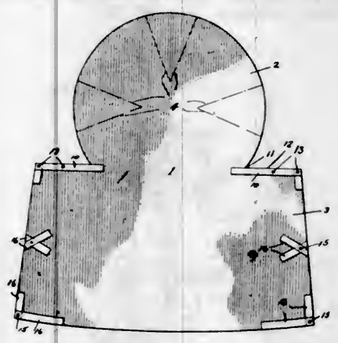
7. A molding apparatus comprising a flask-plate having a plurality of transverse openings therethrough, a rib on its top side around said openings, and a core plate having cores to enter said openings from the lower ends thereof, whereby the substance to be molded can be poured simultaneously into all of said openings around said cores.

1,576,020. HOT-AIR FURNACE. FRANK Z. AHL, Sacramento, Calif. Filed Oct. 29, 1924. Serial No. 746,550. 3 Claims. (Cl. 126—116.)



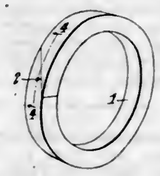
1. In a hot air furnace having a vertical shell, a drum therein spaced from the shell, air intake means below the drum whereby air may pass upwardly between the shell and drum, means for heating the drum, and a cap on the shell having openings in its sides; an air deflecting ring in the shell above the drum, said ring comprising a horizontal portion extending from the shell to a point inwardly of the outer periphery of the drum above but close to the latter, and a tapering portion extending upwardly and inwardly at an acute angle from the inner end of said horizontal portion.

1,576,021. REFRACTORY BRICK FOR FURNACE LININGS. OTTO ARAM, Philadelphia, Pa. Filed Sept. 14, 1922. Serial No. 588,242. 3 Claims. (Cl. 266—43.)



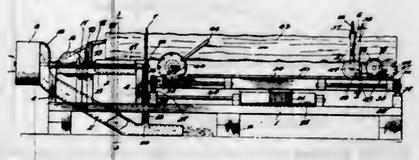
1. The method of lengthening the life of refractory linings of high temperature furnaces which comprises applying to exposed surfaces of the refractory lining a superficial coating consisting largely of metallic aluminum.

1,576,022. APPARATUS FOR TREATING ACID PHOSPHATE. ELI H. ARMSTRONG, Savannah, Ga. Original application filed Aug. 6, 1921, Serial No. 490,357. Divided and this application filed Dec. 2, 1922. Serial No. 604,465. 6 Claims. (Cl. 34—10.)



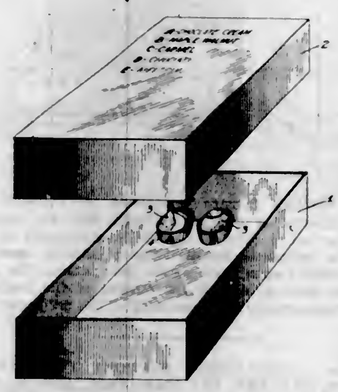
1. Apparatus for treating phosphates and the like, comprising a tower, including a casing, a series of cone-shaped mass-directing members in spaced relation within the casing, a rotatable support for spreading members mounted within the casing, a spreader member having a convex upper surface mounted on the support in proximity to certain of the cone-shaped mass-directing members, means for rotating the support operatively associated with certain of the members, and regulable means for directing a blast of heated air through the casing and against the materials passing therethrough.

1,576,023. WATERPROOF PROTECTOR. ELIGIO G. BARBERIS, Brooklyn, N. Y. Filed Mar. 7, 1923. Serial No. 623,323. 2 Claims. (Cl. 2—88.)



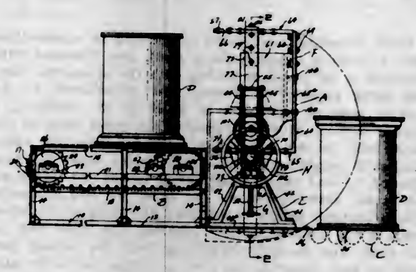
1. A waterproof cape comprising a sheet of waterproof material, one portion of which is substantially rectangular and the remaining portion substantially circular, said circular portion being provided with radial folds or pleats to form a hood.

1,576,024. METHOD OF MANUFACTURING CELLULAR CUSHION TIRES. ROBERT BARRANTES, Kenmore, and ROBERT J. BONSTEIN and MARK A. REPLOGLE, Akron, Ohio, assignors to Lambert Tire & Rubber Co., Barberton, Ohio, a Corporation of Arizona. Filed June 11, 1925. Serial No. 36,519. 5 Claims. (Cl. 18—59.)



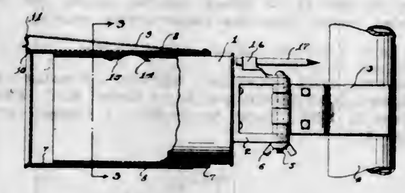
1. The method of manufacturing cushion tires which consists in tubing the stock, cutting it into strip lengths of the required size or cubical content, bevelling the ends and lapping them together to constitute an endless band, the splice or lap lying diagonally across the carcass in a plane passing through the axis of the tire, hammering the lapped ends together to cause a primary adhesion of the lapped surfaces, placing the band on a rim and vulcanizing the band thereon.

1,576,025. LOG-SAWING MACHINE. LOUIS B. BAUMHOVER, Carroll, Iowa. Filed Apr. 24, 1924. Serial No. 708,730. 3 Claims. (Cl. 143—54.)



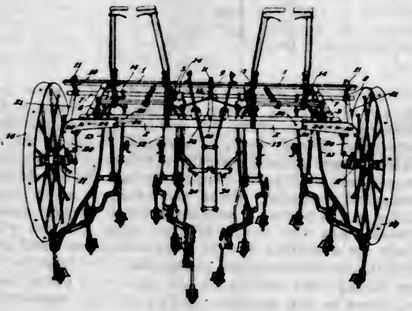
1. In a sawing apparatus, the combination of a main supporting frame, a saw mounted thereon, a trailer mounted for travel toward and from the plane of the saw, a standard rising from the rear side of the trailer, a clamping bar adjustably mounted upon the said standard, a clamping head carried by said bar and adapted to engage a log resting upon the trailer, means for locking said clamping bar to the trailer, and means for supporting the inner free end of the log and feeding the same across the plane of the saw.

1,576,026. BOX OF CONFECTIONS. MAHLON H. BEAKES, New York, N. Y. Filed May 12, 1924. Serial No. 712,501. 2 Claims. (Cl. 206—46.)



1. The combination with a box of a plurality of different candies contained within the box and packed in separate and distinct individual containers, said candies having fillings of different characteristics concealed in them, an identifying character on each container, and an index to the contents of the box comprising a list of said characters with which are associated the names of the corresponding kinds of candy.

1,576,027. PIPE-TURNING APPARATUS. JOHN BECKER, St. Marys, Pa. Filed June 6, 1925. Serial No. 35,401. 14 Claims. (Cl. 214—130.)



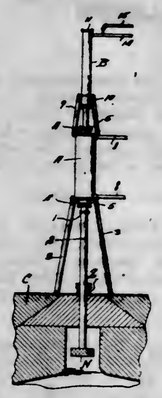
1. In a pipe turning device a supporting frame, a cradle including pipe supporting shelves and connecting means therebetween, said cradle being open at a side thereof between said shelves, means eccentrically and oscillatively supporting the cradle on the frame on a pivot axis closer to one of the shelves than the other shelf, and counter weight means connected with the cradle adjacent that shelf closest to the pivot axis of the cradle, for returning the cradle to a predetermined position.

1,576,028. MAP HOLDER. JOHN S. BOWEN, Baldwin Park, Calif. Filed Oct. 20, 1925. Serial No. 63,726. 3 Claims. (Cl. 40—68.)

1. In a device of the class described in combination, an inner cylinder, an outer cylinder, the outer cylinder adapted to rotate on the inner cylinder, a bracket attached to the inner cylinder at one end, a clamp cooperating with the said bracket, the said bracket and inner cylinder adapted to swing on the said clamp.

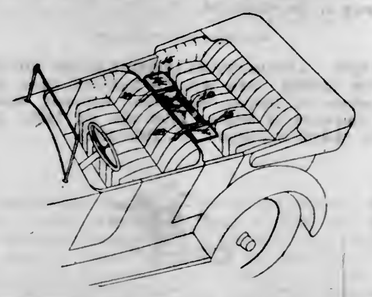
1,576,029. CULTIVATOR. WILLIAM L. BRALEY and HENRY N. FAAS, Springfield, Ohio, assignors to The American Seeding Machine Company, Springfield, Ohio, a Corporation of Ohio. Filed May 2, 1923. Serial No. 636,122. 4 Claims. (Cl. 97—154.)

1. In a cultivator, a main frame having a transversely-arranged forward rail, a draft bar, hangers mounted to move on said rail and supporting said draft bar, means for shifting said bar endwise, said shifting means including a brace pivotally connected to said frame at one end and having a pivotal connection with one of said hangers at the other end.



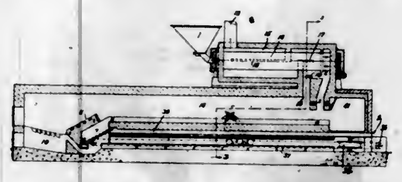
1,576,030. AUTOMATICALLY-THREADING SHUTTLE FOR LOOMS. NEM WILLIAM BRANNON, Greer, S. C., assignor to Draper Corporation, Hopedale, Mass., a Corporation of Maine. Filed Oct. 30, 1925. Serial No. 65,880. 7 Claims. (Cl. 139—220.)

1. An automatically threading loom shuttle having a threading block provided with an open top thread passage and a side delivery eye, a tension pad having a thread receiving opening with a flaring mouth, and a tension pad holder having a part enclosing one of the



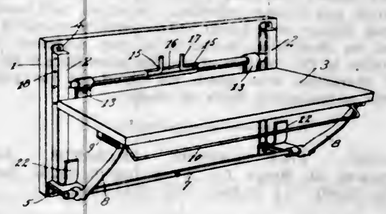
jaws of the flaring mouth of the tension pad formed of a pliable substantially inelastic metal that may be bent into different positions and retain its bent form to vary the size of the thread receiving opening and the tension exerted upon the thread during weaving.

1,576,031. OIL-SPRAYING DEVICE. WILLIAM B. BROWN, Nash County, near Rocky Mount, N. C. Filed June 2, 1925. Serial No. 34,387. 3 Claims. (Cl. 48—87.)



3. In combination with the carburetor of a water gas set, an oil spraying device comprising a tubular shaft slidably extending within the carburetor through a wall thereof and through which oil is adapted to flow, a pair of spaced aligned cylinders arranged exteriorly of the carburetor, said shaft being disposed through one of said cylinders and extending within the other, a piston head carried by the portion of said shaft within the first named cylinder, said first named cylinder being provided with means for admitting fluid to move said piston head and shaft in opposite directions, means adapted to close the oil flow through the shaft when the shaft and piston head are moved in one direction, and an oil pipe discharging within the second cylinder.

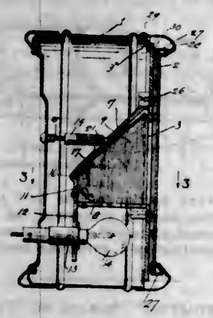
1,576,032. AUTO LUNCHEON KIT. ROBERT C. BROWNE, Alameda, Calif. Filed Apr. 29, 1925. Serial No. 26,660. 3 Claims. (Cl. 224—29.)



1. A device of the character described comprising a container, trays hinged thereto and capable of forming a closure therefor or being extended horizontally to serve as trays, brackets adapted to removably engage said trays, said brackets being adapted to removably engage the back of the front seat of an automobile to rigidly support the container and trays in a horizontal position in the tonneau of the automobile.

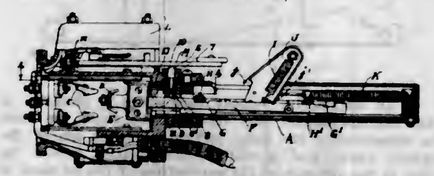
1,576,033. INDUSTRIAL FURNACE. HUDSON H. BUBAR, New York, N. Y. Filed Aug. 10, 1923. Serial No. 656,656. 17 Claims. (Cl. 263—23.)

1. A roasting furnace comprising an extended stationary hearth for treating material with the products of combustion, a rabbler movable longitudinally of said hearth, a pre-heater for discharging material upon one end of said hearth, and means for passing the gases from the material around the outside of the pre-heater without contact with the material in the pre-heater.



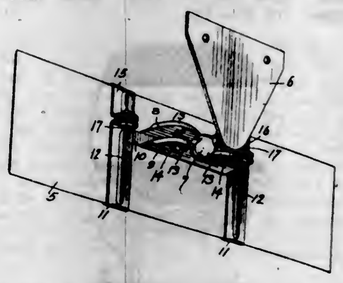
1,576,034. COLLAPSIBLE SUPPORT FOR TABLES, SEATS, SHELVES, AND THE LIKE. EDNA M. BUTT, Williamsport, Ind. Filed May 11, 1923. Serial No. 638,229. 1 Claim. (Cl. 45—51.)

Shelf adjusting mechanism comprising in combination with a backing member and a shelf, two channels with openings in the channels facing each the other, the channels being provided with means for attachment to the backing member, apertures in walls of the channels, a tubular member attached adjacent the inner edge of the shelf, said tubular member extending within the channels, said tubular member having spring tensioned rods adapted to seat in said apertures, means for adjusting said rods, arms hinged at the bases of said channels, with adjustable means of securing the ends of the arms opposite the hinged portions adjacent the outer edge of the shelf, and members extending from the bottom portions of said channels adapted to retain the inner edge of the shelf when said shelf is in folded-in position.



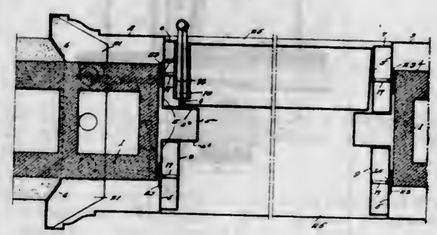
1,576,035. HEADLIGHT. ELLSWORTH E. CIPPERLY, Palo Alto, Calif. Filed June 29, 1925. Serial No. 40,322. 1 Claim. (Cl. 240—41.)

In a headlight, a vertical opaque front plate formed with a rectangular opening therein, a flat reflector mounted behind the plate on an incline so as to project light rays through the opening and a light mounted behind the front plate below the opening and positioned below the reflector to allow light rays emanating therefrom to strike the reflector with a plate interposed between



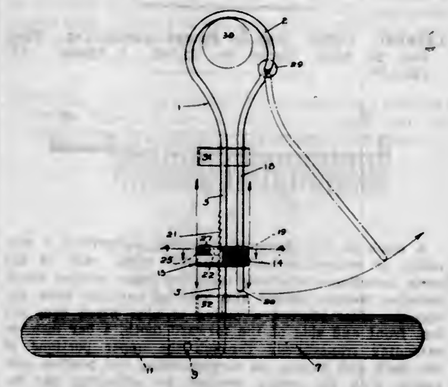
the light and the reflector abutting the front and perforated to allow light rays to pass therethrough from the light to the reflector within the area of the latter only.

1,576,036. SAFETY SWITCH MECHANISM. CHARLES B. COATES, Cleveland, Ohio, assignor to Chicago Pneumatic Tool Company, New York, N. Y., a Corporation of New Jersey. Filed May 20, 1924. Serial No. 714,554. 17 Claims. (Cl. 200—5.)



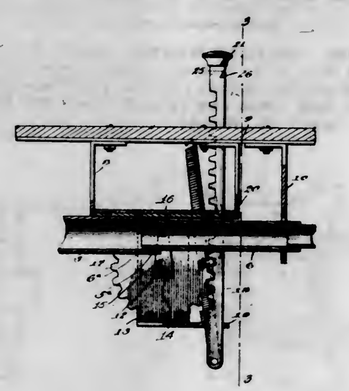
1. In combination, a main switch having a reciprocating member, a reversing switch associated with said main switch, and means controlled by said reciprocatory member for locking said reversing switch against movement while the main switch is "on."

1,576,037. MIRROR SUPPORT. GEORGE F. COLBERT and WILLIAM H. COLBERT, Pittsburgh, Pa. Filed Nov. 20, 1924. Serial No. 751,122. 3 Claims. (Cl. 45—97.)



1. Bracket structure for mirrors and the like, comprising a substantially spherical support, a bracket member having a body portion from which hooks extend at right angles thereto and which is provided with integral outturned wing portions between the hooks, each of the wing portions being provided with a seating surface for engaging one portion of said spherical support, hook members for engaging the opposite edge of a mirror, means for securing said hook members to said body portion, and screws at opposite sides of said seating surfaces for drawing said wing portions into clamping engagement with the spherical support.

1,576,038. METAL DOOR JAMB. ANDREW J. CONNELL, New York, N. Y., assignor to Superior Steel Door and Trim Co., Inc., College Point, N. Y., a Corporation of New York. Filed July 21, 1921. Serial No. 486,383. 12 Claims. (Cl. 189—46.)



1. A door-jamb comprising a sheet-metal back having integrally formed a face portion and side molding portions so as to embrace the edge and sides of the door opening; a sheet-metal door-stop arranged on the said face portion and means for detachably connecting said door stop to said face portion.

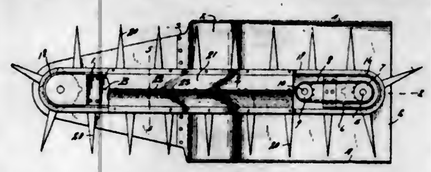
1,576,039. ADJUSTABLE AND LOCKABLE GARMENT HANGER. EDITH A. DENNIS, San Francisco, Calif. Filed Sept. 20, 1924. Serial No. 738,747. 2 Claims. (Cl. 223—68.)

1. A garment hanger comprising in combination, resilient supporting members, of locking mechanism therefor, said supporting members carrying a rod engaging hook and garment clamping members, a hinged arm mounted upon said hook and extending in parallelism with said supporting members, and said locking mechanism adapted to include said resilient supporting members and hinged arm and contract said resilient members and clamp members tightly against the garment when moved toward said clamp members.

1,576,040. ENGINE EXHAUST. WELFORD CLARENCE DIAL, Pueblo, Colo. Filed Apr. 29, 1925. Serial No. 26,768. 10 Claims. (Cl. 251—123.)

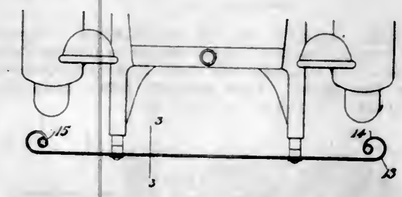
2. In an engine exhaust, an exhaust conduit including a stationary section and a movable section, the movable section having an end designed to be fitted into one end of the stationary section.

10. In an engine exhaust, an exhaust conduit including a stationary section adapted to be connected with a muffler, a movable section having a flexible portion adapted to be connected with the engine, the movable section having an end designed to telescope in an end of the stationary section, the movable section being adapted to be shifted out of the stationary section and then laterally thereof, means for shifting the movable section and including a shaft having a crank arm connected with the movable section, and a guide co-acting with the movable section to constrain it to proper movement.



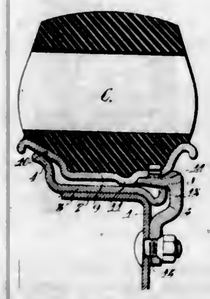
1,576,041. COMB. GUY DU PRIEST, Austin, Tex. Filed Feb. 28, 1925. Serial No. 12,385. 1 Claim. (Cl. 132—16.)

A comb of the character described comprising a plurality of removable and separable teeth, each of the teeth including a relatively large flat upper portion which includes thereon tongue and grooved portions upon the opposite sides thereof, a casing member fitted over the top, front and side of the forward tooth, a bar member extending transversely through the upper portions of the teeth and having its corresponding end portion connected with the casing member, an adjusting nut included upon the opposite end of the bar and resting against the corresponding side of the rear tooth, and a handle member received on the said end and bearing against the corresponding side of the adjusting nut.



1,576,042. GATHERING APPARATUS. HENRY C. ESTEP, Indiana, Pa. Filed June 13, 1925. Serial No. 36,921. 7 Claims. (Cl. 198—11.)

1. A gathering apparatus of the class described comprising, in combination, a base plate, transversely disposed beams mounted upon the rear portion of said base plate, a supplemental plate mounted upon the beams, the forward portion of said supplemental plate being downwardly disposed and substantially merging

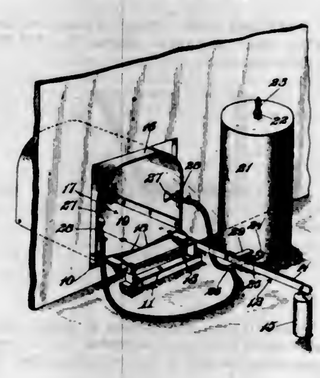


with the forward portion of the first named plate, an endless gathering medium traversing the forward portion of the first named plate and the supplemental plate, and means for operating said gathering medium.

1,576,043. BUMPER. ROLLIE B. FAGBOL, Oakland, Calif., assignor to American Chain Company, Inc., Bridgeport, Conn., a Corporation of New York. Filed May 31, 1923. Serial No. 642,377. 19 Claims. (Cl. 293—55.)

1. An automobile bumper comprising a plurality of flat resilient impact bars arranged one above the other in substantially the same vertical plane at spaced distances apart and extending substantially across the face of the automobile, the extremities of two or more of said bars being curled to form eyelets, vertical members extending through said eyelets and connecting the ends of said bars and resilient flat strip supporting members for connecting the impact bars to the automobile frame.

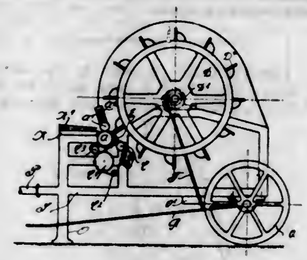
1,576,044. MEANS FOR ADAPTING WIDE-BASE CUSHION TIRES TO NARROW-BASE RIMS. WALLACE R. GILLAM, Tallmadge, Ohio, assignor to Lambert Tire & Rubber Co., Barberton, Ohio, a Corporation of Arizona. Filed Feb. 27, 1925. Serial No. 12,119. 3 Claims. (Cl. 301—13.)



1. A means for adapting cushion tires to standard rims of the quick detachable type, which rims comprise a base with one side flange and a locking ring groove at the opposite side; said means comprising a special rim which is adapted permanently to carry a cushion tire, said special rim comprising a base and two side flanges, one of which is adapted to rest on the side flange of the standard base, securing wedge lugs fastened to said special rim and adapted to lie between the base of the special rim and over the locking-groove-edge of the standard rim, said wedge lugs each having a portion projecting radially, and fastening bolt and nut devices to hold said lugs in place, thereby to secure said rims together.

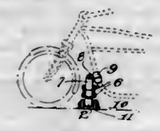
1,576,045. PAVING MATERIAL AND METHOD OF PREPARING SAME. FRED E. GREENE, Berkeley, Calif. Filed Sept. 21, 1921. Serial No. 502,239. 3 Claims. (Cl. 106—31.)

2. A method of forming paving material which consists in employing steam-refined asphalt heated to a temperature of from 250° to 300° F., adding thereto aggregate and limestone, the latter in excess of the asphaltic constituent, and agitating and cooking the mixture at a temperature of from 300° to 600° F.



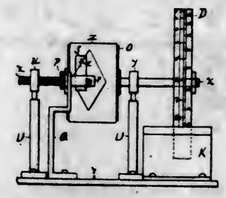
1,576,046. SPRAYING DEVICE. GEORGE AMBROSE GUTHRIE, Forgan, Okla., assignor of one-half to Miron E. Guthrie, Forgan, Okla. Filed May 14, 1925. Serial No. 30,290. 2 Claims. (Cl. 119—159.)

1. In a device for treating fowls by spraying, a tunnel structure, means for pivotally supporting the tunnel structure to receive fowls passing through such exit opening, the tunnel being normally horizontally disposed and tilting toward its outlet during each passage of a fowl therethrough, a tank for the storage of a spraying solution under pressure, a valved outlet for the tank, a nozzle connected with the outlet and arranged within the entrance end of the tunnel and directed toward the outlet end thereof and an operative connection between the tunnel and the valve of the storage tank opening the valve of the storage tank at each tilting of the tunnel, said tunnel having a smooth bottom surface.



1,576,047. PULPING MACHINE FOR TREATING PLANTS YIELDING FIBROUS MATTER. ANDRÉ HAUSER, Mexico, Mexico. Filed June 27, 1924. Serial No. 722,868. 2 Claims. (Cl. 19—27.)

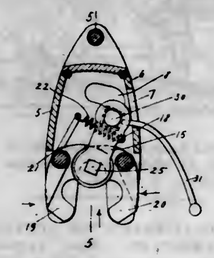
1. In a pulping machine for separating the pulp from the fibrous matter of plants and in combination, a framing supporting a feed device, a scraping device, and a device for ejecting the separated pulp and fibres each in a different direction, two hinged feet and a wheel provided at the fore end of said framing and two steady



feet and two hand bars at the rear end of said framing, all substantially as shown and described and for the purpose set forth.

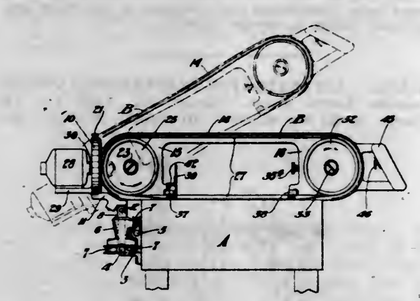
1,576,048. DISPLAY STAND FOR SUPPORTING TWO-WHEELED VEHICLES. EARL EDWARD HOFFMAN, Springfield, Mass., assignor to Indian Motorcycle Company, Springfield, Mass., a Corporation of Massachusetts. Filed Feb. 4, 1924. Serial No. 690,522. 7 Claims. (Cl. 208—91.)

1. A display stand for two-wheeled vehicles comprising supporting means, means for securing said supporting means to the frame of the vehicle with said supporting means extending laterally of the vehicle and supported on the floor at each side of the vehicle, said supporting means being constructed and arranged to resiliently support said vehicle in upright position.



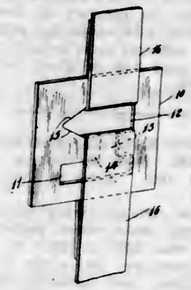
1,576,049. APPARATUS FOR TRANSMITTING COPIES. GEORGE LEWIS HOGAN, Chicago, Ill. Filed Apr. 18, 1923. Serial No. 633,026. 10 Claims. (Cl. 178—5.)

7. An apparatus for the transmission of copies by sound reproduction or signals consisting of a sending device and a receiving device each having a rotary holder for holding respectively a picture or sketch and a sheet upon which such copy is to be reproduced and each capable of a predetermined movement in a transverse direction to its rotary movement and each in operative relation with a respective tracing and recording stylus and a respective equal or proportionately graduated index dial having respective indicators, such tracing stylus being of a transparent material in close proximity to such sending holder and means on such tracing stylus for defining a point to operate in such manner



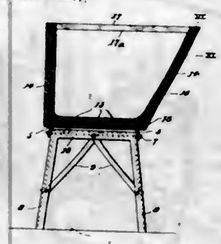
that the position of such point may be registered in terms of such graduated dial and reproduced on such receiving device by adjustment of its graduated dial to corresponding indices and means for recording such point by auch recording stylus.

1,576,050. CONNECTER. ROBERT E. JELLISON, New Auburn, Minn. Filed June 4, 1924, Serial No. 717,911. Renewed July 1, 1925. 5 Claims. (Cl. 294—83.)



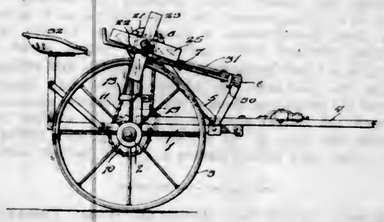
1. A connector comprising a housing, swinging jaws in and connected to said housing, swinging means in the housing and connected to the jaws and movable endwise coincident to the opening and closing of the jaws, a retractile spring interposed between and connected to said swinging means and one of the jaws, and co-operating means carried by the housing and swinging means for yieldingly retaining the jaws in open positions when the said spring is tensioned.

1,576,051. POWER SAW. CHARLES H. JULL, Ben Avon, Pa., assignor to Pittsburgh-Erie Saw Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Oct. 30, 1924. Serial No. 746,909. 9 Claims. (Cl. 143—24.)



1. A power meat saw comprising in combination a track, a wheeled carrier mounted on said track and adapted to move longitudinally thereof, a supporting member pivotally mounted on said carrier for horizontal swinging movement, a housing pivotally mounted on said supporting member for vertical swinging movement, and a saw support revolubly mounted in said housing and adapted to be turned to various angular positions, said saw support comprising an elongated frame member having a mounting disk on its rear end and mounted in said housing, a pair of band wheels journaled adjacent the opposite ends of said frame, a band saw trained around said band wheels, a motor secured to the rear face of said mounting disk, and suitable drive connections between said motor and at least one of said band wheels.

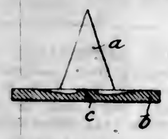
1,576,052. TIE BUCKLE. JOHN WM. KAYE, Luling, Tex. Filed Apr. 2, 1925. Serial No. 20,109. 1 Claim. (Cl. 24—23.)



A buckle of the class described comprising a single blank of metal continuous at its edge, said blank being flat and having parallel elongated slots the same length and a relatively narrow slot connecting them, said slots providing parallel lugs, one of said longitudinal slots being rectangular and relatively narrow to afford maximum width for the lugs, and the wider longitudinal slot having one end tapered from both side walls thereof, and said wider longitudinal slot being otherwise rectangular.

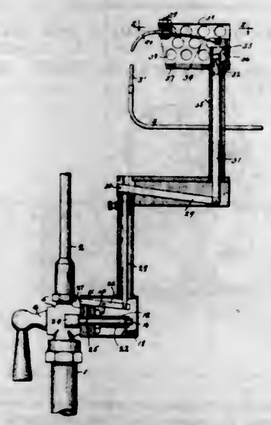
1,576,053. LAUNDRY TUB. FELIX KNOBLOCH, Detroit, Mich. Filed Aug. 29, 1924. Serial No. 734,913. 3 Claims. (Cl. 68—31.)

1. In a laundry tub, a tub formed of plastic material having longitudinal base bars embedded in the tub and partially projecting therefrom for mounting upon a support.



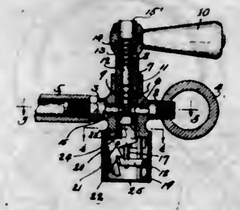
1,576,054. MACHINE FOR WINDING OR UNWINDING BARBED WIRE. HENRY E. LARSON, Boyd, Minn. Filed June 8, 1925. Serial No. 35,723. 1 Claim. (Cl. 242—92.)

Apparatus for the purpose set forth comprising a main frame, draft devices attached thereto, a supplemental frame secured upon the main frame and rising rearwardly therefrom, a shaft mounted in the upper rear end of the supplemental frame and extending across the main frame



and laterally beyond one end of the main frame, means whereby travel of the main frame will effect rotation of the shaft, a clutch device mounted on and firmly held to the shaft, a reel mounted on the extending end of the shaft and detachably engaged at its inner end with the clutch device, means mounted on the shaft and acting upon the outer end of the reel to yieldably maintain engagement of the reel with the clutch device, a guide bar mounted slidably on the supplemental frame in front of and parallel with the shaft and extending laterally to a point in front of the reel and constructed at its outer end to receive and guide a reel, and a lever pivoted between its ends upon the main frame and having a sliding pivotal connection at its front end with the guide bar.

1,576,055. MANUFACTURE OF DRAWING TACKS. GEORGES LEIGHTON, Paris, France. Filed Mar. 4, 1922. Serial No. 541,078. 4 Claims. (Cl. 10—27.)



1. In a process for the manufacture of drawing tacks, consisting in cutting out a point from a sheet metal band, in raising this point at right angles, in stamping the edges of the opening so as to cause them to approach each other, in shaping the point and in cuttting the circular head of the tack so as to separate the same from the band, the step of causing the edges of the aperture to approach each other close to the base of the point and of shaping the point so that its base will extend over and bear upon the edges of the aperture which have been brought close to each other.

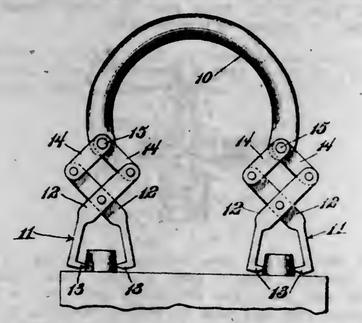
1,576,056. FLUID-CONTROL APPARATUS. RUDOLF LIEFKE, New York, N. Y., assignor to R. Liefke & Company, a Copartnership consisting of Rudolf Liefke, Robert Adelmann, and Robert E. Leyendecker, all of New York, N. Y. Filed Dec. 11, 1924. Serial No. 755,206. 12 Claims. (67—116.)

1. In a gas controlling device the combination of a valve for controlling the supply of gas, a spring for closing said valve, a weight for resisting said spring throughout the normal operation of the device, and a heat controlled element for releasing said weight to cause the valve to close under conditions other than normal.

1,576,057. FLUID-CONTROL APPARATUS. RUDOLF LIEFKE, New York, N. Y., assignor to R. Liefke & Company, a Copartnership consisting of Rudolf Liefke, Robert Adelmann, and Robert E. Leyendecker, all of New York, N. Y. Filed June 10, 1925. Serial No. 36,093. 5 Claims. (Cl. 277—25.)

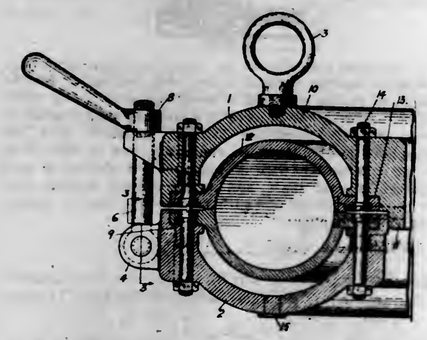
1. A device of the class described comprising a rotary valve provided with a port, a valve plug extending through said valve and controlling said port, a latch engageable with said plug for holding said plug in open position when the valve is in open position, and a cam operable by said valve for releasing said latch when the valve is moved toward closed position.

1,576,058. DIRECTION INDICATOR. JAMES M. MELLIS, Victoria, British Columbia, and William H. L. Mellis, Peterboro, Ontario, Canada. Filed Nov. 4, 1924. Serial No. 747,881. 1 Claim. (Cl. 116—51.)



A direction indicator of the class described, comprising a bracket having parallel arms with horizontal bearing apertures at one end, and a clamping device at the other end for securing the bracket to a windshield, a semaphore carrying shaft journalled in said apertures with the semaphore located between the arms, one of said arms having a chamber with a cap plate, a sheave in said chamber on said shaft, and means passing through said chamber and associated with said sheave and to operate with said semaphore.

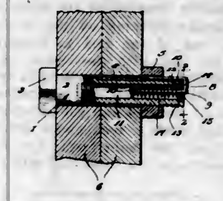
1,576,059. TIE-LOCK SEAL. ADOLPH MORITZ, Atlanta, Ga. Filed May 19, 1925. Serial No. 31,255. 2 Claims. (Cl. 292—315.)



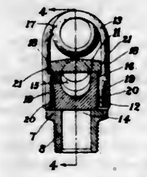
1. A sealing band having a diagonal slot near one end, the other end being adapted for passage thru said slot and to be bent around the first-mentioned end, and locking means located near said ends to hold the ends in locked relation when the said other end is passed thru said slot and bent around the first-mentioned end.

1,576,060. STORAGE-BATTERY CARRIER AND GROUP PULLER. CLARENCE E. MOSS, Ponca City, Okla. Filed Sept. 1, 1925. Serial No. 53,940. 3 Claims. (Cl. 244—119.)

1. In a battery carrier and group puller, a flexible insulating handle and coacting gripping elements carried by each end of the handle for engagement with the terminals of a battery or cell.



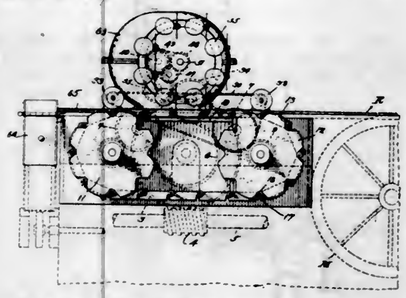
1,576,061. APPARATUS FOR CURING PNEUMATIC TUBES. MAX H. PADE, Akron, Ohio, assignor to The Firestone Tire and Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed Nov. 19, 1923. Serial No. 675,436. 3 Claims. (Cl. 18—38.)



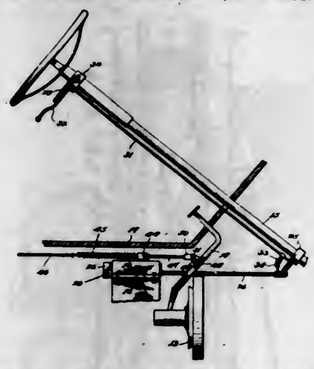
1. In an apparatus for curing circular rubber tubes, an upper and a lower mold section, each section being provided with an outer wall of lower conductivity and an inner wall of higher conductivity to form a continuous chamber therearound, and having means by which a heating fluid such as steam may be admitted.

1,576,062. NUT LOCK. JOSEPH C. PASSMORE, Coshocton, Ohio. Filed Oct. 21, 1925. Serial No. 64,026. 1 Claim. (Cl. 151—8.)

A nut lock comprising a threaded bolt having a longitudinally extending groove intersecting its threads and an axially extending pocket opening through its end, the outer end portion of the walls of said pocket being reduced in thickness to form an internal annular shoulder and lip extension, a disc seated against said shoulder and formed with an opening, the lip extension of said bolt being turned inwardly to overlie said disc and engage the outer face thereof about the opening, a U-shaped fastener having one arm extending into said pocket through the opening of said disc and its other arm adapted to be slid into and out of the groove of said bolt, an abutment adjacent the free end of the inner arm of said fastener, a spring coiled about said inner arm between said abutment and disc to yieldably resist outward movement of the fastener to an inoperative position, and a nut screwed upon said bolt and having its threaded bore formed with grooves to be selectively moved into registry with the groove of said bolt and receive a portion of the outer arm of the fastener to lock the nut against turning.

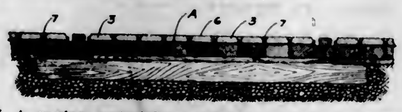


1,576,063. FLUID-REGULATING VALVE. ERNEST PENBERTHY, Detroit, Mich., assignor to Chicago Pneumatic Tool Company, New York, N. Y., a Corporation of New Jersey. Filed Jan. 28, 1924. Serial No. 689,083. 6 Claims. (Cl. 251—153.)



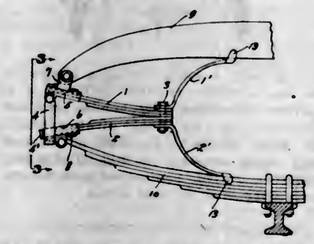
1. A fluid regulating valve comprising a casing having a bore therethrough and ports opening into said bore, a valve within said bore arranged to control said ports, an operating handle loosely engaging the ends of said valve and making frictional contact with said casing to hold the valve in adjusted position, and means on said handle projecting within the bore of said casing for maintaining said handle against accidental removal.

1,576,064. CUT-OFF ATTACHMENT FOR CIGARETTE MACHINES. GUSTAVE A. PEPLE, Jr., Lynchburg, Va. Filed Aug. 28, 1924. Serial No. 734,708. 9 Claims. (Cl. 131—37.)



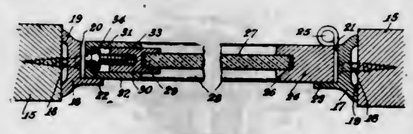
1. In a cut-off for cigarette machines, a continuously moving conveyor for supporting a cigarette rod, a rotatable series of cutters, means for maintaining the cutters perpendicularly to the cigarette rod, means for rotating the series of cutters about a common axis to bring them successively into engagement with the supported rod, and means operated by the rotation of the cutters about said axis to revolve the cutters about individual axes.

1,576,065. GEAR-SHIFTING MECHANISM. GLENN T. RANDOL, Marmaduke, Ark., assignor of one-half to Sol S. Steinberg, Paragould, Ark. Filed Oct. 25, 1922. Serial No. 596,838. 46 Claims. (Cl. 74—58.)



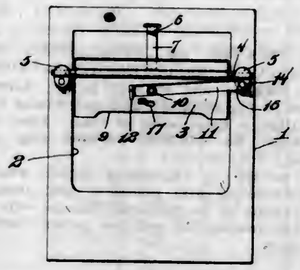
1. A gear shifting mechanism including selecting means, gear shifting means movable by said selecting means, yieldable coupling means for detachably connecting said shifting means with said selecting means for movement thereby, the selecting means being rotatable, and means for rotatably setting said selecting means to coact with said coupling means whereby to select a gear to be shifted.

1,576,066. PAVEMENT CONSTRUCTION. BERNARD RANSOME, Diablo, Calif. Filed Feb. 26, 1925. Serial No. 11,655. 7 Claims. (Cl. 94—4.)



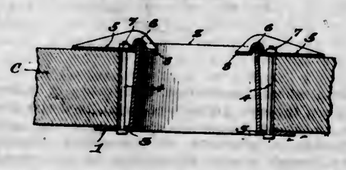
7. A paving material comprising a plank, a channel-shaped section of sheet metal secured to the upper surface of the plank and extending from end to end thereof, an expanded bottom section in the channel, and a semi-resilient filing material in the channel and keyed to the plank by the expanded bottom section of the channel.

1,576,067. AUXILIARY ROAD SPRING. CHARLES ALPHAUS RASCO, Samoa, Calif. Filed Jan. 5, 1925. Serial No. 611. 4 Claims. (Cl. 267—46.)



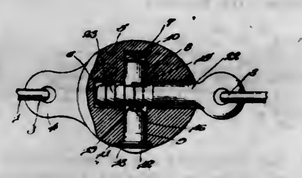
1. An auxiliary spring for the spring suspension of a vehicle comprising two sets of spring leaves secured together at one end and diverging at their free ends, the free ends being adapted for pivotally securing to opposed members of the existing spring suspension, a yoke over the free end adapted to limit the divergence but permitting approach thereof, the said yoke being pivoted to one set of spring leaves, the other set of spring leaves having eared means for holding said springs in operative relation to the yoke.

1,576,068. ADJUSTABLE DOOR. BENJAMIN M. BEZNIK, Newark, N. J., assignor of one-half to David Tunick, Newark, N. J. Filed Apr. 25, 1925. Serial No. 25,726. 2 Claims. (Cl. 20—35.)



1. A door comprising one or more panels, a frame in which said panels are rigidly set, a channelled stile along one face of said frame to receive a portion of said frame, said stile being of corresponding width and outward appearance as the opposite side portion of said frame, and means affording relative adjustment between said stile and the frame portion seated therein.

1,576,069. TRAP NEST. JOHN M. SARGEANT, Elmira, N. Y. Filed Jan. 22, 1925. Serial No. 4,068. 5 Claims. (Cl. 119—49.)



1. In combination with a wall provided with an opening, a door for said opening, means for supporting said door for swinging movement in a vertical direction, an outstanding part carried by the wall at one side of the opening, and a bar pivotally connected with the door, an end portion of the bar contacting with the outstanding part to hold the door in a raised position, said bar being maintained in contact with said part by the weight of the door and bar.

1,576,070. CHIMNEY THIMBLE. WALTER T. SCOTT, Sioux Falls, S. Dak. Filed Apr. 20, 1925. Serial No. 24,504. 7 Claims. (Cl. 126—314.)

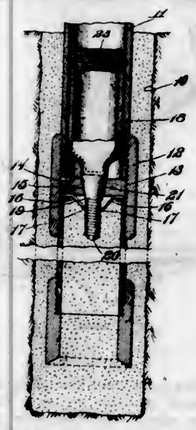
1. In combination with a thimble having a face plate formed to engage the front face of a chimney wall and having its rear end projecting beyond the rear face of the chimney, jaws having free outer ends formed to seat on the rear face of the chimney wall and having inner ends with U-shaped bends therein receiving and seated on the said rear end of the thimble, and bolts extended through the face plate and through the jaws and disposed exteriorly of the thimble, the inner ends of the jaws being extended to project into and register with the interior of the thimble to form stops to engage the stove pipe to prevent the latter from entering the chimney flue.

1,576,071. LOCK. JOSEPH SETTEMBRINO, Chicago, Ill. Filed July 14, 1924. Serial No. 725,946. 3 Claims. (Cl. 70—17.)

1. A lock of the character described, including a body having a longitudinal and transverse bore extending into the body with their inner ends crossing each other, a connecting bolt having annular shoulders upon its outer end and adapted to be inserted into the longitudinal bore and extended across the transverse bore, a spring pressed locking tumbler having a ribbed face to cooperate with the shoulders on the bolt for retaining the bolt in a locked position, and a key operated tumbler within the transverse bore cooperating with the first tumbler to release said bolt.

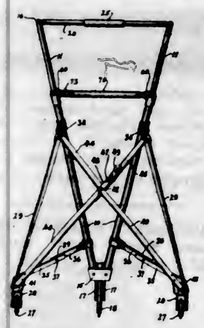
1,576,072. PROCESS OF VULCANIZING RUBBER AND COMPOUND RESULTING THEREFROM. NORMAN A. SHEPARD and STANLEY KRALL, Akron, Ohio, assignors to The Firestone Tire and Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed June 20, 1923, Serial No. 646,702. Renewed Aug. 4, 1925. 6 Claims. (Cl. 18—53.)

1. The process of vulcanizing rubber which comprises incorporating with rubber a small amount of a reaction product of an aldehyde-ammonia with a mustard oil, and heating the resultant product with a vulcanizing agent.



1,576,073. WHEEL CONSTRUCTION. JOSEPH G. SWAIN, Akron, Ohio, assignor to The Firestone Steel Products Company, Akron, Ohio, a Corporation of Ohio. Filed Apr. 6, 1922. Serial No. 550,006. 4 Claims. (Cl. 301—67.)

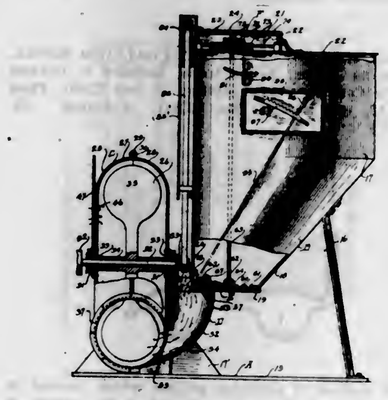
2. In a wheel construction, a plurality of spokes radiating from the hub, an endless metal fixed rim about the spokes, inturned flanges about the fixed rim, said fixed rim having a plurality of depressions therein, and sockets formed in said depressions for the reception of the ends of the spokes.



1,576,074. APPARATUS FOR SEALING OIL WELLS. WILLIAM T. THOMAS, Tonkawa, Okla., assignor of one-half to American Iron & Machine Works, Inc., Tonkawa, Okla., a Corporation of Oklahoma. Filed Apr. 9, 1925, Serial No. 22,000. Renewed Jan. 14, 1926. 7 Claims. (Cl. 166—1.)

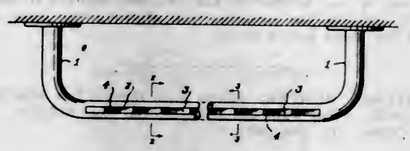
1. In apparatus for cementing wells, a disk carried by the casing adjacent the lower end thereof and having a central opening providing an upwardly facing valve seat, a follower piston adapted to be placed upon the cement and having at its lower end a valve for coaction with the valve seat and means carried by the

disk and engaging the follower piston for locking the follower piston in position with its valve engaged with the seat of the disk.



1,576,075. COMBINED GOCART, HIGH CHAIR, AND BABY CARRIAGE. TRACEY A. TISDELL, Los Angeles, Calif. Filed Jan. 24, 1925. Serial No. 4,472. 8 Claims. (Cl. 280—41.)

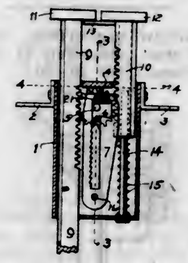
1. In a go cart, a body including a pair of handle members and a wheel structure including a supporting wheel, pivots connecting said handle members to said wheel structure, the axes of said pivots extending at substantially right angles to the axis of rotation of said supporting wheel whereby the handle members may be moved together, a strut pivoted on each handle member, and wheels supported on said struts.



1,576,076. AIR-BLAST SPRAYER OR DUSTER. AVERY W. WALKER, Gasport, N. Y. Filed June 12, 1922. Serial No. 567,808. 7 Claims. (Cl. 48—148.)

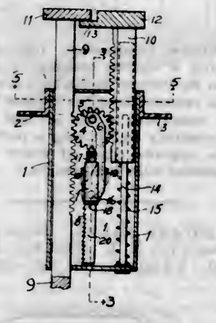
5. In a machine for dusting trees, shrubbery and plants, a hopper, a blower including a casing divided longitudinally to provided a pair of sections, means for connecting the sections together, one of the sections having an air inlet opening therein, means for controlling the effective size of said opening including a swinging plate, a suction pipe formed integral with the other section communicating with the blower at a point in advance of the fan portion of the blower, the upper end of the suction pipe being flared, a portion of the lower end of the hopper being disposed within a portion of

the suction pipe, the mentioned portion of the hopper having an opening therein, means for feeding powder through the opening, means for controlling the effective size of the opening, and means for operatively connecting the blower and the powder feeding means together.



1,576,077. TOWEL RAIL. HENRY D. WATSON, Philadelphia, Pa. Filed Feb. 21, 1924. Serial No. 694,326. 2 Claims. (Cl. 45—32.)

1. As a new article of manufacture, a towel rail having longitudinally extending inturned edge portions, disposed in spaced relation to provide a longitudinally extending groove, an insert of non-slippery semi-elastic material in said groove.

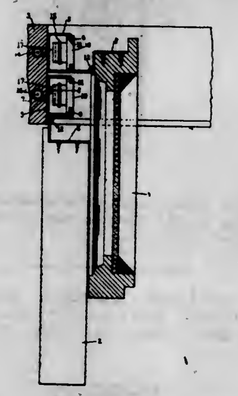


1,576,078. FUEL-FEED CONTROL FOR AUTOMOTIVE ENGINES. SIMON BARLOW, Ogden, Utah. Filed Mar. 31, 1925. Serial No. 19,702. 13 Claims. (Cl. 74—39.)

1. In a fuel feed control for automotive engines, a carburetter valve crank, a through foot-throttle push-rod operatively connected with said valve crank, a hand-operated means also for operating said valve crank and co-acting with said through push-rod but operating at right angles thereto, through means fulcrumed thereon, a spring means of retaining and retracting said through push-rod from downward to normal off position and a sleeve slidably connected to such push-rod as a check on such spring action, a second push-rod adacent to the first and bearing a stop such that downward movement of the through push-rod depresses said second push-rod, a spring to return said second push-rod and connections to normal off position, a gear wheel operatively in mesh with both said push rods and having crank arms off

center and a center shaft, fulcrum-and-distance-check pieces having bearing surfaces and slot coacting with such shaft and crank arms.

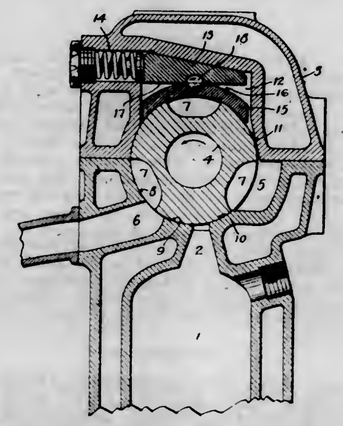
1,576,079. FUEL-FEED CONTROL FOR AUTOMOTIVE ENGINES. SIMON BARLOW, Ogden, Utah. Filed Sept. 26, 1925. Serial No. 58,874. 6 Claims. (Cl. 74—81.)



1. In a fuel feed control for automotive engines, a carburetor valve crank, a through foot-throttle push-rod operatively connected with said valve crank, a hand operated means also for operating said valve crank and co-acting with said through push-rod through a connection that slides freely in one direction from a given point and is elastic in the other direction, a second push-rod adjacent to the first and bearing a stop such that downward movement of the through push-rod depresses said second push-rod, a spring to return said push rods and connections to normal off position, a gear wheel operatively in mesh with both said push rods and having an off-center shaft only, and an expansible fulcrum-and-check yoke journaled on said off-center shaft, catches and guide lugs on said yoke, and side plates having slots, respectively, co-acting with the guide lugs and catches on said yoke.

1,576,080. METHOD OF RECOVERING LIGHT METALS FROM SCRAP AND THE LIKE. ADOLF BECK, Griesheim-on-the-Main, Germany, assignor to the Firm: Chemische Fabrik Griesheim-Elektron, Griesheim-on-the-Main, Germany. Filed Apr. 11, 1924. Serial No. 705,936. 9 Claims. (Cl. 7—17.)

1. The process for recovering light metals, such as magnesium and aluminium or their alloys from scrap and other impure metallic mixtures, which comprises



melting the metal to be treated, adding magnesium chloride and a substance adapted to act as a thickening medium on magnesium chloride, stirring the mixture and separating the molten metal from the foreign substances.

1,576,081. WINDOW MOUNTING. GEORGE S. BENJAMIN, Detroit, Mich. Filed July 21. 1924. Serial No. 727,265. 2 Claims. (Cl. 20—50.)

1. In a window construction, the combination with a frame having a window opening, of a channel guide mounted upon said frame within said opening and formed with a pair of opposed flanges, a closure for said opening, and a hinge comprising a leaf secured to said closure, and a complementary leaf having a portion of increased thickness, the opposite edges of which are grooved for sliding engagement with said flanges.

1,576,082. ROTARY VALVE. EUGENE M. BOURNONVILLE, Jersey City, N. J. Filed May 31, 1923. Serial No. 642,510. 9 Claims. (Cl. 123—190.)

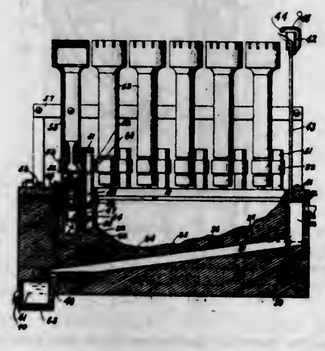
1. A rotary valve of the kind described, having a casing and a rotary valve member, and a circumferentially movable shoe and a wedge or movable backing member, together constituting a compensating device acted on in one direction by the drag of the valve member and in the opposite direction by means opposing such drag characterized by the shoe having a back surface curved substantially concentrically with the face that bears on the valve member, so as to bear and rock in a rolling manner on the face of the backing member, there being means to connect the wedge and shoe in respect to their reciprocal movement.

1,576,083. METHOD OF REFINING GALLIUM METAL. SYLVESTER BOYER, Lynn, Mass., assignor to General Electric Company, a Corporation of New York. Filed Aug. 12, 1925. Serial No. 49,841. 4 Claims. (Cl. 75—17.)

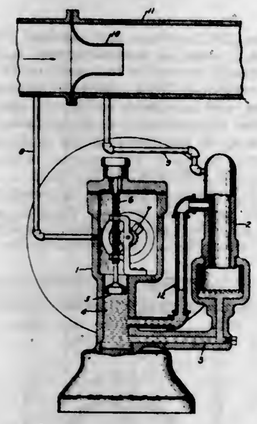
1. The method of purifying gallium which consists in forming a film of a halogen compound on the surface of a charge of metallic gallium to be purified and heating said charge in a vacuous space to a temperature at which the halogen film is volatilized.

1,576,084. PROCESS OF CRYSTALLIZING MAPLE-SUGAR CAKES. ALICE BROWN, Shelburne Falls, Mass. Filed June 27, 1925. Serial No. 40,107. 1 Claim. (Cl. 127—58.)

The process of crystallizing maple sugar cakes, which consists in first placing the cakes on wire screens, then inserting them in a container, then boiling maple syrup to a temperature of 224° to 228° F., then allowing the syrup to cool to 110° to 115° F., then pouring it over the cakes in the container and allowing the mass to set for about twelve hours.



1,576,085. BUMPER. JAMES B. L. BROWN, Los Angeles, Calif. Filed July 21, 1922. Serial No. 576,570. 1 Claim. (Cl. 293—55.)

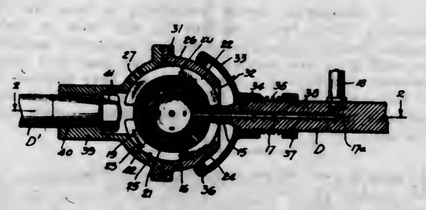


A one piece bumper formed with securing members, clamps for clamping said securing members against the end member of the automobile chassis, hook bolts for engaging the automobile lamp brackets and extending through said securing members, and nuts screwing on the ends of said bolts against said securing members.

1,576,086. HEATING APPLIANCE. RALPH C. BROWNE, Salem, Mass. Filed Mar. 11, 1921. Serial No. 451,560. 13 Claims. (Cl. 126—90.)

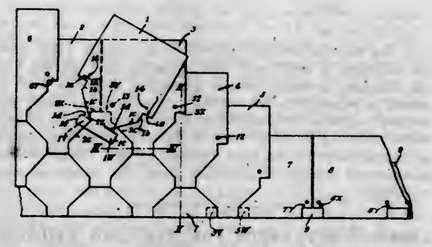
1. In apparatus of the character described, in combination, a heating unit comprising a plurality of independent burners of the Bunsen type, means for controlling the admission of gas to a number of said burners, determined by the temperature of the chamber to be heated, said means comprising a fluid heavier than the gas admitted, being displaced by variation of temperature in said chamber and operative thereby to open or close said burners to the gas.

1,576,087. U-TUBE MANOMETER. CHARLES F. BULLOCK, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Nov. 8, 1924. Serial No. 748,779. 3 Claims. (Cl. 73—31.)



1. The combination with an instrument comprising a U-tube and indicating liquid therein, of means controlled by the level of the liquid in the U-tube for automatically placing the two legs of the U-tube in communication with each other above the levels of the liquid therein when the liquid deflection from the leading leg of the U-tube to the trailing leg of the U-tube exceeds a predetermined amount.

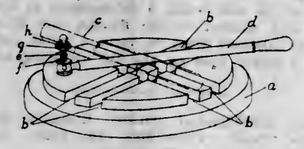
1,576,088. CONTAINER. CHARLES J. BUNE, West Hoboken, N. J. Filed Apr. 10, 1925. Serial No. 22,097. 7 Claims. (Cl. 229—15.)



1. A container comprising a pair of pockets, each having a bottom wall and side walls and a flange at the top of the side walls, a lid common to both of the pockets and secured to the flanges, the flanges being shaped at adjacent sides to form a notch and thereby provide a finger hold on the lid overlying said notch.

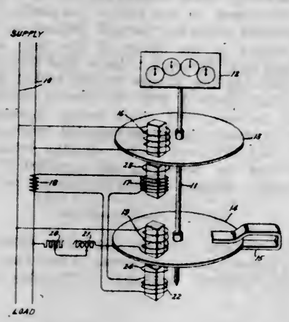
1,576,089. UNIVERSAL JOINT. ELMER G. BURNS, Los Angeles, Calif. Filed Mar. 10, 1925. Serial No. 14,510. 4 Claims. (Cl. 64—91.)

1. A universal joint comprising a shaft, a hollow flanged ball formed on one end of the shaft, a two-part socket rotatably receiving the ball, flanges on the socket at right angles to the flange of the ball, a two-part housing receiving the socket parts and having grooves slidably receiving the flanges of the socket parts, said housing being provided with an opening through which said shaft extends, said shaft being provided with a duct through which oil can be supplied interiorly of said ball, and said ball and socket sections being provided with openings for delivering oil supplied to the ball to the working surfaces of said ball, socket and housing.



1,576,090. INTERLOCKING-SHINGLE ROOF. SCOTT E. CARPENTER, Memphis, Tenn. Filed July 23, 1923. Serial No. 653,198. 6 Claims. (Cl. 108—8.)

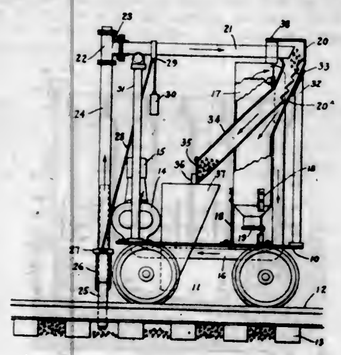
1. A shingle having a rectangular upper portion, oppositely disposed shoulders extending inward from both sides along the lower edge of said upper section, a symmetrically disposed lower section of less width than said



upper portion, a restricted throat near the lower edge thereof symmetrically disposed with reference thereto, said throat being of a width equal to the combined widths of the said shoulders, and comparatively narrow rectangular tongues extending laterally outward below said throat and forming the lower edge of said shingle, the length of said tongues being equal to their width, whereby when said shingle is assembled with other shingles on a roof the ends of the said tongues of an overlying shingle for their entire depth come beneath and are adapted to be held down by the underlying shingle.

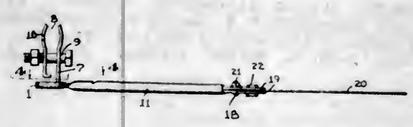
1,576,091. SHARPENING DEVICE. JAMES CHANTRY, Sheffield, England. Filed July 5, 1923. Serial No. 649,690. 5 Claims. (Cl. 76—82.)

1. A sharpening device comprising a base, an upstanding pivot fixedly secured to said base at right angles thereto, a sharpening medium resiliently mounted on said pivot and oscillatable over the base in a plane parallel thereto, and a support on the base disposed in a plane parallel thereto for holding an article in the operable position between the sharpening medium and the base.



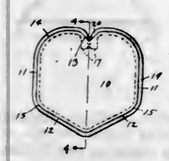
1,576,092. INDUCTION METER. FREDERICK P. CHURCH, Lynn, Mass., assignor to General Electric Company, a Corporation of New York. Filed Nov. 9, 1923. Serial No. 673,829. 6 Claims. (Cl. 171—264.)

1. An electric circuit subject to a variable other than its wattage, a wattmeter for metering said circuit having unequal opposing torque producing elements each of which is susceptible in different degrees to an error due to said variable, the individual torques and errors of said elements being so proportioned that the resultant torque is proportional to the true wattage of said circuit within commercial limits of accuracy over the range of said variable.



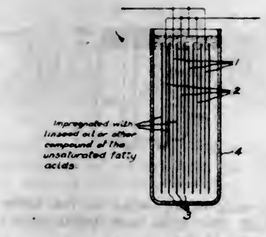
1,576,093. APPARATUS FOR HANDLING RAILROAD BALLAST. HORACE G. COOKE, New York, N. Y. Filed Sept. 17, 1921. Serial No. 501,395. 1 Claim. (Cl. 262—2.)

An apparatus of the kind described comprising a car, a suction pipe supported on the car and constructed to have its mouth brought adjacent to the roadbed of the track, means for creating a suction in the pipe, a hopper



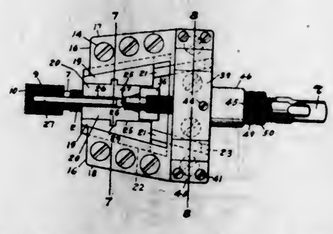
to receive the material discharged from the pipe, and a screen in the path of the material in the pipe to screen out the finer parts thereof.

1,576,094. GLARESHIELD. JAMES P. CULBERTSON, Allentown, Pa. Filed May 9, 1924. Serial No. 712,016. 2 Claims. (Cl. 296—97.)



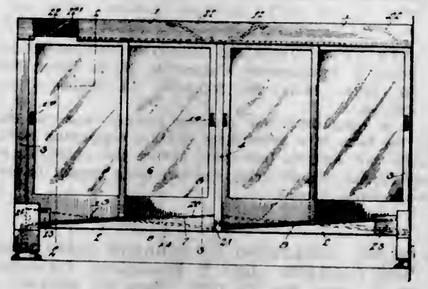
1. A device of the character described, comprising a notched disk, a clamped element rigidly secured to said disk and adapted to secure the same to an appropriate part of a vehicle, a head revolvable around said disk and provided with a tubular extension, said head being provided with a plurality of ears that overlap the disk serving to keep it positioned in the head, a glare protector element having a rod secured thereto extending into the tubular extension of the head, a plug in the throat of the tubular extension adjacent the head, a spiral spring interposed between the plug and the end of the rod, and a ball seated in the plug and adapted to engage one or another of the notches in the disk.

1,576,095. FILE-CLEANING TOOL. JOHN G. DALY, Portland, Oreg. Filed Feb. 24, 1925. Serial No. 11,226. 2 Claims. (Cl. 15—236.)



1. The combination of a holder having flat sides and a groove formed around the edge thereof; and a soft wire partially embedded in said groove.

1,576,096. ELECTRIC CONDENSER. WHEELER P. DAVEY, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Apr. 22, 1924. Serial No. 708,248. 6 Claims. (Cl. 250—41.)

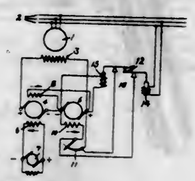


1. A condenser comprising a plurality of conducting layers and spacing of solid material therebetween containing a compound of the unsaturated fatty acids.

1,576,097. KEY-PULLING TOOL. MURVIN C. DEIFENDERFER, Bluffton, Ohio, assignor to Scott & Ewing Company, a Partnership composed of Frank Scott and E. R. Ewing, both of Bluffton, Ohio. Filed Jan. 23, 1925. Serial No. 4,173. 12 Claims. (Cl. 29—86.1.)

1. In a key pulling tool, a base block, spaced converging guiding members, tapered sliding blocks carried thereby, engaging jaws carried by the respective blocks, and means carried by said base-block such as a screw adapted to have one end actuated and the other end engaging an abutment adjacent the shaft in which the key is located which is engaged between the jaws.

1,576,098. DOOR CONSTRUCTION. JOHN GITLEN DEITZ, Tulsa, Okla. Filed Oct. 8, 1924. Serial No. 742,468. 7 Claims. (Cl. 20—20.)

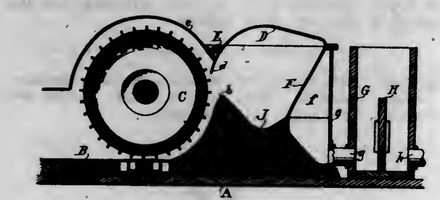


1. In a door construction, a frame defining an opening and comprising a horizontal top member and a stationary bottom member having an inclined track at the upper side thereof, said top member having a channel formed in its lower side directly above said track, and a door slidable on said stationary inclined track to and from position to close said opening, the lower edge of the door being inclined to correspond to the inclination of the track, the upper edge of the door being horizontal, and the upper edge portion of the door extending into the channel in said top frame member.

1,576,099. TOY TRUMPET. MORLAND MICHOLL DESSAU, London, England. Filed Nov. 8, 1924. Serial No. 748,703. 4 Claims. (Cl. 46—46.)

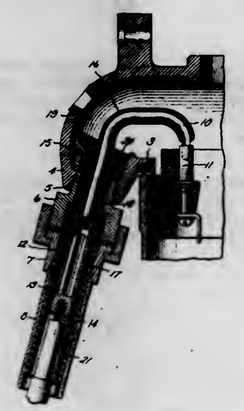
1. A toy trumpet comprising a hollow body formed of rubber, a bow-shaped stiffening member secured at its ends to the hollow body, a mouthpiece formed at one end of the hollow body and a sound producing device within said mouthpiece.

1,576,100. REGULATING SYSTEM. RICHARD DIETZE, Pankow, Germany, assignor to General Electric Company, a Corporation of New York. Filed May 12, 1923. Serial No. 638,485. 6 Claims. (Cl. 171—225.)



1. In a regulating system, a dynamo-electric machine adapted to control the condition to be regulated, two sources of current connected in opposition to each other in the field circuit of the machine, means responsive to the condition to be regulated for regulating the voltage of one of said sources of current, and regulating means whereby the voltage of the other one of said sources varies inversely with respect to the voltage of said one of said sources.

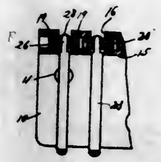
1,576,101. EXTRACTOR BEATING ENGINE. FRANK B. DILTS, Fulton, N. Y., assignor to Dilts Machine Works, Inc., Fulton, N. Y. Filed May 2, 1924. Serial No. 710,588. 11 Claims. (Cl. 92—24.)



1. In a beating engine, the combination with a tub having a rounded end, of a beater roll at one side of the tub to disintegrate and circulate the material in the tub, a back-fall located adjacent to the roll, the rounded end of the tub receiving material directly from a backfall

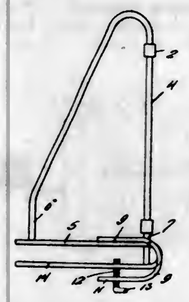
and including a screen constructed to turn the direction of the flow of material and permitting the passage of sufficiently beaten material, the bottom of the

tub adjacent to the said screen having an abrupt drop to accelerate the movement of the material passing by the screen, and means for receiving and discharging material after it has passed through the said screen.



1,576,102. TERMINAL CONNECTION FOR ELECTRICAL APPARATUS. LOUIS W. DOWNES, Providence, R. I., assignor to General Electric Company, a Corporation of New York. Filed Feb. 14, 1922. Serial No. 536,549. 3 Claims. (Cl. 173—353.)

2. The combination with a metallic casing having an opening therein, a pipe union connected to the casing at said opening, an electric conductor extending out of said casing and into said union and having at its outer end a slip contact member, fibrous insulation surrounding said conductor, an insulating sleeve surrounding said slip contact member and a portion of the fibrous insulation of said conductor, and insulating cement surrounding the upper end of said sleeve and embracing the fibrous insulation of said electric conductor and serving positively to anchor said conductor and the parts connected thereto to said metallic casing.



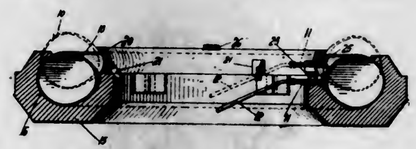
1,576,103. KEY HOLDER. CHARLES H. FALLOWS, Providence, R. I. Filed Dec. 9, 1925. Serial No. 74,358. 1 Claim. (Cl. 150—40.)

In an article of the character described, an attaching plate, a plurality of longitudinally disposed loops integral with the plate and interspaced from each other, blocks loosely fitting in the spaces between the loops and provided with holes, trunnions on the blocks journaled

in the loops, snap hooks, necks on the hooks extending loosely through the holes and heads upon the necks resting upon the blocks.

1,576,104. LUGGAGE CARRIER. JOHN J. FERGUSON, Columbus, Ohio. Filed July 21, 1924. Serial No. 727,286. 3 Claims. (Cl. 224—29.)

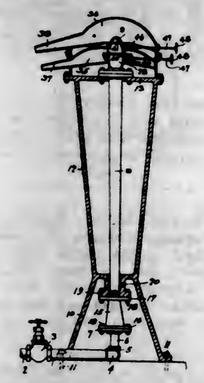
3. A combination clamp and bracket structure including a U-shaped member comprising an upper plate, and a lower plate connected by an intermediate portion, a second U-shaped member comprising an upper plate, and a lower plate connected by an intermediate portion having a slot for receiving the first mentioned U-shaped member, the upper plate of the second U-shaped member resting on the upper plate of the first U-shaped member, and means for holding the first U-shaped member against displacement on a support, and holding the second U-shaped member in different adjusted positions on the first U-shaped member.



1,576,105. GARBAGE-TREATING COMPOSITION. JOHN T. FETHERSTON, Cuylerville, N. Y. Filed Feb. 27, 1924. Serial No. 695,585. 14 Claims. (Cl. 167—3.)

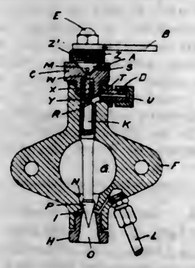
1. A composition for treating garbage, and the like in the form of a pulverulent mixture comprising essentially salt and an ingredient having the properties of neutralizing organic acids, the salt being present in preponderating amount.

1,576,106. TREATMENT OF GARBAGE CONTAINERS AND GARBAGE. JOHN T. FETHERSTON, Cuylerville, N. Y. Filed Feb. 27, 1924. Serial No. 695,586. 6 Claims. (Cl. 167—3.)



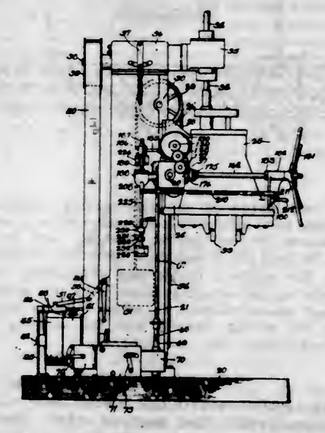
1. The method of treating garbage containers which comprises sprinkling or scattering salt on the bottom and around the sides thereof.

1,576,107. DEVICE FOR LOCATING INNER TUBES IN MOLDS. MICHAEL A. FLYNN, Akron, Ohio. Filed Nov. 5, 1925. Serial No. 66,945. 8 Claims. (Cl. 18—2.)



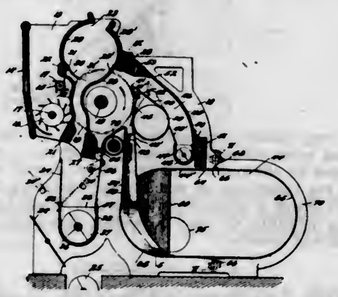
1. In combination with a tube mold having a cavity therein, a ring which is concave upon its outer surface to provide a seat for the inner periphery of the inner tube, and means to center the ring with respect to the mold with the seat therein in alignment with the mold cavity.

1,576,108. SEPARATOR. GEORGE L. FOGLER, Tulsa, Okla. Filed July 5, 1923. Serial No. 649,628. 8 Claims. (Cl. 210—51.)



1. Apparatus for separating the constituents of fluid mixtures comprising a vertical tube of upwardly increasing diameter, means for supplying fluid to the lower end of said tube, means for causing said fluid before entering said tube to rotate around the vertical axis of said tube, and means for removing the separated materials from the upper end of said tube.

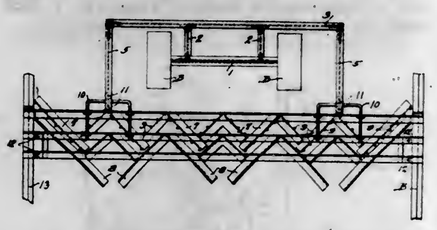
1,576,109. HUMIDIFIER FOR INTERNAL-COMBUSTION ENGINES. ADAM FORMAN and RICHARD MATCHETT, Beattock, Scotland. Filed Oct. 2, 1922. Serial No. 591,990. 3 Claims. (Cl. 261—62.)



1. A humidifying apparatus for internal combustion engines comprising, a casing, a Venturi tube in the casing through which the engine suction operates, an annular water inlet at the throat of the Venturi tube, a valve at the throat of the Venturi tube controlling the water inlet, a piston carried by the valve, a chamber in the casing within which the piston is a loose fit, said chamber being open to the engine suction, a passage opening into said chamber at a point beyond the piston and effecting communication between said chamber and the atmosphere, and means for closing said passage.

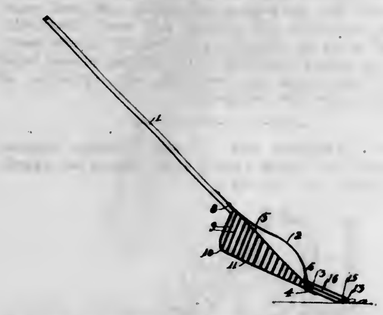
1,576,110. DRILLING MACHINE. ROBERT M. GALLOWAY and PAUL C. BURTON, Richmond, Ind., assignors to The National Automatic Tool Company, Richmond, Ind., a Corporation of Indiana. Filed Sept. 7, 1923. Serial No. 661,448. 36 Claims. (Cl. 77—32.)

2. In a machine of the class described, a movable head, slow power feed mechanism for moving said head, rapid traverse mechanism for moving said head, electrically actuated means for controlling said rapid traverse mechanism, and means controlled by the starting of said rapid traverse mechanism for controlling the operation of said slow power feed mechanism.



1,576,111. COTTON GIN. JAMES CHARLES GARNER, Houston, Tex. Filed June 3, 1925. Serial No. 34,667. 46 Claims. (Cl. 19—59.)

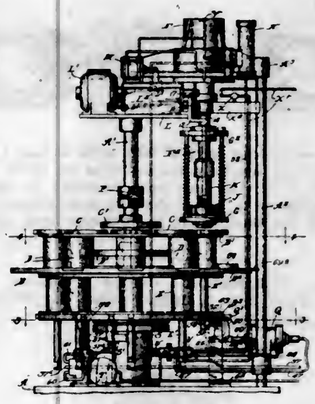
1. In a machine of the class described, rotatable saws, a blast nozzle having a working position adjacent the saws and movable toward and away from the same, a lint flue spaced from said nozzle and adapted to receive lint from the saws, and an air board adjacent the saws between the nozzle and the flue adapted to direct the lint and blast to the flue, said air board being movable toward and away from the saws.



8. In a machine of the class described, a frame, and a substantially tubular main flue section carried by said frame, said main flue section being substantially longitudinally divided into sub-sections, one of which communicates with the machine and the other of which is detachable.

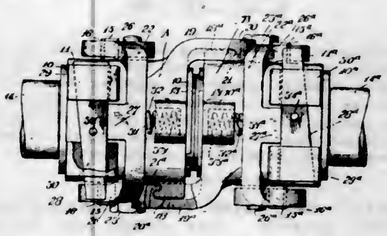
1,576,112. SUBGRADE PLANER. JAMES M. GARVEY, Appleton, Wis., assignor to Garvey-Weyenberg Construction Company, Appleton, Wis., a Corporation. Filed Jan. 6, 1922. Serial No. 527,422. 6 Claims. (Cl. 94—45.)

1. In combination, a sub-grade paving machine, and a sub-grade scraping device connected with said machine, track means for the paving machine, and propelling devices for said track means, a draw bar means intermediate the scraping device and the paving machine for advancing the scraping device with the paving machine, and means whereby to permit relative movement between the paving machine and the scraping device, as the two operate over the sub-grade.



1,576,113. FRUIT GATHERER. WILLIAM P. GAUGHAN, San Jose, Calif. Filed Sept. 13, 1923. Serial No. 662,476. 1 Claim. (Cl. 56—327.)

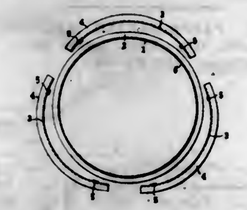
A fruit gatherer comprising a handle having a supporting strap extending forwardly therefrom, a cross-bar mounted on the free end of said strap, a plate mounted upon the lower edge of said bar and extending throughout its length, a basket mounted on said handle and plate, and a plurality of teeth extending forwardly of said basket and cross-bar.



1,576,114. MACHINE FOR MAKING GLASS CONTAINERS. WARREN E. GLASPEY, Bridgeton, N. J., assignor to Spring Stopper Company, New York, N. Y., a Corporation of Delaware. Filed Oct. 22, 1923. Serial No. 670,041. 5 Claims. (Cl. 49—10.)

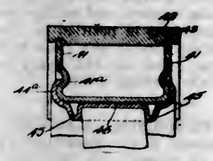
1. In a machine of the character set forth, the combination with a reciprocable press-plunger equipped with a pressing tool, of an independently movable cross head, a nut mounted thereon, an annular mandrel receiving said tool and having a threaded shank working through said nut and having a thread-equipped tip, gear mechanism mounted on said cross-head and adapted to rotate said mandrel, said gear mechanism being equipped with

means for limiting the number of rotations, a clutch associated with said gear mechanism, a driving shaft having splined connection with said clutch, and reversing gear mechanism serving to actuate said shaft in either direction.



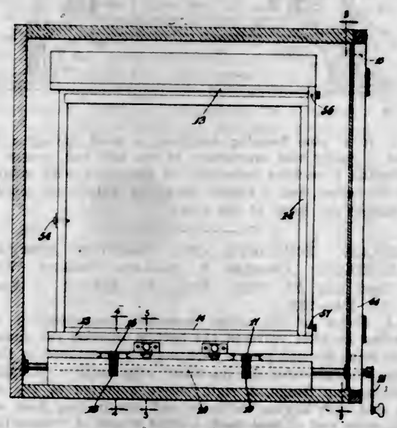
1,576,115. HOSE COUPLING. EGBERT H. GOLD and EDWARD A. RUSSELL, Chicago, Ill.; said Russell assignor of one-half of the entire right to Vapor Car Heating Company, Inc., Chicago, Ill., a New York Corporation. Original application filed May 1, 1922, Serial No. 557,675. Divided and this application filed May 29, 1924. Serial No. 716,602. 18 Claims. (Cl. 285—65.)

1. In a hose coupler, the combination of a conduit member formed with a pair of diametrically arranged outstanding projections, a coupling member through which the conduit member extends and which is slotted for said projections, means on the coupling member for interlocking the same with a mating coupler, a yoke pivoted to said coupling member and adapted to bear against the projections on the conduit member, and a wedge adapted to be driven against said yoke so that the conduit member is moved forwardly through the coupling member.



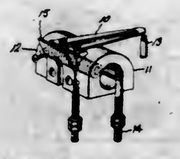
1,576,116. RIM. GEORGE S. GREENE and LORENZ WEIHER, New York, N. Y. Filed July 9, 1923. Serial No. 650,329. 1 Claim. (Cl. 301—35.)

In a device of the character described, in combination, a tire supporting rim part including a plurality of circumferential sections adapted to abut end to end to form a complete outer rim part, said circumferential sections having inwardly extending circumferential flanges adapted to bear against the inner surface of a surrounding tire for supporting the same, and means including



a circumferential rim part disposed inside of said circumferential flanges, whereby inwardly directed radial pressure of the surrounding tire retains the rim sections in tire supporting relation with each other.

1,576,117. WHEEL. JAMES GUTHRIE, Elyria, Ohio. Filed Dec. 5, 1919. Serial No. 342,761. 4 Claims. (Cl. 301—67.)

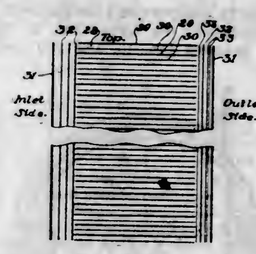


3. A felly comprising an annular outer body adapted to receive a tire base, and an annular sheet-metal reinforcing band within and secured to said body and having inwardly projecting double-walled cups adapted to receive the ends of spokes.

1,576,118. COLOR PHOTOGRAPHY. FRANCIS HAHN, Bergenfield, N. J., assignor, by mesne assignments, to Repro-Art Machinery Co., a Copartnership consisting of Howard S. Levy and Lionel F. Levy. Filed Mar. 1, 1921. Serial No. 448,895. 12 Claims. (Cl. 95—2.)

1. A camera having a lens, means for supporting a light sensitive medium in operative relation to the lens, and a member supported intermediate the lens and first-named supporting means for intercepting rays corresponding to high lights and to certain colors but permitting other rays to pass therethrough.

1,576,119. PROTECTIVE RELAY. CHESTER I. HALL, Fort Wayne, Ind., assignor to General Electric Company, a Corporation of New York. Filed Aug. 8, 1924. Serial No. 730,985. 4 Claims. (Cl. 200—122.)

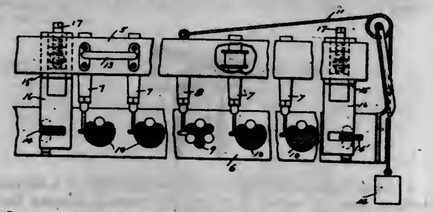


4. In a temperature relay, the combination of a divided storage mass of metal, a bimetallic thermal element electrically and thermally connected to each portion of said mass, and means for heating said mass comprising a resistor in series connection with said element and a resistor in shunt connection with said element.

1,576,120. WRIST WATCH AND OTHER WATCH. JOHN HARWOOD, Baldrine, Lonon, Isle of Man. Filed Oct. 8, 1923. Serial No. 667,373. 3 Claims. (Cl. 58—82.

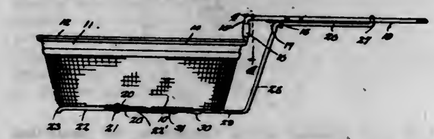
1. A self winding watch comprising, an oscillating weight, a pawl carrying plate frictionally connected to the weight, and a pawl on said plate adapted to be moved by the oscillations of the weight to turn the winding train.

1,576,121. FILTER UNIT. JAMES JARVIS PREBLE, Newton, Mass., assignor to Spray Engineering Company, Boston, Mass., a Corporation of Massachusetts. Filed Apr. 30, 1925. Serial No. 27,033. 8 Claims. (Cl. 183—51.)



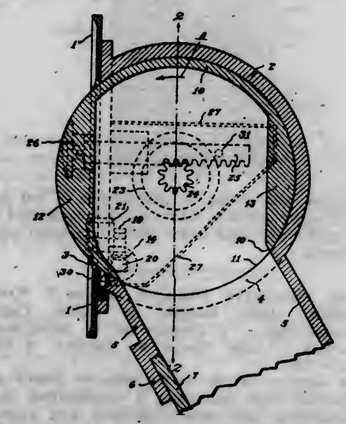
1. A filter unit having, in combination, a cell having inlet and outlet openings, and a densely compacted stack of diversiform expanded metal sheets interposed between the openings.

1,576,122. ABRASIVE ARTICLE. DUANE E. WEBSTER, Worcester, Mass., assignor to Norton Company, Worcester, Mass., a Corporation of Massachusetts. Filed Feb. 4, 1924. Serial No. 690,662. 2 Claims. (Cl. 51—280.)



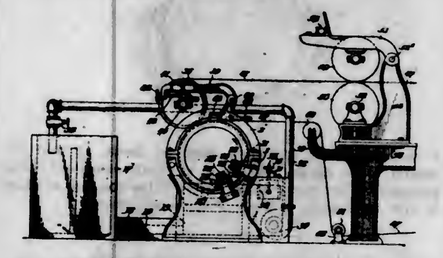
2. An abrasive article having abrasive grains united by a heat-set bond comprising a condensation product of formaldehyde and phenol combined with plaster of Paris forming from ½ to 80% by weight of the total mass.

1,576,123. CARVING-MACHINE ATTACHMENT. THEODORE WILDBERGER and ERNEST B. JOHNS, Los Angeles, Calif. Filed Dec. 8, 1923. Serial No. 679,508. 1 Claim. (Cl. 90—13.3.)



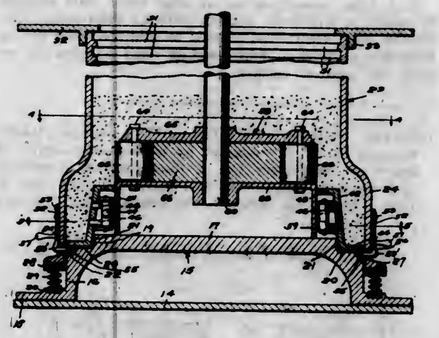
In a carving machine attachment, the combination of guide bars engaging the cutter bar of carving machines, ball bearings engaging on guides or tracks attached to the table frame, adjusting means for said ball bearings, adjusting screws for adjusting the cutter bar in a vertical direction, adjusting screw control levers; a pulley bracket, a cord running through said pulley bracket, means for attaching one end thereof to the cutter bar, and a weight attached to the other end, substantially as and for the purpose set forth.

1,576,124. FRYING BASKET. WALTER BRUCE WILLS, Baltimore, Md. Filed Oct. 1, 1925. Serial No. 59,902. 3 Claims. (Cl. 53—7.)



1. A utensil of the kind described having a plurality of supporting arms pivoted beneath the bottom of the utensil eccentrically thereof and arranged to protrude beyond said bottom when swung into one position and to be housed beneath said bottom when swung into a second position, a further supporting arm located beneath the bottom and movable inwardly and outwardly thereof, and means connecting said arms for simultaneous movement.

1,576,125. NIGHT-DEPOSITORY ENTRANCE. SAMUEL P. YEO, Philadelphia, Pa. Filed Feb. 2, 1925, Serial No. 6,441. Renewed Jan. 15, 1926. 9 Claims. (Cl. 109—1.)



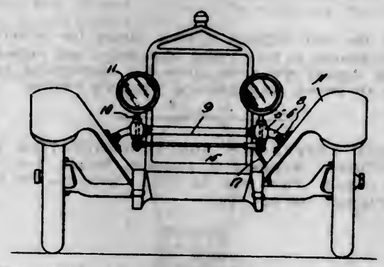
1. In a night depository entrance structure, a rotary object receiving member, a lock for locking said member against rotation, a rack and pinion operable independently of the lock for rotating the cylinder upon release of the cylinder from the lock.

1,576,126. PAPER-MAKING MACHINE. ALONZO ALDRICH, Beloit, Wis. Filed Nov. 4, 1921. Serial No. 512,811. 6 Claims. (Cl. 92—43.)

1. A paper machine comprising a rotary forming member, a vat or tank for the pulp for said forming member and suction means tending to strip the paper film from the rotary forming member, said suction means comprising a suction box arranged in position on the outer side of the rotary forming member and close to the same so as to exert suction force on the paper strip before it actually leaves the forming member.

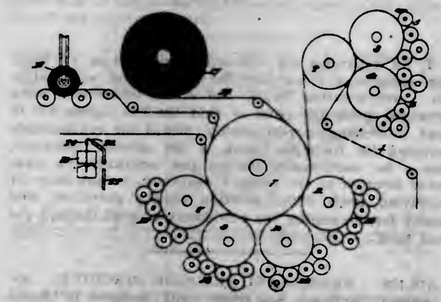
1,576,127. PIPE-FORMING MACHINE. WILLIAM C. AUSTIN, Anderson, S. C. Filed Apr. 24, 1925. Serial No. 25,646. 23 Claims. (Cl. 25—39.)

1. In a pipe forming machine, a mold having a bell end, a pallet held stationary in the bell end, means for effecting a packing operation of the mold with relation to the pallet, and a former operating within the mold to complete the body of the pipe.



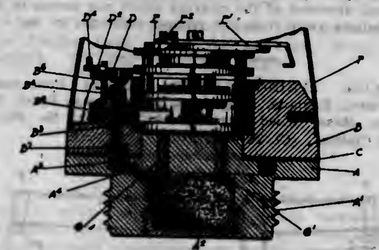
1,576,128. DENTIST'S CHIP BLOWER AND AIR SYRINGE. CHARLES S. BALLARD, Buckley, Wash. Filed Aug. 27, 1923. Serial No. 659,514. 1 Claim. (Cl. 128—231.)

A device of the class described comprising a bulb having an inlet valve in the bottom thereof, the opposite end being formed into a neck portion, increased in thickness and provided at its outer edge with a peripheral outstanding flange, a rigid sleeve mounted in the neck of said bulb having its outer end terminating flush with the outer end of said neck, a rigid nipple of substantially conical design applied to the end of said neck and held frictionally in engagement therewith by the annular flange of said neck engaging the peripheral edge of said nipple, said nipple having a restricted bore terminating at its inner end in an enlarged cavity adapted to communicate with the bore of the aforesaid sleeve, a hollow conical valve member loosely disposed in said cavity and adapted to be seated on the outer end of said sleeve, the outer peripheral edge of said valve member being formed with



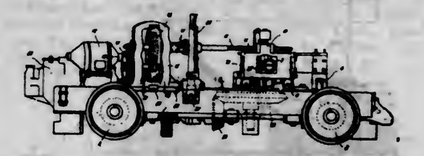
notches to afford passageways when the valve is disposed against the one wall of said cavity, and a tube mounted in the bore of said nipple and extending therethrough, as and for the purposes described.

1,576,129. DIRIGIBLE HEADLIGHT. HERWIN S. BANHOLZER and JOHN J. MONTAGUE, Bicknell, Ind. Filed July 7, 1925. Serial No. 41,985. 1 Claim. (Cl. 240—62.)



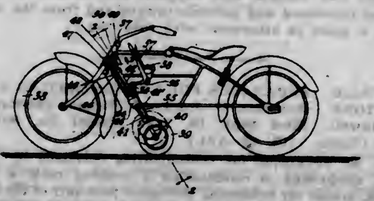
In a vehicle wherein the same includes a pair of fenders, a pair of arms, journal brackets formed on the arms, means connecting the arms, shafts journaled in the journal brackets, headlights on the upper ends of the shafts, a steering mechanism, and means connecting the steering mechanism with the shafts, a pair of plates having their lower ends pivoted to the fenders and their upper ends provided with arcuate slots, bolts extending from the fenders through the slots to hold the said plates in adjusted positions on the fenders, and a pair of straight parallel ears projecting from said plates to which said arms are pivoted.

1,576,130. MEANS FOR APPLYING ANTIOFFSET MATERIAL TO THE FRESHLY-PRINTED SIDES OF TRAVELING WEBS. HOWARD M. BARBER, Stonington, Conn., assignor to C. B. Cottrell & Sons Company, Stonington, Conn., a Corporation of Delaware. Filed Jan. 31, 1924. Serial No. 689,686. 5 Claims. (Cl. 101—416.)



1. In a rotary web printing press, means for printing on the traveling web, means for leading off the web with the freshly printed side down, and a device located under said web for spraying an anti-offset liquid upwardly against the freshly printed side of the web.

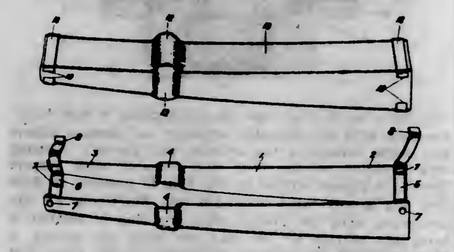
1,576,131. MECHANICAL TIME FUSE. JOHN S. BARNES, Rochester, N. Y. Filed Oct. 18, 1921. Serial No. 508,556. 15 Claims. (Cl. 102—86.) (Granted under the act of Mar. 3, 1883, 22 Stat. L., 625.)



1. In a mechanical time fuse, including a fuse body; provided with an explosive chamber, an annular groove and ducts connecting the chamber and groove; a timing ring mounted on the body and movable with respect thereto, a primer carried by the ring in position to flash into the groove when exploded and describing an arc concentric with the groove when the ring is rotated, a firing pin carried by the ring for firing the primer, a block mounted for rocking movement on the ring, said block having a cut-away portion, a collar on the pin and normally resting in the cut-away portion of the block, to retain the pin in unarmed position, a latch for normally holding the block against rocking movement, a centrifugal catch normally holding the latch, a motor connected to the fuse body and an arm moved by the motor and normally passing the latch without contact therewith and moved by centrifugal force to a position to contact the latch to free the block and permit the pin to fire the primer.

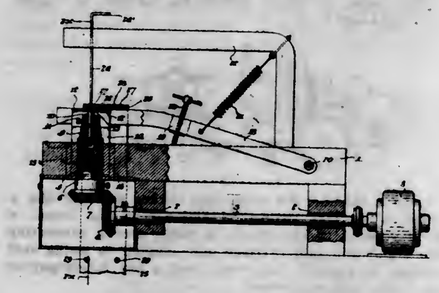
1,576,132. CLINKER EXTRACTOR. GEORGE M. BOOKMAN, Mallow, Va., assignor to Covington Machine Company, Inc., Covington, Va., a Corporation of Virginia. Filed Sept. 3, 1925. Serial No. 54,208. 5 Claims. (Cl. 214—33.)

1. In a machine for extracting clinker and the like, a frame, a carriage swingably mounted on the frame, a stand secured to the frame, a power means connecting said stand and said carriage and adapted to swing said carriage in opposite directions, and a key interengaging said frame and said stand.



1,576,133. BALANCING DEVICE FOR MOTOR CYCLES AND THE LIKE. LOUIS CHIGAR, New York, N. Y. Filed Sept. 5, 1924. Serial No. 736,178. 2 Claims. (Cl. 208—78.)

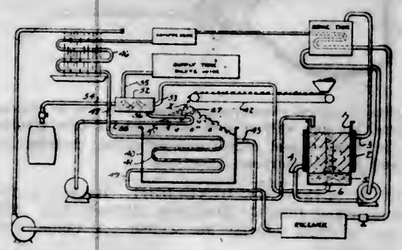
I. A balancing device comprising in connection with the frame and steering gear of a motorcycle, a supporting structure including a tube having a rod extension, a



fork carrying rollers said fork having a shank slidably carried in the tube and splined thereto, to revolve therewith, a pair of spaced arms on said steering gear for engaging the arms to cause the rollers to follow the general direction of the steering wheel and means to hold the rollers away from the ground when not in use.

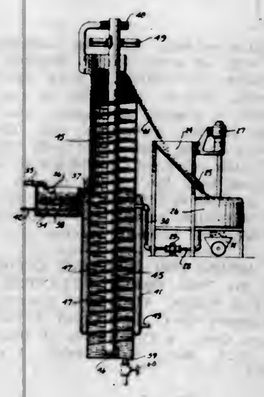
1,576,134. SPRING GAITER. THOMAS CORDINGLEY, Bristol, England, assignor to Mary Crease Sears, Boston, Mass. Filed Aug. 29, 1925. Serial No. 53,311. 12 Claims. (Cl. 267—37.)

1. In spring gaiters for the springs of motor and other vehicles, a U-shaped tray to engage under the spring, an outer sheath to engage over the spring and tray when in position on the spring and a longitudinal joint in the outer sheath, arranged along its underside and beneath the tray.



1,576,135. MECHANISM FOR DRILLING AND APPLYING BRAKE-BAND LININGS. CHALON E. CORSON and WILLIAM A. WRIGHT, Philadelphia, Pa., assignors to Wright & Corson Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Mar. 25, 1922. Serial No. 546,567. 12 Claims. (Cl. 77—5.)

1. The mechanism for perforating linings in registration with brake band apertures which comprises a work support forming a rest for a lining on a band, a revoluble tool beneath said support, one of said members being fulcrumed and movable toward and from the other, and a guide in alignment with said tool.

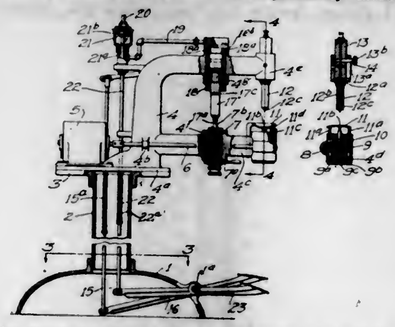


1,576,136. APPARATUS FOR CONCENTRATING SOLUTIONS. MAXWELL O. JOHNSON, Waipio, Territory of Hawaii. Filed Sept. 19, 1921. Serial No. 501,855. 5 Claims. (Cl. 62—124.)

5. An apparatus for concentrating solutions by freezing, comprising in combination a freezing tank, a brine tank, means for subjecting the upper part only of the freezing tank to the cooling action of the brine, a compressor, a forecooler, a cooling tank for the compressed refrigerant, containing ice from the freezing tank for further cooling the compressed refrigerant, means for expanding the cooled refrigerant and cooling the brine therewith, means at the lower part of the freezing tank for conducting

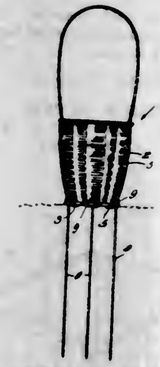
away the cold unfrozen solution, means for delivering dilute solution to the freezing tank, and a heat exchange device through which the dilute and concentrated solutions are passed, for pre-cooling the dilute solution.

1,576,137. APPARATUS FOR CONCENTRATING SOLUTIONS. MAXWELL O. JOHNSON, Waipio, Territory of Hawaii. Filed Sept. 19, 1921. Serial No. 501,856. 4 Claims. (Cl. 62—124.)



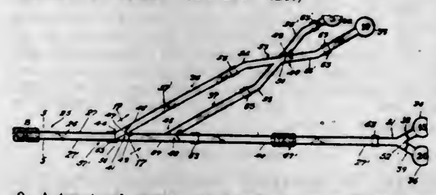
1. An apparatus for concentrating solutions by freezing, comprising a container for the solution, a container for a refrigerating liquid, one of the containers being arranged inside the other so that the two liquids are in heat interchanging relationship, means for continuously scraping ice from the walls of the solution container, means for centrifuging the ice and returning the separated solution to the solution container, a feed tank for supplying fresh dilute solution to the container, and means for circulating the refrigerating agent through the feed tank.

1,576,138. BRAKE-BAND-RELINING MACHINE. ARTHUR C. MCBRIDE, San Diego, Calif., assignor to Chalon E. Corson and William A. Wright. Filed Nov. 12, 1919. Serial No. 337,602. 20 Claims. Cl. 77—5.)



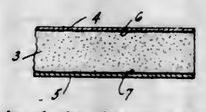
1. A device of the class described, including a combination revoluble drill and countersinking member, a

presser foot member reciprocally mounted in axial alinement with the same and in close proximity thereto, a



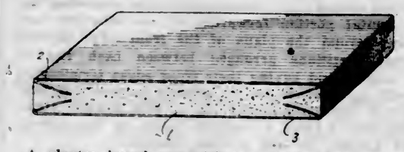
pilot member reciprocally and resiliently mounted in said presser foot member, and means for regulating the movement of said presser foot member.

1,576,139. FLOWER HOLDER. NELLY NELSON SCHNEIDER, Nauvoo, Ill. Filed Mar. 27, 1925. Serial No. 18,812. 1 Claim. (Cl. 47—41.)



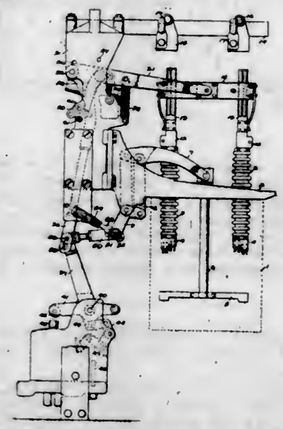
A flower holder comprising a basket, the bottom of said basket comprising a disk-like member, laterally extending ears formed on said disk at spaced intervals, each of said ears being provided with an opening, and a plurality of elongated anchoring pins extending through the openings in the respective laterally extending ears and adapted to enter the ground for supporting the basket in an upright position on the ground, and heads formed on the upper ends of the anchoring pins and engaging the upper face of the respective ears.

1,576,140. TOY TRACK. WILLIAM H. SCHNEIDER, Freeport, N. Y. Filed Sept. 11, 1925. Serial No. 55,665. 9 Claims. (Cl. 273—120.)



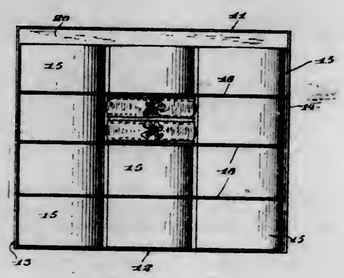
9. A toy track system composed of detachable sections including a section having a plurality of branches a switch pivoted at the junction of the branches of the branch section, means projecting from said switch into the open branch of said section in the path of an article passing into said branch whereby the passage of an article throws the switch, each section having means at one end to engage the end of the next succeeding section.

1,576,141. PLASTER BOARD. JOHN N. SCHUMACHER, Los Angeles, Calif. Filed Nov. 13, 1924. Serial No. 749,676. 2 Claims. (Cl. 154—45.9.)



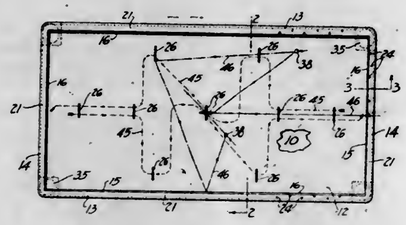
2 An article of the character described comprising a body of quick setting plaster interposed between pliable sheets slowly permeable to moisture, and laminations of retarded plaster disposed on the outer faces of said body and binding said sheets and body.

1,576,142. PLASTER BOARD. JOHN SCHUMACHER, Los Angeles, Calif. Original application filed Nov. 14, 1921, Serial No. 514,914. Divided and this application filed Apr. 13, 1925. Serial No. 22,583. 1 Claim. (Cl. 154—45.9.)



A plaster board comprising a plaster having covering sheets adhering to the outer faces thereof and folded back at an acute angle at the junctions of the side edges and faces of the board so as to cover the corner edges thereof, the extreme ends of the said sheets being folded into and embedded in the plaster so as to expose the plaster at the end faces for the full thickness of the board.

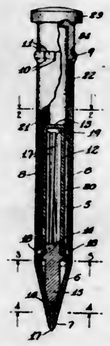
1,576,148. ELECTRIC SWITCH. CHARLES F. SCHWENNKER, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed June 17, 1924. Serial No. 720,086. 10 Claims. (Cl. 200—50.)



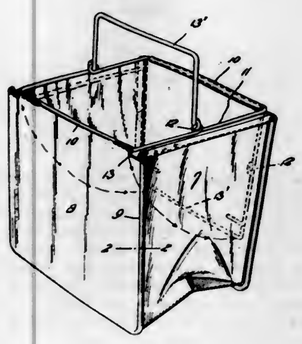
4. In combination, a main switch, fixed contact members secured to the terminals thereof, fixed contacts spaced from said contact members, and a movable member having contacts adapted to slide on the fixed contact members and to engage the spaced fixed contacts.

1,576,144. DISPLAY BOX. BARNEY SHAMAN, New York, N. Y. Filed Aug. 6, 1925. Serial No. 48,537. 2 Claims. (Cl. 211—28.)

1. A display device comprising an open front box-like structure, a plurality of article holders arranged in tiers therein, each holder being formed from an integral blank semi-circular in cross-section and presenting its bowed frontal portion forwardly of the structure and extending beyond the plane of the front edge thereof, horizontal partitions arranged between each tier of article holders and having their front edges terminating flush with said bowed portion of said holders and foldable means positioned at the top of said box-like structure adapted to exert a wedging action to the various tiers of holders for the purpose specified.



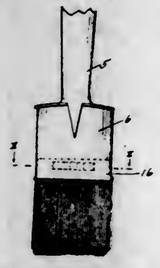
1,576,145. GAME TABLE. ALLEN H. SEARLE, Salt Lake City, Utah. Filed Apr. 3, 1923. Serial No. 629,614. 5 Claims. (Cl. 273—57.)



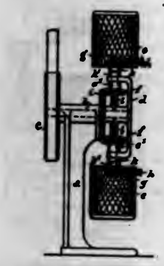
1. A game apparatus comprising a table structure having a plane surface, a coping projecting upwardly from the said surface, a resilient bead extending along the said coping, and a plurality of wickets having resilient properties, positioned in a predetermined arrangement on said table surface within the said coping, each wicket consisting of a core in an elastic jacket or skin.

1,576,146. PENCIL. BERNARD SHELDON, Keyport, N. J. Filed Sept. 27, 1923. Serial No. 665,117. 3 Claims. (Cl. 120—18.)

1. A pencil of the class described comprising a tubular body portion, a member rotatably mounted in connection with one end portion thereof, means for retaining said member in predetermined position with reference to said body, a lead feeding member in threaded engagement with said rotatable member and keyed to said body portion whereby the rotation of said first named member will move the second named member longitudinally of said body portion, said second named member being tubular in form and provided therein with a storage chamber for leads, and a plug controlling the admission to said chamber, said plug being provided at its free end with means for receiving and frictionally supporting a lead.



1,576,147. COLLAPSIBLE BUCKET. THOMAS LEO SHELL, Tulsa, Okla. Filed Mar. 3, 1925. Serial No. 12,830. 3 Claims. (Cl. 150—48.)



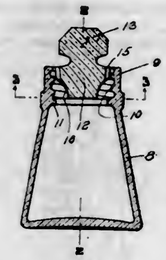
1. A bucket of the class described including a pair of relatively rigid sides, a strip of flexible material connecting the sides, the edges of the sides at the opening of the bucket being provided with sleeves, a U-shaped resilient frame having its intermediate portion revolvably mounted in one of the sleeves and its side provided with inwardly extending fingers engageable with the other sleeve for holding the receptacle in an extended position.

1,576,148. PAINTBRUSH. HARRY SHULMAN, New York, N. Y. Filed June 11, 1925. Serial No. 36,315. 2 Claims. (Cl. 15—192.)

1. A paintbrush comprising a split tubular ferrule, a locking member in said ferrule, said member comprising a bent metallic strip having a relatively long section extending across and secured to the contiguous edges of the ferrule, portions at opposite ends of said section extending at right angles from said section and to the opposite wall of the ferrule, said portions being secured to said opposite wall and bristles secured in and projecting from said ferrule.

1,576,149. PROCESS AND APPARATUS FOR THE MANUFACTURE OF HOLLOW OBJECTS OF CHOCOLATE. RICHARD SIEGERT, Dresden, Germany. Filed Dec. 24, 1924. Serial No. 757,957. 5 Claims. (Cl. 107—8.)

1. A process for the manufacture of hollow bodies of chocolate-mass which consists in partly filling double-moulds with liquid chocolate-mass, inserting said filled moulds in receptacles, imparting a planetary motion to said receptacles and imparting to the latter simultaneously with said motion a springing or jumping movement.

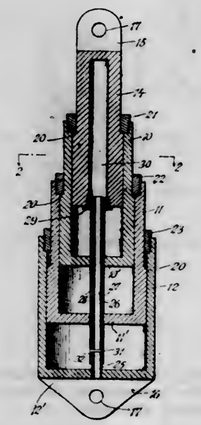


3. In an apparatus for the manufacture of hollow bodies of chocolate-mass, in combination with double-moulds partly filled chocolate-mass, of means for receiving said filled double-moulds, means for imparting a planetary motion to the moulds mentioned and means for imparting a springing or jumping movement to said molds during the planetary motion mentioned.

1,576,150. WINDSHIELD PANEL AND WEATHER SILL. EMORY GLENN SIMPSON and ALBERT HABERER, Detroit, Mich., assignors to Fisher Body Corporation, Detroit, Mich., a Corporation of New York. Filed Mar. 17, 1924. Serial No. 699,843. 4 Claims. (Cl. 296—93.)

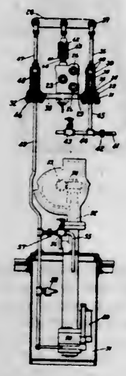
4. In windshield and window construction, the combination of a fence of deformable material having a hollow sealing portion and a metal windshield panel provided with an inverted V groove, the top of the V groove forming a support for the glass and the bottom of said V groove arranged to fit over the deformable fence for distorting the same.

1,576,151. SHAKER FOR SALT OR OTHER MATERIAL. EDWIN E. SLICK, Pittsburgh, Pa. Filed Apr. 25, 1925. Serial No. 25,778. 5 Claims. (Cl. 65—45.)



1. A shaker for salt or other material, comprising a hollow body having a base with a threaded opening in the end opposite said base and a plug threaded into said opening and provided with longitudinal channels or grooves which extend inwardly beyond the plug threads and form relatively short passages for discharging material directly from the hollow body when the shaker is inverted.

1,576,152. SHOCK ABSORBER. RUDOLPH C. G. STAATSOELS, Brooklyn, N. Y. Filed July 11, 1924. Serial No. 725,411. 5 Claims. (Cl. 267—65.)

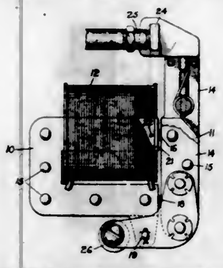


5. A shock absorber for automobiles comprising a plurality of vertically disposed cylinders fitting telescopically into one another, a plunger fitting into the top cylinder, a tube fixed at its lower end in the bottom of the lower cylinder, a sleeve surrounding said tube, said sleeve and tube extending upward through the bottoms of the upper cylinders, said sleeve being frictionally engaged at its upper end with the said plunger, a pin fixed in said sleeve and passing through short vertical slots in the

said tube to limit sliding movement of the sleeve on the tube, said sleeve and tube having rows of apertures spaced substantially throughout the length thereof, said

apertures being adapted to be moved into and out of registry with one another by sliding movement of the sleeve on the tube.

1,576,153. GOVERNING MECHANISM FOR PRIME MOVERS. REGINALD G. STANDERWICK, Marblehead, Mass., assignor to General Electric Company, a Corporation of New York. Filed Mar. 4, 1924. Serial No. 696,872. 8 Claims. (Cl. 264—14.)



1. The combination with a prime mover, a driven machine, and valve mechanism controlling the flow of actuating fluid to the prime mover, of means for regulating said valve mechanism comprising a fluid-actuated motor, a pilot valve, a lever connected to the pilot valve, a movable abutment connected to said lever, a conduit which conveys pressure from the driven machine, a conduit connecting the first named conduit to said movable abutment, and means defining passages of restricted area in the first-named conduit on opposite sides of the connection of the second named conduit therewith, one of such means being adjustable to vary the size of the passage.

1,576,154. SIGN HOLDER. SAUL STEINMAN, Shelton, Conn., assignor of one-half to Mathew Kuzak, Shelton, Conn. Filed Mar. 20, 1925. Serial No. 17,021. 3 Claims. (Cl. 40—146.)

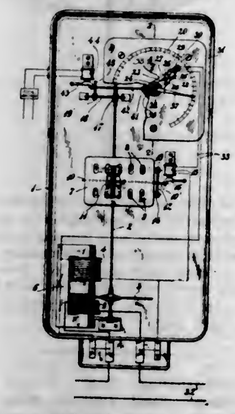
1. A sign holder comprising a vertically extensible standard made up of complemental sections provided at their outer ends with sleeves of polygonal cross section, the lower section being provided at its top with a head having slots, one of which slidably receives the upper section, a supporting prop having its upper end slidably positioned in the other slot in said head, and horizontally extensible sign engaging means carried by said sleeves.

1,576,155. ELECTROMAGNET. HARRY M. STEVENS, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed May 24, 1924. Serial No. 715,760. 7 Claims. (Cl. 175—338.)

1. An alternating current electromagnet comprising relatively fixed and movable cooperating magnetic members, characterized by the fact that said electromsgnet is provided with three triangularly spaced portions projecting from the cooperating pole faces of said members whereby to provide a three point bearing between said members when the electromagnet is energized.

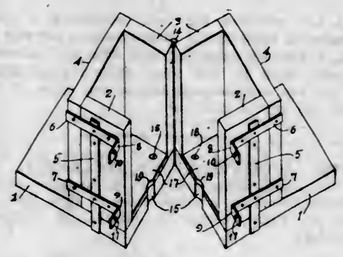
1,576,156. METHOD OF PERMANENTLY MARKING TIRE CASINGS. ALOIS P. SWOBODA, New York, N. Y. Original application filed Dec. 24, 1919, Serial No. 347,056. Divided and this application filed May 26, 1923. Serial No. 641,785. 3 Claims. (Cl. 18—61.)

1. The method of producing a tire casing having a distinctive character thereon which is of a color contrasting with the color of the casing, said method consisting of building up a tire carcass with independent



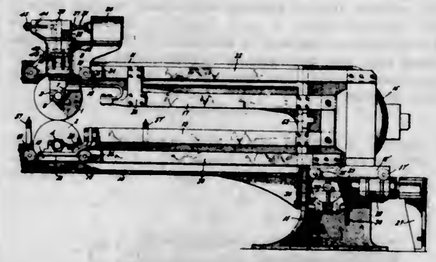
and superposed thicknesses of unvulcanized rubber which extend substantially around the entire periphery of the carcass, and vulcanizing the tire carcass whereby the two superposed thicknesses of differently colored rubber are joined together in a homogeneous mass, portions of the outer thickness of rubber being removed to provide openings of distinctive configurations through which corresponding portions of the inner thickness of rubber are displayed.

1,576,157. AUTOMOBILE LICENSE SIGN. CHARLES F. TAYLOR, Fortuna, Calif. Filed Feb. 21, 1922. Serial No. 538,178. 1 Claim. (Cl. 40—133.)



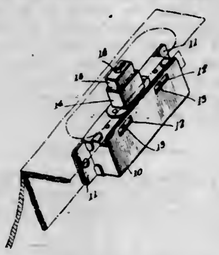
An illuminated license sign holder comprising an elongated parallelepiped casing, said casing including a door which forms the forward side thereof, said door being hinged to the bottom wall of the casing, and when in closed position adapted to bear at its inner side against the forward edges of the bottom, top and end walls of said casing, said door being formed with a plurality of openings of predetermined form, corresponding to the shape of suitable numerals and indicia, a glass plate mounted on and against the inner side of the door, over the portion formed with said opening to provide a backing therefor, and a fastener having a pair of hinged members, one of which is fixed to the free edge portion of the door, at the central portion of the upper edge of said door, and the other hinged member adapted to swing over the top wall of the casing, and a screw carried by the last mentioned hinged member of the fastener adapted to threadably engage an opening in the top wall of the casing and draw the hinged member toward the casing and the door tightly against the forward edges of said casing.

1,576,158. EXCESS-REGISTERING METER. OTTO TEMPERLI, Zug, Switzerland, assignor to Landis & Gyr A.-G., Zug, Switzerland. Filed Oct. 30, 1923. Serial No. 671,817. 2 Claims. (Cl. 171—34.)



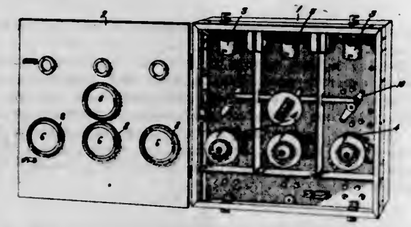
1. In an excess registering meter a spindle mounted for rotation, an element thereon, a core having a pressure coil and a current coil between which the said element is arranged, a pair of counter mechanisms, means to alternately operate said counter mechanisms including a shiftable element, a maximum time pointer, a spring to return the pointer to initial position, means including a shiftable element connecting said spindle to said pointer to cause the latter to be moved by the spindle, electrically operated means to control the last named shiftable element, electrically operated means to control the first named shiftable element and included in open circuit with the pressure coil, and a switch arranged for operation by the said pointer to close said circuit when said pointer reaches a predetermined position.

1,576,159. DEVICE FOR GREASING HOISTING ROPES OR CABLES. GEORGE TIMMERMAN, Staunton, Ill. Filed July 20, 1925. Serial No. 44,789. 1 Claim. (Cl. 184—15.)



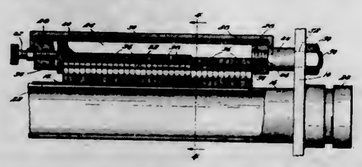
In a device of the character described, a container comprising sections hinged together having an open top and an opening in the bottom thereof for the passage of a cable, a cover to protect the base of said container and having an opening of smaller diameter than the opening in said base to prevent the escape of lubricant from the container, and means for clamping said sections of the container together, said container when clamped together about a cable adapted to receive a supply of lubricant.

1,576,160. LINE-WELDING MACHINE. HARRY W. TOBEY, Pittsfield, Mass., assignor to General Electric Company, a Corporation of New York. Filed Apr. 11, 1924. Serial No. 705,940. 16 Claims. (Cl. 219—4).



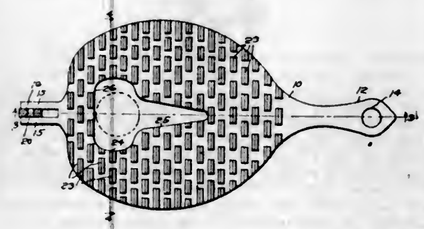
1. A line welding machine comprising an electrode disc for conducting welding current into the work, a bearing in which the disc is rotatably mounted, a carriage for supporting said bearing, means carried by said carriage for moving said bearing to force said disc into engagement with the work or disengage it from the work, an arm provided with guide ways, rollers on said carriage arranged to move in said guide ways to support and guide the carriage and transmit to said arm the reaction due to pressure upon the work and means for moving said carriage along said arm comprising a bar pivotally connected to said carriage.

1,576,161. BAG-FRAME LOCK. HUGO TUECKMANTEL, Newark, N. J., assignor to T & L Co., Inc., Newark, N. J., a Corporation of New Jersey. Filed Feb. 28, 1924. Serial No. 695,654. 5 Claims. (Cl. 70—2.)



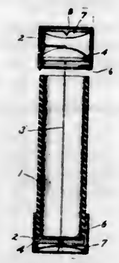
1. A key operated bag lock comprising a casing, a slide movable transversely therein, a bolt movable in said casing, a key for actuating said bolt, and an unbroken key guide fixed in said slide extending longitudinally from the key entrance opening to the plane of application of the key to said bolt.

1,576,162. HIGH-FREQUENCY APPARATUS. ARTHUR F. VAN DYCK, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Mar. 31, 1922. Serial No. 548,481. 8 Claims. (Cl. 250—14.)



1. The combination in an apparatus for controlling high frequency currents of a casing, control devices within said casing and mounted thereon, handles for adjusting said control devices, a door for said casing having openings therein through which said handles project, said openings being of such size that the door can be opened without removal of the handles, and means associated with said handles and located inside said door for completely closing the openings in the door when the door is closed.

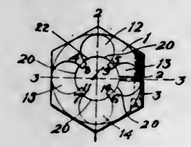
1,576,163. VACUUM SEAL FOR VACUUM CLOTH HYDROEXTRACTORS. GEORGE W. VOELKER, Woonsocket, R. I. Filed Dec. 5, 1924. Serial No. 754,167. 9 Claims. (Cl. 34—48.)



1. In a machine for extracting liquid from cloth or other material, in combination, a suction pump, a hollow member connected to said suction pump having a longitudinal slot on the upper surface thereof, means for drawing the cloth spread out endwise over the slot in said member and combined gravity and atmospheric pressure actuated means for automatically sealing the vacuum between the ends of the slot in the slotted member and the selvages of the cloth, comprising a series of metallic annular discs mounted contiguously to each other to have individual up and down relative movement on frames attached to the machine over each end of the slot in the slotted member so as to have the peripheries of some of said disks rest on the cloth for a distance near the end over the selvage edge thereof only and the peripheries of other adjacent disks rest for a distance beyond over the entire adjacent ends of the slotted member unsealed by the cloth.

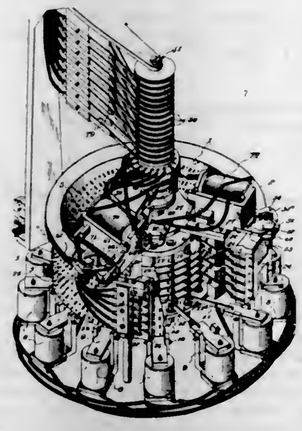
1,576,164. MEAT TENDERER. JAMES C. WAFFORD, Charlotte, N. C. Filed Nov. 24, 1925. Serial No. 71,046. 3 Claims. (Cl. 17—28.)

1. A meat tenderer comprising a pair of pivotally connected plate members, one plate member having inwardly projecting teeth, the plate member having the teeth being provided with a combined round bone and T-bone receiving opening.



1,576,165. ELECTRIC FUSE AND METHOD OF MAKING SAME. ALBERT F. WEISE, Bridgeport, Conn., assignor to General Electric Company, a Corporation of New York. Filed Sept. 10, 1924. Serial No. 736,982. 5 Claims. (Cl. 200—132.)

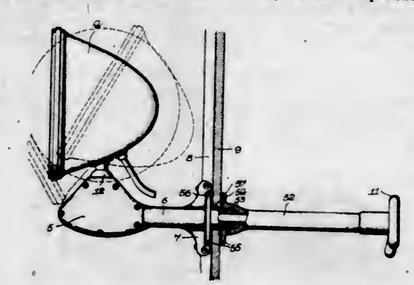
1. An electric fuse comprising an insulating housing provided with terminal caps having elastic side walls embracing the end portions of said housing, a link of fusible metal within said housing and mechanically connected at its ends to said caps, said mechanical connection being made by a soft metal disk expanded within said caps so as to bind the link ends to and initially tension the side walls of said caps.



1,576,166. HEXAGONAL DIE. FRANK O. WELLS, Greenfield, Mass. Filed July 3, 1924. Serial No. 723,894. 7 Claims. (Cl. 10—118.)

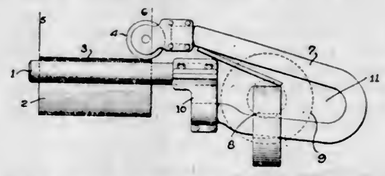
1. A thread forming die comprising a one piece member which is formed with an opening therethrough with radially arranged projections extending into the opening and having thread forming teeth on the projections and a plurality of cone shaped recesses extending from the outer opposite surfaces of the die and terminating in an

arc shaped surface or edge back of the thread forming teeth or cutting edges of the lands and in a plane midway between the opposite faces.



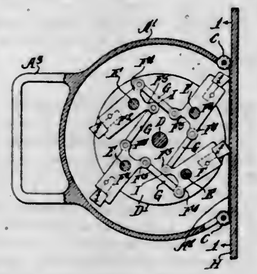
1,576,167. STORING TRANSMITTER. EVAN R. WHEELER, North Plainfield, N. J., and ROBERT F. DIRKES, Jamaica, N. Y., assignors to The Western Union Telegraph Company, New York, N. Y., a Corporation of New York. Filed May 9, 1925. Serial No. 29,158. 9 Claims. (Cl. 178—17.5.)

1. In a telegraph system, a signal storing transmitter, comprising a stationary drum or cylinder, a series of sets or groups of permutation elements positioned upon axial planes of the cylinder and slidably mounted in radial apertures therein, a setting-up or selecting carrier rotatable about the axis of said cylinder, selectable members mounted on said carrier for successive engagement with said sets of elements, a transmitting carrier rotatable axially of said cylinder, and circuit closers positioned on said transmitting carrier for engagement successively with the selected elements.



1,576,168. SPOTLAMP. CAMERON A. WHITSETT, Chicago, Ill., assignor to Fyrac Manufacturing Company, Rockford, Ill., a Corporation of Illinois. Filed Aug. 15, 1921. Serial No. 492,275. 25 Claims. (Cl. 240—61.)

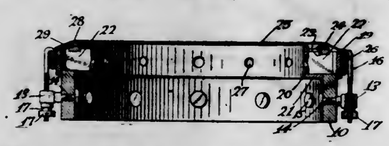
1. In combination, a rotatable and rockable stem, a lamp mounted on said stem, an operating shaft extending substantially at right angles to said stem, and motion transmitting means connecting said stem with said shaft and comprising a pair of cooperating gears whereby said shaft is operative to axially rotate said stem through said gears, said motion transmitting means also comprising mechanism whereby axial reciprocation



of said shaft is operative to rock said stem in a substantially vertical plane extending approximately parallel with said shaft.

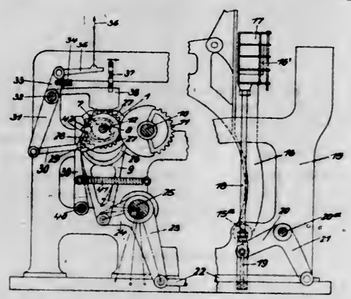
1,576,169. METHOD OF ELECTRIC WELDING. HERBERT ADDISON WOOFTER, Swampscott, Mass., assignor to Thomson Electric Welding Company, Lynn, Mass., a Corporation of Massachusetts. Filed Feb. 3, 1925. Serial No. 6,515. 3 Claims. (Cl. 219—10.)

1. In an electric seam welding apparatus wherein a movable electrode has a flexible terminal of the secondary directly attached to and supplying current to said electrode, the method of compensating for the increased absorption of power by the work as the length of seam increases consisting in automatically decreasing the air gap between a portion of said flexible secondary and the transformer core to automatically produce a practically constant welding current in all positions of said electrode.



1,576,170. PLATE-SCRAPING MACHINE. HUBERT F. YELDING, Philadelphia, Pa., assignor to The United States Metallic Packing Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Jan. 11, 1924. Serial No. 685,639. 3 Claims. (Cl. 29—81.)

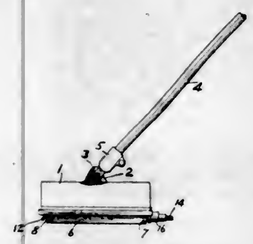
1. A plate scraping machine having in combination a rotating tool carrier, a multiple series of symmetrically disposed pivots carried thereby, a series of tools carried by said pivots and means connecting said tools in series



as described and so that an angular movement of a tool on its pivot will communicate angular movement in a reverse direction to the adjacent tools whereby the tools are brought successively into contact with the plate to be scraped and whereby each tool is held pressed against the work while an adjacent tool is in contact therewith.

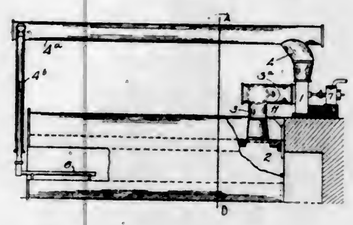
1,576,171. BANJO-HEAD SUPPORTS. VICTOR E. ADLER, Los Angeles, Calif. Filed Apr. 13, 1925. Serial No. 22,756. 12 Claims. (Cl. 84—272.)

1. In a banjo, an annular body and a head supporting device supported upon said body comprising an outside ring, an inside ring, webs connecting said rings and resting upon the top of said body, a supporting ring resting upon the top of said webs, and a head supported upon said supporting ring.



1,576,172. SHUTTLE-BOX-SELECTING MECHANISM FOR SHUTTLE BOXES WITH MORE THAN TWO COMPARTMENTS. WALTHER BOSHECK, Plauen, Germany, assignor to the Firm: Vogtlandische Maschinenfabrik (vormals: J. C. & H. Dietrich) Aktiengesellschaft, Plauen, Germany. Filed Mar. 19, 1924. Serial No. 700,239½. 7 Claims. (Cl. 139—178.)

1. A shuttle change-box mechanism for looms, comprising in combination, a lifting-wheel, a member located in said wheel and having two oppositely located teeth forming catch-teeth, and a cam disk adapted to be turned alternately forward and rearward, and means adapted to turn said cam-disk back into its initial position after the completion of every cycle of operations, substantially as set forth.

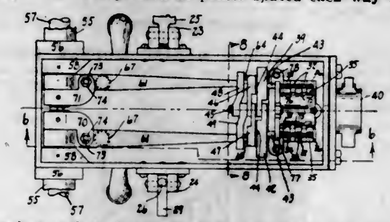


1,576,173. FLOOR WAXER AND POLISHER. WILLIAM F. H. BRAUN and EVELYN P. BRAUN, Wynnewood, Pa., assignors to W. F. Harold Braun and Thomas R. Powell, trading as The Dixie Company, Lansdowne, Pa. Filed Aug. 1, 1925. Serial No. 47,414. 2 Claims. (Cl. 15—118.)

1. A floor waxer and polisher comprising a hollow housing of the general form of a semi-cylinder provided with ears and a stop, a handle pivotally connected with the ears and co-operating with the stop, a generally rectangular open ended pad carrier adapted to turn in the housing and to be connected and disconnected therewith, end bars movable in respect to the ends of the pad carrier and adapted to afford clearance at their sides and of which one is provided with a pivot element adapted for co-operation with a pivot element provided on one end wall of the housing and of which the other is provided with a keyway, a spring pressed turnable and endwise movable key provided at the other end wall of the housing and adapted to detachably engage the key-

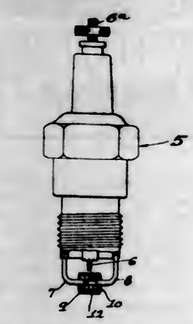
way and lock mechanism for the key comprising a projection on the key and a pair of confronting angularly disposed notches adapted to co-operate with the projection and provided at the last mentioned end wall of the housing.

1,576,174. FURNACE. THOMAS WILLIAM CASHMAN, London, England. Filed Nov. 8, 1923. Serial No. 673,617. 1 Claim. (Cl. 110—49.)



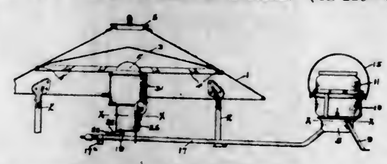
Means for effecting smoke consumption in a battery of furnaces whereby the whole smoke of any of the furnaces can be passed through the fire of any other of the furnaces, comprising in combination with furnace flues which lead directly to the chimney and are provided with dampers, a transverse conduit, short vertical pipes connecting the flue of each furnace to said transverse conduit, a common shaft longitudinally disposed above said furnaces and connected to said transverse conduit, a transverse branch pipe connected to said shaft, down pipes leading from said branch pipe to beneath the grates of the furnaces, means for controlling the entrances of said vertical pipes and the exits of said down pipes, and means for forcing flue gases through the pipe system, the whole system of pipes, conduits and shaft being external of the furnaces and the boilers associated therewith, substantially as described.

1,576,175. RAIL-CONTACT CIRCUIT CONTROLLER. JAMES E. CLOUGH, La Grange, and WILSON H. STILWELL and ARTHUR R. FUGINA, Louisville, Ky. Filed Oct. 11, 1924. Serial No. 743,102. 2 Claims. (Cl. 246—251.)



1. In apparatus as characterized, a box, contacts therein, a movable segment, a crank, a pair of pivoted counterweights, a pin extending from said counterweights engaging said crank, a pair of slotted selector links secured to said counterweights, secondary selector levers, selector tips, secured to said secondary selector levers, primary selector levers to engage respectively with opposite sec-

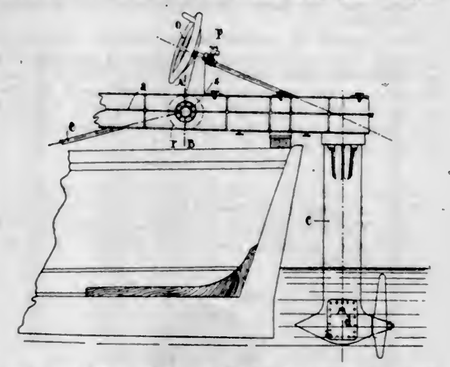
ondary levers to turn the segment on its axis, shafts to the inner ends of which said levers are secured, a rail adapted to be depressed at points spaced each way from



the box and a dog secured on the outer end of each shaft, a toe of the dog bearing on the rail in proximity to the depressible point and opposing movement of the levers except when the rail is depressed.

1,576,176. SPARK PLUG. HARMON E. COREY, Los Angeles, Calif. Filed Mar. 10, 1924. Serial No. 698,043. 1 Claim. (Cl. 123—169.)

A spark plug having a central electrode, a pair of electrodes constituting a second electrode disposed beneath said central electrode and having opposed ends, a sleeve of insulating material mounted upon said opposed ends, and a sleeve of conducting material about said sleeve of insulating material, said conducting material being held in spaced relation to said central electrode.

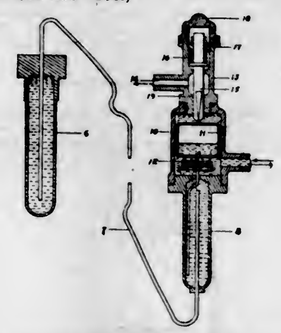


1,576,177. BROODER. GEORGE CUOLEY, Springfield, Ohio, assignor to The Buckeye Incubator Company, Springfield, Ohio, a Corporation of Ohio. Filed June 25, 1923. Serial No. 647,630. 1 Claim. (Cl. 119—32.)

The combination with a canopy for a brooder, of a heat conveyor plate in said canopy with peripheral contact therewith, whereby heat conveyed by the plate will be transmitted to the canopy and carried thereby to its outer extremities, and exit ports in said plate and canopy for the escape of foul gases.

1,576,178. REMOVABLE PROPELLING MECHANISM FOR BOATS. AUGUSTE MARIE CHARLES DE CORTA, Paris, France. Filed Feb. 3, 1925. Serial No. 6,665. 8 Claims. (Cl. 115—17.)

1. Propelling mechanism for boats, comprising a cradle adapted to be secured to a boat; a propeller unit supported upon the cradle and adapted to be tilted about a horizontal axis into and out of the water and to travel

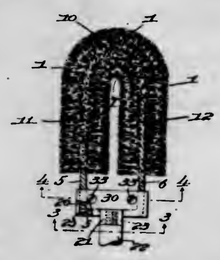


bodily lengthwise of the cradle; and a connecting device for coupling the propeller unit with the engine of the boat to be driven therefrom.

1,576,179. PROCESS OF MODIFYING IGNITION TEMPERATURE, ETC., OF CARBONACEOUS MATERIALS AND SUCH MATERIALS. IRA H. DERBY and CARLETON B. EDWARDS, Indianapolis, Ind., assignors to Peter C. Reilly, Indianapolis, Ind. Filed Aug. 11, 1923. Serial No. 656,914. 25 Claims. (Cl. 44—1.)

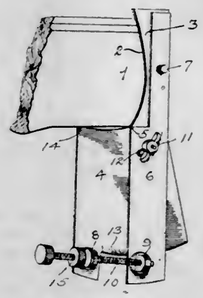
1. A new article of manufacture having a relatively low ignition temperature and a relatively high burning rate comprising a carbonized material and a substance containing a metal which catalyzes the combustion.

1,576,180. THERMOSTAT. EUGENE ARSÈNE DIFFINGER, Paris, France, assignor to Etablissements P. Colombier Fils, Paris, France. Original application filed Aug. 18, 1923, Serial No. 658,138. Divided and this application filed May 2, 1924. Serial No. 710,671. 2 Claims. (Cl. 236—100.)



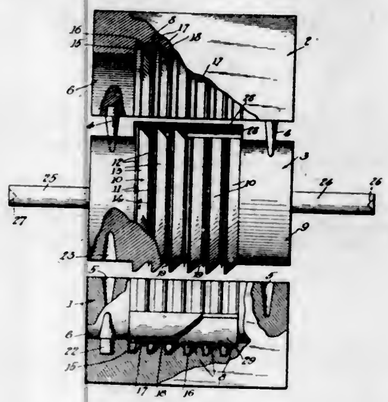
1. In a thermostatic regulator for the control of the flow of liquids, the combination of the following elements; a container provided with a liquid adapted to be vaporized; a second container provided with mercury; a pipe connection between the said two containers; a chamber provided with an inlet and an outlet; a float within said chamber; a pipe connection between the mercury in the said second container and the said float; a conduit connected with the said chamber and provided with an outlet; and a piston mounted in the said conduit and having a groove in its lower end, the said piston being in engagement with the said float and adapted to move therewith.

1,576,181. METHOD OF MANUFACTURING LINOLEUM. GEORG DUBSKY, Lobositz, Czechoslovakia. Filed July 14, 1925. Serial No. 43,614. 1 Claim. (Cl. 106—7.)



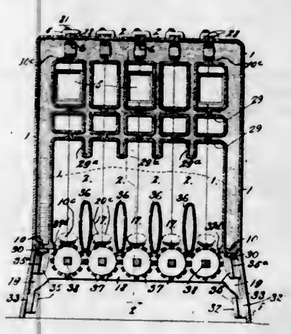
The method of manufacturing linoleum comprising partially oxidizing a drying oil by heating and injecting air into the same until it gelatinizes, adding filling material to the same, injecting air into said mixture at an elevated temperature while continually agitating the same to gently and rapidly complete the oxidation of the linseed oil.

1,576,182. BRUSH. EDWARD F. FLETCHER, Worcester, Mass., assignor to Worcester Brush and Scraper Company, Worcester, Mass., a Corporation of Massachusetts. Filed Apr. 5, 1924. Serial No. 704,515. 1 Claim. (Cl. 15—206.)



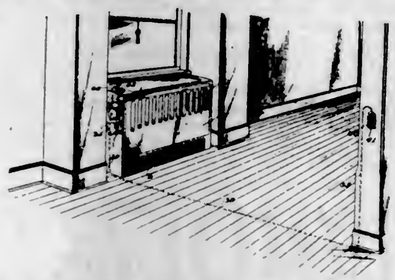
A metallic brush for use on boilers, furnaces, iron work and the like, comprising a twisted bristle carrying core of substantially U-shaped form, the terminal portions of the legs of the core being bent inwardly at right angles toward each other into alinement, a holding and locking clamp for said alined members, comprising a pair of rectangular metallic blocks, one of said blocks having formed therein a substantially U-shaped groove and having a threaded handle receiving device formed integral therewith, the second block being provided with substantially U-shaped grooves cooperating with the U-shaped groove in the first block, and together acting as a clamp for the wire elements, and adjustable and removable means extending through said blocks and near each end thereof for holding said blocks in close association.

1,576,183. HEEL GAUGE. WILLIAM FOLLET, Dayton, Ohio, assignor to The Crawford, McGregor and Canby Company, Dayton, Ohio, a Corporation of Ohio. Filed June 20, 1921. Serial No. 478,952. 10 Claims. (Cl. 33—4.)



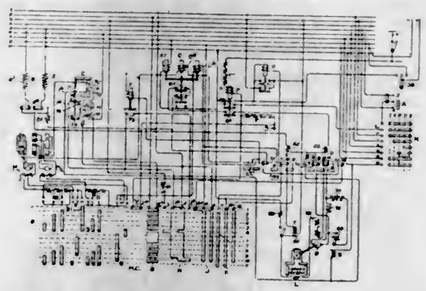
2. In a heel gauge for shoe lasts, a supporting member engageable with a predetermined portion of the last to be gauged, and an arcuate template carried thereby and adjustable to various positions angular to said member to vary the pitch of the template curve with the supporting member.

1,576,184. MOLD FOR MAKING RUBBER GOODS. HAROLD A. FREEMAN, Los Angeles, Calif. Filed Apr. 10, 1924. Serial No. 705,539. 3 Claims. (Cl. 18—35.)



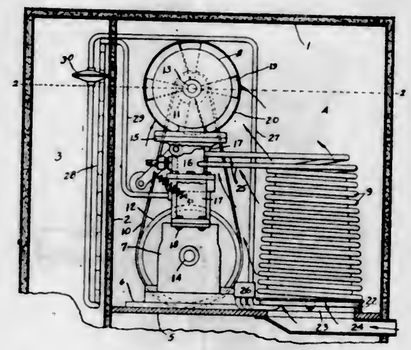
1. A mold for forming and vulcanizing rubber goods comprising means forming annular pockets, a circular core having flanges extending into the pockets, the pockets being shaped to form the outer side of the articles and the core being shaped to form the inner side of the articles, the pockets being side by side so as to produce a plurality of the articles surrounding the core, and adapted to be separated.

1,576,185. STEAM AND HOT-WATER BOILER. IRWIN J. FRENCH, Pittsburgh, Pa., assignor of one-half to Albert C. Good, Wilkinsburg, Pa. Filed Dec. 12, 1922. Serial No. 606,368. 2 Claims. (Cl. 122—223.)



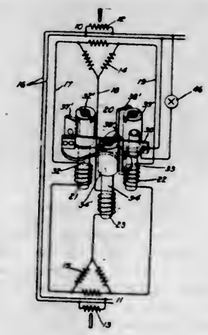
1. A boiler composed of end and intermediate sections fitted together side by side and enclosing a fire box, surrounded top, sides and ends by a water space, a base and grate structure over which said sections set, said base and grate structure including cylindrical-cage grate elements extending from front to back with their axes substantially aligning with the joints between said sections, said cages projecting up above the bottom plane of said sections, vertically elongated water tubes extending from the front to the back of said intermediate sections through the fire box and communicating with said water spaces, said tubes projecting between said adjacent pairs of cylindrical-cage grate elements and extending below the level of the top of said grate elements into proximity with the same.

1,576,186. THERMOSTATICALLY-OPERATED RADIATOR CASING. WESTON M. FULTON, Knoxville, Tenn., assignor to The Fulton Company, Knoxville, Tenn., a Corporation of Maine. Filed Feb. 11, 1921. Serial No. 444,224. 16 Claims. (Cl. 236—38.)



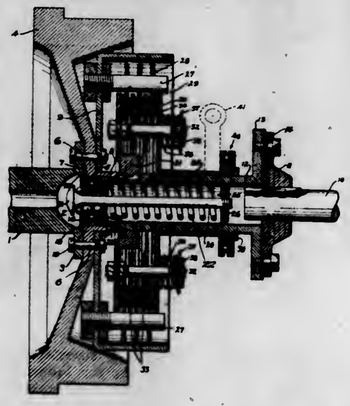
1. In combination with a radiator casing provided with means for controlling the flow of air therethrough, means for operating said controlling means including a thermostat comprising a motor element in said casing where it is maintained by the radiator at a temperature above that in the space to be heated, said motor element being operatively connected to said controlling means, and a container for a thermosensitive fluid in communication with said motor element and positioned exteriorly of said casing where it is subjected to the temperature of the space to be heated.

1,576,187. SYSTEM OF ELECTRIC-MOTOR CONTROL. HAMMOND C. HASTINGS and EDWARD B. TUPPER, Rugby, England, assignors to General Electric Company, a Corporation of New York. Filed Oct. 11, 1924. Serial No. 743,106. 4 Claims. (Cl. 172—179.)



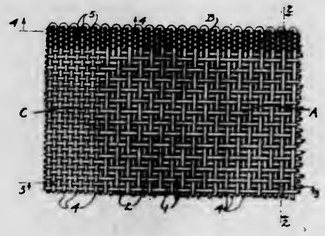
2. In combination, a main controller arranged to be advanced step by step for starting electric motors a current limit device for causing the step by step advance of the main controller to be normally under the control of the motor current, a multi-position manually operated master controller for cooperating with said current limit device to determine at will the limit to which said main controller is automatically advanced under the control of said device, and means whereby said main controller is caused to advance step by step independently of the motor current by advancing the said master controller to a definite position and returning the master controller to a preceding position.

1,576,188. REFRIGERATING APPARATUS. DELOS P. HEATH, Detroit, Mich. Filed Mar. 6, 1924. Serial No. 697,182. 4 Claims. (Cl. 62—116.)



3. In a refrigerating apparatus, a chamber having an air inlet and an air outlet, means for inducing a flow of air through said chamber from said inlet to said outlet, and a refrigerant condenser within said chamber in close proximity to said inlet having the form of a coiled pipe with substantially coaxial convolutions, and having the space within said convolutions substantially registering with said inlet, whereby the incoming air flows directly axially into and through said convolutions, and is sufficiently confined thereby to insure its distribution to all of said convolutions.

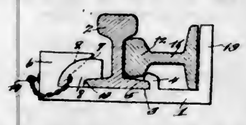
1,576,189. SYSTEM FOR THE TRANSMISSION OF ANGULAR MOTION. EDWARD M. HEWLETT and WALDO W. WILLARD, Schenectady, N. Y., assignors to General Electric Company, a Corporation of New York. Filed May 12, 1922. Serial No. 560,512. 7 Claims. (Cl. 177—337.)



1. A system for the transmission of angular motion comprising an electrical transmitting device, an electrical receiving device responsive to movement of said transmitting device, electrical connections between said devices in which currents are set up upon angular disagreement between them, and indicating means actuated by the combined effects of said currents in such manner as to be operated upon the occurrence of a predetermined maximum current in any one of said connections.

1,576,190. CLUTCH MECHANISM. HARRY H. JACKSON, Los Angeles, Calif., assignor of one-fourth to James V. Baldwin, one-fourth to Andrew E. Baldwin, and one-fourth to Bernard H. Sonntag, all of Los Angeles, Calif. Filed Aug. 11, 1924. Serial No. 731,337. 13 Claims. (Cl. 192—69.)

8. In clutch mechanism, a driving shaft, a driven shaft, a cone clutch fly wheel secured to said driving shaft, and disc clutch mechanism interposed between said fly wheel and said driven shaft and having one end thereof fixed to said fly wheel.

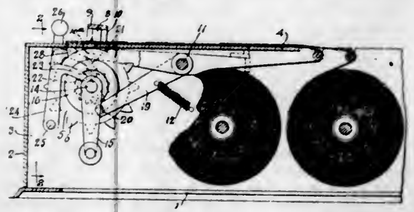


1,576,191. BAG, WOVEN FABRIC, AND METHOD OF MAKING THEM. WILLIAM O. JELLEMS, Passaic, N. J., assignor to Brighton Mills, a Corporation of New Jersey. Filed July 24, 1923. Serial No. 653,539. 6 Claims. (Cl. 139—389.)

1. A tubular fabric comprising a portion having two sets of warp yarns, a part of the filler yarns being interwoven with one set of warp yarns and another part of the filler yarns being interwoven with the other set of warp yarns to form a tubular part, and a portion at the side thereof wherein the warp yarns are relatively fine, and all said filler yarns are interwoven with said relatively fine warp yarns to constitute a hard and dense fin.

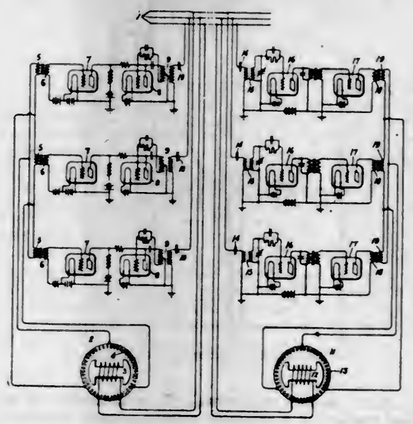
1,576,192. HOLDING CHAIR FOR RAILS. FRANK JENNINGS, Winslow, Ind. Filed Oct. 16, 1923. Serial No. 668,816. 5 Claims. (Cl. 238—10.)

1. In a rail holding device, a chair provided with a seat, an upright rail disposed with its base engaging the seat, means rising from the seat and overlying one side of the base of the upright rail, said chair having a wall overlying the opposite side of the base of the upright rail, a wedge key engaging between the overlying wall and the base of the upright rail, a rail section



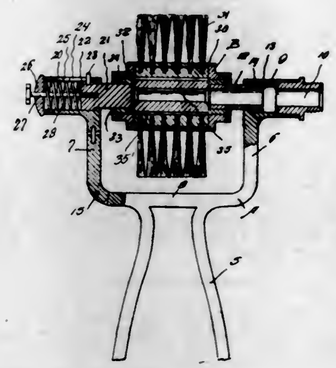
constituting a track rail retaining element disposed whereby its ball may engage with the upright track rail, and means for retaining the rail section in position.

1,576,193. LICENSE-PLATE HOLDER. PETER JOHN, Milwaukee, Wis. Filed Oct. 17, 1925. Serial No. 63,019. 1 Claim. (Cl. 40—133.)



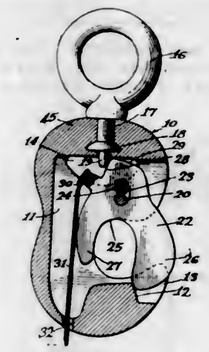
The combination of a box-like member, lamps carried within said member, a cover hingedly mounted upon said member, brackets carried by said member and said cover, screws passing through said brackets and drawing said cover tightly against said member, said cover having a cutaway portion, a transparent plate carried rearwardly of said cutaway portion, clamping means for holding said plate in position, said cover having a flange spaced inwardly from the body of said cover, a license plate positioned between said flange and the body of said cover and having apertures therethrough forming the insignia of said license plate, lugs carried by the lower portion of said license plate, corresponding lugs carried by said box-like body portion and screws passing through said last mentioned lugs, and tending to draw them towards each other.

1,576,194. AUTOGRAPHIC REGISTER. ARTHUR A. JOHNSON, Bridgeport, Conn., assignor to The Egry Register Company, Dayton, Ohio, a Corporation of Ohio. Filed Feb. 9, 1924. Serial No. 691,788. 6 Claims. (Cl. 28—11.)



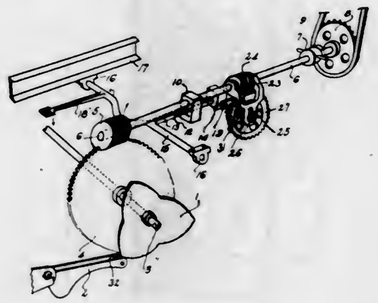
1. In an autographic register, the combination with a platen over which webs are fed, means for feeding said webs, a driver for said means, means for connecting said driver to said feeding means, means adapted to enter apertures arranged along the webs, and means controlled by said last mentioned means for holding said connecting means for the driver and feeding means in operative position so that the webs may be fed a predetermined distance.

1,576,195. SYSTEM FOR TRANSMITTING ANGULAR MOTION. LAWRENCE H. JUNKEN, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Sept. 14, 1925. Serial No. 56,143. 6 Claims. (Cl. 172—239.)



1. In combination, a transmission system, a transmitter and a receiver connected to said system, the transmitter and receiver each including a polyphase stator winding and a polarized rotary member, the connections between one of the stator windings and the transmission system including a plurality of carrier frequency current generators.

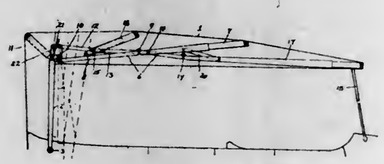
1,576,196. ROTARY HAIRBRUSH. RALPH ROY KEMMIS, El Paso, Tex. Filed May 7, 1925. Serial No. 28,713. 3 Claims. (Cl. 15—23.)



1. In a device of the class described, a frame, comprising a fixed side and a hinged side, means for holding the hinged side in parallelism with the fixed side, casings extending outwardly from the sides coaxially aligned when said sides are in parallelism, pintles in the casings, the pintle in the casing on the hinged side being slidable, means for holding the pintle which is slidable, normally extended, means for retracting the same and a brush adapted to be rotatably supported by said pintles.

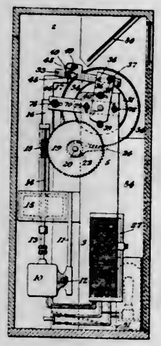
1,576,197. SAFETY HOOK. DAVID C. KUPPEL and WADE H. WILLIAMS, Los Angeles, Calif. Filed Feb. 6, 1925. Serial No. 7,268. 5 Claims. (Cl. 294—83.)

4. A safety hook comprising a hook-shaped body, a pin on said body, a member having a slot therethrough through which the pin extends, a spring disposed in said slot urging said member to assume a predetermined position with respect to said pin, means providing a shoulder on said member, and locking means on said body engageable on said shoulder for locking said member in its predetermined position, said member having a finger extending across the entrance to said hook when in said predetermined position, said member being so arranged that it may be caused to slide upon said pin against the action of said spring so as to disengage said shoulder from said locking means, and thus permit said finger to be swung outwardly from the entrance to said hook.



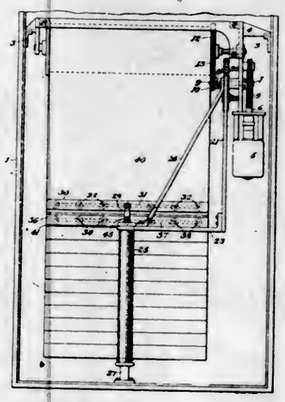
1,576,198. AUTOMATIC BUNCH BUILDER. JOHN F. LEHMAN, Birmingham, Ala., assignor, by mesne assignments, to Holcombe Textile Equipment Co. Inc., Birmingham, Ala., a Corporation of Alabama. Filed Apr. 5, 1924. Serial No. 704,505. 7 Claims. (Cl. 242—43.7.)

1. A bunch building mechanism for spinning frames having a main builder cam, a drive therefor adapted to be interrupted to free the builder cam, and a pitman, which, responsive to the weight of the ring rail, will engage and move the cam until it engages a low point



thereof in combination with bunch building means automatically operative on starting up the frame to repeatedly free the builder cam after a predetermined partial operation of the pitman until the desired bunch has been built on the feeler wood of the quills on the ring rail.

1,576,199. TOP FOR VEHICLES AND THE LIKE. FRED K. LEWIS, Ashtabula, Ohio. Filed Nov. 15, 1920. Serial No. 424,077. 1 Claim. (Cl. 296—116.)



In a top for vehicles and the like, the combination of a single main support pivotally attached to the body of the vehicle and adapted to stand approximately vertical in the open position of the top, a rearwardly inclining supplemental bow pivotally attached to said support adjacent the upper end thereof, and disposed to form the upper rear corner of the top when opened, a forwardly extending articulated auxiliary bow also pivotally attached to said support, a second supplemental bow pivotally attached to the rear portion of said auxiliary bow, a link connecting said second supplemental bow with the forward portion of said auxiliary bow, a second link connecting said first-named link with said support, and another link operatively connecting said second link with said first supplemental bow, whereby all said bows are caused to move in unison towards and from said support.

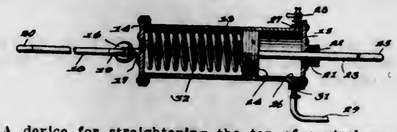
1,576,200. ADVERTISEMENT-DISPLAYING MECHANISM. LESLIE R. MCDONALD, Montreal, Quebec, Canada. Filed Dec. 21, 1922. Serial No. 608,208. 32 Claims. (Cl. 40—35.

1. In a display apparatus, the combination of a rotatable placard carrier, a series of flexible placards, having free ends of the normal thickness of the placards rolled around the carrier, roll keepers and means for adjusting the roll keepers radially of the carrier.

1,576,201. DISPLAY APPARATUS. LESLIE R. MCDONALD, Montreal, Quebec, Canada. Filed July 7, 1925. Serial No. 41,908. 12 Claims. (Cl. 40—35.)

1. In a display apparatus, the combination of rotating means and a rotatable placard carrier, a series of flexible placards each attached by one end thereto and partially rolled thereupon with their free ends depending therefrom, and auctional means for engaging and lifting the free end of a placard.

1,576,202. METHOD OF OPERATING MALE AND FEMALE MOLDS HAVING STRIPPER PLATES. WALTER MCLAREN, Dayton, Ohio, assignor to The McLaren Products Co., Dayton, Ohio, a Corporation of Ohio. Filed June 23, 1924. Serial No. 721,857. 3 Claims. (Cl. 107—54.)



1. The method of extracting pastry products from male and female molds having stripper plates on the male element, said method including the steps of detaching the stripper plate from the baked product before using the stripper plate to detach the baked product from the male element.

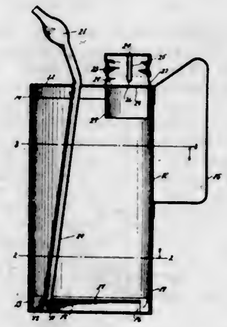
1,576,203. MOP. RINSAI MAEDA, Seattle, Wash. Filed Dec. 20, 1924. Serial No. 757,261. 1 Claim. (Cl. 15—229.)

A mop comprising a plurality of independent sections, of different lengths and composed of mop strands, bands on the several sections, holding the mop strands in place, a removable band securing the sections in superimposed relation with the ends of the sections in stepped relations.

1,576,204. PULLING JACK. ROBERT A. MAXEY, Williamson, W. Va. Filed Dec. 6, 1923. Serial No. 678,947. 1 Claim. (Cl. 153—32.)

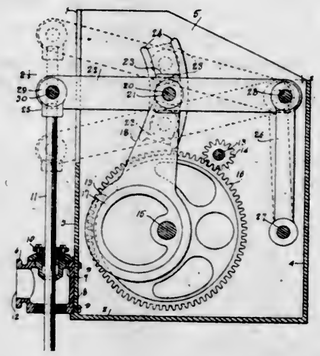
A device for straightening the top of a steel car including a cylinder presenting a stuffing box at one end and a ring at the other end, said cylinder being adapted to be disposed horizontally between the sides of the car, a pulling hook having one end secured to the said ring and its other end adapted to be hooked over the side of the car for anchoring the cylinder thereto, a plunger rod slidably supported in the said stuffing box and having its outer end provided with a hook adapted to be engaged with the opposite side of the car, a plunger at the inner end of the said plunger rod, a spring in expansion between the face of the plunger and the adjacent end of the cylinder and means for introducing fluid pressure into the cylinder and rearwardly of the plunger for moving the latter inwardly against the action of the said spring for drawing together the sides of the car.

1,576,205. CANDLE. MARY A. MERTENS, Syracuse, N. Y., assignor to Will & Baumer Candle Company Incorporated, Syracuse, N. Y., a Corporation of New York. Filed Oct. 22, 1925. Serial No. 64,131. 3 Claims. (Cl. 41—36.)



1. The herein described method of applying a decoration to candles consisting in applying to the body of the candle a lacquer, painting the desired design on said lacquered surface, then covering the painted design with an adhesive material to form a sticky surface, and while in its wet condition, applying pulverized crystals thereto, and allowing it to dry.

1,576,206. CUSHION-TIRE STRUCTURE. FRANK H. MEYER, Warren, Ohio. Filed Nov. 25, 1922. Serial No. 603,289. 8 Claims. (Cl. 152—1.)

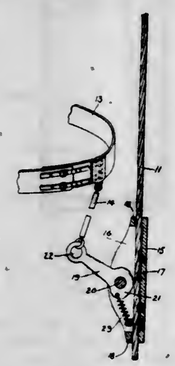


6. A cushion tire structure comprising a pair of side sections, having an arched cushion tire secured thereto, a spacing and locking member positioned between said sections, said member and sections being formed with complementary interlocking means to substantially prevent relative lateral and circumferential movement of the sections.

1,576,207. PRIMING CAN FOR STOVES. CLYDE W. MUMMERT, Chicago, Ill. Filed July 9, 1925. Serial No. 42,417. 2 Claims. (Cl. 221—98.)

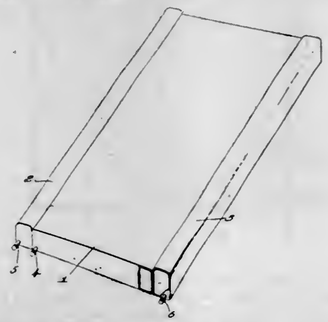
2. A measuring and dispensing device including a storage chamber, a handle at the back of the storage chamber, a measuring chamber at the bottom of the storage chamber and in communication therewith adjacent to the back, a delivery spout connected with the front of the measuring chamber, a filling opening in the top of the storage chamber, a neck surrounding said opening, a cap on the neck and having a small opening therein, and a vent tube extending downwardly from said cap with its upper end connected to the cap around the small opening and having a reduced bore in its lower end.

1,576,208. POWER HEAD. PHILIP A. MYERS, Ashland, Ohio, assignor to The F. E. Myers & Brother Company, Ashland, Ohio, a Corporation of Ohio. Filed Nov. 8, 1924. Serial No. 748,536. Renewed Jan. 15, 1926. 4 Claims. (Cl. 74—14.)



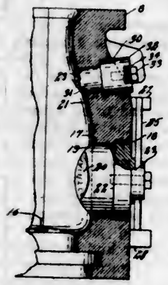
1. In a power head, the combination with a casing and power mechanism mounted therein comprising a shaft and pinion, a gear, and an arm actuated thereby, of a walking beam, compensating devices connecting the beam and casing, cam ways carried by the casing, a cam block in the ways and a connection between the block, the beam and the arm.

1,576,209. PROCESS FOR PRESERVING WOOD. HANS NEUBAUER, Kamenne Zehrovice, near Kladno, Czechoslovakia. Filed Sept. 17, 1925. Serial No. 57,020. 2 Claims. (Cl. 99—12.)



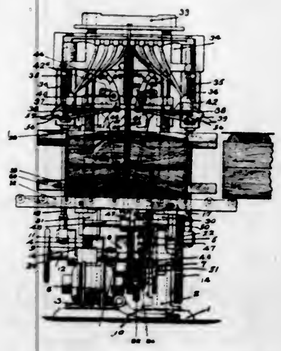
2. A process of preserving wood, comprising the steps of intimately mixing together cementitious material and an aqueous solution of rock salt, and applying the resultant product to the surface of the wood to form a thin, air-tight protective layer thereon.

1,576,210. SAFETY DEVICE FOR HIGH RIGGERS. NICHOLAS NICKSON, Vancouver, British Columbia, Canada. Filed May 23, 1925. Serial No. 32,416. 1 Claim. (Cl. 227—8.)



A safety device of the character described comprising a U-shaped clamp member, a lever having one end pivotally mounted between the sides of said member and formed to present a cam surface cooperating with an opposing portion of the member to clamp an interposed rope passing between the sides of said member, a spring secured at one end to said member and at the opposite end to the cam portion of the lever and arranged to normally hold the lever out of gripping engagement with the rope, a body encircling belt, and a connecting element having one extremity secured to said belt and the other extremity secured to an eye formed in the outer end of the lever.

1,576,211. MATTRESS. WALTER C. O'KANE, Durham, N. H. Filed May 15, 1925. Serial No. 30,566. 2 Claims. (Cl. 5—348.)

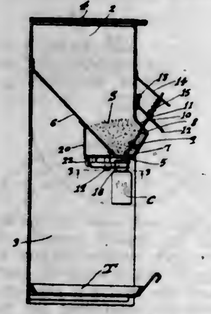


1. An air mattress comprising a unitary body supporting central portion adapted to be inflated to a pressure to permit free distribution of air therein, and separate relatively narrow edge portions adapted to be inflated to a higher pressure than the central portion to maintain the sides of the central portion against collapse.

1,576,212. MOLD MARKER MOUNTING. FRANK O'NEILL, Toledo, Ohio. Filed July 10, 1924. Serial No. 725,273. 7 Claims. (Cl. 49—70.)

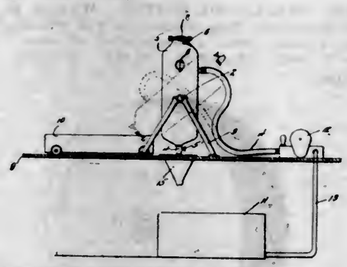
1. A mold having a side wall with an aperture therethrough, a marker for the mold produced article insertable from exterior of the mold directly into said aperture into aperture closing position, and yieldable locking means angularly shiftable over the mold side wall adjacent the aperture for flexing in anchoring the marker in aperture closing position.

1,576,213. COMBINED COVER PRESS AND NAILING MACHINE. GEORGE DAVID PARKER, Riverside, Calif. Filed Dec. 16, 1924. Serial No. 756,238. 35 Claims. (Cl. 1—10.)



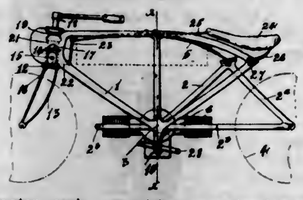
1. In a machine for the purpose described, means for clamping a cover in place on a box comprising a movable member, pivoted means carried at the opposite ends thereof for movement to engage the cover at two opposite ends to align the same, means for moving the movable member and the pivoted means with their engaged cover as a unit for pressing the said engaged ends into contact with the box, and means for nailing the said positioned ends of the cover to the box.

1,576,214. MAGAZINE. JOHN A. PASKAL, Los Angeles, Calif. Filed Dec. 13, 1923. Serial No. 680,428. 2 Claims. (Cl. 226—126.)



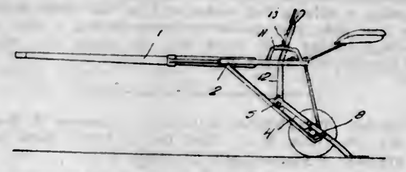
1. In combination with a dispensing magazine having a discharge opening in its bottom portion, a receiver hold-

ing means including a pair of opposed levers having jaw portions and having curved arms concentric to the respective pivots of the levers, a bearing for each curved arm,



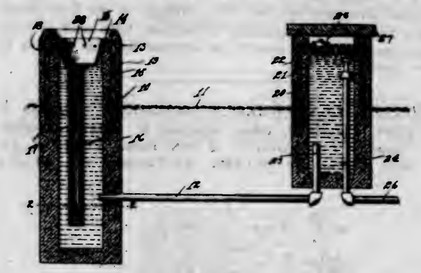
and springs mounted on the curved arms for normally shifting the jaw portions toward each other in closing position.

1,576,215. APPARATUS FOR USE IN IMPARTING FLAVOR TO PEANUTS. ADOLPHUS PERIS, Florin, Pa. Filed Oct. 31, 1924. Serial No. 747,013. 1 Claim. (Cl. 99—2.)



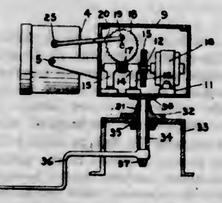
An apparatus for imparting flavor to peanuts comprising a platform, a standard rising from the platform, a tank rockably mounted on the upper end of the standard, a valved spout at one end of the tank, a closure at the other end of the tank which may be removed for filling the tank with peanuts, a pump mounted on the platform, a flexible tube connecting the pump with the tank, a hopper depending from the platform, a storage tank below the hopper, and a pipe connecting the pump with the storage tank.

1,576,216. CYCLE, MOTOR CYCLE, AND THE LIKE. FREDERICK JOHN HENRY PHILLIPS, Llanelly, Wales. Filed Nov. 20, 1922. Serial No. 602,160. 2 Claims. (Cl. 208—94.)



1. A motor cycle comprising a main frame, a leaf spring carried thereby, a frame carrying the rear wheel and engine pivotally mounted on the main frame under the control of the said leaf spring and a fork mounted on the main frame under the control of the said leaf spring.

1,576,217. COTTON-STALK CUTTER. OREN OLIVER POTTER and SAMUEL WILLIAM POTTER, Weslaco, Tex. Filed Sept. 23, 1924. Serial No. 739,357. 1 Claim. (Cl. 55—60.)



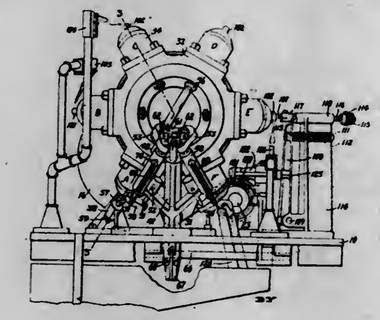
A cotton stalk cutter including a rectangular frame, a pair of brackets provided with downwardly and rearwardly inclined forward sides extending from the front side of the frame, and upwardly and forwardly inclined sides attached to the rear side of the frame, a shaft journaled intermediately of the downwardly and rearwardly inclined forward sides of the bracket, transversely under the frame, cutting blades carried by the shaft, means for actuating the shaft, so that the cutting blades may be disengaged from the ground, and a second shaft journaled at the bottom ends of the brackets, adjacent the junctures of the forward and rearward sides thereof, and spaced discs mounted upon the second mentioned shaft.

1,576,218. STOCK-WATERING FOUNTAIN. ERNEST A. POWELL, Rawson, Ohio. Filed Apr. 30, 1924. Serial No. 710,056. 4 Claims. (Cl. 119—73.)

1. A stock watering device including a tank, means for delivering earth warmed water to the tank, a receptacle in the tank for receiving such earth warmed water, and means for returning the chilled water of the receptacle to the lower portion of the tank whereby to induce a circulation of water for the purpose of preventing freezing thereof.

1,576,219. SIGNAL AND SPOTLIGHT FOR MOTOR VEHICLES. HOWARD R. POWER, Los Angeles, Calif. Filed Apr. 13, 1925. Serial No. 22,888. 1 Claim. (Cl. 240—48.)

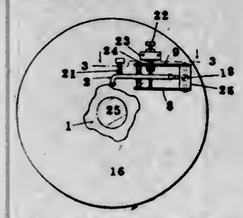
A signal and spotlight comprising in combination a base, a bearing mounted thereon, a pin extending vertically through the base and bearing, a housing supported by the bearing and having the pin attached thereto, an



arm attached to the pin to swivel the pin and the housing, a pair of brackets attached to the housing, a spot light pivotally mounted in the brackets to swing on a horizontal axis, a crank pin rotatably mounted in the housing, a driving rod connected from the crank pin to the spot light and an electric motor having a train of gearing driving said crank pin, the crank pin being mounted on one of the gears.

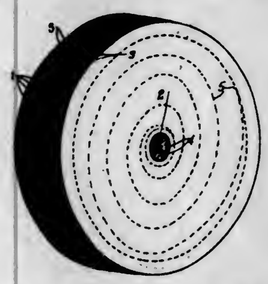
1,576,220. TENTERING MACHINE. CLIFFORD H. RAMSAY, Glen Rock, N. J. Filed Dec. 6, 1923. Serial No. 678,875. 8 Claims. (Cl. 26—57.)

2. A tentering machine including, in combination, a supporting structure having spaced bearings, a rotary shaft journaled in said bearings, another structure having bearings and shiftable on the first structure lengthwise of the shaft, and means to be driven arranged on the second structure and including a tentering system and a rotary member journaled in the bearings of said second structure between the bearings of the first structure and having a gearing connection with said system, said member being axially penetrated by and splined to the shaft.



1,576,221. GLASS-WORKING MACHINE. FRANCIS J. RIPPL, Cleveland, Ohio, assignor to General Electric Company, a Corporation of New York. Filed Oct. 18, 1919. Serial No. 331,660. 13 Claims. (Cl. 49—7.)

1. In a machine for shaping glass tubes, the combination of a carrier rotatable in a substantially vertical plane, a holder mounted thereon having a passage therethrough disposed so as to allow a glass tube to feed therethrough by gravity, and means for gripping said tube, means disposed in the path of travel of said holder whereby tubes may be fed to said holder, tube heating and shaping means disposed in the path of travel of said holder, and means automatically brought into operation for periodically opening said gripping means to discharge a tube and for subsequently causing said gripping means to close upon a fresh tube.

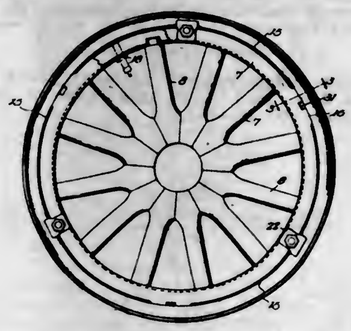


10. In a machine for flaring tubes, a carrier, a plurality of rotatable tube holders, means for simultaneously rotating said tube holders, means for heating the tubes and means for flaring said tubes while heated.

1,576,222. IGNITION APPARATUS. WALTER ROBBINS, St. Louis, Mo. Filed Nov. 23, 1921. Serial No. 517,188. 2 Claims. (Cl. 200—30.)

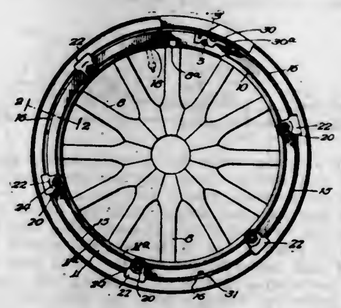
1. Circuit breaker mechanism for electric ignition systems, comprising two breaker contacts electrically connected, an interrupter member adapted to engage said contacts alternately, and a revolving cam for actuating said member, said cam having a plurality of non-radial engaging surfaces for controlling the motion of said member, and said breaker contacts being so arranged with respect to the interrupter member that a single non-radial face of the cam controls the interrupter member to cause both its disengagement from one breaker contact and its immediate re-engagement with the other contact through further movement of the interrupter member in the same direction.

1,576,223. STEEL-WOOL BUFFER. WILLIAM H. ROBBINS, Springfield, Ohio, assignor to The Williams Company, London, Ohio, a Corporation of Ohio. Filed June 5, 1925. Serial No. 35,153. 1 Claim. (Cl. 15—230.)



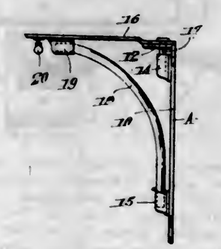
In a buffer the combination of a plurality of spaced layers of steel wool, retaining disks interposed between said layers of steel wool and being of material adapted to be worn away with the steel wool during buffing and a spiral stitching through said wool and retaining disks proceeding progressively from the center of the buffer to the margin thereof completely therethrough, said buffer having a central aperture for mounting of the buffer on a shaft.

1,576,224. INSULATOR CLAMP. CURTIS E. ROGERS, Logan, W. Va. Filed Sept. 4, 1925. Serial No. 54,540. 6 Claims. (Cl. 191—40.)



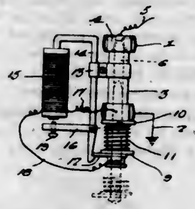
1. A feeder cable support comprising in combination a clamp including a pair of separable cable clamping members and means for clamping said members together upon a cable; and attaching means at opposite ends of said clamp, one adapted for connection with a support and the other for connection with a trolley wire clamp.

1,576,225. VEHICLE WHEEL. CHARLES F. RUBSAM, Jackson, Mich., assignor to Rubsam Corporation, Jackson, Mich., a Corporation of Delaware. Filed Mar. 26, 1924. Serial No. 701,900. 12 Claims. (Cl. 301—24.)



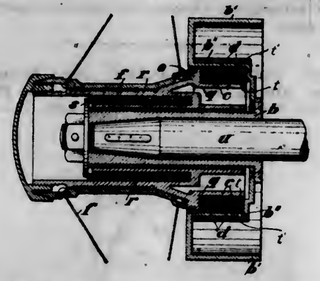
2. A vehicle wheel comprising a wheel body having a fixed rim, a demountable rim therefor adapted to be swung onto said wheel body about a portion of the same, said fixed rim being provided with a rim receiving flange on the vehicle side and a second flange on the other side, said second flange having rim supporting portions, said rim supporting portions being connected by portions of said flange of reduced diameter to form clearances, certain of said portions of reduced diameter being so spaced relative to the swinging point and a point diametrically opposite thereof as to allow the demountable rim to be swung into substantially concentric position as to said wheel body.

1,576,226. VEHICLE WHEEL. CHARLES F. RUBSAM, Jackson, Mich., assignor to Rubsam Corporation, Jackson, Mich., a Corporation of Delaware. Filed Feb. 18, 1925. Serial No. 9,902. 2 Claims. (Cl. 301—24.)



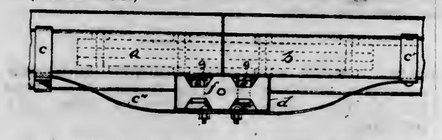
1. In a vehicle wheel, the combination of a fixed channel-shaped rim provided with an annular integral flange on the inner side thereof having a flared portion and an integral flange on the outer side, a demountable rim provided with indented portions of limited length and adapted to engage the periphery of the flange on the outer side of the fixed rim, and removable devices arranged circumferentially between the indented portions and adapted to support the demountable rim at the clearances between the indented portions, said clearances extending to and said indented portions terminating at points remote from said devices to permit the demountable rim to be placed on and removed from the fixed rim without retardation between the indented portions and said devices.

1,576,227. FOLDING BRACKET. JOHN RUNDLE, Lethbridge, Alberta, Canada. Filed Apr. 21, 1923. Serial No. 633,684. 2 Claims. (Cl. 248—19.)



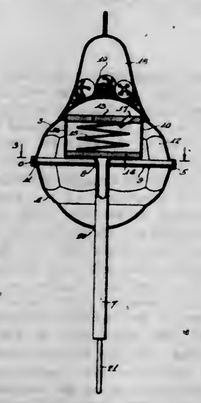
1. In a device of the character described, a vehicle supporting plate formed with an extension, substantially at right-angles thereto, having an opening therein, spaced socket members on said plate, a horizontally arranged arm pivotally mounted on the plate, a socket on said arm and a brace adapted to engage with said socket and with one of the plate carried sockets and a defachable pin through the plate extension and the horizontal arm adapted to pivotally engage with the other socket on the supporting plate.

1,576,228. FUSE-CUT-OUT CIRCUIT BREAKER. CHARLES F. SCHMIEKE, Muskegon Heights, Mich. Filed Feb. 26, 1924. Serial No. 695,225. 1 Claim. (Cl. 200—106.)



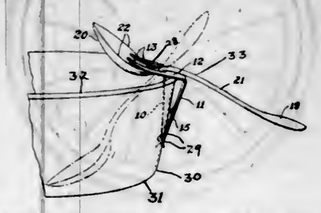
A circuit breaker comprising a cylinder of insulating material, a cap member closing one end of the cylinder and having resilient fingers disposed within the cylinder, a bolt slidably mounted in the cylinder and having a head portion adapted to engage between the fingers, a washer carried by the cylinder, said bolt passing through the washer, and the washer having an intermediate portion lying in the path of movement of the head of the bolt whereby the movement of the bolt with relation to the cylinder is limited, a finger carried by the bolt, a spring interposed between the washer and the finger and tensioned to normally hold the bolt with its head out of engagement with the resilient fingers, an inverted U-shaped bracket, a clip engaged with the cylinder and engaged with one arm of the inverted U-shaped bracket, a magnet carried by the other arm of the bracket and electrically connected with the bolt and grounded, a conductor connected with the first mentioned cap and a hook mounted upon the arm of the bracket engaged by the clamp and operatively associated with the magnet and having an end portion normally disposed under the finger which is carried by the bolt for holding the head of the bolt in engagement with the resilient fingers.

1,576,229. LAMINATED COUPLING. ARNOLD SEIDEL, Berlin-Charlottenburg, Germany. Filed Dec. 16, 1924. Serial No. 756,306. 2 Claims. (Cl. 74—7.)



1. In combination, a driving element, a plurality of driven elements, and a differential driving gear interposed between the driving and driven elements, said differential driving gear including friction couplings provided with notched plates, the notches in the plates of the respective friction couplings varying in length, and stop members carried by the driving and driven elements and engaging in the notches.

1,576,230. MOLD FOR ATTACHING RAIL BONDS. EARL J. SHULER, New Orleans, La., assignor to Rail Welding and Bonding Company, East Cleveland, Ohio, a Corporation of Delaware. Filed Nov. 22, 1918, Serial No. 263,723. Renewed Nov. 6, 1925. 23 Claims. (Cl. 22—116.)



1. A mold for attaching rail bonds having a bottom portion formed of copper and an upper refractory portion, said copper portion being adapted to be engaged directly with the body of the rail for conducting away the heat, substantially as set forth.

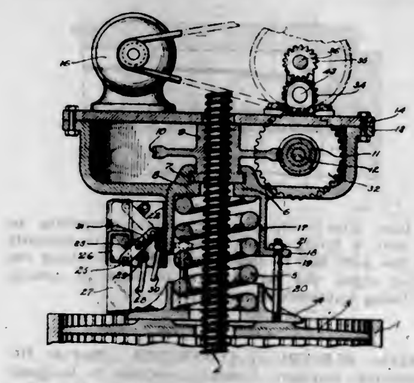
1,576,231. DUAL-SOUNDING RATTLE. IRWIN E. COHN, New York, N. Y. Filed Sept. 22, 1924. Serial No. 739,145. 1 Claim. (Cl. 46—46.)

A dual-sounding rattle comprising a body formed of two sections, the sections being provided with interfitted annular flanges, a seat formed on one of the sections, a diaphragm mounted on said seat, a sound producing device located within the other section, the first mentioned section and the diaphragm being provided with a passage, a handle connected with the sound producing device and movable through the passages in the diaphragm and the first mentioned section, a hollow body arranged on the second mentioned section and in alinement with the sound producing device, rattle elements loosely arranged in said body, said handle adapted to actuate the sound producing device in alinement with the rattle elements arranged in the hollow body so that when the handle is actuated the rattle elements and sound producing device will be operated.

1,576,232. SPOON HOLDER. ALFRED C. COOKE, Hartford, Conn. Filed Dec. 20, 1924. Serial No. 757,269. 1 Claim. (Cl. 65—65.)

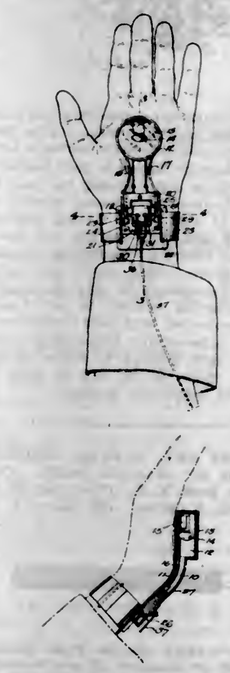
A spoon holder made of sheet metal, comprising a platform of appreciable length for resting on the top edge of a supporting vessel and inner and outer clamping fingers depending from the inner and outer edges of said platform, a pair of spaced fork arms extended inwardly and in the same plane from the inner edge of said platform and spaced apart for admitting the shank of a spoon, mating recesses or notches in the boundary walls of the space between said arms for receiving the bowl portion of said spoon, and said recesses or notches being spaced inwardly from said inner edge of the platform, whereby with a spoon-bowl engaged with said recesses or notches and serving as a fulcrum for the spoon the shank portion of the spoon will be adapted to contact with the outer edge of the platform.

1,576,233. AUTOMATIC FISHING DEVICE. GEORGE COOK, Detroit, Mich. Filed June 8, 1925. Serial No. 35,685. 6 Claims. (Cl. 43—16.)



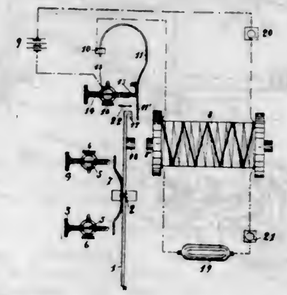
1. In a fishing device having an elongated guideway, a line reel slidable along said guideway, line-released means for normally holding the reel at the front end of the guideway, and spring means for sliding the reel toward the rear end of the guideway when said holding means is released; an elongated plate secured to one end of said guideway and adapted to be held by the usual reel-holding sleeves of a fishing rod handle, a plate projecting laterally from the other end of said guideway and having a seat adapted to rest on the rod in advance of the handle, and hook means pivoted on said plate for engagement with the rod to hold the latter and the seat in engagement with each other.

1,576,234. FRUIT-PRESS DRIVE. FRANK COZZOLI, Plainfield, N. J. Filed Nov. 16, 1925. Serial No. 69,442. 4 Claims. (Cl. 100—44.)



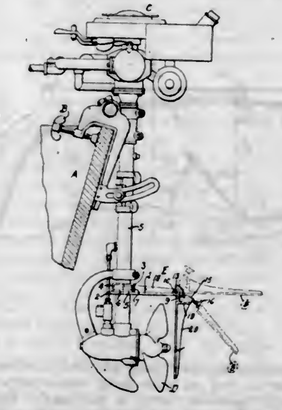
1. A fruit press drive, comprising a stationary threaded shaft, a traveling nut arranged on said shaft,

means including an electric motor for rotating said nut, a spring compressed by said nut when the same is rotated in one direction, a shoe for transmitting the pressure of said spring, and an automatically actuated



switch arranged in the circuit of said motor, said switch being automatically opened when said spring is completely compressed and automatically closed when said spring is partly distended.

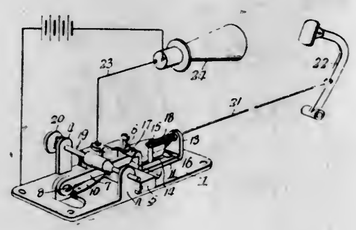
1,576,235. SIGNAL LAMP. MARTIN M. CUNNINGHAM, Far Rockaway, N. Y. Filed Nov. 20, 1923. Serial No. 675,901. 1 Claim. (Cl. 177—329.)



A palm lamp for giving hand signals comprising an elongated housing, the said housing being shaped to fit the contour of the wrist and the palm of the hand, a switch in the housing, the said switch located in that end of the housing which fits the wrist, a windowed compartment in that end of the housing which fits the palm, a lamp in the said windowed compartment, and means for fastening the housing to the wrist.

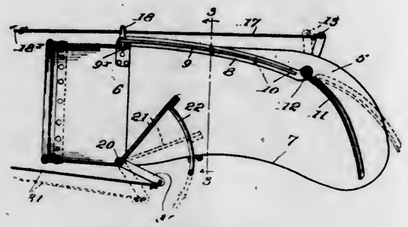
1,576,236. STROBOSCOPIC APPARATUS. LOUIS CRIKAN, Ixelles, near Brussels, Belgium. Filed Sept. 19, 1924. Serial No. 738,641. 1 Claim. (Cl. 176—122.)

In a stroboscopic apparatus of the type comprising an induction coil of which the secondary circuit comprises a condenser and a flash-tube filled with rarefied gas while its primary winding also comprises a condenser and is at one end electrically connected to one of the terminals of a source of electricity an interrupter including an oscillatory ticker, two abutment screws arranged on the same side of the ticker and on different sides of its point of oscillation in such a manner as to allow the adjustment of the amplitude of the oscillations of the ticker in each direction, an adjustable contact screw electrically connected to the other terminal of the source of electricity, and a contact spring having its point of fixation electrically connected to the other end of the primary winding of the induction coil and arranged in such a manner as normally to tend to keep contact with the aforesaid contact screw and to maintain the ticker at a distance from the adjacent end of the core of the induction coil, substantially as described.



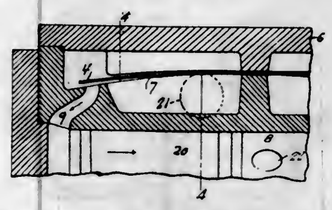
1,576,237. ATTACHMENT FOR MOTOR BOATS. JOSEPH W. DAWSON, St. Louis, Mo. Filed Dec. 4, 1924. Serial No. 753,792. 5 Claims. (Cl. 115—17.)

1. An attachment for a motor boat, comprising a pivoted plate arranged immediately behind and extended transversely of the propeller of the motor boat, said plate being hinged at the top to permit the lower end



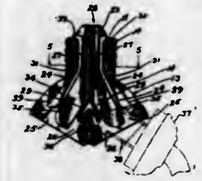
thereof to swing upwardly and downwardly, and means comprising an adjusting screw whereby the position of said plate with respect to said propeller may be regulated.

1,576,238. ALARM DEVICE. JOSEPH DE MARTI, Chicago, Ill. Filed Apr. 13, 1925. Serial No. 22,507. 4 Claims. (Cl. 200—161.)



1. A device of the kind described embodying therein, a base, a fixed contact thereon, a swingable contact lever pivotally mounted on the base to swing toward and away from the fixed contact, means urging said contact lever toward said fixed contact, a latch member carried on said base for longitudinal movement and adapted to engage the movable contact lever to hold it out of engagement with the fixed contact, and a device extending transversely to the movement of the movable contact lever and capable of an endwise movement in one direction for setting said lever under the latch member and holding said lever out of engagement with the fixed contact when released by the latch, said device when moved endwise in the other direction permitting said lever to engage the fixed contact when released by said latch.

1,576,239. PNEUMATIC-STACKER HOOD. AUGUST P. DETERMANN, Lyons, Iowa. Filed Mar. 24, 1925. Serial No. 18,039. 5 Claims. (Cl. 302—10.)

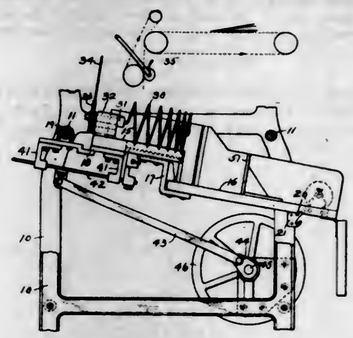


1. A pneumatic stacker hood adapted for the passage of straw and having an open-work straw-guide fixed in the hood and provided with a swingable imperforate deflector at the forward end thereof, yielding means for closing said deflector, and manually-operable means for opening said deflector against the action of said yielding means.

1,576,240. AUTOMATIC INLET-VALVE MECHANISM FOR RECIPROCATING ENGINES. KURT LIGNIER, Mannheim, Germany. Filed Sept. 12, 1923. Serial No. 662,333. 4 Claims. (Cl. 121—143.)

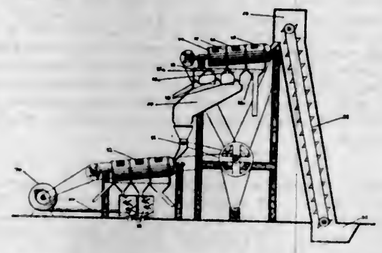
1. Inlet valve mechanism for engines comprising an inlet port, a spring cut-off valve arranged to normally open the inlet and to close the inlet by throttling the working vapor, and curved seats to limit the opening and closing movement of the spring.

1,576,241. ELECTRICAL CONNECTER. STANLEY MCCLATCHIE, Stuttgart, Germany, assignor to Benjamin Electric Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed July 26, 1923. Serial No. 653,861. 2 Claims. (Cl. 173—334.)



1. An electrical connecter comprising two substantially similar halves, each half including a plug portion and receptacle portions, said receptacle portions having openings to receive connecter blades, a shell contact threaded on said plug portions and securing the two halves together, a center contact on said plug portion, the inner surfaces of each of said halves having grooves therein extending through said plug portion and into said receptacle portions, electrical conducting members in a plurality of said grooves electrically connected with said shell contact and extending into said receptacle portions, and electrical conducting members in one of said grooves and electrically connected with said center contact, said connecter having substantially bell-shaped openings communicating with said grooves to allow electrical connecter blades to enter therein and to form a contact with said electrical conducting members.

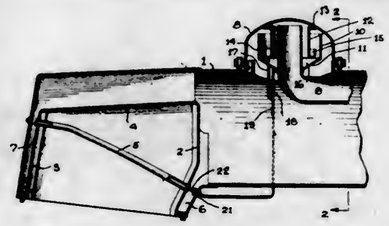
1,576,242. SHEET FOR MAKING CUSHION DISKS AND METHOD OF MAKING SAME. CHARLES E. MCMANUS, New York, N. Y. Filed Aug. 29, 1923. Serial No. 659,894. 5 Claims. (Cl. 154—2.)



3. A sheet for making cushion disks consisting of a stratum composed of granules of cork bonded together by a thin coating of adhesive, a thin sheet of natural cork having substantially no voids therein bonded to one surface thereof, and a gummed sheet of collet forming material bonded to the opposite side thereof.

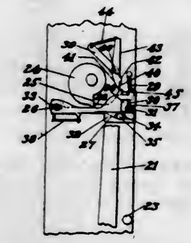
1,576,243. PAPER-PACKING DEVICE. FREDRICK MENTGES, Sidney, Ohio, assignor to The Mentges Folder Company, Sidney, Ohio, a Corporation of Ohio. Filed Aug. 4, 1923. Serial No. 655,646. 10 Claims. (Cl. 271—87.)

1. A packing device for paper folding machines, comprising a packing receptacle, an antechamber therefor, a table upon which the folded papers fall, a constantly revolving spiral conveyer adapted to receive the papers as they fall and carry them to the edge of the table, whence they drop to the antechamber, and means for moving the folded papers, one or more at a time, from the antechamber to the packing receptacle.



1,576,244. MEANS FOR SHELLING NUTS. GEORGE A. NEHAHOOD, Chicago, Ill., assignor to California Almond Confections Company, Long Beach, Calif., a Corporation. Filed Oct. 13, 1922. Serial No. 594,280. 5 Claims. (Cl. 146—11.)

5. Method of separating the shell fragments of cracked nuts from the kernels of the nuts which consists in screening the material to divide the same into classes as to size and subjecting the material of each such class to treatment as follows: causing the material to be moved downwardly by gravity through a zigzag passageway which arrests the movement of the material and reverses its direction of flow at intervals to produce a tumbling movement and series of impacts which dislodge the kernels from the nuts, and blowing the shell fragments out of the material by air currents directed across the stream at the places where the impacts and reversals of the stream occur.

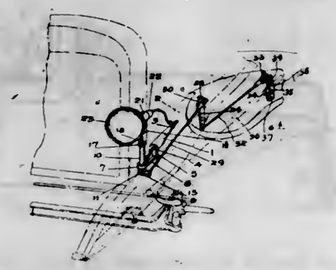


1,576,245. LOCOMOTIVE. HENRY B. OATLEY, Flushing, and WILLIAM E. WOODARD, Forest Hills, N. Y.; said Oatley assignor of all his right to The Superheater Company, New York, N. Y. Filed June 16, 1922. Serial No. 568,823. 2 Claims. (Cl. 122—492.)

1. In a boiler of the locomotive type, the combination of a steam dome; a separator in the dome; a rear water leg; a front water leg; a circulating tube connecting a high point of the former with a low point of the latter and extending through the firebox; and a pipe leading from the water collecting space of the separator through

the outer sheet of the front water leg and a short distance into the circulating tube; said pipe being spaced from the walls of the circulating tube.

1,576,246. AUTOMATIC FILM-WINDING CAMERA JOHN B. PAWLEY, Binghamton, N. Y., assignor to Ansco Photoproducts, Inc., Binghamton, N. Y. Filed Nov. 25, 1924. Serial No. 752,209. 3 Claims. (Cl. 95—31.)

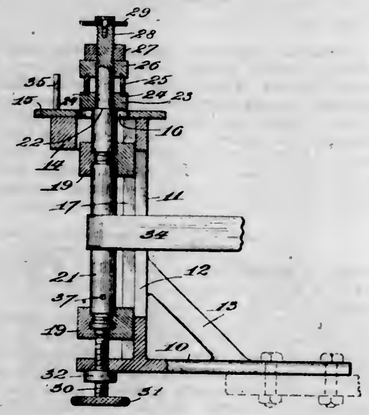


1. A releasing device for a camera winding mechanism comprising a driven element, a pivoted stop lever therefor, the free end of said stop lever being bifurcated, a guide pin for said bifurcated end, operating means for said lever, a safety arm carried by said lever and having a bifurcated end normally out of register with the bifurcation on said stop lever whereby said lever is held from movement, and means on said operating means for causing said bifurcation to register permitting movement of said stop means to release the winding mechanism.

1,576,247. DIRIGIBLE AUXILIARY ROADLIGHT. FRANK A. PAYNE, Calistoga, Calif. Filed July 2, 1925. Serial No. 40,985. 1 Claim. (Cl. 240—62.)

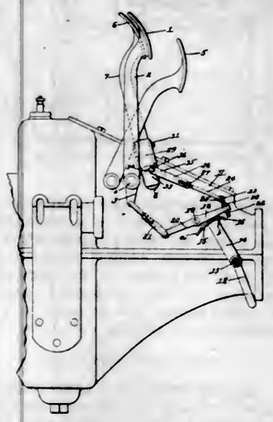
In a device of the character described, the combination with an automobile and its steering mechanism, of a lamp supporting-post comprising a sleeve bearing a revoluble spindle, said spindle extending beyond the upper end of said sleeve and provided with a squared lower end, a supporting-bracket for said post, an attaching-bracket adjustably secured to said supporting-bracket and adapted for mounting to the underside of the fender on the steering side of the vehicle, a rocker-arm lever mounted upon the squared lower end of said spindle, a clamp member bearing a lamp mounted upon the upper end of said spindle adjacent the upper end of said sleeve, said lamp being normally adjusted to cant both downwardly and to the right to focus its rays substantially at a point 31 feet in advance of the vehicle and to the right-hand side of the roadway, and actuating means connecting said rocker-arm lever and the steering mechanism, comprising a reduction lever mounted upon the vehicle chassis

bearing adjustment openings in its lower end, a clamp-member mounted upon the pull-rod of said steering mechanism, a link connection between said rocker-arm lever



and reduction lever bearing a universal-joint connection, and a link connection between said reduction lever and said pull-rod clamp-member bearing a universal-joint similar to the aforementioned universal-joint.

1,576,248. COMPOSITION FOR MAKING BRIQUETTES. JACOB SHOTWELL ROBESON, Pennington, N. J. Filed Aug. 3, 1921. Serial No. 489,623. 4 Claims. (Cl. 87—17.)



1. A composition of matter for use as an adhesive or binding agent including sulfite solutions of the non-cellulose elements of woody tissue, liquid residue of destructive distillation of woody tissue and thick residuum of sugar bearing plant juices.

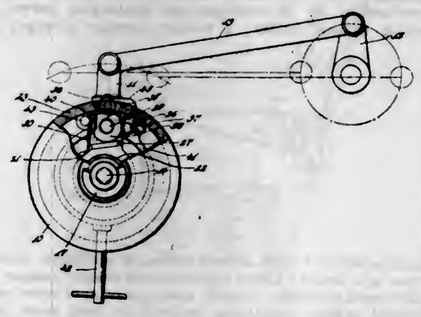
1,576,249. PORTABLE SHAPER. MAX SHERMAN, Los Angeles, Calif. Filed Apr. 21, 1924. Serial No. 707,897. 1 Claim. (Cl. 144—114.)

In a portable shaper, an upright frame, parallel rails arranged vertically on the front face of said frame, a horizontally disposed U-shaped frame secured to the front face of the upright frame at the upper end thereof, a table arranged on top of the horizontally disposed U-shaped frame and provided at its center with an opening, bearings arranged to slide on the upright frame between the parallel rails thereon, the space between the horizontally disposed U-shaped frame and the upright frame being of sufficient size to accommodate the upper one of the sliding bearings, a shaft journalled in the bearings, cutter clamping means on the upper end of said shaft, which clamping means includes a pair of discs, the lower one of the latter being adapted to move freely through the opening in the table when the shaft is adjusted vertically and an adjusting screw seated in the lower front portion of the upright frame, and swivelled to the lower one of the sliding bearings.

1,576,250. CLUTCH CONTROL FOR BRAKE MECHANISMS. STEPHEN R. SPATENGA, New York, N. Y. Filed Dec. 1, 1921. Serial No. 519,054. 4 Claims. (Cl. 74—81.)

1. In combination with the clutch mechanism and its pedal and lever, and the service brake and its pedal, of an automobile control system, a direct connection between said brake pedal and said lever including a U-shaped member and a forked member at the brake pedal, and a pin and slot connection between the two members enabling one of the members to shift laterally of the brake pedal and at an angle to the same, whereby the service brake pedal can shift laterally without affecting the clutch.

1,576,251. BURNER PLATE. CHARLES W. SPONSEL, Wethersfield, Conn., assignor to Domestic Stoker Company, New York, N. Y., a Corporation of Delaware. Filed July 7, 1924. Serial No. 724,585. 2 Claims. (Cl. 126—163.)

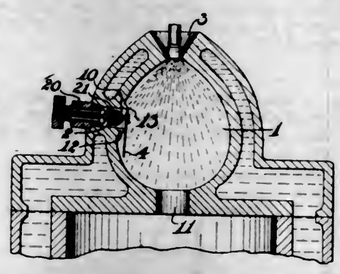


1. A burner plate comprising an annular body having radially extending grooves in its fuel supporting face and having circumferential grooves in its other face of sufficient depth to intersect the radial grooves.

1,576,252. MOTION-CONVERTING DEVICE. CHARLES W. SPONSEL, Wethersfield, Conn. Filed July 7, 1924. Serial No. 724,586. 3 Claims. (Cl. 74—53.)

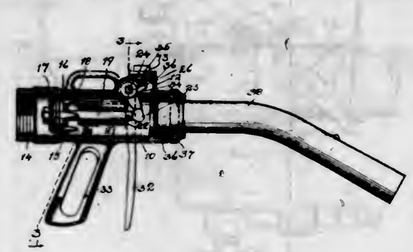
3. A device of the character described, including a shaft, a disk on said shaft having a hub and a peripheral rim, a constantly rotating crank, an arm having a bearing on said hub, a pitman between said crank and arm, an inclined block carried by said arm, a roller between said block and the internal periphery of said rim, a spring

carried by said arm and normally urging said roller in wedging position between said block and rim, a lever pivoted to said arm and having one end adapted to engage said roller opposite said spring, an anti-friction roller on the other end of said lever, a spring normally



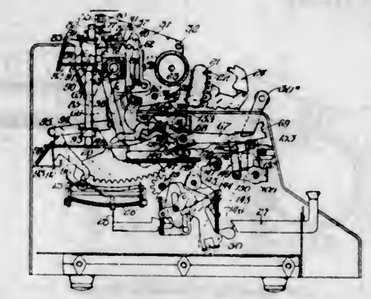
urging said lever in a direction to withdraw the first mentioned arm of said lever out of engagement with said roller, an angularly adjustable segment over which said anti-friction roller is adapted to ride, and means for holding said segment in any desired position of angular adjustment.

1,576,253. ARTIFICIAL FUEL AND THE PROCESS OF MAKING IT. LELAND L. SUMMERS, New York, N. Y. Filed Sept. 29, 1921. Serial No. 504,148. 5 Claims. (Cl. 44—1.)



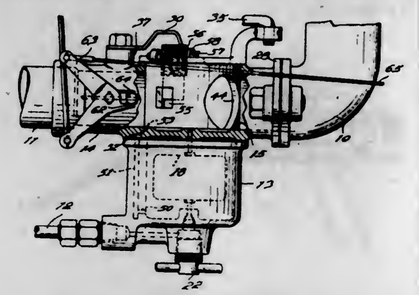
1. The process of producing an artificial fuel which consists in subjecting raw coal to the action of a solvent for the soluble elements thereof and then covering compressed, distilled solid carbonaceous residue with the solution so obtained.

1,576,254. CLOSURE FOR ENGINE IGNITERS. HENRY W. SUMNER, Seattle, Wash., assignor to H. W. Sumner Oil Engine Company, Seattle, Wash., a Corporation of Washington. Filed Jan. 25, 1922. Serial No. 531,633. 2 Claims. (Cl. 123—145.)



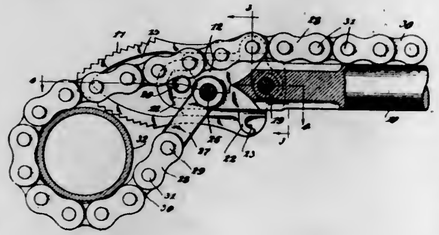
1. In an internal combustion engine, a boss raised above the inner wall of the combustion chamber and having its raised surface finished smoothly to form a seating surface, the wall having an aperture therethrough terminating in said boss, a removable igniter receivable in said aperture, a resilient closure for the inner end of said aperture having a sliding engagement with and adapted to seat upon said finished surface, said closure being pressed into close contact therewith at all points by pressures within the combustion chamber, and means for sliding said closure from without the combustion chamber to open or close the inner end of the aperture.

1,576,255. SELF-CLOSING HOSE NOZZLE. OTTO E. SZEKELY, Moline, Ill., assignor to A. Y. McDonald Mfg. Co., Dubuque, Iowa, a Corporation of Iowa. Filed Aug. 17, 1925. Serial No. 50,550. 7 Claims. (Cl. 251—134.)



1. In a self-closing hose nozzle, the combination of a barrel, a tubular spout forwardly extending from the barrel, a pistol grip depending from the barrel, a trigger in proximate relation to the pistol grip, a valve within the barrel, an inlet aligned with the valve stem and connections between the trigger and the valve for manipulating the valve by movements of the trigger, substantially as described.

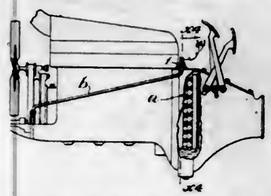
1,576,256. CROSS-TABULATING CARRIAGE FOR ADDING MACHINES. BRUCE H. TINGLEY, Cincinnati, Ohio, assignor to The Dalton Adding Machine Company, Cincinnati, Ohio, a Corporation of Ohio. Filed Nov. 25, 1922. Serial No. 603,146. 16 Claims. (Cl. 235—60.)



14. In a mechanism of the class described, the combination of adding wheels and means for actuating the same, a transversely movable paper carriage provided with a rotatable platen, means for disabling the operation of the adding wheel actuating means, means for rotating the platen, means for disabling the operation of the platen rotating means, a disabling slide plate interposed between the adding wheel disabling means and the platen rotating disabling means, said disabling slide plate being provided on its opposite edges with engaging surfaces, devices actuated by the arrival of the carriage at a predetermined point for moving said slide plate to bring said engaging surfaces to a position to simultaneously actuate both of said disabling devices, normalizing blocking means adapted, when moved to predetermined position, to block the movements of the slide plate, an escapement for the carriage, and a normalizing lever for disabling the operation of said escapement and for simultaneously moving the blocking devices to a position to prevent a disabling movement of the disabling slide plate, substantially as described.

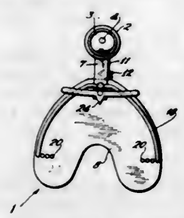
1,576,257. CARBURETOR. CAREL T. TORRESEN, Cleveland, Ohio, and CHARLES G. ROTH, Ford City, Mich. Filed Oct. 29, 1921. Serial No. 511,309. 4 Claims. (Cl. 261—41.)

1. A carburetor having in combination a float chamber, an air conduit carried by the chamber, a throttle disposed within the conduit and comprising a hollow member having an air inlet passagway extending upwardly from the bottom thereof and comprising two vertically extending walls and an inclined connecting wall, said hollow member having a discharge passageway also extending upwardly from the bottom thereof, an auxiliary air inlet comprising an opening spaced from the bottom of the member and a vertically extending plunger in threaded engagement with the member for varying the active air of the auxiliary inlet.



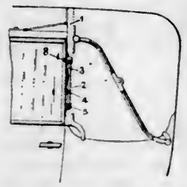
1,576,258. WRENCH. FRANK W. TRABOLD, Marion, Ind. Filed Sept. 18, 1924. Serial No. 738,354. 2 Claims. (Cl. 81—70.)

1. In a pipe wrench, a handle, gripper jaws, means for securing the gripper jaws in spaced positions to the said handle, a chain member, and means for pivotally connecting the chain member to the handle between the said jaws and independently of the means for securing the gripper jaws to the handle, and also in a position offset from the longitudinal axis of the handle, whereby in use with pipes of the same diameter the teeth of the jaws will be engaged in different positions on opposite sides of the jaws of the wrench.



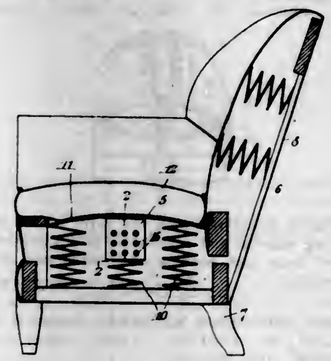
1,576,259. MAGNETO-BRUSH AND FORCE-FEED ATTACHMENT FOR INTERNAL-COMBUSTION ENGINES. KELLY M. TURNER, Los Angeles, Calif., assignor of one-third to Fred H. Koch and one-third to Esten M. Roland, both of Los Angeles, Calif., and one-third to Yale Corporation, Los Angeles, Calif., a Corporation of California. Filed July 26, 1922. Serial No. 577,651. 7 Claims. (Cl. 123—196.)

1. In an attachment for internal combustion engines substantially set forth, an oil receiving and discharging barrel open at one end and adapted to catch oil, and provided with a central orifice opposite such open end, and also provided with an outlet; a flange at the bottom of the barrel; a lip in the form of a semi-circle extending downward from said flange; a contact holder terminating at its upper end in a shoulder and provided with a threaded stem extending through said central orifice provided in the oil receiving and discharging barrel; a spring in said holder; a contact member arranged in



said holder and held by said spring to yieldingly extend from said holder; means to retain said contact member in said contact holder; washer seats above and below said central orifice; insulating washers in said seats and through which said threaded stem passes; and a nut threaded on said stem and adapted to clamp said washers in said seats between said nut and the shoulder on said contact holder.

1,576,260. DENTAL LEVEL. HARRY F. WAITE, New York, N. Y. Filed Mar. 1, 1921. Serial No. 448,792. 4 Claims. (Cl. 33—207.)

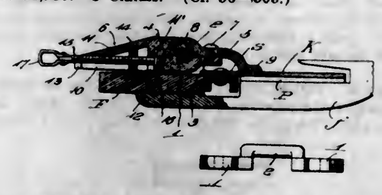


2. A dental level composed of a plate which is shaped so that it may be placed between the teeth of a patient and in his mouth, a clevis connected to said plate and a spirit level pivotally connected to the clevis so that either face of the plate may be uppermost when in the mouth of a patient.

1,576,261. REMOVABLE FRAME FOR MOTOR OR LIKE VEHICLES. GUSTAVE BAEHR, Paris, France. Filed Mar. 20, 1924. Serial No. 700,897. 3 Claims. (Cl. 296—45.)

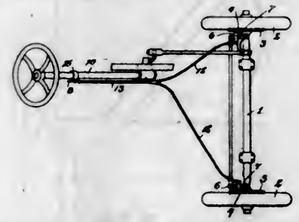
1. In a transformable vehicle body having a movable frame or panel, a movable member adapted to engage the frame at one side and to be operated by said frame or panel, a second movable member adapted to engage the frame or panel at the side opposite that engaged by the first member, and means for operating the second member from the first member to cause it to engage the said frame or panel.

1,576,262. INSECTICIDE CONTAINER FOR UPHOLSTERED FURNITURE. ALBERT M. BANK, Jersey City, N. J. Filed Dec. 26, 1924. Serial No. 758,176. 11 Claims. (Cl. 155—1.)



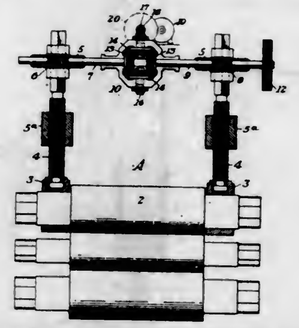
1. In a device of the character described, the combination with an article of furniture having upholstered portions, and a fabric layer having a slit therein covering said portions adapted to support a removable seat, of a container having an opening and having porous side walls extending into said portions, the edge portions of said container at said opening being secured to the edges of said slit, and closure means for said slit.

1,576,263. XYLOPHONE. WILLIAM BARTHOLOMAE, Brooklyn, N. Y., assignor to Bar Zim Toy Mfg. Co., Inc., New York, N. Y., a Corporation of New York. Filed Oct. 10, 1923. Serial No. 667,723. 7 Claims. (Cl. 84—403.)



1. In a xylophone, a pair of side members having apertures therein, vibratile members extending through said apertures, each of said side members being formed with a section extending from the edge of said side member at right angles to the remaining part of the side member, said section being formed with a portion presenting a groove, said grooved portion having notches therein so as to interrupt said groove, and a string extending through each of said grooves and through said notches for engaging and supporting said vibratile members.

1,576,264. SICKLE-BAR-ADJUSTING MEANS. HARVEY BECKWITH, Tracy, Calif. Filed June 4, 1925. Serial No. 34,959. 3 Claims. (Cl. 56—305.)

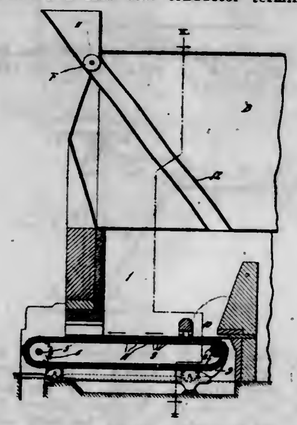


1. In a mowing mechanism having a finger bar and a sickle bar; a lever extending transversely of said bars and disposed over the latter, means between the ends of the lever for fulcruming said lever on said finger bar, the front end of said lever being in sliding engagement with the upper side of the sickle bar and the rear portion of said lever being provided with a slightly inclined downwardly facing surface, a shoe contacting with said surface, and with the relatively stationary subjacent surface of the finger bar, and means for adjusting said shoe toward the lower end of said inclined surface to rock the level.

1,576,265. AUTO ATTACHMENT. SOL BERINGER, Bronxville, N. Y. Filed Dec. 11, 1924. Serial No. 755,265. 1 Claim. (Cl. 188—30.)

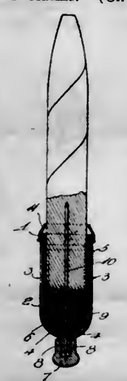
The combination with an automobile, ratchet wheels fixed to turn with the front wheels of the automobile, spindle arms constituting a portion of the steering mechanism of the automobile, brackets secured to the spindle arms, pawls carried by the brackets and engaging the ratchet wheels, a lever pivotally connected to the steering column, flexible devices connecting the lever and the pawls, and means for holding the lever in either of its operative positions to maintain the pawls either in or out of engagement with the ratchet wheels.

1,576,266. ROLL-ADJUSTING MECHANISM FOR ROLLING MILLS. FLORENCE C. BIGGERT, Jr., Pittsburgh, Pa., assignor to United Engineering and Foundry Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Oct. 22, 1925. Serial No. 64,103. 13 Claims. Cl. 80—56.)



1. In a rolling mill having an adjustable-roll and an adjusting mechanism for each end of the adjustable roll, and means including a differential gearing for simultaneously adjusting opposite ends of the roll.

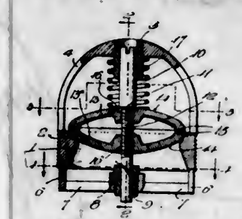
1,576,267. FURNACE. WILLIAM M. DUNCAN, Alton, Ill. Filed May 11, 1922, Serial No. 560,118. Renewed Jan. 29, 1926. 1 Claim. (Cl. 110—43.)



In a furnace provided with a boiler, a traveling grate within the furnace fire box, a portion of said traveling grate being in vertical alinement with said boiler, a coal receptacle located in said fire box immediately above said grate, said coal receptacle having an open bottom permitting coal therein to be supported by the grate, a second coal receptacle outside of the furnace fire box and at an end of said boiler, the last mentioned coal receptacle

being in a higher plane than the first mentioned receptacle, and a coal conducting member extended diagonally through the boiler, said coal conducting member being in communication with the second mentioned coal receptacle and said coal conductor terminating at the

bottom of the boiler and at a point immediately above the first mentioned coal receptacle whereby coal may pass from the second mentioned coal receptacle through said coal conductor and be discharged into said first mentioned coal receptacle.



1,576,268. ASH-RECEIVING ATTACHMENT FOR CIGARS AND ANALOGOUS SMOKES. FREDERICK W. DUQUETTE, St. Paul, Minn. Filed Aug. 17, 1925. Serial No. 50,737. 4 Claims. (Cl. 131—51.)

3. An ash receiving attachment for a cigar or analogous smoke, comprising a frame consisting of spaced cigar-encircling rings connected by circumferentially spaced parallel bars, said bars projecting beyond one of said rings and having their ends curved inwardly into overlapping relation to form a closed end for the frame, a cylindrical screen within the frame having a closed end contacting with the closed end of the frame, a knob contacting with the outer side of said closed end of the frame, and means securing the closed ends of the screen and frame to said knob.

1,576,269. CHECK VALVE. JOHN H. DURANT and FRANK VACHAL, Portland, Oreg. Filed June 11, 1925. Serial No. 36,492. 3 Claims. (Cl. 251—144.)

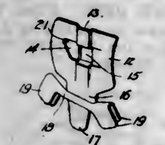
1. A valve comprising a cage having an annular seat and central stem guides at opposite sides thereof, a reversible valve co-operable with said seat and having a central threaded opening alined with said stem guides, and a straight stem threadedly engaged in said opening and having its ends slidably received in said guides,

said stem normally retaining the valve in the cage but permitting removal and reversal of said valve when unthreaded from said opening and withdrawn from the stem guides.

1,576,270. DOUGHNUT MACHINE. JOSEPH F. GANSKI, Portland, Me. Filed Feb. 5, 1925. Serial No. 7,120. 4 Claims. (Cl. 107—20.)

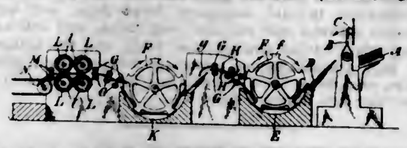
3. A doughnut machine comprising a support, a doughboard disposed thereon, a cutter back associated with the doughboard and disposed thereon, and angularly disposed means hinging the doughboard to the support and the doughboard and back together, for the purpose specified.

1,576,271. LUMBER BUNK. VICTOR G. GILBREATH and SAMUEL T. WILLIAMSON, Seattle, Wash. Filed Feb. 27, 1924. Serial No. 695,458. 5 Claims. (Cl. 34—26.)



3. A lumber bunk embodying a bunk bolster; a stake pocket slidably mounted upon one end of said bolster; a link means slidably disposed in the side walls of said stake pocket; a nut carried by an end of said link means; a shaft connecting the opposite end of said link means; a crank operatively mounted in said bolster; a spring; a second link means connecting said spring and said shaft in said first named link means; a third link means connecting said shaft to said crank; a screw operatively disposed in said nut, whereby it may be caused to bear against said stake pocket; a second stake pocket slidably mounted upon the other end of said bolster, having a shaft supporting lug; a shaft in said lug; a second crank operatively mounted in said bolster; a fourth link means connecting said spring to said second crank; and a fifth link means connecting said second crank to said last named shaft.

1,576,272. COMBINED CONTAINER AND HUMIDOR. HERMAN GOLDSMITH, New York, N. Y. Filed Aug. 11, 1922. Serial No. 581,085. 1 Claim. (Cl. 131—30.)

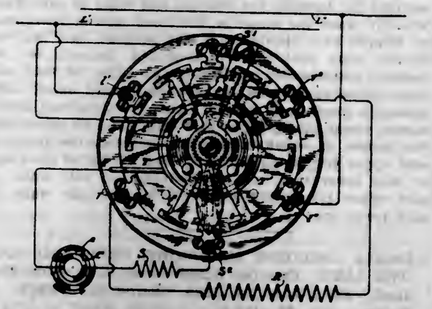


A container for tobacco products, including a body and a slip-on flanged cover, and a sheet or pad of blotting paper held within the flange against the body of the cover, said sheet being of an area to fit within the flange to prevent displacement thereof, the flange of the cover having an internal bead to hold the sheet in place.

1,576,273. SUPPORTING DEVICE FOR SHOE BUCKLES. LEW GOLDSMITH and SAMUEL M. DRUMMER, New York, N. Y., assignors to Primrose Novelty Corporation, New York, N. Y. Filed Nov. 20, 1925. Serial No. 70,420. 1 Claim. (Cl. 2—245.)

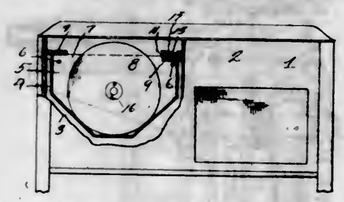
A buckle supporting arrangement having spaced jaws to embrace the edge of the footwear and an intermediate toe to rest against the outer face of the footwear to prevent the arrangement from falling forward.

1,576,274. MANUFACTURE OF TIN PLATE. GAVIN MURR HARRIS, Lancashire, England. Filed Mar. 28, 1925. Serial No. 19,186. 12 Claims. (Cl. 148—4.)



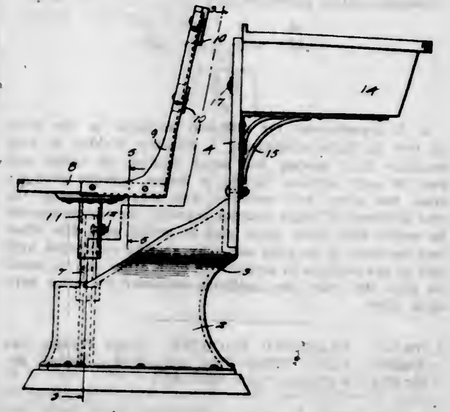
1. A process for the manufacture of tin-plate which comprises in combination the stages of hot rolling the plates, thereafter black annealing them, then black pickling and swilling them, thereafter drying them in such manner that they do not reach a temperature substantially exceeding 100° C., thereafter passing the plates as dried to the cold-rolling plant and cold rolling them, then preparing the plates for tinning, and tinning them.

1,576,275. ZIRCONIUM CARBIDE. MINER L. HARTMANN, Niagara Falls, N. Y., assignor to The Carborundum Company, Niagara Falls, N. Y., a Corporation of Pennsylvania. Filed Mar. 13, 1924. Serial No. 699,148. 5 Claims. (Cl. 204—64.)



1. The process of making zirconium carbide consisting of fusing zirconium silicate ore under reducing conditions in an electric furnace and collecting the product.

1,576,276. AUTOMATIC ELECTRIC SWITCH AND CIRCUIT. GEORGE L. HEDGES and EUGENE F. MARTINET, Cleveland, Ohio, assignors to The P. A. Geier Company, Cleveland, Ohio, a Corporation of Ohio. Filed Dec. 20, 1922. Serial No. 608,074. 8 Claims. (Cl. 172—279.)

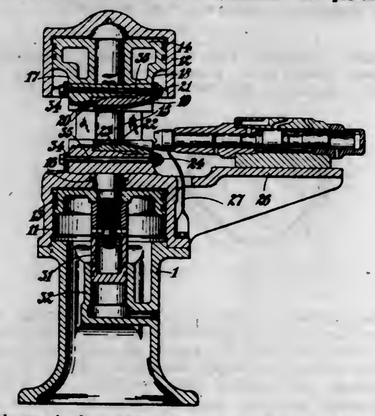


1. In an electric switch of the class described, the combination with switch contacts positioned for alternative engagement by the travelling contact member, of said travelling contact member normally maintained out of contact therewith, means temporarily blocking the final movement of the contact member to its contact-making positions, and electromagnetic means automatically operated for rendering the latter means temporarily inoperative, substantially as set forth.

1,576,277. CABINET FOR GRAPHOPHONE RECORDS. AARON HERMANSON, Rockford, Ill. Filed Aug. 21, 1923. Serial No. 658,564. 1 Claim. (Cl. 211—16.)

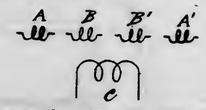
The combination with a graphophone casing, of a record receiving rack carried thereby at one side thereof, said rack comprising a plurality of vertically disposed pockets having their upper sides open for the reception of records said pockets being provided with bottoms horizontally disposed, upwardly diverging bottom sections extending upwardly from the ends of the first mentioned bottom, thereby in combination with the first mentioned bottom forming a three point bearing for the record and maintaining the same spaced from the end walls of the pocket.

1,576,278. COMBINED SCHOOL DESK AND SEAT. JOHN B. HICKS, Safford, Ariz., assignor of one-half to Harry L. Payne, Safford, Ariz. Filed Oct. 30, 1924. Serial No. 746,819. 2 Claims. (Cl. 155—89.)



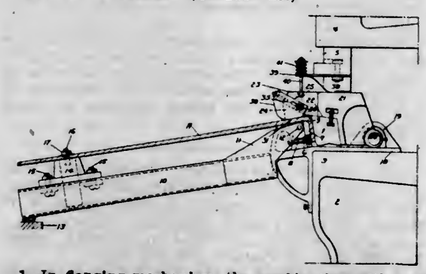
1. A pedestal of the class described consisting of a hollow casting, said casting having means to surmount a chair support, and a bifurcated portion, each arm of the bifurcated portion being adapted for connection of a desk support thereto and having shoulders on which the desk supports rest.

1,576,279. FORGING MACHINE. ARTHUR TREVE HOLMAN, Camborne, Cornwall, and KENNETH JAMES HOLMAN, Carbis Bay, Cornwall, England, assignors to Holman Brothers Limited, Camborne, Cornwall, England, a British Company. Filed May 1, 1924. Serial No. 710, 326. 14 Claims. (Cl. 76—5.)



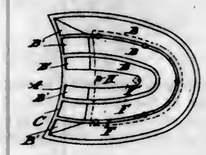
1. A forging machine of the type described comprising in combination two opposed work-holding jaws one

at least of which is movable relatively towards and away from the other, a reciprocating forging hammer arranged to operate on the work while it is held by said jaws, a single piston-rod connected with the movable jaw, and two pistons and cylinders the pistons of



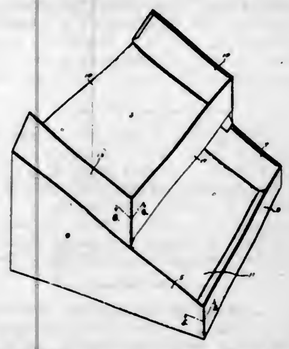
which are both connected to said piston-rod and serve jointly to move said movable jaw towards the companion jaw, said pistons being arranged respectively on opposite sides of the said companion jaw, for the purpose described.

1,576,280. TRANSFORMER. SAMUEL HORELICK, Pittsburgh, Pa., assignor to Pittsburgh Transformer Company, a Corporation of Pennsylvania. Filed Feb. 11, 1922, Serial No. 535,954. Renewed Aug. 4, 1925. 4 Claims. (Cl. 170—356.)



4. A transformer for different voltages in the ratio of two to three comprising a winding divided in four sections each having the same number of turns and two of said sections having a larger current capacity than the other two sections, and means whereby the two sections of larger current capacity may be connected in series with each other and in series with the other two sections in parallel and may also be connected with two of the sections in series with each other and in parallel with the other two sections connected in series with each other.

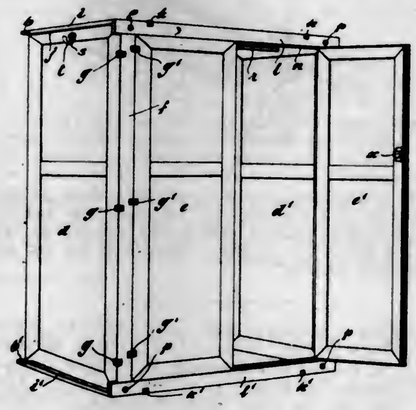
1,576,281. FLANGING MACHINE. JOHN HUBER, Los Angeles, Calif. Filed July 24, 1924. Serial No. 727,874. 9 Claims. (Cl. 153—25.)



1. In flanging mechanism, the combination with a supporting base and an upper reciprocable power driven head, of an anvil block, and a pressing head interposed between the anvil block and reciprocable head having a bending face and a plurality of separately adjustable shoes mounted on the pressing head.

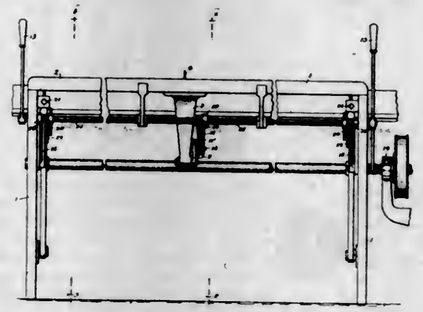
1,576,282. RUBBER HEEL. HUGH T. HUGHES, Cleveland, Ohio, assignor of one-half to Albert Crost, Cleveland, Ohio. Filed Oct. 24, 1922. Serial No. 596,585. 3 Claims. (Cl. 36—35.)

1. In a rubber heel, a body having its upper surface provided with a marginal ridge, on its sides and rear end, and a transverse ridge on its front, and with inner ridges parallel with the sides and rear end thereof, and terminating in said transverse front ridge, and with grooves between said side and rear ridges, said side and rear ridges having sloping inner faces, and the bottoms of said grooves sloping upwardly towards said front ridge, said ridges being spaced apart to permit division of said heel into different sizes.



1,576,283. COMMODITY-DISPLAY STAND. CLARENCE P. JOHNSON, Newton, Mass. Filed Nov. 19, 1924. Serial No. 750,956. 3 Claims. (Cl. 211—24.)

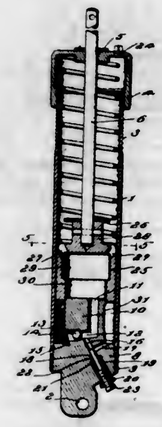
1. A compactible commodity display stand, comprising when assembled a plurality of superimposed trays and formed of a plurality of substantially flat sheet metal sections for forming the bottoms and walls of said trays whereby when the stand is disjointed said sections may be shipped as a substantially flat package, said sections having edges bent to form U-shaped channels for detachably interlocking with adjacent edges of said sections when said stand is assembled; said stand comprising a lower tray with a bottom wall inclined downwardly toward the front of said stand, and an upper tray the bottom of which is similarly inclined, the front of said upper tray being positioned rearwardly of the front of said lower tray, and the bottom and side walls of said upper tray being supported on the side walls of said lower tray.



1,576,284. FOLDING WARDROBE, CUPBOARD, AND THE LIKE. CHARLES ALLAN JONES, Gloucester, England. Filed June 18, 1925. Serial No. 37,937. 4 Claims. (Cl. 45—118.)

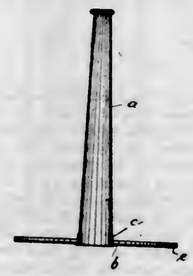
1. A folding wardrobe, cupboard, or the like which comprises, in combination, an upright back or foundation member, a pair of side members hingedly carried by said back, a pair of front door members hingedly carried by said sides, top and bottom members hingedly carried by said back so as to be adapted for rebated engagement with said sides, a pair of front flap members hingedly carried by said top and bottom members so as to be adapted for rebated engagement with said sides and with

the upper and lower edges of said doors, and means for fastening the various hinged members in their open position of use, the arrangement being such that the various hinged members are adapted to hold in substantially flat superposed relation upon said back member as a foundation.



1,576,285. LOOM BUNTER. ADOLPHUS HENRY LANDRY, Townsend, Mass. Filed Apr. 8, 1924, Serial No. 705,149. Renewed Nov. 11, 1925. 2 Claims. (Cl. 139—336.)

1. A bunter mechanism for looms, comprising a pivoted arm, a spring-pressed bolt engaging the arm, a cushion limiting the movement of the arm, a pivoted dog on the arm, and means for moving the dog into the path of the lay whereby the spring-pressed arm functions as a bunter to stop the lay.

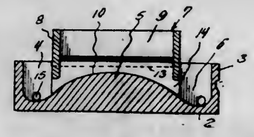


1,576,286. DOOR CLOSER AND CHECK. PHILIP LANG, Cedar Falls, Iowa, assignor to Wagner Manufacturing Company, Cedar Falls, Iowa. Filed June 4, 1925. Serial No. 34,989. 8 Claims. (Cl. 16—51.)

1. A door closer and check comprising a cylinder adapted to retain liquid, a piston therein, a spring in the cylinder and normally holding the piston at the lower end of the cylinder, a projection carried by the cylinder and cooperating with the piston for retarding the movement of the piston against the tension of the spring and constructed to have a high checking pressure upon the first part of the checking movement of the

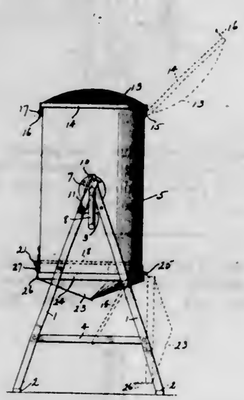
piston and partially releasing said pressure for a short movement of the piston and gradually retarding the movement of the piston against the tension of the spring on the last part of the movement.

1,576,287. MOUTHPIECE FOR USE IN BLOWING SOAP BUBBLES. RUDOLF LARSEN, Copenhagen, Denmark. Filed Aug. 22, 1922. Serial No. 583,635. 3 Claims. (Cl. 46—31.)



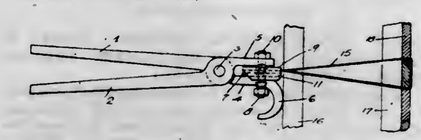
2. A mouth piece for blowing soap bubbles, comprising a blow pipe, a disk-shaped member attached to the discharge end of the blow pipe and provided with radial slots alternating with radial arms or spokes and an outer ring.

1,576,288. STOCK-FEEDING TROUGH. HARVEY S. LAW, Charleston, Ill. Filed Aug. 28, 1925. Serial No. 53,106. 1 Claim. (Cl. 119—52.)



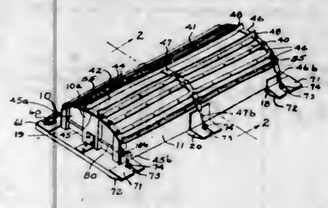
A stock feeding device of the class described comprising a base having upstanding side and end walls, the central portion of the base being arched for its entire length to provide longitudinally extending troughs on opposite sides, the upper edges of the end walls of the base being notched, a hopper supported on the base over said arched portion, said hopper including a frame, the ends of the frame having their bottom edges rounded for engagement with the arched portion, a shoulder being formed on each end of the frame of the hopper for

engagement with the respective notches formed in the respective end walls of the base, the sides of the frame being spaced from the sides of the base, and the bottom



edges of the sides of the frame being spaced from the arched portion to permit the feed in the hopper from the hopper to be discharged into the troughs by gravity.

1,576,289. INCINERATOR. THOMAS H. LEDDEN, Ridgway, Pa. Filed Apr. 9, 1925. Serial No. 21,968. 4 Claims. (Cl. 110—18.)

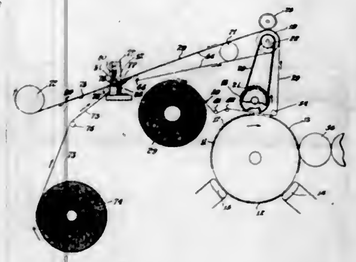


1. An incinerator comprising an open-ended body member, a hinged imperforate bottom at one end of said member, a grate secured within said member adjacent to said bottom, means for pivoting the body member to permit said member to be tilted, means for locking the same with either end uppermost, and a hinged foraminous top closure at the other end of the body member to permit the passage of smoke and prevent the escape of sparks while in use and to be swung open for dumping when the body member is tilted, said imperforate bottom serving as a rain deflector when the body member is adjusted with the lower end uppermost.

1,576,290. TONGS. ALFRED LENORMAND, San Francisco, Calif. Filed Oct. 26, 1925. Serial No. 64,784. 3 Claims. (Cl. 254—79.)

1. A device such as described comprising a pair of complementary handle members cross-pivoted together; a jaw member pivotally mounted on the end of each of said handle members in co-operating relationship; and fastening means loosely connecting each of said jaws.

1,576,291. MOLD FORM. JAY D. ACKER, Norwalk, Ohio. Filed Sept. 18, 1925. Serial No. 57,046. 17 Claims. (Cl. 25—130.)

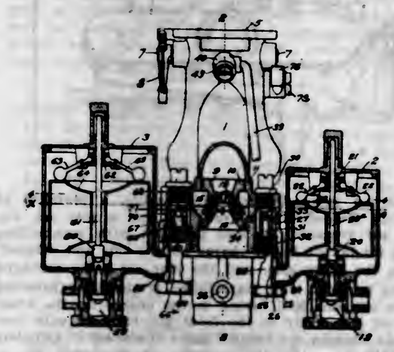


1. In a mold form of the character described, the combination of a core structure, removable side and end wall members mounted upon a base carrying the core and a flexible top arcuately supported by the end and side wall members.

1,576,292. MANUFACTURE OF ARTICLES FROM WOVEN GOODS. THOMAS DOW AINSLIE, Metuchen, N. J., assignor to The Roessler & Hasslacher Chemical Company, New York, N. Y., a Corporation of New York. Filed Jan. 19, 1926. Serial No. 82,867. 12 Claims. (Cl. 2—143.)

1. Process of manufacturing an article from woven fabric which consists in setting piece goods, forming a rough oversized multiple layer article therefrom, and bleaching and shrinking to size.

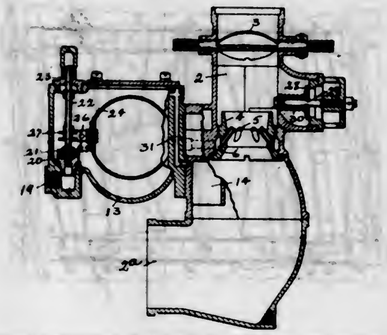
1,576,293. ROTARY WEB UNDERSURFACE PRINTING MACHINE. PETER AITCHISON, New Rochelle, N. Y., assignor to American Bank Note Company, New York, N. Y., a Corporation of New York. Filed Apr. 18, 1924. Serial No. 707,432. 25 Claims. (Cl. 101—156.)



1. A rotary web undersurface printing machine embodying therein a plate cylinder adapted to receive a plurality of engraved, intaglio or undersurface plates, spaced apart in relation to each other, inking, wiping and polishing mechanisms associated therewith, an impression cylinder or D-roll adapted to apply great pressure upon a strip or web between same and a plate upon said plate cylinder, means adapted to rotatably support a roll of continuous web, automatically acting means permitting rotation of said roll while said impression cylinder or D-roll and a plate are in engagement with said web, and preventing rotation thereof substantially simultaneously with the disengagement of the impression cylinder or D-roll and such plate from the web, a collecting mechanism, and means receiving the strip or web as it is fed by said impression cylinder or D-roll and a plate upon said plate cylinder, and delivering it toward said collecting mechanism.

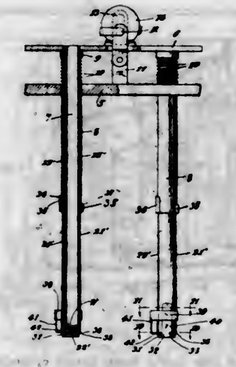
1,576,294. TRAY. ALBERT A. ALLEMAND, near Gilroy, Calif. Filed Sept. 10, 1925. Serial No. 55,576. 1 Claim. (Cl. 34—17.)

A drying tray comprising a rigid rectangular frame having its ends recessed from one side and a bottom of thin material normally easily warped when subjected to heat and moisture, a supporting strip positioned on the bottom of said material along its longitudinal axis, straps arranged transversely of said tray over the outer edge of said strip and secured to the opposite sides of the tray, and strips mounted upon the ends of the bottom material and passing over said straps and extending the length of said tray.



1,576,295. CARBURETOR. FRANK H. BALL, Detroit, Mich., assignor, by mesne assignments, to Ball and Ball Carbureter Company, Detroit, Mich., a Partnership composed of Frederick O. Ball and Cornelia M. Ball. Filed Mar. 7, 1918. Serial No. 220,906. 17 Claims. (Cl. 261—18.)

1. In a carburetor, the combination of a suction passage; a throttle valve in the passage; a fuel well; a fuel feeding means delivering fuel to the fuel well from a constant level; a spray device leading from below the fuel level in the fuel well to the suction passage below the throttle and to above the fuel level; and an air delivery for the fuel well having an inlet more remote from the discharge end of the suction passage than the spray device and having a capacity relatively to the spray device to maintain sub-atmospheric pressure in the fuel well responsive to and varying with the suction effort communicated through the spray passage for inducing a flow of fuel varying as the suction effort for induction of air varies in the suction passage.

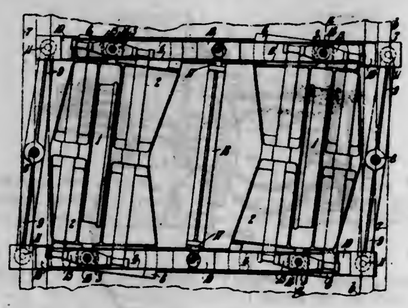


1,576,296. CARBURETOR. FRANK H. BALL, Detroit, Mich., assignor, by mesne assignments, to Ball & Ball Carburetor Company, Detroit, Mich., a Partnership composed of Frederick O. Ball and Cornelia M. Ball. Filed Jan. 13, 1919. Serial No. 270,804. 3 Claims. (Cl. 261—121.)

1. In a carburetor, the combination of a suction passage; a float chamber, said passage and float chamber being arranged one forward of the other; a spray passage below the level of the fuel in the float chamber leading to the suction passage; a fuel conduit leading from the float chamber and discharging to the spray passage at

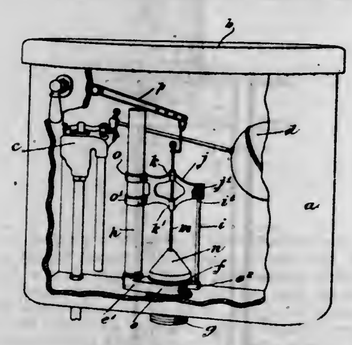
the side of the float chamber away from a front and rear line through the chamber; and an air passage leading to the spray passage.

1,576,297. WASHER-PLACING APPARATUS. JOHN W. AYMAR, Jr., Montclair, N. J. Filed June 10, 1924. Serial No. 719,033. 12 Claims. (Cl. 18—1.)



1. In an apparatus for placing washers upon heel mold pins, a washer magazine bodily movable towards and from the mold pin and provided with diametrically opposed openings in its wall, and means for singly delivering the washers through the lower end of the magazine as the latter is moved towards the mold pin, said means consisting of members movable through the respective openings into and out of supporting relation with the washers contained in the magazine, and relatively stationary cam means for actuating said members.

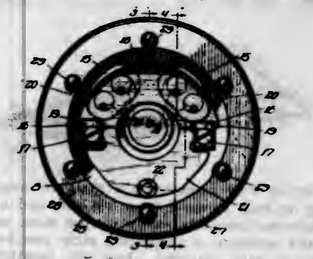
1,576,298. ROLLING STOCK FOR RAILWAYS AND TRAMWAYS. CAMILLE BARBEY, Vaud, Switzerland, and ROBERT EDWARD STOPFORD VENABLES, London, England. Filed Sept. 6, 1923. Serial No. 661,810. 20 Claims. (Cl. 105—179.)



1. In a four wheel truck for use on rails, the combination of side members to which the carriage body is

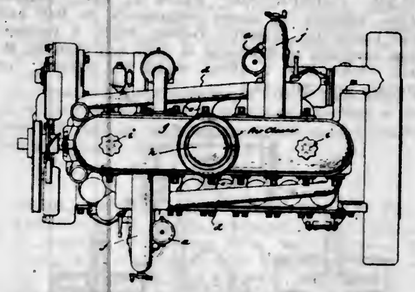
connected by vertical pivots, a frame for each wheel, links connecting to said side members the frames of the

two wheels on each side of the truck, transverse members at each end of the truck, said members connected to the wheel frames by bolts slidable in said frames.



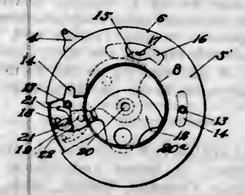
1,576,299. VALVE FOR LOW-DOWN FLUSH TANKS. ARNOLD M. BEHREE, New York, N. Y. Filed June 18, 1924. Serial No. 720,746. 4 Claims. (Cl. 4—57.)

1. A valve for low down flush tanks embodying therein a fitting having a discharge port therethrough, a nipple extending from, and extensions upon different radii of, said port, one of said extensions having an opening extending therethrough and communicating with said nipple, an overflow pipe carried by said last named extension, a standard secured to said other extension, a bearing fitting, means whereby said bearing fitting is non-adjustably supported from said standard, said bearing fitting having a plurality of spaced alined narrow bearings therein axial alinement with said port, and means thereon encircling but unconnected with said overflow pipe, a valve stem slidably mounted in said bearings, a buoyant valve carried by said stem, and actuating means for said stem.



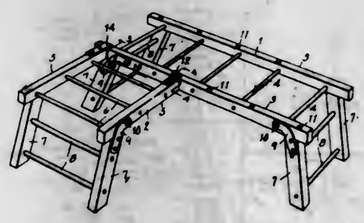
1,576,300. FLUID BUFFER. GEORGE BOOTH, Chicago, Ill., assignor to Miehle Printing Press & Mfg. Co., Chicago, Ill., a Corporation of Illinois. Filed Nov. 16, 1922. Serial No. 601,421. 7 Claims. (Cl. 188—96.)

1. In a fluid buffer, a cylinder and a solid piston head movable therein, a port in said piston head, a swinging valve pivoted to the solid piston head adjacent the port, said valve being normally maintained in open position



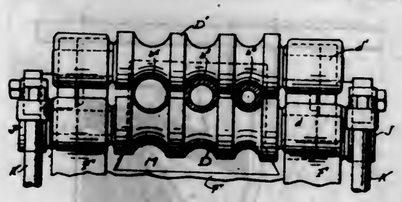
and adapted to be closed against the piston head to close the port therein, by fluid pressure in said cylinder.

1,576,301. INTERNAL-COMBUSTION ENGINE. JAMES SCRIPPS BOOTH, Detroit, Mich. Filed Nov. 6, 1924. Serial No. 748,119. 3 Claims. (Cl. 123—122.)



1. In an internal combustion engine, a plurality of cylinders divided into a front set and a rear set, the front set arranged for and provided with manifolding means for taking in the charge on one side and exhausting on the other side, and the rear set being arranged for and provided with manifolding means for exhausting on the one side and taking in the charge on the other side just conversely to the front set, together with connections whereby the exhaust gases of one set of cylinders heats the incoming fuel mixture of the other set of cylinders on the same side without being caused to pass to the opposite side of the cylinder block.

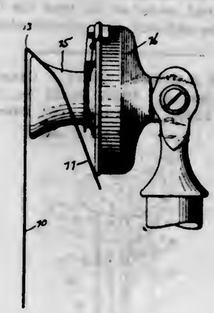
1,576,302. PHOTOGRAPHIC SHUTTER. CARL BORNMANN, Binghamton, N. Y., assignor to Ansco Photoproducts, Inc., Binghamton, N. Y. Filed May 15, 1924. Serial No. 713,619. 12 Claims. (Cl. 95—59.)



1. A photographic shutter comprising a speed controlling element, a pivoted diaphragm provided with relatively large and small apertures, and means whereby operation of the speed controlling element results in swinging said apertures alternately into operative positions.

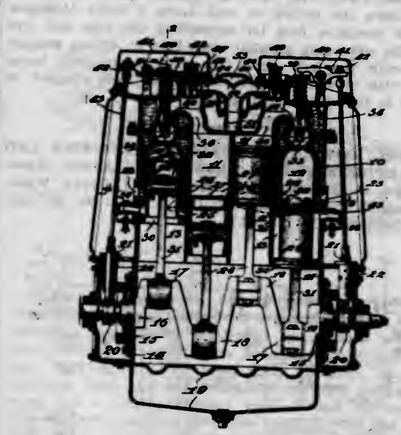
1,576,303. WASHBENCH. JOHN J. BROWN, Holland, Mich. Filed June 29, 1925. Serial No. 40,280. 2 Claims. (Cl. 68—95.)

1. In a wash bench, the combination of a main bench member comprising connected side rails, one of said side rails having a vertical bore therein, an auxiliary bench member comprising connected side rails, a plate with a projecting downwardly engaging hook support mounted on the end of one of the auxiliary member side rails to engage over a side rail of the main member, and a projecting plate with a pin pivotally mounted on the other auxiliary member side rail to engage said bore in said main member side rail whereby said auxiliary member may be supported at the side of the main member or swung over and collapsed in inverted position upon said main member.



1,576,304. METHOD OF AND APPARATUS FOR MAKING IMPLEMENT SOCKETS. JOHN E. BARNES, Jackson, Mich., assignor to The American Fork & Hoe Company, Cleveland, Ohio, a Corporation of Ohio. Filed Jan. 10, 1921. Serial No. 436,078. 8 Claims. (Cl. 76—113.)

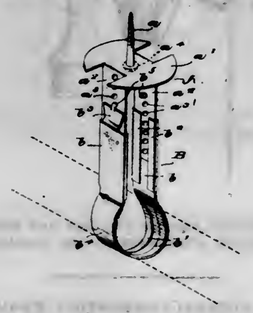
1. The method of making sockets for implements comprising rolling the end portion of a blank over the end of a rigidly held mandrel toward which the blank is pushed by rolls which have the same direction of travel at the lines of contact, and subsequently rolling such portion over a larger mandrel between rolls having a larger pass and having the same direction of travel at the lines of contact.



1,576,305. TELEPHONE ATTACHMENT. MARTIN E. BULLWINKEL, Brooklyn, N. Y. Filed Apr. 1, 1925. Serial No. 19,767. 1 Claim. (Cl. 179—185.)

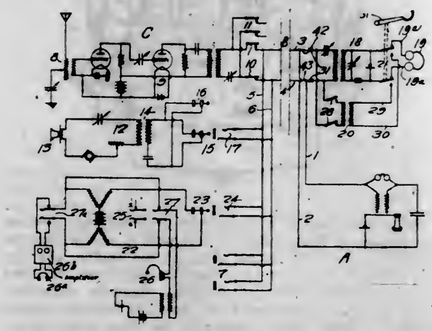
A telephone attachment comprising a rectangular blank folded transversely to comprise a short flap, and a long flap adapted when folded to lie against each other, there being an opening provided in the short flap for receiving the mouthpiece of a telephone instrument, and there being a crease extending longitudinally in the long flap and into the short flap between the transverse fold in the blank and the opening in the short flap to enable

the user to readily separate the flaps and thus facilitate the placing of the attachment on the mouthpiece of the telephone.



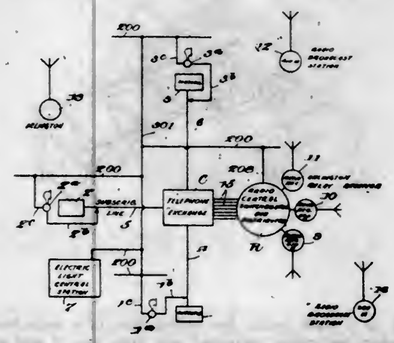
1,576,306. INTERNAL-COMBUSTION ENGINE. EVERETT R. BURTNETT, Los Angeles, Calif., assignor, by direct and mesne assignments, to The Automotive Valves Co., Los Angeles, Calif., a Voluntary Trust. Filed Oct. 24, 1922. Serial No. 596,580. 1 Claim. (Cl. 123—59.)

The combination in a two stroke cycle internal combustion engine, of four cylinders arranged in a row parallel with the axis of the crank shaft of the engine, the two end cylinders being of two diameter structure, the two center cylinders being of straight diameter structure, means to bypass compressed air from the enlarged piston chamber of each center cylinder to the other power chamber at the end of the row, valvular means for admitting a charge to the annular space created between the large diameters of the end cylinders and the pistons therein, valvular means for admitting a charge to the head clearance space of the two center cylinders, valvular means for the transfer of a precompressed charge from the said pump cylinders to the head clearance chamber of the adjacent end cylinders, ports formed in the wall of the lesser diameter of each two diameter end cylinders, a four crank throw crank shaft, a separate connection between each of the four pistons and the crank shaft, each piston being connected to a separate crank throw, the



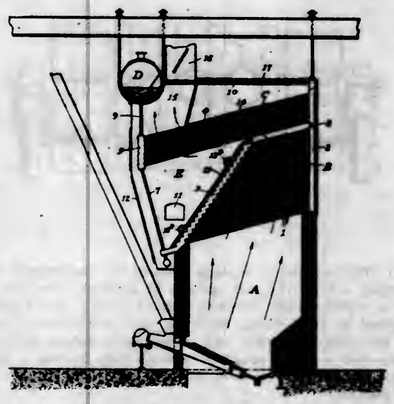
second piston from either end being late in the direction of crank rotation, a sufficient number of degrees relative to the first crank from the same end so as to cause the piston with said second cylinder from the given end, to reach head end dead center at the time the transfer valve in the head of the adjacent end cylinder closes.

1,576,307. PIPE HANGER. JOHN J. CASEY, Gloucester, Mass. Filed Jan. 31, 1924, Serial No. 689,640. Renewed Feb. 5, 1926. 3 Claims. (Cl. 248—31.)



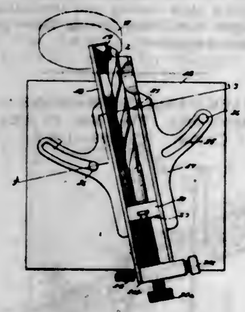
2. A hanger for pipes consisting of a base plate, attaching means therefor extending upwardly, a pair of downwardly extending parallel arms formed integral with said base plate, with openings spaced apart in opposite pairs down the middle of said arms, a lower U-shaped member having a loop for supporting the pipe and two upwardly extending parallel arms held in sliding engagement with the base arms, the said lower arms being fitted with claw fingers at their upper ends adapted to engage in the openings in the base arms.

1,576,308. COMBINED BROADCAST RECEIVING AND TELEPHONE SYSTEM. EDWARD B. CLEMENT, Washington, D. C., assignor to Edward F. Colladay, Washington, D. C. Filed Oct. 27, 1922. Serial No. 597,422. 10 Claims. (Cl. 179—2.)



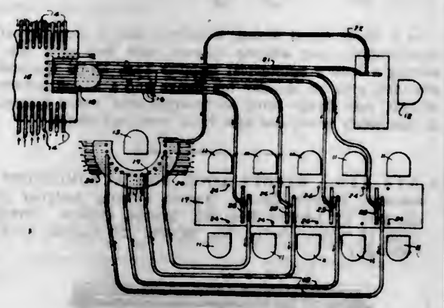
1. The combination with a telephone exchange system having a central office, subscribers' substations, and line circuits connecting the substations with the central office; of means for transmitting modulated super audio frequency carrier currents from the central office over a subscriber's circuit to the subscriber's substation, detector means at the substation for demodulating the same, means for passing the result—and audio frequency curents to line, and means at the central station responsive to said audio frequency currents, whereby a central station operator may listen in on the subscriber's receiving apparatus.

1,576,309. BROADCASTING SYSTEM. EDWARD B. CLEMENT, Washington, D. C., assignor to Edward F. Colladay, Washington, D. C. Filed Oct. 6, 1923. Serial No. 667,024. 16 Claims. (Cl. 179—2.)



1. In a broadcasting system the combination of a current distributing system comprising a connected network of wires serving a given area, a communication system composed of separate individual wires, subscribers' stations in said area provided with carrier current receiving apparatus, connections from said subscribers' receiving apparatus to said distributing system for receiving waves broadcasted thereon, other connections from said subscribers' receiving apparatus to said individual wires for individually receiving and transmitting electrical impulses or waves thereover, and a central broadcasting station connected for transmitting to said distributing system of wires, and also having access to said individual wires for communication thereover with the individual subscribers' stations.

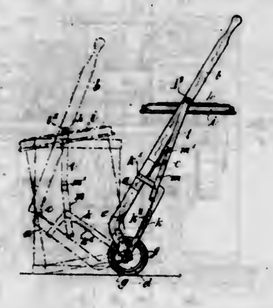
1,576,310. WATER-TUBE BOILER. ALFRED COTTON, St. Louis, Mo., assignor to Heine Boiler Company, St. Louis, Mo., a Corporation of Missouri. Filed Mar. 20, 1922. Serial No. 545,134. 11 Claims. (Cl. 122—308.)



1. A water tube boiler provided with a main tube bank composed of tubes that diminish in length in the direction in which the gases flow through the boiler, an inclined header structure arranged between the said bank and one wall of the boiler setting so as to form a dust collection chamber between said wall and header structure, and a top tube bank arranged so that a portion of same extends beyond said header structure and over said dust collection chamber.

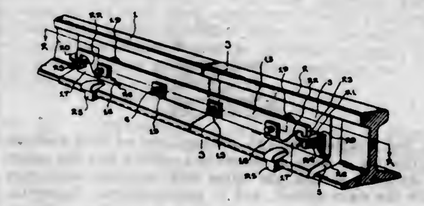
1,576,311. MECHANISM FOR USE IN GRINDING TWIST-DRILL POINTS AND THE LIKE. BENJAMIN M. DUD JARDINE, West Hartford, Conn. Filed Mar. 25, 1921. Serial No. 455,486. 8 Claims. (Cl. 51—219.)

1. In combination, a grinding wheel, a carrier mounted entirely outside of the plane of said wheel and to one side face thereof and having adjustment to and from said side face of said grinding wheel and also being mounted for adjustment for movement in a curved path about a center adjacent said side face, a drill holder on said carrier, and means for adjusting said carrier to and from said face to change the center about which it turns relative to the grinding wheel.



1,576,312. CENTRAL-STATION APPARATUS FOR PNEUMATIC-DISPATCH SYSTEM. WILLIAM H. DINSMORE, New York, N. Y., assignor to G & G Atlas Systems, Inc., New York, N. Y., a Corporation of New York. Filed Sept. 5, 1925. Serial No. 54,624. 9 Claims. (Cl. 243—6.)

1. In a central station installation for pneumatic dispatch systems, a relay station at which carriers are received from outlying stations, a plurality of operators' stations to which carriers are dispatched by an operator at the relay station, and a dispatching station to which carriers are transmitted by the operators for return dispatch to the outlying stations from which they were received by the relay station.

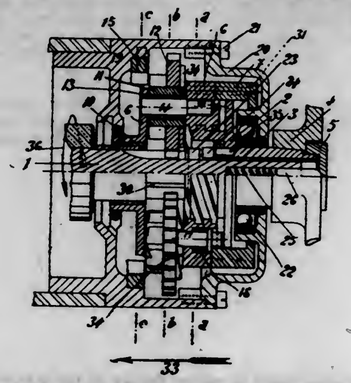


1,576,313. HAND TRUCK. JAMES J. DOLAN, New Rochelle, N. Y. Filed June 27, 1925. Serial No. 39,915. 6 Claims. (Cl. 214—65.4.)

1. In a hand truck, a main frame composed of two portions hingedly connected, a cross member at the lower end of the main frame to engage the article to be transported, a clamping member carried by the upper portion

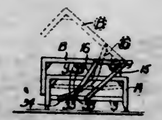
of the main frame to engage the top of the article to be transported, and locking devices to retain the parts in clamping position.

1,576,314. LOCKING DEVICE FOR RAILROAD-TRACK JOINTS. EDD DOZIER, Versailles, Ky., assignor of one-half to Carl H. Ledendecker, Versailles, Ky. Filed Nov. 25, 1925. Serial No. 71,356. 3 Claims. (Cl. 238—262.)



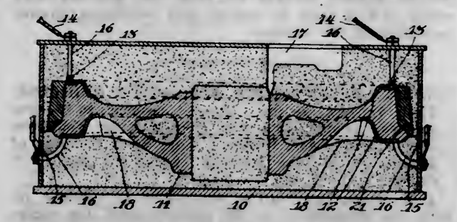
1. In a locking device for railroad track joints, the combination with adjoining end portions of a pair of rails including fish plates positioned in contact with the webs of the rails with bolts passing through said parts and nuts thereon to hold them together, of plates mounted upon the end bolts and provided with lateral ears, and a locking element with notches applicable to the nuts in a vertical direction parallel with one of the fish plates and having downwardly extending end projections passing through the ears, and provided with means to hold them in position and preventing upward movement of the element.

1,576,315. SELF-STARTER FOR MOTOR VEHICLES. PAUL DUFOUR, Belfort, France, assignor to Societe Anonyme pour l'Equipement Electrique des Vehicules, Issy-les-Moulineaux, France, a Joint Stock Company of France. Filed June 26, 1925. Serial No. 39,707. 7 Claims. (Cl. 74—59.)



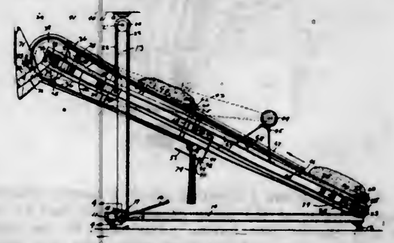
1. In a gear for starting the engine of a motor vehicle, the combination of the dynamo shaft, the engine shaft, a planetary train comprising a central pinion, a planet wheel and a planetary track ring interposed between said dynamo shaft and said engine shaft, a screw parallel with the dynamo shaft, means connecting said screw to said engine shaft, a nut screwing on said screw,

means connecting said nut to said planet wheel so that said planet wheel is fast with said nut in its translations parallel to the dynamo shaft and can thus escape



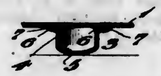
from said planetary track ring, means operated to said planet wheel as it escapes by translation from said planetary track ring, the said means effecting direct engagement of said dynamo shaft and said engine shaft.

1,576,316. EXTENSION OR PULL-OVER BED. WILLIAM J. DUVALL, St. Louis, Mo., assignor to Smith & Davis Mfg. Co., St. Louis, Mo., a Corporation of Missouri. Filed Mar. 21, 1924. Serial No. 700,854. 1 Claim. (Cl. 5—22.)



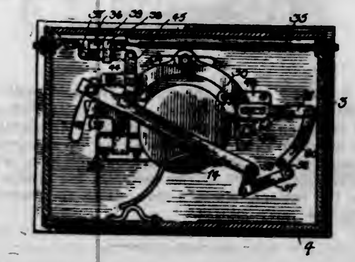
A bed composed of two sections, one of said sections constituting a main or supporting section and the other an extension section, the latter being normally supported above the main section, and in spaced relation therewith, and being movable through an arc to a position adjacent to and in the same plane with the main section, means for maintaining said extension section in parallelism with the main section throughout its entire arc of movement, and said last mentioned means being arranged to permit tilting said extension section upwardly in a direction opposite to that in which it moves when extended.

1,576,317. METHOD OF FORMING REENFORCED CASTINGS. CARL E. EKLIND, Berwyn, Ill. Filed Apr. 16, 1925. Serial No. 23,469. 3 Claims. (Cl. 22—204.)



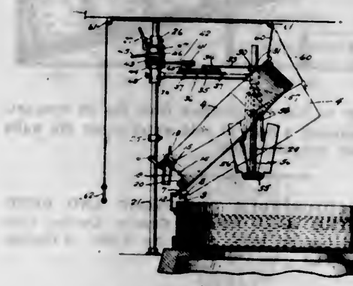
1. The method of forming reenforced cast wheels comprising preheating preformed reenforcing pieces of one metal in a mold to substantially the highest temperature they will stand without losing their shapes, the pieces being so placed in the mold that one will be on the outside of each face of the finished wheel, then pouring a molten metal of a different quality and at a temperature in excess of its melting point into the mold against and between the reenforcing pieces, such reenforcing pieces absorbing such excess heat and welding with the poured metal, the metals then cooling and shrinking together to form an integral cast wheel having faces provided with exposed reenforcing pieces.

1,576,318. SACK-HANDLING MACHINE. IRA T. ENGLISH, Portland, Oreg. Filed Mar. 19, 1924. Serial No. 700,200. 7 Claims. (Cl. 198—178.)



1. A sack emptying machine having, in combination, a conveyor; and a sack holding means on said conveyor adapted to engage the closed end of open sacks while they pass around the discharge end of said conveyor in an inverted position.

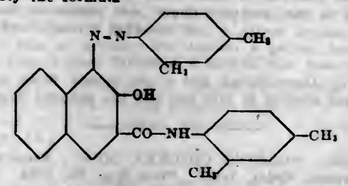
1,576,319. DRIP AND OTHER REFREGERATOR PAN. OLIVER MILLER FAGLEY, Philadelphia, Pa. Filed Jan. 9, 1924. Serial No. 685,121. 1 Claim. (Cl. 220—69.)



In a sheet metal vessel, a bottom and a plurality of noncorrodible feet secured thereto, said feet each comprising a hollow cylindrical member open at its top and provided with an annular top flange and a closed convex bottom, said flange being soldered to said vessel bottom to completely cover and hide from view said flange.

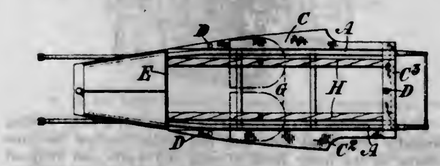
1,576,320. SAFETY LOCK FOR AUTOMOBILES. GEORGES FORTIN, Quebec, Quebec, Canada, assignor of one-half to Adjutor Brulotte, Quebec, Canada. Filed June 18, 1925. Serial No. 38,070. 10 Claims. (Cl. 200—45.)

1. A circuit control device comprising in combination with a housing and a switch mounted therein, a lever pivoted in said housing and connected to the blade of the switch, a slide mounted in said housing and operable by said lever, an obstructing member carried by said slide and adapted to enter the path of said lever, a lock attached to said housing, and a bolt connected to said slide and adapted to enter said lock.



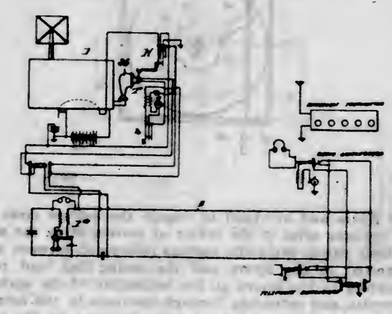
1,576,321. MECHANISM FOR FRYING POTATO CHIPS AND THE LIKE. CHARLES B. GASSER, Reading, Pa. Filed Sept. 22, 1923. Serial No. 664,182. 8 Claims. (Cl. 53—7.)

1. A cooking apparatus including a fat kettle and a basket therein for containing the articles to be cooked, means for raising and supporting the body above the kettle in a position to permit draining, and means for preventing one side of the basket elevating beyond a predetermined position during the raising of the basket out of the kettle to cause the basket to tip into a position in which the contents will discharge by gravity.



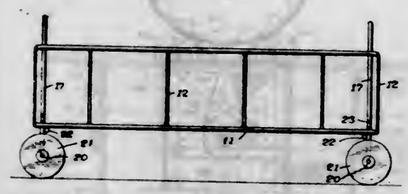
1,576,322. AZO DYE. JOSEF HALLER, Leverkusen, Germany, assignor to Farbenfabriken vorm. Friedr. Bayer and Co., Leverkusen, near Cologne-on-the-Rhine, Germany. Filed Nov. 7, 1925. Serial No. 67,655. 4 Claims. (Cl. 260—96.)

2. As a new product the azo dyestuff having most probably the formula



which is a deep red powder, practically insoluble in water, soluble in concentrated sulfuric acid with a violet color and yielding by reduction asymmetrical-m-xylidin and 1-amino-2-hydroxy-3-naphthoic acid-asymmetrical-m-xylidid.

1,576,323. MOTOR VEHICLE. EDWARD AXELSON HELLSTRAND, Guildford, England. Filed May 26, 1925. Serial No. 33,006. 1 Claim. (Cl. 296—28.)

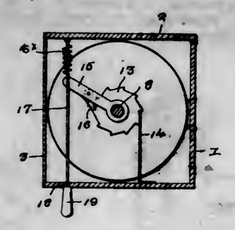


In a motor vehicle the combination of a chassis frame, longitudinal sills mounted thereon, detachable seats carried solely thereby and out of contact with said chassis frame, and a detachable body shell, mounted upon its own supporting frame, said frame engaging the chassis at three points only, the remainder of the body shell supporting frame being spaced from said chassis frame.

1,576,324. RADIOPHONE BROADCASTING SYSTEM. JAMES B. HOGE, Cleveland, Ohio, and EDWARD E. CLEMENT, Washington, D. C., assignors, by direct and mesne assignments, to Edward F. Colladay, Washington, D. C. Filed Aug. 22, 1922. Serial No. 583,559. 1 Claim. (Cl. 250—6.)

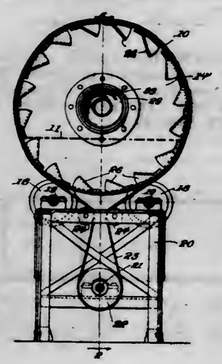
In a communication system, a plurality of receiving stations all having receiving apparatus permanently tuned to a fixed standard wave length, a common transmitting station equipped with transmitting apparatus, means for tuning and operating said transmitting apparatus with reference to the fixed wave adjustment of said receiving stations, and means controlled from the transmitting station for determining when the receiving apparatus at a receiving station is operating in resonance to the transmitted wave.

1,576,325. CONVERTIBLE CART. RUDOLPH A. HOPF, New York, N. Y., assignor to Averill Manufacturing Corporation, New York, N. Y., a Corporation of New York. Filed Mar. 13, 1924. Serial No. 699,101. 6 Claims. (Cl. 280—47.)



1. A structure of the kind described comprising a body having vertically spaced flattened sockets extending for a substantial distance transversely thereof, and supports detachably connected to the body having shanks to fit the said sockets.

1,576,326. BULLETIN CABINET. ISAAC LEE HORNE, West Graham, Va., assignor of one-half to Philip Burkett, West Graham, Va. Filed Aug. 29, 1924. Serial No. 734,972. 1 Claim. (Cl. 40—69.)



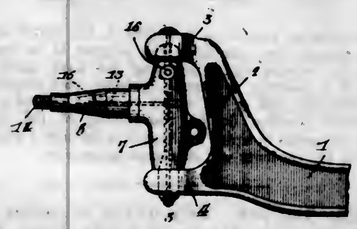
The combination in a bulletin cabinet, of a casing body having display openings in one wall thereof indicating wheels supported in said casing body opposite the said display openings and adapted to bear on their peripheries and in spaced relation with respect to each other data items of various description, ratchet disks fixed to said

wheels at the sides thereof, right angled shaped resilient pawls rising vertically from and fixed to the bottom of the casing body and having their upper ends bearing against the peripheries of the ratchet disks respectively at one side of the center of movement thereof, vertically swinging levers arranged alongside said ratchet disks and movable about said center of movement, dogs carried by

said levers and arranged to engage the ratchet disks at the opposite sides of the center of movement to the said resilient pawls, retractile springs interposed between and connected to the levers and the casing top, and rods connected to the levers at the connection of the springs therewith and extending through openings in the bottom of the casing body and hand grasp portions on the rods and arranged below said bottom.

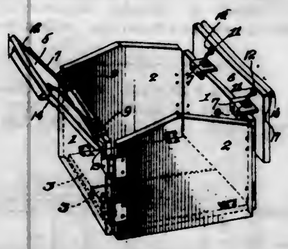
1,576,327. HANDLE-PAINTING MACHINE. JAMES H. HUGHES, Canton, Ohio. Filed Feb. 18, 1925. Serial No. 10,117. 7 Claims. (Cl. 91—18.)

1. A painting apparatus of the character described, comprising a container through which each article to be painted is adapted to be passed, said container being adapted to be partly filled with paint, means for conveying the paint in predetermined quantities to points above the article and subsequently splashing the article therewith, and means for wiping each article as it is taken from the container.



1,576,328. REFRIGERATING CABINET. HIRAM D. IRWIN, Beckley, W. Va. Filed June 12, 1925. Serial No. 36,719. 7 Claims. (Cl. 62—37.)

1. A refrigerating cabinet comprising an inclined cabinet body having an overflow at its lower end, and an ice compartment at its upper end, a plurality of storage compartments within the body, and damming baffles within the body arranged between successive ones of the storage



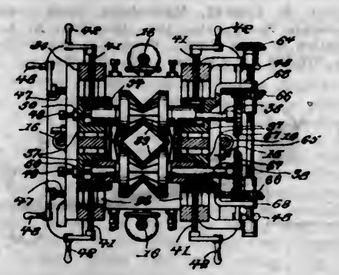
compartments to dam the overflow from the ice compartment and maintain a body of cold water about the walls of the storage compartments.

1,576,329. ADJUSTABLE DUSTPROOF AND RUSTPROOF AXLE. ISAIE JACQUES, Granby, Quebec, Canada. Filed Jan. 22, 1925. Serial No. 4,099. 2 Claims. (Cl. 280—96.1.)

1. A dust and rustproof axle comprising a yoke having a pair of fingers extending therefrom, one of said fingers having a cavity formed in its inner surface, the remaining finger having a threaded aperture, a spindle having one end received in said cavity and its remaining end resting on the apertured finger, said remaining end having a conical cavity, a nut threaded through said aperture and having a conical end received in said conical cavity, said bolt having a lubricant duct formed longitudinally therethrough and a pin loosely fitted in said duct and secured to said nut and the opposite finger.

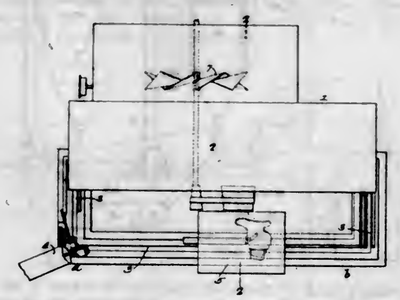
1,576,330. FOLDING CHICKEN COOP. EMANUEL A. KAMBREB, Cedar, Iowa. Filed Mar. 25, 1924. Serial No. 701,798. 4 Claims. (Cl. 119—19.)

3. In a device of the character described, a body having hingedly connected side and end walls, bottom sections hinged to the inner faces of said end walls and adapted to be swung upwardly to a folded position against the inner faces of said end walls, means for supporting said bottom sections in a horizontal position between the walls when swung downwardly to an operative position, cover



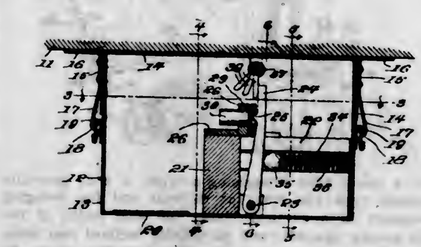
sections adapted to rest upon the upper edges of said side and end walls when closed, brackets carried by said side walls and having portions extending outwardly therefrom and provided with openings, and rods carried by said cover sections and extending transversely across the inner faces thereof and through the openings, in said brackets to slidably and pivotally mount the cover sections for movement from a closed position upon the upper edges of the walls to an open position against the outer faces of the side walls.

1,576,331. AUTOMATIC VALVE. EDWARD G. KELLEY and CHARLES ZIEKLE, Greenville, Ohio. Filed June 30, 1925. Serial No. 40,583. 5 Claims. (Cl. 137—69.)



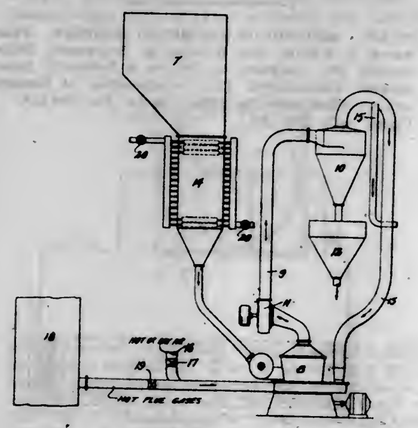
1. A valve of the character described comprising, a chambered head, tubular means carried thereby and opening into the chamber for connecting the head to a compression flush tank, said head having an air inlet thereinto, check means arranged in said tubular means allowing air to pass into said tank through said head, and means for closing said air inlet to said head in the event of the failure of said check.

1,576,332. HYDRAULIC INGOT-TRIMMING PRESS. ALPHONSO DE CLAUDE KESSLER, Dunkirk, N. Y. Filed Aug. 31, 1923. Serial No. 660,410. 9 Claims. (Cl. 90—16.)



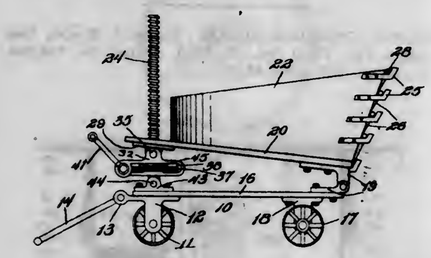
4. In an ingot trimming machine, a supporting frame, upper and lower pairs of cutters journaled therein, the cutters of one pair being arranged at right angles to those of the other pair whereby to act upon opposite sides of the ingot, means for rotating all of the cutters simultaneously, a guide cage carried by the frame in alignment with the opening between the cutters, chute means for leading an ingot into the cage, and a hydraulic press carried above the frame and having a depending plunger entering the cage for feeding the ingot through the cutters, and means for adjusting the cutters toward or from each other whereby to vary the distance between them to accommodate ingots of different sizes.

1,576,333. METHOD OF FINISHING HOSIERY. FREDERICK J. KIENEL and WALTER M. SCHWARTZ, Philadelphia, Pa., assignors to Proctor & Schwartz, Incorporated, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Oct. 18, 1921. Serial No. 508,488. 1 Claim. (Cl. 223—17.)



The method herein described of finishing stockings, said method consisting in placing the stockings on forms while in a dry condition; passing the stockings while on the forms through a moistening chamber in which they will receive the proper degree of moisture; straightening the stockings while on the forms after they leave the moistening chamber; and then passing the stockings while on the forms through a drying chamber in which the heated air is circulated in direct contact with the stockings.

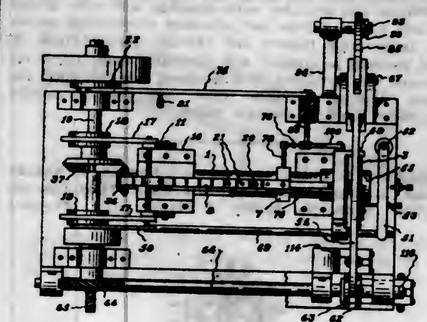
1,576,334. BURGLAR ALARM. FRANK J. KOKAL, Herminie, Pa. Filed Oct. 17, 1924. Serial No. 744,284. 1 Claim. (Cl. 116—87.)



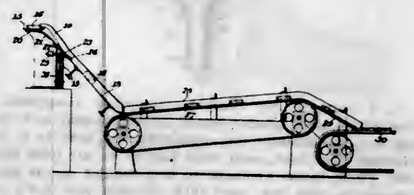
An alarm including a casing, a block in said casing having spaced slots and openings communicating with said slots, a cartridge holder on said block adapted to contain a plurality of cartridges, a hammer for each cartridge, said hammers being pivoted beneath the block and movable in said slots, springs in said openings and bearing against said hammers for normally forcing them toward their respective hammers and means for engaging said hammers for moving them against the tension of said springs whereby said tension will forcibly move said hammers toward the cartridges upon release of said hammers.

1,576,335. PULVERIZATION OF COAL. HENRY KREISINGER, Piermont, N. Y., assignor to Combustion Engineering Corporation, New York, N. Y., a Corporation of New York. Filed Jan. 16, 1925. Serial No. 2,718. 12 Claims. (Cl. 83—11.)

1. The herein described process of pulverizing coal which consists in pulverizing the coal in the mill of a system including a separator and air as a carrying medium, and in preheating the coal to be pulverized to a point such that the sensible heat of the coal in pulverization is sufficient to dry the coal for transport and in the presence of the carrying air.



1,576,336. GRAVE FILLER. WILHELM KRONSBEIN, Campbell Hill, Ill. Filed Dec. 18, 1924. Serial No. 756,790. 4 Claims. (Cl. 298—19.)

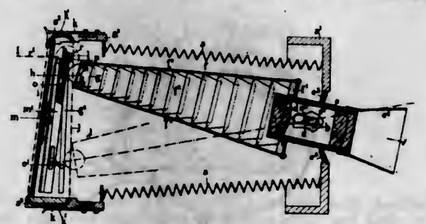


1. A grave filler comprising a truck, a body pivotally mounted upon the truck at its rear end for swinging movement in a vertical plane, the side walls of the body having upwardly and rearwardly inclined rear ends, supporting irons mounted one below another upon he rear ends of the side walls and projecting beyond the side walls and having upwardly turned rear ends, and a plurality of end gates having trunnions engaging said irons, the end gates being thereby mounted for independent removal and said gates normally closing the rear end of the body.

1,576,337. ELBOW-MAKING MACHINE. AUGUST D. KUMPF, Philadelphia, Pa. Filed May 16, 1925. Serial No. 30,806. 27 Claims. (Cl. 153—69.5.)

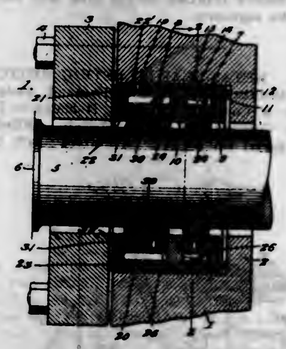
1. In an elbow making machine, tube creasing means, corrugating hammers for corrugating sections of the tube, tails on said hammers, cam levers for operating said hammers normally engaging said tails, means supporting said hammers to permit limited lateral movement of the hammers to move them out of engagement with said levers.

1,576,338. BRICK HACKING. JAMES B. LADD, Ardmore, Pa. Filed Dec. 3, 1918. Serial No. 265,082. 9 Claims. (Cl. 214—1.1.)



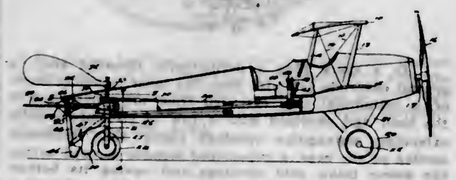
1. The method of hacking bricks which consists in transferring the bricks from the pallets, upon which they come from the driers, to a hacking table, part of said movement being caused by gravity, and up-edging the bricks during the gravity movement.

1,576,339. METHOD OF MAKING POROUS CANDY. PHILIP B. LASKEY, Marblehead, Mass., assignor to Chocolate Sponge Co., Inc., Brooklyn, N. Y., a Corporation of New York. Filed Nov. 24, 1923. Serial No. 676,756. 2 Claims. (Cl. 107—54.)



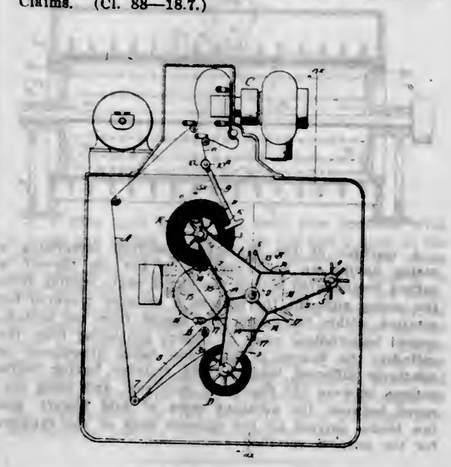
1. The process of making porous candy which consists in forming a plurality of separate longitudinal corrugated streams of candy material, pulling said streams of candy while they are separated and while the candy material forming the streams is still in a tacky condition, bringing portions of said elongated streams into adhering contact to form a cellular candy structure, and then further pulling said cellular candy structure.

1,576,340. SYSTEM OF PHOTOGRAPHIC APPARATUS WITH CURVED FOCUS. HENRI EMILE LE PROVOST, Argenteuil, France. Filed Mar. 6, 1924. Serial No. 697,362. 7 Claims. (Cl. 95—15.)



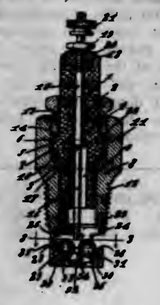
1. In a photographic apparatus, an objective adapted to give a curved image from a plane object and rotatable about an axis, a curved film carrier associated with said objective, the generatrix of curvature of the film carrier being at right angles to the axis about which the objective rotates, a film mounted on said carrier and curved similarly to the latter, and means for causing the film carrier to rotate about an axis parallel to the first mentioned one, during the rotary movement of the objective.

1,576,341. METALLIC PACKING FOR PISTON RODS. CHARLES H. LOVE, Mattoon, Ill. Filed Sept. 12, 1923. Serial No. 662,185. 1 Claim. (Cl. 286—24.)



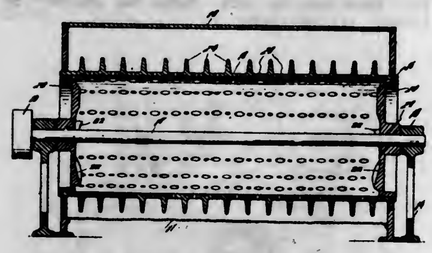
In a device of the character described, the combination with a piston rod, a hollow casing, and a gland secured thereto, of substantially L-shaped inner and outer casing rings interposed between the hollow casing and the gland, the inner extensions of said casing rings having openings therethrough of sufficient size to allow the passage of the piston rod, the inner casing ring having a groove on one side thereof, a ring received in said groove, each of said inner and outer casing rings having flanges extending outwardly in the same direction therefrom, said flanges having circumferential grooves formed at the outer edges thereof, an inwardly extending flange formed on the outer casing ring and received in the groove in the inner casing ring, forming an internal chamber within said inner casing ring, a cap ring interposed between the outer casing ring and the gland and having an inwardly extending flange received within the groove formed in the outer casing ring, forming an internal chamber within said outer casing ring of a greater width than the first-mentioned chamber, sectional packing rings closely embracing the piston rod within the internal chambers, a substantially L-shaped sectional joint ring embracing the piston rod and interposed between the outer packing ring and the cap ring within the wider internal chamber, a second joint ring fitted over and embracing a portion of said sectional joint ring and interposed between said sectional joint ring and the cap ring, said packing rings having circumferential grooves in the peripheries thereof, and having radial holes extending inwardly at points within the grooves, segmental springs received within said grooves and having the outer free ends thereof engaging the walls of the internal chambers for holding the springs within the grooves for compressing the packing rings, and dowel pins secured to the springs and extending into the holes for holding said springs against endwise movement.

1,576,342. AEROPLANE. FRANK MCELHANEY, Morgantown, W. Va. Filed Aug. 15, 1925. Serial No. 50,451. 10 Claims. (Cl. 244—29.)



1. In a device of the class described, a body portion, planes mounted thereon, propelling mechanism, a vertical shaft mounted for rotatable and vertical movement, a stem rotatable with the shaft, and slidably vertical with reference thereto, rudders carried by the shaft and by the stem, and controlling means for shifting the rudders simultaneously.

1,576,343. APPARATUS FOR WINDING AND UNWINDING FILMS. GEORGE R. MACOMBER, Chicago, Ill. Filed Aug. 24, 1921. Serial No. 495,007. 20 Claims. (Cl. 88—18.7.)



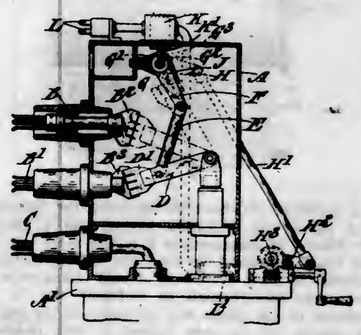
1. In a film winding apparatus, a winding spool, a spool revolving member, means for directing a film between the spool and the revolving member, and means for bringing the spool and revolving member together into spool-revolving relation, thereby clamping the film therebetween.

1,576,344. SPARK PLUG. STUART MACPHERSON and JAMES C. POETER, Pittsburgh, Pa. Filed June 5, 1925. Serial No. 35,127. 2 Claims. (Cl. 123—169.)

1. In a spark plug a peripherally threaded shell, a central electrode extended from the inner terminus thereof, a cylindrical cage extended from the inner edge of the shell and provided with a row of circumferentially extending rectangular openings above the transverse median of the cage, a cup-shaped member secured within the sleeve below said openings and having its bottom flush with the inner end of the cage and formed with a series of openings, said member having centrally disposed means carried by the upper face of the bottom thereof, extending towards the openings in the cage and coacting with the edge of said member to provide an annular ball race, and a plurality of auxiliary electrodes of spherical contour shiftable in and projecting from said race and spaced from said central electrode.

1,576,345. COTTON-CLEANING CYLINDER. CELSTINO MARTINEZ, San Diego, Tex. Filed May 23, 1925. Serial No. 32,419. 1 Claim. (Cl. 19—97.)

A machine of the character described comprising a casing having an inlet opening in the top thereof, a curved foraminated bottom, an outlet chute leading from the casing adjacent the bottom, a cylinder mounted for rotation within the casing and spaced from the bottom, spaced longitudinal rows of fingers projecting from the cylinder, the fingers of each row being alternately of relatively different lengths, said cylinder having perforations between the fingers of each row, and being concaved between the adjacent rows of said fingers, and fan blades carried by the opposed ends of the cylinder for the purpose specified.

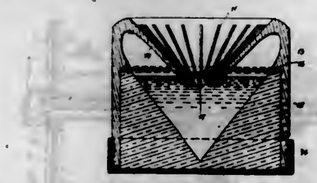


1,576,346. GAUGE. GLENN MENDELL, Moran, Kans. Filed July 14, 1924. Serial No. 726,012. 5 Claims. (Cl. 33—178.)

1. A gauge comprising an annular casing, an annular series of gauge segments mounted within the casing for radial adjustment, and each having a seat in one face disposed intermediate its width and extending radially of the casing, ribs carried by said casing and fitting into said seats to guide sliding movement of the gauge elements, a rotatable adjusting ring in the casing, having grooves extending chordally with relation to the

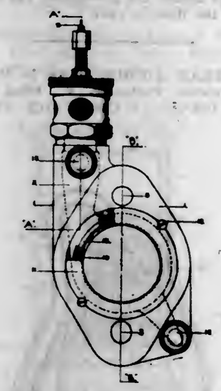
periphery of the ring and in crossed relation to said ribs at oblique angles thereto, and studs upon the segments disposed over said ribs and engaging in the said grooves whereby rotation of the ring will effect adjustment of the segments.

1,576,347. METAL-CLAD ELECTRIC SWITCH GEAR. JAMES MIERRY, East Boldon, England, assignor to A. Reyrolle & Company Limited, Hebburn-on-Tyne, England, a Company of Great Britain. Filed Sept. 3, 1925. Serial No. 54,347. 8 Claims. (Cl. 200—150.)



1. In electric switchgear of the metal-clad horizontal draw-out type for a duplicate busbar system, the combination with the movable or draw-out portion of the switchgear, of a main switch, a hood or casing carried by said movable portion, duplicate busbar connections mounted on said casing, at least one switch arm or connector within the casing adapted to connect either of said busbar connections to one pole of the main switch, and means outside the casing for operating said switch arm or connector.

1,576,348. INKWELL. MARTIN F. MORAN, Nekoma, Kans. Filed Feb. 24, 1925. Serial No. 11,251. 3 Claims. (Cl. 120—57.)



1. An ink well comprising a cover formed with a re-entrant funnel and with an internal annular shoulder,

a body telescoping within said cover and having an annular terminal edge co-acting with said shoulder, a cap engaging said body and screwed upon the lower end

of said cover, and a gasket fitted between said shoulder and edge and compressed when said cover and body are screwed together.

1,576,349. SUPPLY OF AUXILIARY AIR TO INTERNAL-COMBUSTION ENGINES. ARTHUR HARRIMAN MOSS, Misterton, England. Filed June 22, 1925. Serial No. 38,895. 4 Claims. (Cl. 48—180.)

1. In a device for admitting an auxiliary supply of air to the fuel mixture in the induction pipe of an internal combustion engine, the combination of a body having a boring adapted to form part of the induction pipe and provided with an annular recess forming an enlargement of that boring, a valve communicating by a passage in the body with the recess and a coiled wire in annular form disposed to provide a partition having jet-producing apertures between the recess and boring, substantially as specified.

1,576,350. HAT-CROWN-ADJUSTING DEVICE. GEORGE W. MURPHY, Philadelphia, Pa., assignor to International Harvest Hat Company, St. Louis, Mo. Filed Aug. 4, 1925. Serial No. 48,118. 2 Claims. (Cl. 2—197.)

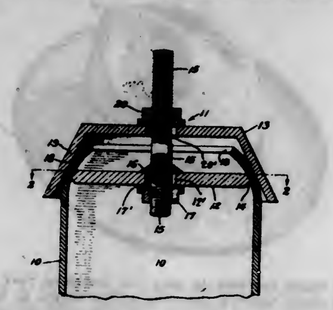
1. The combination with the crown and brim of a hat, of a series of upstanding, looped, spaced, narrow, endless coupling members, each forming in itself a complete loop and having its lower terminal portion fixedly secured solely to the inner portion of the upper face of said brim and the remaining portion free of connection with and arranged against the outer periphery of the base of the crown, said members positioned at the front, rear and one side of the crown, a slidable band in the form of an adjustable strap extending through all of said coupling members, positioned against parts of the sides, front and rear of the outer periphery of the base of the crown and free of direct connection therewith throughout, and a slide buckle bearing against a part of the outer periphery of the base of the crown and slidably engaging with and having portions of its outer face permanently overlapped by the free end terminal portions of the strap for adjustably connecting the ends

of the latter together to vary the length of that portion of the strap between the ends of the buckle to vary the size of the base of the crown and further to bind said coupling members and strap against the outer periphery of the base of the crown.

1,576,351. PROCESS OF MAKING CONCENTRATED SOUR MILK. AMOS NEUBAUER, Bluffton, Ind. Filed Jan. 19, 1924. Serial No. 687,870. 3 Claims. (Cl. 99—11.)

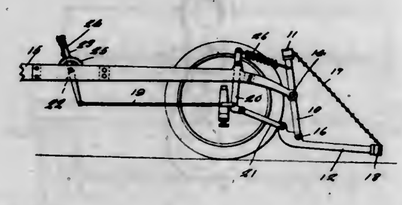
2. A process which comprises concentrating skim milk to about 4 to 1 concentration, souring the product at about 90 to 100° F., up to an acidity of over 4% and then homogenising the product.

1,576,352. HOOK. PETER AUGUST NORDLING, Gottenborg, Sweden. Filed Mar. 21, 1925. Serial No. 17,894. 2 Claims. (Cl. 24—233.)



1. A snap hook including a body part provided with a recess and having an eye at one end and a hook at the other end, a spring pressed lever pivoted in the recess and adapted to close the hook but normally tending to open outwardly, an offset, on the inner end of the lever, a spring pressed pivoted catch arranged entirely within the recess and normally engaged with the offset on the lever but adapted to be manually lifted from engagement therewith to permit of opening of the lever and the outer end of the catch bearing against the inner end of the bolt when the latter is released to also assist in the maintenance of the lever in open position, substantially as and for the purposes set forth.

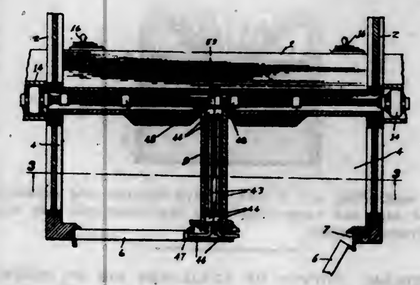
1,576,353. PIPE CAP. HAROLD E. OLSEN, Bronx, N. Y. Filed Apr. 17, 1925. Serial No. 23,997. 2 Claims. (Cl. 137—76.)



1. A closure comprising a disk, the periphery of which is adapted to engage the inner curved walls of the inwardly bent end of a ductile pipe, a cap having annular outwardly flared side walls adapted to engage the outer walls of the bent end and which co-acts with the

disks for clamping the walls of the bent end therebetween, a threaded stud, said disk and cap having openings therein of a diameter greater than the diameter of the stud, and a clamping nut co-acting with the threads of said stud for engagement with said cap.

2. In combination with a ductile pipe having inwardly bent curved walls at one end thereof, a disk within said pipe and having its periphery in engagement with the inner curved walls of said pipe, a stud removably associated with said disk and extending beyond the curved walls of the pipe, a cap having an outwardly flared annular wall for wedging engagement with the exterior of the inwardly bent curved walls at a point adjacent the periphery of said disk, and a clamping nut associated with the thread on the outer end of said stud for maintaining said stud and disk in compressing relation.



1,576,354. BUMPER. ARTHUR JAMES OWSLEY, Gary, Ind. Filed Oct. 10, 1925. Serial No. 61,735. 2 Claims. (Cl. 293—41.)

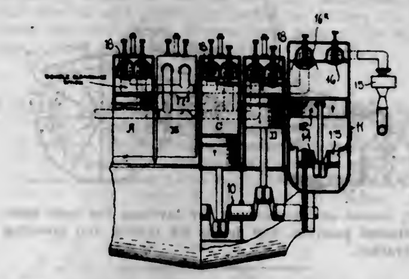
1. A safety bumper for vehicles comprising two sections pivotally mounted upon the vehicle, and also pivotally connected together in a manner whereby said sections can be simultaneously adjusted to cause said sections to occupy parallel positions in advance of the vehicle, or positions at right angles to each other, a sheet of fabric connecting the outer extremities of said sections and adapted to be extended when the latter assumes the latter mentioned position, and adapted to be folded or collapsed when the sections are arranged parallel, slats forming part of the lowermost section and upon which said fabric is adapted to repose when folded, and means operable from within the vehicle for controlling the movement of said sections.

1,576,355. TELLER'S CAGE. FRANK PELIKAN, San Francisco, Calif. Filed June 8, 1925. Serial No. 35,833. 21 Claims. (Cl. 20—1.01.)

1. The combination with a teller's cage having a customer's window therein, of a booth arranged outside of said window and having an entrance; a door arranged to open and close said entrance; a shutter movable to open and close the customer's window; means

for locking the door in closed position when the shutter is opened; and means for preventing the opening of the shutter when the door is open.

1,576,356. CREAM SIPHON. LEE D. PIERCE and EDWARD W. AUSTEN, Fulton, N. Y. Filed Dec. 30, 1924. Serial No. 758,815. 1 Claim. (Cl. 137—20.)



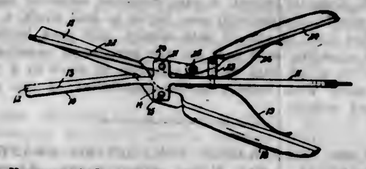
A siphon attachment for bottles, comprising a siphon tube having a uniform outer diameter throughout its length, and an elongated cap enclosing the outer end of the tube and having direct contact throughout its length with the tube for making a substantially air tight joint between the cap and the tube whereby when the cap is withdrawn from the end of the tube sufficient suction is created to draw a liquid over the apex of the tube.

1,576,357. INTERNAL-COMBUSTION ENGINE. VINTON U. D. PIERCE, Washington, D. C.; Josiah Pierce, executor of said Vinton U. D. Pierce, deceased. Filed July 5, 1917. Serial No. 178,692. 5 Claims. (Cl. 123—59.)

1. A multiple cylinder multi-cycle internal combustion engine comprising cylinders and pistons working therein, a carburetor, and an independent pumping means

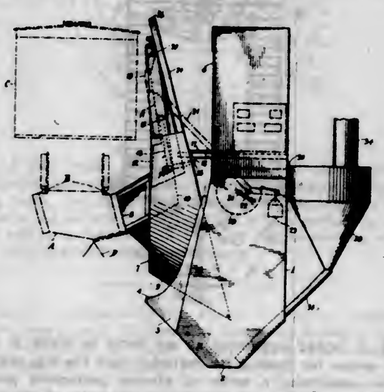
geared to operate successively in synchronism with the suction stroke of each piston; said means being connected between said carburetor and cylinders and pro-

vided with relatively extended connections whereby substantially complete vaporization of the fuel occurs during the passage of the charge.



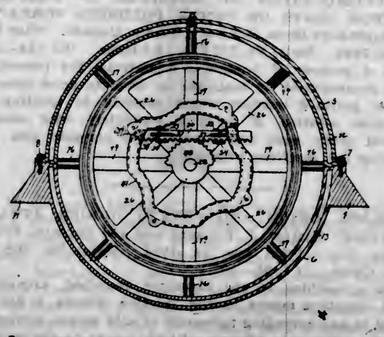
1,576,358. REFRIGERATOR. JOHN S. PIHLSTROM, Mobile, Ala. Filed July 12, 1922. Serial No. 574,357. 1 Claim. (Cl. 45—133.)

In a device of the class described, a casing including legs, a frame and outer perforated walls, inner walls of textile material, a water tank in the upper portion of the casing, a trough surrounding the lower portion of the casing, the textile material extending into the upper tank and into the trough, said trough comprising a structure including a rectangular enlarged portion at each corner, a sleeve projecting upwardly from the center of each rectangular portion and adapted to surround the leg at that point, and narrow channels communicating with the rectangular portions, adapted to receive the lower edge of the textile material, and permitting of the flow of fluid entirely around each leg and the sleeve therefor, and from one of said enlarged rectangular portions to the remainder of said portions, the sleeves being approximately square in cross section and being in alinement with the narrow channels at points of connection thereof with the rectangular enlarged portions.



1,576,359. CUTTER. JOHN M. RAUHA, Jr., Owen, Wis. Filed July 27, 1925. Serial No. 46,415. 2 Claims. (Cl. 30—14.)

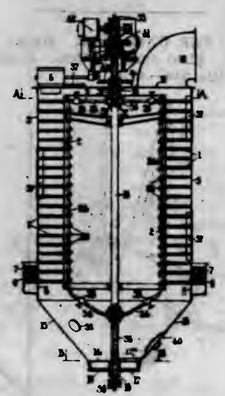
1. A cutter comprising a main jaw, a handle rigid with said jaw, a cutting blade extending along one edge of the jaw beyond one face of the latter, a handle pivotally mounted on the handle of the main jaw, a cutting blade rigid with the pivotally mounted handle and cooperating with the first mentioned blade, a clamping jaw



pivotally mounted upon the handle of the main jaw and cooperating with the latter for clamping the material to be cut and means whereby the cutting blades and clamping jaws may be simultaneously operated.

1,576,360. CAR UNLOADER. HENRY RICHARDSON Passaic, N. J. Filed June 27, 1925. Serial No. 40,003. 20 Claims. (Cl. 214—47.)

1. In a grain car unloader embodying a tiltable car carrying bridge and a hopper to receive grain discharged from the car, means adapted to be interposed between a car on said bridge and the receiving hopper to substantially close the space therebetween and thereby confine within the hopper dust from the discharging grain.

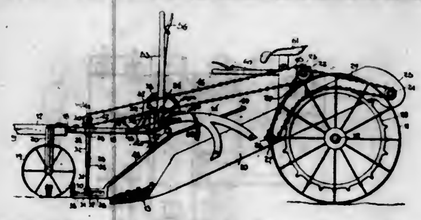


1,576,361. ROTARY ENGINE. FRANK S. ROGERS, Cowell, Calif. Filed July 14, 1924. Serial No. 725,943. 2 Claims. (Cl. 123—11.)

1. In a rotary engine a circular explosive chamber, a shaft centrally positioned with respect to said explosive chamber, a pair of wheels positioned on said shaft,

one of said wheels being keyed to said shaft, said wheels having contacting rims, pistons mounted on the rims of each of said wheels, said pistons overlapping the rim of the opposite wheel, a cam mounted adjacent one of said wheels, a segmental gear keyed to said shaft, a rack slidably held on one of said wheels, said rack having a roller engaging said cam for the purpose of causing the wheel to which said rack is attached to move at a varying speed with respect to the movement of the other of said wheels.

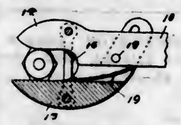
1,576,362. APPARATUS FOR DRYING GRANULAR MATERIAL. FAY HARRY ROSENCRANTS, Kingsway, London, England, assignor to International Combustion, Limited, London, England. Filed Oct. 15, 1924. Serial No. 743,728. 14 Claims. (Cl. 34—23.)



13. A drying apparatus as set forth in claim 2, the said means for feeding the material onto the top carrier plates comprising a series of pivoted perforated plates which support the wet material in the path of the dust at the outlet part of the hot air casing, said perforated plates being arranged to revolve with the said drum and provided with means for tilting them one after another automatically at a predetermined point to discharge the material onto the carrier plates, and a stationary baffle plate arranged over the perforated plates at their point of discharge and while they are tilted.

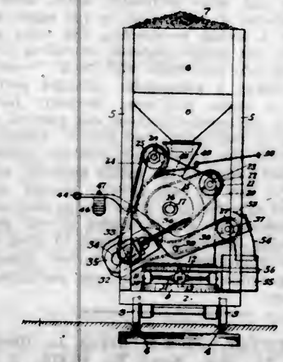
1,576,363. COMPOSITION FOR PREVENTING THE ACCUMULATION OF MOISTURE IN DROPLETS UPON GLASS OR OTHER POLISHED SURFACES. MADELEINE ROSS, Montreal, Quebec, Canada. Filed Dec. 22, 1924. Serial No. 757,578. 5 Claims. (Cl. 134—27.)

2. A process of producing a material for preventing the accumulation of moisture in droplets upon glass or other polished surface which consists in treating an aqueous solution of gelatine separately with concentrated nitric acid and concentrated chromic acid and mixing the resulting products.



1,576,364. ONION AND POTATO DIGGER ATTACHMENT. SAMUEL J. RUSSELL and JOE GODWIN, Princeton, Tex. Filed Apr. 24, 1924. Serial No. 708,732. 1 Claim. (Cl. 55—107.)

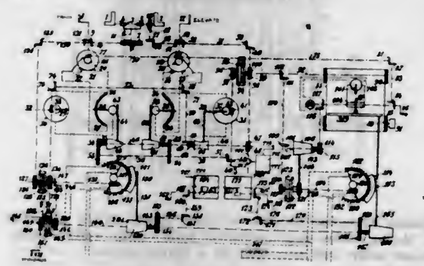
In a machine of the character described, excavating and elevating means having traction wheels, a bracket fixed to and extending forwardly of said means, a wheeled draft appliance in advance of and pivoted to the bracket, a forwardly inclined foot lever having universal joint connection with the bracket, a shoe on the lower end of the lever, a shaft depending from and having universal connection with the draft appliance, a cutter located within the shoe and having slidable connection with the



shaft, means on the bracket for latching the foot lever in adjusted position, and means for raising and lowering the bracket.

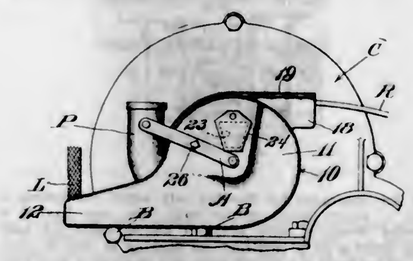
1,576,365. WRENCH. NATALE SALVUCCI, Detroit, Mich., assignor of one-half to John W. Headley, jr., Kansas City, Mo. Filed Sept. 26, 1924. Serial No. 740,067. Renewed July 24, 1925. 1 Claim. (Cl. 81—117.)

A wrench including a handle, a fixed jaw projecting from one end thereof, a movable jaw spaced from the fixed jaw, links arranged at both sides of the wrench and having their terminals pivotally connected with both the fixed and movable jaws, a leaf spring interposed between the handle and the adjacent side of the movable jaw, and utilized to normally hold the movable jaw parallel with the fixed jaw, a pair of spaced obliquely disposed extensions projecting from one end of the movable jaw and slidably embracing said handle, said extensions having inclined slots, and a pin projecting through the handle and received by said slots, whereby the movable jaw is forced forwardly in advance of the fixed jaw into gripping relation when pressure is applied to the handle.



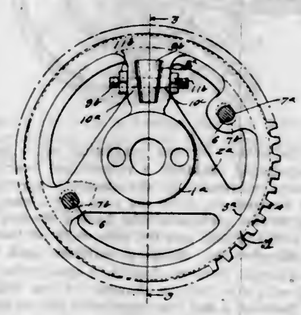
1,576,366. APPARATUS FOR PROJECTING LOOSE MATERIAL. BJARNE H. SCHIELDROP, Pittsburgh, Pa., assignor to Blaw-Knox Company, Pittsburgh, Pa., a Corporation of New Jersey. Filed Aug. 16, 1924. Serial No. 732,588. 7 Claims. (Cl. 198—128.)

1. Apparatus for projecting loose material, comprising a pulley mounted to rotate upon a horizontal axis and having a peripheral groove, a belt engaging the core of said pulley at the base of said groove, a belt having its



outer surface in engagement with the periphery of said pulley and spanning said groove, said belt being bent around said pulley to engage a substantial arc of its periphery, means for driving said last mentioned belt and rotating said pulley, and means for feeding the material into said groove between said belts at the upper side of said pulley, substantially as described.

1,576,367. APPARATUS FOR CONTROLLING THE FIRING AGAINST AERIAL OBJECTIVES. EUGÈNE SCHNEIDER, Paris, France, assignor to Schneider & Cie., Paris, France, a Limited Joint Stock Company of France, and Joseph Louis Routin, Paris, France. Filed Jan. 5, 1922. Serial No. 527,275. 20 Claims. (Cl. 235—61.5.)

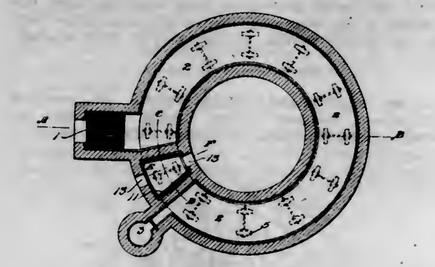


1. In a fire-control system having sighting means, training and elevating means therefor, and a gun provided with indicators which are actuated when the gun is trained and elevated, means operatively connected to said first-named training and elevating means for receiving the angles of elevation and azimuth of the objective from said sighting means, means including conoids operatively connected with said receiving means for determining kinetic corrections for the azimuthal and zenithal velocity of said objective, wind correction means including conoids operatively connected with said receiving means, and means operatively connected with said receiving means, kinetic correction means and wind correction means for transmitting said corrections and angles to said indicators.

1,576,368. TIMER COVER. RICHARD J. SCHOESSOW, Embden, N. Dak. Filed Apr. 25, 1925. Serial No. 25,877. 3 Claims. (Cl. 200—19.)

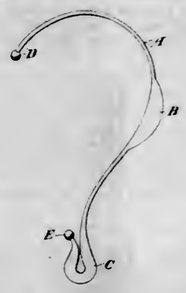
1. A timer cover for the timers of engines having a timing gear cover against which the timer abuts, said timer cover comprising a plate adapted to confront the timer and having a reduced extension projecting therefrom at one side and of a length to project beyond the edge of the timing gear cover, said plate and its extension having flanges at their side edges, those portions of the flanges adapted to oppose the timing gear cover being shaped to conform thereto, the flange of the plate having a hooded notch for the passage of an operating rod for the timer, said extension and its flanges combining with the timing gear cover to provide a conduit for the lead wires of the timer, the flanges of the extension at that portion thereof projecting beyond the side of the timing gear cover being connected with the exception of the outer ends thereof by a removable cover plate to thereby provide an extension of such conduit.

1,576,369. ADJUSTABLE GEAR WHEEL. WALTER RAY SCHOOLING, Standard, Alberta, Canada. Filed Feb. 14, 1925. Serial No. 9,233. 3 Claims. (Cl. 74—28.)



1. A gear wheel comprising substantially similar units connected for relative rotary adjustment and provided with teeth, one of the units having an opening and the other a lug entering said opening, a bolt carried by the lug, and nuts mounted on the bolt and contacting with the unit provided with the opening.

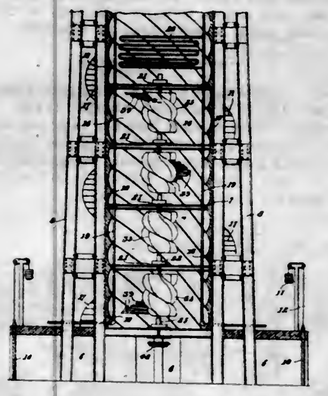
1,576,370. LUBRICATOR. FLOYD L. SCOTT, Houston, Tex., assignor to Hughes Tool Company, Houston, Tex., a Corporation of Texas. Filed Oct. 6, 1922. Serial No. 592,700. 3 Claims. (Cl. 255—77.)



3. In an earth boring drill comprising a head, roller cutters thereon, a water channel through said head, and a lubricator barrel having connections with the bearings of said cutters, the combination of a plunger on the lubricant in said barrel, said barrel having openings above said plunger to allow pressure of flushing fluid to bear on said plunger and additional means connected with said barrel to advance said plunger positively downward a limited distance against said lubricant designed to be manually operated preliminary to introducing the drill into the well.

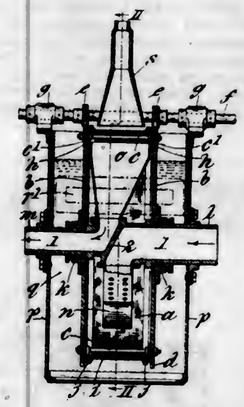
1,576,371. FURNACE. FRIEDRICH SIEBEL, Crefeld, Germany. Filed Mar. 30, 1925. Serial No. 19,463. 8 Claims. (Cl. 263—28.

1. An industrial furnace consisting of a completely closed ring-shaped chamber, a ring-shaped hearth mounted for rotary movement in the chamber, partition walls extending downwardly from the roof of the chamber into proximity to the surface of the hearth thereby defining together with the roof and the side walls of the chamber a closed chamber for charging material upon and discharging material from the hearth, a combustion chamber connected with the furnace chamber at one side of said charging chamber, a flue connected with the furnace chamber at the opposite side of the charging chamber and means between the hearth and the walls of the furnace chamber providing a gas-tight seal.



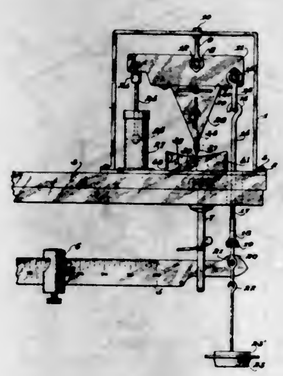
1,576,372. EARRING SAFETY GUARD. EDWARD J. SHEA, Brooklyn, N. Y. Filed Oct. 25, 1924. Serial No. 745,891. 2 Claims. (Cl. 63—14.)

2. An article of the class described formed from a single piece of material to provide a hanger for suspending the articles from an ear, a hook substantially flat to provide comparatively wide portions which will lie against the lobe of the ear, the hook further serving for receiving a portion of an earring to support the earring, and a comparatively wide grasping portion in the plane of the hanger to facilitate the application of the article to the ear and to give stability to the article when applied.



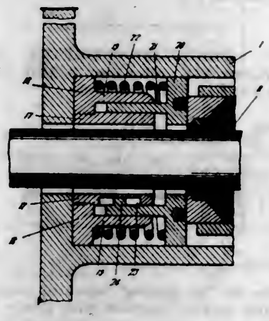
1,576,373. POWER GENERATOR. WILLIAM M. SMITH, Turtle Creek, Pa. Filed Mar. 7, 1925. Serial No. 13,737. 5 Claims. (Cl. 253—38.)

1. In a power generator of the type described, a stack having an open upper end, means for admitting air into said stack at its lower end, a rotatable shaft extending axially through said stack, said shaft consisting of a series of connected sections, a cylindrically-shaped body mounted on each shaft section, a plurality of vanes extending spirally around each of said bodies against which the air passing upwardly through said stack may



impinge to cause rotation of said shaft, and a plurality of blades extending laterally from each cylindrically-shaped body and arranged in a spiral series.

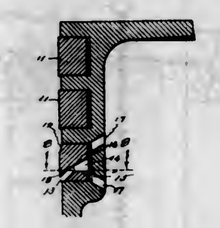
1,576,374. MECHANICAL FILTERING DEVICE. EDWARD FRANK SPANNER, Blackheath, London, England. Filed Nov. 10, 1924. Serial No. 749,012. 5 Claims. (Cl. 210—199.)



1. An apparatus for filtering oily water comprising a tank, a rotary drum within said tank and having a filtering screen of wire gauze, a hollow shaft for said drum divided by a partition, an opening in one division of said shaft to act as the inlet for oily water into said drum and a collecting funnel on the other division of said shaft to act as the outlet for oil and as an emergency outlet for water, an outlet for water from said tank arranged at a level sufficient to ensure that the major portion of said drum is submerged, said funnel being at a slightly higher level than said tank outlet, and an air blast nozzle above said drum and funnel for the purpose of blowing oil off the gauze screen of said drum into said funnel as said screen emerges from the water in the tank, substantially as hereinbefore set forth.

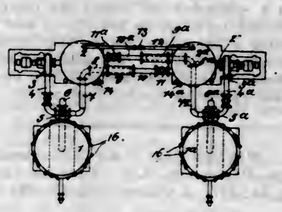
1,576,375. ATTACHMENT FOR WEIGHING SCALES. JOSEPH M. SPINKS, New Orleans, La. Filed Sept. 12, 1925. Serial No. 55,966. 8 Claims. (Cl. 265—58.)

1. A device of the character described comprising in combination with scales of the balance beam type, a supporting frame immovably mounted on the scales, a lever mounted off-center on said frame, a connecting rod connected at one end to the balance beam and pivotally connected at its other end to one end of the lever, an indicator carried by the lever, a chart immovably positioned with respect to the indicator, and motion stabilizing means connected to the opposite end of the lever.



1,576,376. SPRING HOUSING. WILLIAM SUDEKUM, Nashville, Tenn. Filed Jan. 5, 1925. Serial No. 723. 2 Claims. (Cl. 286—30.)

1. In a spring housing for a piston rod packing spring, the combination of a ring provided with an annular recess and longitudinal sinuous slot; a second ring provided with an annular extension slidable in said recess, and pin received in said slot; and an annular helical spring interposed between said rings.

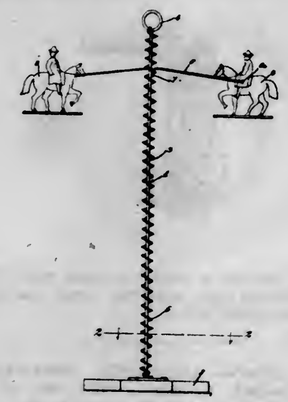


1,576,377. PISTON RING. LOUIS R. SPENCER, West Hartford, Conn. Filed May 28, 1925. Serial No. 33,368. 1 Claim. (Cl. 74—109.)

A piston ring having a thin encircling groove with parallel walls extending from the outer lower corner of the ring obliquely upward and inward with relation to the outer vertical face of the ring, and slots extending from the inner face of the ring to the groove, said

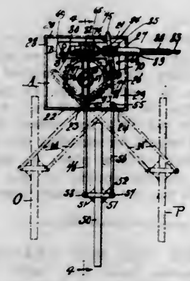
slots having the form of conical segments with flat lower walls and inclined upper walls that merge into the walls of the thin encircling groove.

1,576,378. DYEING APPARATUS. BERNHARD KARL THIES, Coesfeld, Germany. Filed Oct. 23, 1924. Serial No. 745,488. 4 Claims. (Cl. 8—19.)



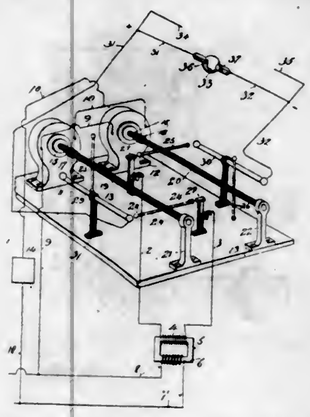
1. Dyeing apparatus of the character described including two dye vats, two auxiliary vacuum vessels, one of said vessels being directly connected with each of said vats, means for causing dye to pass from each of said vessels into its associated vat, an outflow pipe leading from each vat into the vessel associated with the other vat, and means for enabling dye that is passing through one of said outflow pipes to take with it by ejector action a further supply of dye from its own vacuum vessel into the other vacuum vessel.

1,576,379. SPADE LUG FOR TRACTOR WHEELS. LEONARD A. TURNER, Santa Ana, Calif. Filed Aug. 11, 1924. Serial No. 731,443. 9 Claims. (Cl. 301—44.



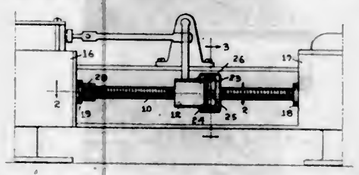
3. A traction device for tractor wheels, comprising a mounting member attachable to the rim of a tractor wheel, said mounting member having a flat face, teeth arranged upon said flat face and an adjustable shoe having teeth adapted to interfit with the teeth upon the mounting member, said shoe being removably secured to said mounting member.

1,576,380. GRAVITY-OPERATED TOY. MINOR EUGENE TYNES, New Orleans, La. Filed Feb. 6, 1923. Serial No. 617,316. 3 Claims. (Cl. 46—40.)



1. In a toy, a supporting structure, including a spiral track and a removable two armed one point suspension sweep mounted to travel by gravity on said track, said sweep having a laterally extending loop intermediate its ends removably inserted in the spirals of said track to travel thereon, and means whereby the sweep is held on the track against accidental displacement.

1,576,381. WINDSHIELD CLEANER. STEPHEN G. VAN DERBECK, Hackensack, N. J. Filed Nov. 2, 1921. Serial No. 512,217. 2 Claims. (Cl. 15—253.)

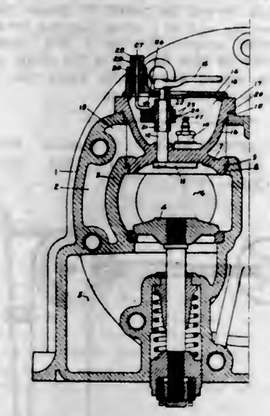


1. The combination in a wind shield cleaner, of a casing for the cleaner adapted to be attached to the glass of the windshield of a vehicle, a bracket in the casing pivoted to a wall thereof, a rotating shaft journaled to said bracket, a worm fastened to the shaft, a worm wheel journaled in the casing and in mesh with said worm, means to turn said shaft and thereby the worm, means connected to said bracket to swing it to disengage the worm thereon from said worm wheel, a pivot pin fastened at one end in the casing, an oscillating lever with an upper member and a lower member pivoted to said pin, a crank pin extending from said worm wheel actuating the upper member of said oscillating lever with the rotation of the worm wheel, an element connected to the lower member of said oscillating lever, and a cleaning element adapted to bear on said glass of the windshield connected to said first element, said cleaning element swinging over said glass with the oscillation of said lever resulting from the rotation of said worm wheel.

1,576,382. HIGH-TENSION RECTIFYING SWITCH. HARRY F. WAITS, New York, N. Y. Filed June 25, 1921. Serial No. 480,441. 1 Claim. (Cl. 175—364.)

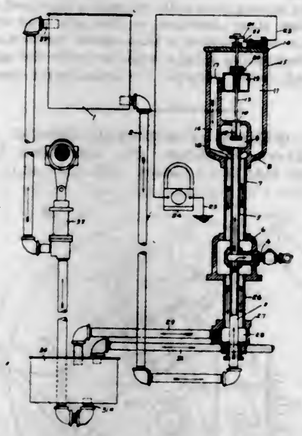
In an alternating current rectifying switch for high tension currents, a pair of spaced, centrally located high tension standards, a pair of high tension standards located one at each side of the plane of the central standards, a pair of synchronously driven shafts, one between the said central standards and each side standard, each of which is provided with a pair of suitable cross conductors so arranged and disposed that on one side one of the central high tension standards is connected to one of the side standards while the other of said central high tension standards is connected to the other side standard so that each side standard will always have the same potential when the apparatus is in use and will be connected synchronously to the center standards and long spark gaps may be maintained so as to prevent a short circuiting of a tube or other device to which the switch is connected.

1,576,383. PUMP-PISTON SHIFTER. LAMAR S. WALKER, Tampa, Fla. Filed Sept. 9, 1925. Serial No. 55,413. 6 Claims. (Cl. 254—100.)



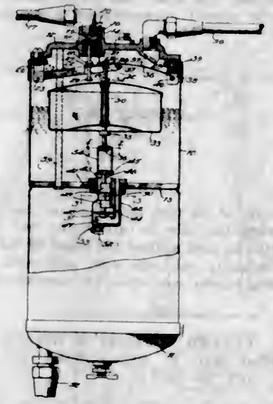
1. A device for the purpose indicated comprising an axially movable member provided with means for engaging the spool on the piston rod of a pump, and a guide element for said member for rigid mounting with respect to the pump, said guide element comprising a longitudinally extensible rod for abutting engagement with the facing ends of the steam and water cylinders of the pump.

1,576,384. SPARK-PLUG CONSTRUCTION FOR INTERNAL-COMBUSTION ENGINES. ELMER A. WATTS, Springfield, Ohio, assignor to The Miller Improved Gas Engine Company, Springfield, Ohio, a Corporation of Ohio. Filed Oct. 23, 1924. Serial No. 745,336. 11 Claims. (Cl. 123—148.)



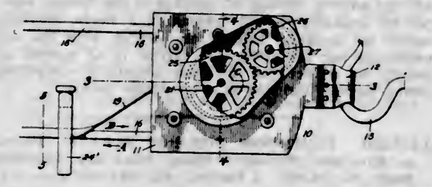
1. In an internal combustion engine, a valve casing, an ignition apparatus consisting of a spark plug, a source

of current supplied thereto by a conduit, said plug and conduit at one end being hermetically sealed in a chamber, the terminals of the spark plug projecting through



one wall of said chamber for access to incoming fuel, said chamber having the bottom thereof forming a detachable top for a valve casing.

1,576,385. LUBRICATING SYSTEM. ELMER A. WATTS, Springfield, Ohio, assignor to The Miller Improved Gas Engine Company, Springfield, Ohio, a Corporation of Ohio. Filed Nov. 28, 1924. Serial No. 752,665. 5 Claims. (Cl. 184—6.)

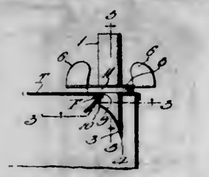


1. In an oiling system, a gravity supply tank, means of delivering oil by gravity to an engine, means of passing an excess of oil not needed by the engine to a valve chamber, a valve in said valve chamber adapted to stop the passage of the excess oil when it exceeds a predetermined amount to prevent its overflowing a float chamber and a float therein adapted to actuate said valve in preventing said overflow, and means for normally returning the excess oil to a reservoir and means of returning the oil from the engine to said reservoir, and means of returning the oil from the reservoir to the source of gravity supply.

1,576,386. FUEL RECEPTACLE. HORACE H. WELCH, Chicago, Ill., assignor, by mesne assignments, to Curtis B. Camp, trustee, Oak Park, Ill. Filed May 24, 1922. Serial No. 563,182. 11 Claims. (Cl. 103—236.)

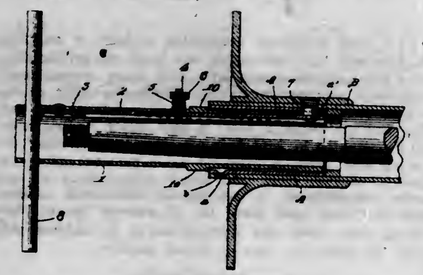
1. A fuel receptacle comprising a tank, a partition dividing said tank into upper and lower compartments, a vent pipe communicating with said lower compartment, said lower compartment having a discharge outlet, an end closure for said upper compartment provided with suction and air ports, a float in said upper compartment, valves actuated by said float for alternately opening and closing said ports, a balanced valve for controlling the passage of fuel from said upper compartment to said lower compartment, a lost motion connection between said float and said valve for alternately opening and closing said valve, and friction means for holding said valve in either its open or closed position.

1,576,387. CLOTHESLINE PULLEY. AUGUSTIN J. WHELAN, Jersey City, N. J. Filed Aug. 7, 1925. Serial No. 48,860. 4 Claims. (Cl. 68—8.)



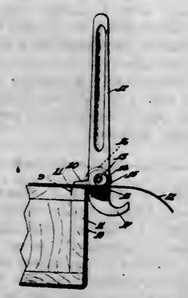
1. In combination with a clothes line, pulleys over which the clothes line passes to provide spaced leads, a spool of tape disposed in alignment with said pulleys, and means for paying out said tape to cover one of said leads of the line upon longitudinal movement of said lead in one direction, and means for automatically winding said tape upon the spool upon longitudinal movement of said lead in the opposite direction.

1,576,388. POURING SPOUT. WALTER LUNSFRED WHITESIDES, Long Beach, Calif. Filed Feb. 19, 1925. Serial No. 10,398. 4 Claims. (Cl. 221—23.)



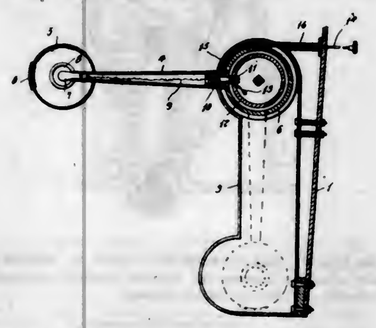
1. A pouring spout comprising a metal tube having an obliquely cut end adapted to be forced through a metal can top to form a substantially circular opening, to fold the metal from the opening, into the can and to provide angular notches at the ends of the fold; a metal collar surrounding said tube, a gasket surrounding the tube in contact with the lower side of said collar, and a pair

of circumferentially spaced fingers extending longitudinally of the tube immediately under the collar and disposed in close proximity to said tube, said fingers projecting below the gasket for reception in the above named notches, the lower end of at least one of said fingers being turned outwardly in a direction substan-



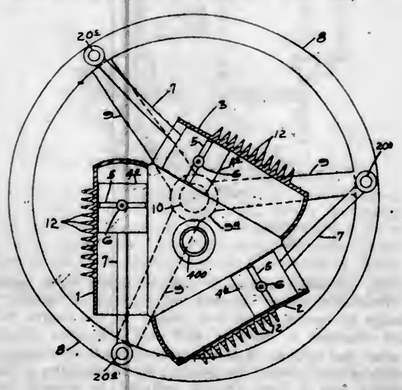
tially radially of the tube to engage the lower side of the can top when the tube is turned, the two fingers being then adapted to bind against the edges of the opening cut by said obliquely cut tube end, said tube, collar and fingers being rigidly connected for movement as a single unit.

1,576,389. PULLER. CHARLES M. WILKINS, Smithfield, Pa. Filed Mar. 9, 1925. Serial No. 14,158. 2 Claims. (Cl. 29—88.2.)



1. A sleeve puller comprising a tubular member, a shoulder surrounding the same, a handle connected with the tubular member, a key carrier movably arranged within the tubular member, a key carried by said member and passing through an opening in the tubular member for engaging the oil opening in a sleeve, yieldable means for normally holding the carrier with the key projecting but permitting the carrier to be pushed inwardly to retract the key and adjustable controlling means therefor included in the yieldable means.

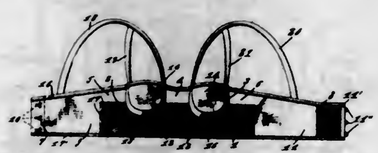
1,576,390. TIGHTENER FOR BOX STRAPS. HENRY A. WILLIAMS, Worcester, Mass. Filed Apr. 17, 1925. Serial No. 23,908. 2 Claims. (Cl. 254—79.)



2. In a device for the purpose described, the combination of an operating handle having a jaw, a fulcrum member connected with the handle and extending therefrom in a straight line and having a convex surface on which the tool can roll in operation extending around through about a quarter circle, and means on the tool projecting outwardly from the handle at right angles thereto by which it can be rested in proper place on a box to receive the end of a strap passing around the box, said fulcrum member having a jaw cooperating with the other jaw to hold the end of the strap, whereby the tool can be rocked downwardly along the vertical side of the box to stretch the strap.

1,576,391. TRAFFIC SIGNAL. EDWARD WILLIAMS, Iowa Park, Tex. Filed Aug. 28, 1924. Serial No. 734,700. 1 Claim. (Cl. 116—54.)

A signal of the class described comprising a housing, a signal arm pivoted to the housing normally disposed within the housing, said housing having a bearing, said signal arm having a ring surrounding said bearing, said bearing having grooves, bearing balls in said grooves engaging the inner surface of the bearing ring, said bearing ring having outwardly extending marginal flanges, an operating strap fastened to the ring and disposed intermediate said flanges, and a guide member extending from the housing being tubular to guide the operating element and being adapted for engagement against a support.

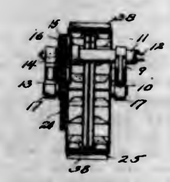


1,576,392. INTERNAL-COMBUSTION ENGINE. HARRY D. WILLIAMS, Pittsburgh, Pa. Filed Oct. 5, 1920. Serial No. 414,775. 5 Claims. (Cl. 123—43.)

1. A rotary engine comprising a rotatable member carrying a plurality of rigidly connected cylinders tangentially mounted in relation to said rotary member, a fly-wheel connected to the pistons of said cylinders, a shaft fixed to the rotatable cylinder member, a second

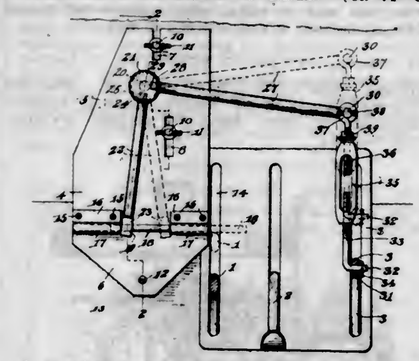
shaft rigidly fixed to the fly-wheel at the center thereof, a chain of gears connecting the two shafts together so as to cause them to turn in the same direction at the same speed.

1,576,393. BRASSIÈRE. GRACIA V. WOOD, Washington, D. C. Filed Aug. 6, 1925. Serial No. 48,615. 1 Claim. (Cl. 2—42.)



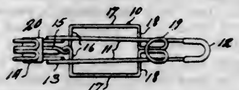
A brassière comprising a body encircling band having the lower part of the front thereof formed of a lengthwise extending elastic portion and the upper part of its front non-elastic, said band further provided at its front with a pair of spaced cut-out portions extending through the non-elastic part of said front and into the upper part of the elastic portion of said front, and a pocket forming element having its side and bottom edges secured to the edge bordering each cut-out portion and extended forwardly from said front, said pocket forming element having its mouth opening at the inner face of the front of the band and its top edge secured throughout with the band.

1,576,394. SIZING COMPOSITION. HARRY WOOD, South Fork, Pa. Filed Aug. 6, 1924. Serial No. 730,498. 3 Claims. (Cl. 134—46.)



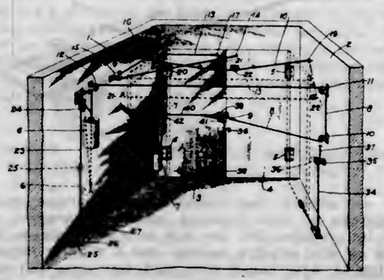
1. A composition of matter containing as major ingredients soap and glue in water sufficient to form a vehicle therefor, said three substances amounting in all to substantially over one half of the entire composition, together with minor ingredients namely, linseed oil, turpentine, vinegar, japan drier and white lead, these ingredients each being in amount less than any one of said major ingredients, all of said ingredients being combined in such proportions as to form a sizing compound.

1,576,395. ATTACHMENT FOR AUTOMOBILES. HAROLD P. WOOD, ERWIN L. STRICKLAND, CHARLES H. WITHAM, and HOWARD O. LIBBY, Kingfield, Me. Filed July 28, 1922. Serial No. 578,141. 3 Claims. (Cl. 305—3.)



2. In an attachment of the class specified, the combination of rotatably mounted drums each having a body with side portions converging toward the periphery of the drum, a plurality of blades extending radially of the drum from the periphery of the latter over the side portions and spaced apart, the ends of the blades being provided with contact heads and each drum having at its periphery an open space extending fully around the latter between the said contact heads, an endless traction belt trained over the drums and having central block members extending into said open sapce to prevent lateral shifting of the belt and also having transversely extending ribs to engage the said heads for driving one drum from the other.

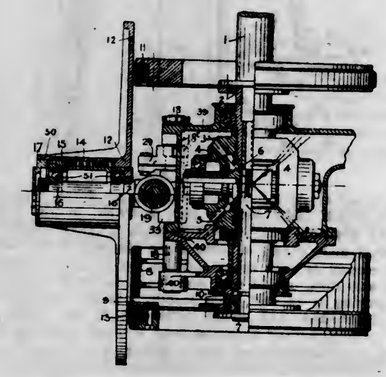
1,576,396. SAFETY DEVICE FOR AUTOMOBILES. NEAL ERASTUS WOOD, Chanute, Kans. Filed Sept. 12, 1925. Serial No. 56,054. 6 Claims. (Cl. 74—81.)



1. A safety device for the purpose set forth comprising a clutch pedal locking bolt shiftable to and from locking position with respect to such pedal, a shiftably mounted disk, a pair of lever arms disposed at an angle with respect to each other and secured to and extending from said disk, one of said arms engaging with said bolt for moving it to and from locking position when said disk is shifted, and means connected to the other of said lever arms and actuated from a brake pedal on the application and release of the latter for shifting said disk alternately in opposite directions to move said bolt to and from locking position.

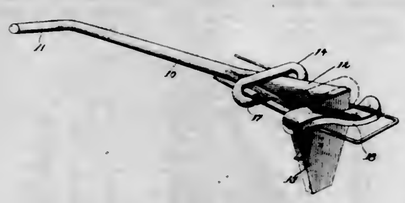
1,576,397. TOURNIQUET. TOKUJIRO YANAGI, Honolulu, Territory of Hawaii. Filed July 18, 1925. Serial No. 44,554. 4 Claims. (Cl. 128—327.)

2. A tourniquet of the character described formed to provide a longitudinally extending shank having a hook at one end, a base connected to the shank by resilient coils acting to resiliently force the base away from the shank, the extremity of the base distant from said coils being formed with a clamping jaw, and a tube of elastic material adapted to be engaged at one end by the hook and its opposite end engaged between said shank and the clamping jaw.



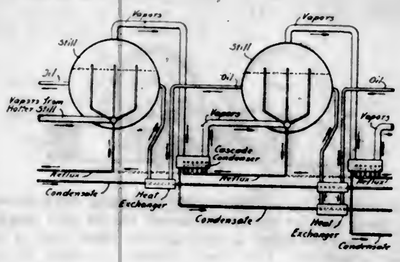
1,576,398. DOOR-ACTUATING MECHANISM. FRANK YELAVICH, San Francisco, Calif. Filed Sept. 2, 1924. Serial No. 735,235. 8 Claims. (Cl. 268—9.)

1. A door-actuating device comprising the combination of a cable attached to a door, a weight normally acting on the cable to open the door, a latch for holding the



door closed, a latch adapted to support the weight and relieve the door-opening tension on the cable, and means including an element outside the door for releasing both latches, the said releasing being accomplished by the weight of a vehicle driving over the element.

1,576,399. VARIABLE-SPEED GEARING. MALCOLM FOERSTER LAMBE AYME AYMARD, London, England. Filed Oct. 16, 1923. Serial No. 668,898. 8 Claims. (Cl. 74—34.)

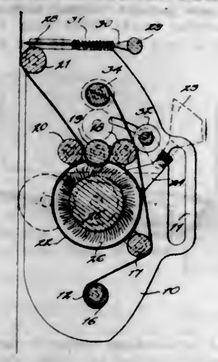


1. A drive shaft, a friction disk and sun pinion, revoluble therewith, a driven shaft having a cross member, pinnet gears mounting on said cross member and engaging said sun pinion, a brake drum loose on the shaft, a friction disk fast with said drum, a second sun pinion fast with said drum and engaged by said planet gears, a friction disk revoluble on an axis at right angles to that of said shafts, movable into and out of engagement with the first-named friction disks and also movable laterally with respect thereto, a brake element for coaction with said brake drum, means for moving said last named friction disk, means for operating said brake element, and common actuating means for said brake element operating means and said friction disk moving means.

1,576,400. WIRE TIGHTENER AND TWISTER. PETER BEGHETTI, San Francisco, Calif. Filed Aug. 10, 1925. Serial No. 49,214. 2 Claims. (Cl. 140—118.)

1. A tightener and twister for the purpose stated, comprising an arm having a gripping member at one end for engaging the free end of a wire loop, a face plate on said gripping member, and a wing or lug projecting at right angles from said face plate and positioned so that one wire end lies beneath one end of the wing and the other wire end overlies the opposite end of said wing.

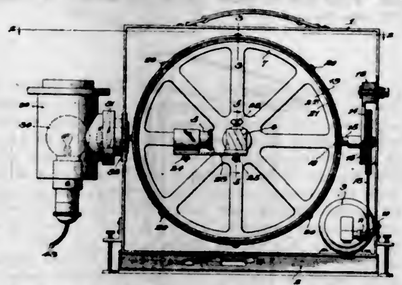
1,576,401. OIL DISTILLATION. JOHN E. BELL, Brooklyn, N. Y., assignor to Sinclair Refining Company, Chicago, Ill., a Corporation of Maine. Filed Oct. 7, 1921. Serial No. 506,088. 36 Claims. (Cl. 196—73.)



1. A process of fractional distillation and condensation of oil which comprises flowing the oil to be treated through a series of stills maintained at successively higher vaporizing temperature, condensing part of the vapors given off in each still by absorbing heat therefrom by the oil in a still lower temperature and heating the oil intermediate successive stills by the condensed vapors from stills later in the series.

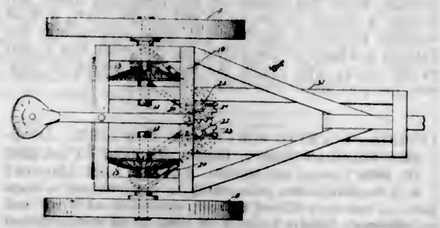
1,576,402. PISTON RING. RAY S. BOLENBAUGH, Jackson, Mich., assignor of one-third to Burton R. Bolenbaugh and one-third to Cyrus Bolenbaugh, both of Jackson, Mich. Filed Dec. 12, 1924. Serial No. 755,545. 1 Claim. (Cl. 74—109.)

A piston ring including an outer section having its ends formed with a lap joint and its inner wall wedged shaped forming oppositely inclined walls, a pair of inner sections each being one half the width of the first section and each having their ends spaced apart and provided upon their outer face with beveled portions adapted to engage one of the inclined walls of the outer section and an irregular spring member arranged within the piston ring with several points thereof engaging the inner sections to normally retain them in contact with the inclined walls of the outer section.



1,576,403. PAPER-HANGING MACHINE. STEVE BOROS, Kenmore, Ohio. Filed Nov. 6, 1925. Serial No. 67,374. 2 Claims. (Cl. 216—6.)

1. A wall papering machine comprising a casing, a roller journaled therein and supporting a roll of wall paper, a roller mounted for rotation adjacent one end of the casing and projecting therefrom for applying paper to the wall as it leaves the casing, a plurality of guide rollers over which said paper passes, means for supplying one side of the paper with paste as it passes over said guide rollers, said means including a



rotatable brush, a friction wheel for rotating said brush, and means for cutting a strip of paper from the roll at a point exterior of the casing.

1,576,404. PICTURE-PROJECTION MACHINE. JAMES R. BRADFORD, San Francisco, Calif. Filed Oct. 28, 1925. Serial No. 65,354. 5 Claims. (Cl. 88—27.)

3. In a picture projecting machine, a film-carrying holder having a circular and transparent film holding face, a removable circular transparent means having a close fit relative to the holding face so as to engage the film throughout its circumference to frictionally and removably hold same against said face, means to rotate the holder, means to project light rays through the film, a projection lens and a prism arranged to receive and project the image from the lens.

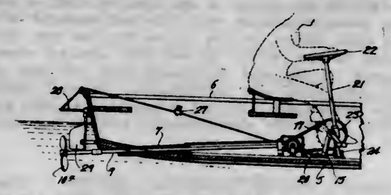
1,576,405. STALK-CUTTING MACHINE. ALBERT C. BRADSHAW, San Antonio, Tex. Filed Mar. 3, 1925. Serial No. 12,953. 1 Claim. (Cl. 55—62.)

A stalk cutter comprising a wheeled frame, an axle for each wheel, spaced vertically disposed shafts journaled at the forward end of the frame and arranged in juxtaposition, a plurality of disk-like knives and guards alternately arranged in spaced superimposed relation on each of said shafts, with the knives of one shaft operating in the guards of the adjacent shaft, a stub shaft journaled beneath each axle and arranged at a right angle thereto, gearing for rotating the stub shaft incident to the rotation of said axle, sprocket wheels arranged on the first mentioned shaft and also on each stub shaft, and convergently disposed endless chains trained over each pair of sprockets, whereby said vertical shafts are simultaneously rotated from said axles.

1,576,406. CIRCUIT-CHANGING SWITCH. HENRY THOMAS BROOKER, Southend, England. Filed Apr. 11, 1924. Serial No. 705,920. 4 Claims. (Cl. 200—2.)

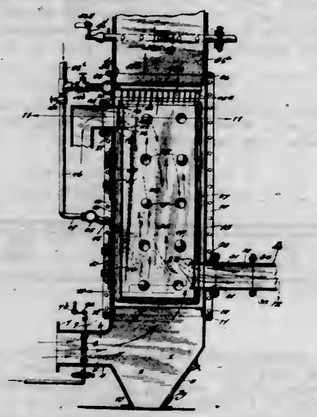
1. An electric connecting device operating as a circuit changing switch, comprising in combination, a fixed terminal and a movable terminal co-operating therewith, said fixed terminal consisting of two components one having a sliding movement relatively to the other, and an insulating member controlled by said sliding component, the insertion of the movable terminal between the two components of the fixed terminal for the purpose of establishing another circuit connection with said fixed terminal causing the sliding component thereof to move the insulating member so as to break connection between the fixed terminal and a contact piece in the normal circuit.

1,576,407. SPLICE BAR. GURLEY BROSHEARS, Newburg, Ind. Filed Oct. 16, 1925. Serial No. 62,927. 1 Claim. (Cl. 238—181.)



Two railway rails having their base flanges at the meeting ends thereof slotted longitudinally, outstanding flanges on the webs of the rails surrounding the slots therein, a bridge plate snugly received in the slots and of a width corresponding to that of the flanges, oppositely directed bolt members projecting from the bridge plate, fish plates and each of said fish plates having a pocket on the inner face thereof to receive the flanges therein and to contact with the sides of the bridge plate, the bolts on the bridge plate passing through the fish plates, other bolts also passing through the fish plates and through the webs of the rails and nuts screwed on the bolts.

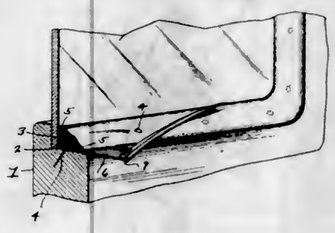
1,576,408. PROCESS FOR THE MANUFACTURE OF PRINTING COLORS OR INK. HERMANN CAJAR, Vienna, Austria. Filed Dec. 5, 1923. Serial No. 678,754. 2 Claims. (Cl. 134—35.)



1. The process of manufacturing colored printing ink, consisting in subjecting an ink composition of a watery paste character to the action of steam jacketed mixing and levigating mechanism connected to a vacuum-creating source, and then evaporating the water from the composition by the action of steam and a relatively high vacuum of about 65 cm.

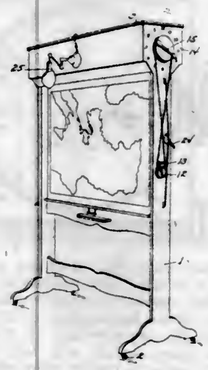
1,576,409. BOAT-PROPULSION MECHANISM. GEORGE CASHOTY, New York, N. Y. Filed Mar. 12, 1925. Serial No. 15,087. 1 Claim. (Cl. 115—25.)

In combination with the body of a boat, a propeller shaft and propeller, a gear casing, a shaft and meshed gears on said shaft and the end of the propeller shaft located in the gear casing, an inverted U-shaped support and crank shaft mounted in the upper part thereof, a sprocket on the crank shaft, a second sprocket on the shaft located in the gear casing, a sprocket chain trained about said sprockets, pedals on the crank shaft for actuating the same and the meshed gears whereby the propeller shaft and propeller are actuated, a bearing formed in the upper part of said support and a steering post held in said bearing.



1,576,410. AIR PREHEATER FOR BOILER FURNACES. WILLIAM M. CONNERY, Philadelphia, Pa. Filed May 22, 1924. Serial No. 715,140. 36 Claims. (Cl. 110—56.)

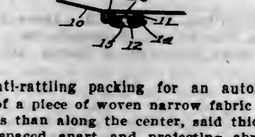
1. In a preheater for boiler furnaces, a casing, means spaced therein forming products of combustion passages and air passages in alternating parallel succession, the walls between the passages having parts of their margins deflected laterally forming air inlets and outlets respectively to remote portions of the air passages, the deflected parts being connected between the air passages with means connecting the upper and lower portions of the deflected parts for closing the products of combustion passages to the air passages, and air draft conductors connected to the casing and communicating with the pluralities of air inlets and outlets respectively.



1,576,411. MOLDING. EDGAR R. CREAMER, Connersville, Ind., assignor to The George R. Carter Company, Connersville, Ind., a Corporation of Indiana. Filed Mar. 18, 1925. Serial No. 16,331. 3 Claims. (Cl. 155—184.)

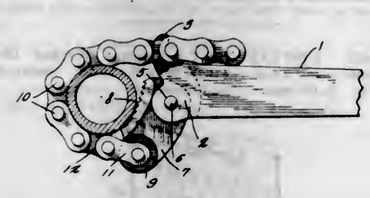
1. In a molding of the character described, the combination, with a structure to which said molding is to be applied, a resilient core, a flexible cover for said core, means for securing said core to said structure with one edge of the cover clamped between said core and structure, said securing means being such as to leave at least one edge of said core free to flex away from said

structure, and interlocking means formed on the said free edge of said core and the other edge of said cover whereby by flexing the free edge of said core away from said structure said last mentioned edge of said cover may be inserted therebetween and caused to interlock with said core to hold the cover in position.



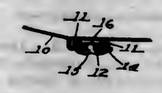
1,576,412. CASE. WAKEMAN H. B. CRONK, Kansas City, Mo. Filed Apr. 4, 1925. Serial No. 20,793. 1 Claim. (Cl. 40—84.)

A device of the class described comprising an upright frame, a casing at the upper end thereof, a shaft passing through the casing, a pair of discs on the shaft within the casing, spring rollers carried by the discs, sheets rolled upon the rollers, handles at the outer ends of the sheets, the casing having an opening in its bottom through which the handle of the lowermost sheet will project, a pulley on the outer end of the shaft, a hand operated pulley on the frame, a cable passing over the pulleys, a finger on the pulley on the shaft and a dial on the casing with which the finger cooperates to indicate the position of the rolls in the case.



1,576,413. LOCKING SCREW AND THE LIKE. ARCHIBALD STANNARD CUBITT, London, England. Filed May 13, 1925. Serial No. 30,097. 3 Claims. (Cl. 151—14.)

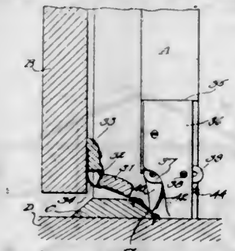
1. A locking screw comprising in combination, a main part, an external thread thereon, a shouldered down end, an external thread thereon of like hand but different pitch to said external thread on the main part, a collar part, an external thread thereon of like hand and pitch to the external thread on said main part, and an internal thread in said collar for engaging the external thread on said shouldered down end, the main part and the collar part when united forming one continuous



screw threaded bolt of like hand and pitch capable of being locked in a screw-threaded hole by a relative movement between the main part and the collar part tending to unscrew these from each other.

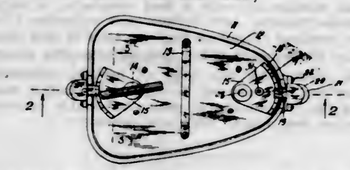
1,576,414. CHAIN PIPE WRENCH. CHARLES W. CUPPETT, Leckrone, Pa. Filed Mar. 13, 1925. Serial No. 15,349. 1 Claim. (Cl. 81—66.)

A wrench of the character described comprising a handle, an enlarged bifurcated head formed on one end thereof, a pair of parallel arranged hooks extending from one end of said head, an arcuate shaped portion formed on the opposite end thereof and being provided with an opening, a cross sectional T-shaped toothed dog pivotally secured to said arcuate shaped portion between the bifurcations, a pin passing through the opening thereof for this purpose, a reduced portion extending from the free end of said dog, and a chain having one of its links pivotally secured to and straddling the reduced portion and being associated with the parallel arranged hooks for the purpose specified.



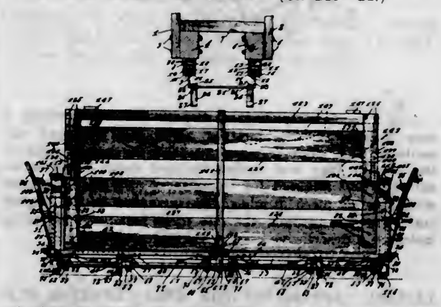
1,576,415. PACKING FOR HOODS OF AUTOMOBILES. GEORGE B. CUTTING, Worcester, Mass. Filed Dec. 26, 1924. Serial No. 758,018. 3 Claims. (Cl. 180—69.)

1. An anti-rattling packing for an automobile hood consisting of a piece of woven narrow fabric tape thicker at the edges than along the center, said thickened edges being flat spaced apart and projecting abruptly above the plane of the center when in use to receive the heads of fastening devices between them and prevent the contact of metal with metal.



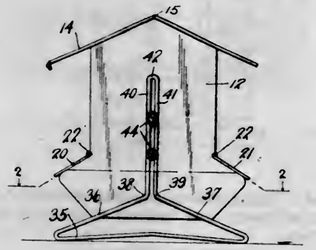
1,576,416. WEATHER STRIP. ALONZO E. DECKER, Fremont, Ohio, assignor of one-half to Frank P. Smith, Fremont, Ohio. Filed Dec. 29, 1924. Serial No. 758,769. 2 Claims. (Cl. 20—67.)

1. In combination with a door and its jamb, a weather strip hingedly mounted at the lower portion of the door, a leaf spring recessed into the door and of angular shape with a portion bearing against said strip to normally urge it away from the door sill, and a trip mounted on the door jamb and including an elongated slotted member slidably adjustably mounted toward or from the



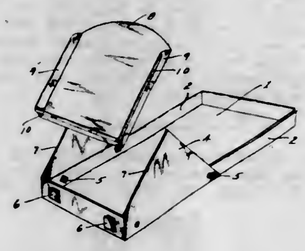
door, and a spring pressed pawl-like member pivoted on said slotted member and disposed in the path of travel of the strip.

1,576,417. MEAT MOLD. THEODOR DRUZBACH, New Durham, N. J. Filed Apr. 26, 1924. Serial No. 709,288. 1 Claim. (Cl. 292—342.)



A closure for a receptacle comprising a latch on a spindle, said spindle being adapted to be rotatably mounted upon the receptacle whereby said latch is adapted to project over the open top of the receptacle in its operative position, said latch having a wedge-shaped underface, a segment-shaped member adapted to be pivoted to the cover of the receptacle, said segment-shaped member having a cam provided with ratchet teeth for co-operation with said latch, whereby said cover is forced downwards into the receptacle as said wedge-shaped member is turned and said latch rides over the said ratchet teeth.

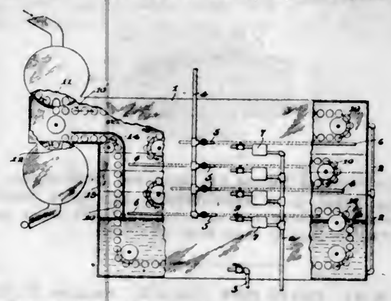
1,576,418. STRETCHING APPARATUS FOR HIDES. ST. CLAIR EDE, Dubuque, Iowa. Filed Mar. 18, 1925. Serial No. 16,421. 22 Claims. (Cl. 149—21.)



1. An apparatus for stretching hides comprising a carriage provided with a pair of vertically shiftable supports and means for elevating the same, a revolvable hide stretching frame removably mounted on and elevated by said supports, and a frame pick-up device connecting with the frame when the latter is elevated to suspend the same when clear of said supports.

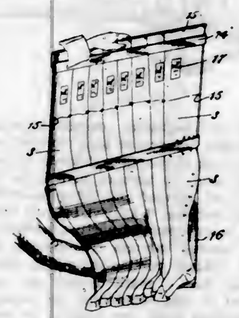
1,576,419. FOOD RECEPTACLE FOR YOUNG CHICKENS. WALTER ELLMAN, Fremont Center, N. Y. Filed July 3, 1925. Serial No. 41,302. 2 Claims. (Cl. 119—52.)

1. The combination with a feed receptacle, of supporting devices therefor, said devices each including a lower element, portions extending from the ends of said element upwardly toward each other, devices extending alongside of each other from the point of nearest approach of said portions and adapted to support oppositely located walls of the receptacle, and means adjustably connecting the devices last named with said walls.



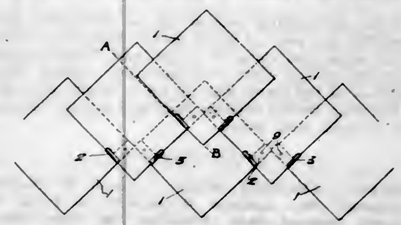
1,576,420. CHOCOLATE-CONFECTION-DISPLAY TRAY. ERTON T. FOLTS, Creswell, Oreg. Filed June 16, 1925. Serial No. 37,483. 5 Claims. (Cl. 211—28.)

1. A chocolate confection display tray, comprising a tray member having inclined reinforced side and end walls, a one piece member adapted for engagement to the display tray and having inclined upper edges, a removable unit adapted for engagement and disengagement with the one piece member when attached to the display tray, and means upon the one piece member adapted to maintain a descriptive card in upright position.



1,576,421. APPARATUS FOR HEAT-TREATING SUBSTANCES PACKED IN SEALED RECEPTACLES. NELSON H. FOOKS, Preston, Md. Original application filed Dec. 5, 1924, Serial No. 754,126. Divided and this application filed Apr. 11, 1925. Serial No. 22,613. 3 Claims. (Cl. 126—272.)

1. In a device for cooking and controlling the cooking period of substances within sealed receptacles, the combination with a tank, a body of relatively cooling liquid partially filling the tank, a body of relatively hot fluid superposed on the body of cooling liquid, a path for



the receptacles extending from the upper to the lower level of the tank, and means for maintaining said bodies at predetermined levels.

1,576,422. DISPLAY TRAY. THOMAS WALTER FRED, Chattanooga, Tenn. Filed Feb. 7, 1925. Serial No. 7,641. 3 Claims. (Cl. 211—34.)

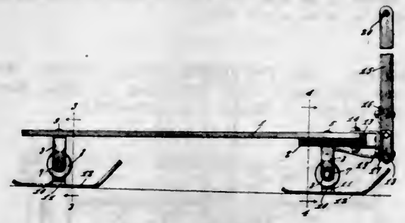
1. A stocking display tray comprising a stiff base, elastic straps secured thereto adjacent its top and bottom and adapted to retain the upper portions of the stockings to be displayed, the major portions of the stockings being free, and a flexible cover secured to the lower end of the base and adapted to act as a supporting background when in its displaying position.

1,576,423. ROOFING FASTENER. JESSE FULENWIDER and HARRY FULENWIDER, Savannah, Ga. Filed Jan. 21, 1925. Serial No. 3,799. 2 Claims. (Cl. 108—33.)

1. In a roofing fastener, a pair of plates each formed with means for supporting an edge of a shingle, said plates being adapted for pivotal mounting upon a roof in right and left juxta-position with their shingle supporting means confronting.

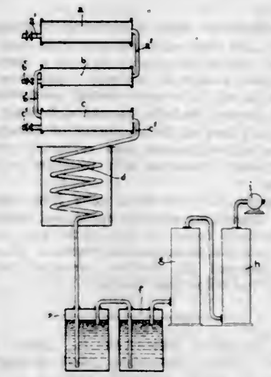
1,576,424. SAFETY LINK. WILLIAM GOODMAN, Pueblo, Colo. Filed Apr. 2, 1924. Serial No. 703,759. 4 Claims. (Cl. 59—86.)

1. A device of the class described comprising a link including side members and a connecting portion, one of the said side members having a slot, and a guard member having pivotal connection at one end with the other side member and extending between the said side members and extending at its other end through the said slot.



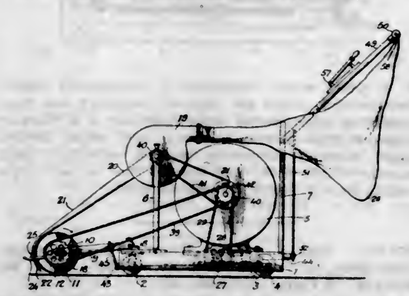
1,576,425. SHOVEL-ATTACHING DEVICE. WILLIAM L. GOODNIGHT, Smallett, Mo. Filed June 1, 1925. Serial No. 34,200. 6 Claims. (Cl. 97—19.8.)

1. A device for attaching an earth working blade of an agricultural implement to the forward surface of its supporting standard wherein the blade and standard have pairs of registerable superimposed bolt receiving openings, including a pair of threadless bolts adapted to be disposed in said openings and having hook-shaped ends, a washer plate having a pair of openings for reception of said bolts and adapted to be disposed against the rear surface of said standard, and a cam element rotatably carried by the washer plate and engageable with the hook shaped ends of the bolts for drawing the latter through the blade, standard and washer plate so as to force the blade and washer plate tightly against the respective surfaces of the standard when said cam element is turned in one direction.



1,576,426. COASTER STEERING GEAR. SIDNEY S. GRIFFIN, Detroit, Mich. Filed Jan. 6, 1925. Serial No. 893. 1 Claim. (Cl. 280—8.)

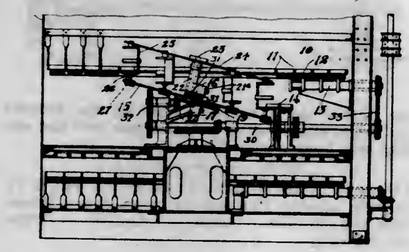
In a coaster toy of the character set forth, including a body provided with front and rear supporting traction elements, a substantially U-shaped member having the legs of substantial length and having the ends thereof arranged one upon the upper side and the other beneath the lower side of said body at its forward end, a pivot bolt passing through said body and said legs, a steering column secured adjacent its lower end to the yoke of said member, a right angled bracket having one leg thereof secured to one side of said column and the other leg extending at right angles to and from the lower end



of the column, and a steering connecting link attached at one end to said other leg and connected with and controlling said front traction element.

1,576,427. RECOVERY OF AMMONIA FROM VINASSES. GASTON PHILIPPE GUIGNARD, Melun, France. Filed Oct. 25, 1921. Serial No. 510,300. 1 Claim. (Cl. 203—1.)

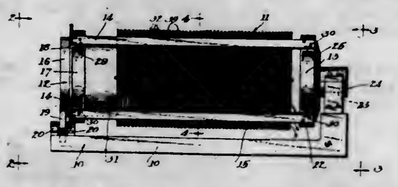
A process of recovering ammonia from vinasses, which consists in heating, at a temperature between 450 and 550 degrees centigrade and under vacuum, a vinasse containing water, said temperature and vacuum being maintained during the whole treatment.



1,576,428. FLOOR-SURFACING MACHINE. OSCAR EARL HADWIGER, Pueblo, Colo. Filed Sept. 11, 1922. Serial No. 587,623. 6 Claims. (Cl. 51—176.)

1. A floor surfacing machine comprising, with a movable frame, a motor for operating the moving parts of the machine, wheels by which said frame is carried and

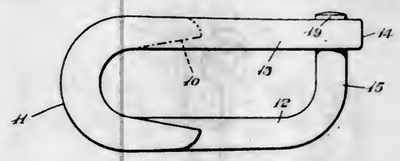
moved, surfacing means adjustably mounted on the frame to be thrown into and out of a surfacing position, and manually controlled means by which the surfacing means is moved to an operative position when the wheels are connected to move the frame.



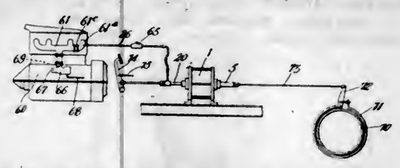
1,576,429. CAN CONVEYER. FRANK OLINGER HUTTON, Sacramento, Calif. Filed Feb. 12, 1923. Serial No. 618,557. 5 Claims. (Cl. 198—103.)

1. In combination with a horizontally disposed tortuous canway and feed conveyer extending into juxtaposition of the innermost canway and in a different plane therefrom and means to transfer cans from the feed conveyer on to the innermost canway comprising parallel upper and lower rotatable members inclined from the horizontal and having their centers of rotation in substantial vertical alignment, and vertically disposed can holders arranged between said members at the outer ends thereof.

2. Mechanism for conveying cans from one elevation to another comprising parallel upper and lower rotatable members inclined from the horizontal and having their centers of rotation in substantial vertical alignment, and vertically disposed can holders arranged between said members at the outer ends thereof.



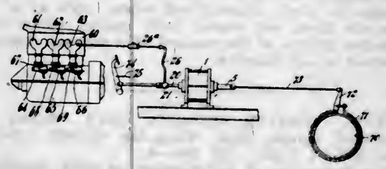
1,576,430. SCREEN SEPARATOR. JOHN F. ISBELL, Alhambra, Calif.; Clementine Isbell, administratrix of said John F. Isbell, deceased, assignor of one-half to Otto Q. Beckwith, Los Angeles, Calif. Filed Mar. 9, 1923. Serial No. 623,929. 4 Claims. (Cl. 209—393.)



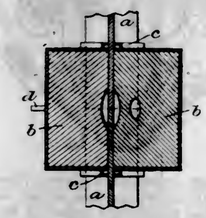
1. A rotary screen comprising a substantially tubular screen portion, means for rotatably mounting said tubular member, said member being composed of a plurality of spaced rings having serrated inner edges forming stepped material supporting surfaces extending longitudinally of the tube, and tapered ribs on said edges forming tapered interstices therebetween.

1,576,431. CHAIN LINK. THOMAS C. BLACKBURN, Winnfield, La. Filed Dec. 12, 1923. Serial No. 680,174. 1 Claim. (Cl. 59—89.)

A link of the character described comprising a pair of shanks having hooks to overlap in reversed positions, one shank having an eye, the other shank having a terminal portion fitted for pivotal movement in said eye, said terminal portion being of parti-circular cross section with a flat side, and the aperture of the eye being less than a circle, said eye having an integral portion arranged to abut said flat side of said terminal portion to limit the swinging movement of the shanks away from one another.



1,576,432. MEANS FOR OPERATING SUCTION-ACTUATED DEVICES FROM THE INTAKE MANIFOLD OF INTERNAL-COMBUSTION ENGINES. CALEB S. BRAGG, Palm Beach, Fla., and VICTOR W. KLIESRATH, Port Washington, N. Y., assignors to Bragg-Kliesrath Corporation, Long Island City, N. Y., a Corporation of New York. Filed June 16, 1925. Serial No. 37,408. 7 Claims. (Cl. 123—198.)



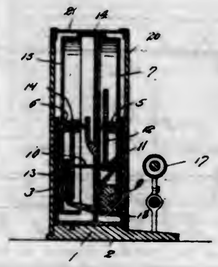
1. The combination with a multi-cylinder internal combustion engine, provided with a suction passage for explosive charges, a carburetor communicating with said passage, a throttle valve for the engine located in said passage, of a suction actuated device, an air connection therefrom to said suction passage of the engine and connected to the latter at a point between the throttle valve and the engine cylinders, said air connection being connected to a portion of said suction passage, supplying a portion only of the cylinders of the engine, and means for disconnecting said portion of the suction passage from the remaining portion of the suction passage supplying the other cylinders of the engine.

1,576,433. MEANS FOR OPERATING SUCTION-ACTUATED DEVICES IN CONNECTION WITH INTERNAL-COMBUSTION ENGINES. CALEB S. BRAGG, Palm Beach, Fla., and VICTOR W. KLIESRATH, Port Washington, N. Y., assignors to Bragg-Kliesrath Corporation, Long Island City, N. Y., a Corporation of New York. Filed June 25, 1925. Serial No. 39,420. 5 Claims. (Cl. 123—198.)

1. The combination with a multi-cylinder internal combustion engine provided with a plurality of suction passages, each of said passages supplying explosive charges to certain only of the cylinders, a carburetor communicating with each of said suction passages, and a throttle valve in each of said passages, of a suction actuated device, an air connection therefrom extending to certain of said suction passages less than the whole number thereof, whereby the withdrawal of air from said suction actuated device in the operation thereof will not affect the operation of the engine cylinders receiving their explosive charges from the suction passage, or passages, not connected with the actuator.

1,576,434. METHOD AND MEANS FOR LUTING MOLDS. AUGUST DZIEWAS, Tempelhof, near Berlin, Germany, assignor to Metal & Thermit Corporation, Carteret, N. J., a Corporation of New Jersey. Filed Apr. 1, 1925. Serial No. 19,880. 3 Claims. (Cl. 22—116.)

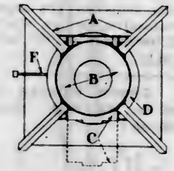
2. A mold box for use in alumino-thermic welding of rails, girders and the like comprising coordinate box sections having their mating edges excised to conform to and engage the parts to be welded, and rectangular flanges associated with the box sections adjacent to and conforming to said edges, said flanges forming channels to receive a plastic luting material to seal the mold joints.



1,576,435. WALKING TOY. ADOLF GUND, New York, N. Y. Filed Sept. 15, 1923. Serial No. 662,923. 4 Claims. (Cl. 46—46.)

1. In a walking toy, a body, a frame carried by said body, a plurality of supports simulating limbs, said supports being pivotally mounted in the frame and connected in pairs, means for limiting the movement of the supports, a reciprocating member mounted for sliding movement in the frame and pivotally connecting each front support with a rear support on the same side, and means for moving the body along a supporting surface, said reciprocating member serving to cant the body and thereby transfer the weight of the body from one side to the other to cause a movement of the supports as the body is moved over the supporting surface.

1,576,436. SEAL AND METHOD FOR MAKING THE SAME. DANIEL SNYDER GUSTIN, East Orange, N. J., assignor to Westinghouse Lamp Company, a Corporation of Pennsylvania. Filed Mar. 30, 1921. Serial No. 457,101. 17 Claims. (Cl. 176—36.)

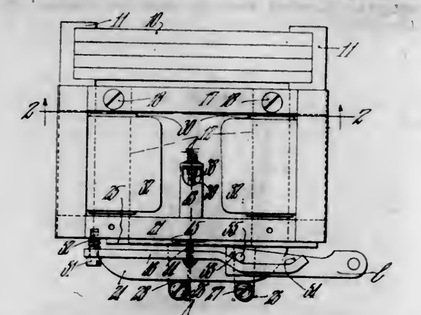


2. As a leading-in conductor a chromium coated wire.

1,576,437. GRAVITY LEVEL. HERMAN J. HALLORAN, Roslindale, Mass. Filed Feb. 12, 1924, Serial No. 692,314. Renewed Oct. 16, 1925. 2 Claims. (Cl. 33—215.)

1. A gravity level comprising a base provided with an under surface having all portions lying in the same plane, a frame mounted upon the base member and having an indicator disposed transversely of the base member and lying in a plane parallel with the plane of the under surface of the base member, a dial journaled for rotation upon the frame and having a series of graduations adapted to move under the indicator, a weight mounted upon the dial wheel and located diametrically opposite the zero graduations of the series of graduations, a second wheel journaled upon the frame with its axis in alignment with the axis of the first mentioned wheel, a series of graduations carried by the second mentioned wheel and adapted to move under the indicator and gearings operatively connecting said dial wheels together.

1,576,438. METHOD OF TESTING THE CONSISTENCY OF CONCRETE. FRANK H. JACKSON, Washington, D. C., dedicated, by mesne assignments, to the citizens of the United States. Filed June 24, 1925. Serial No. 39,373. 1 Claim. (Cl. 73—51. (Granted under the act of Mar. 3, 1883, 22 Stat. L., 625.)

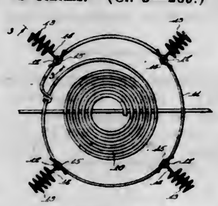


A method of determining the consistency of cement concrete consisting in placing upon a circular retaining plate of given dimensions as much concrete as the plate will carry, in weighing the concrete retained on said plate and in determining the consistency of said concrete which is directly proportionate to the weight thereof.

1,576,439. MAGNETO. TERRENCE G. LOUIS, Springfield, Mass., assignor to Wico Electric Company, a Corporation of Massachusetts. Filed May 26, 1922. Serial No. 563,912. 18 Claims. (Cl. 171—209.)

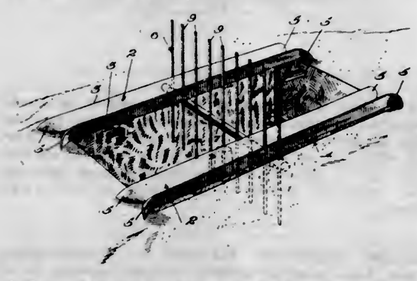
2. In a magneto, having two magnetic pole pieces adapted to be periodically and magnetically connected

and disconnected, an armature reciprocable in a plane at right angles to the longitudinal axes of the pole pieces



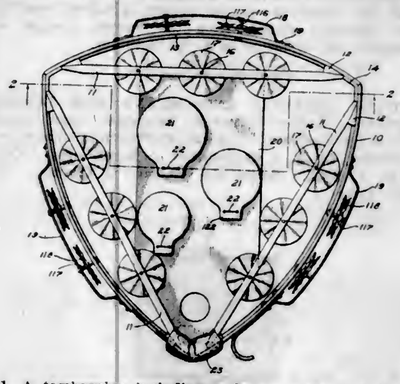
and movable into and out of contact therewith, and means for guiding the armature into contact with the pole pieces without relative impingement thereof.

1,576,440. FILTERING MEDIUM. HARRY C. MARTIN, Niagara Falls, N. Y., assignor to The Carborundum Company, Niagara Falls, N. Y., a Corporation of Pennsylvania. Filed Nov. 13, 1924. Serial No. 749,742. 6 Claims. (Cl. 210—205.)



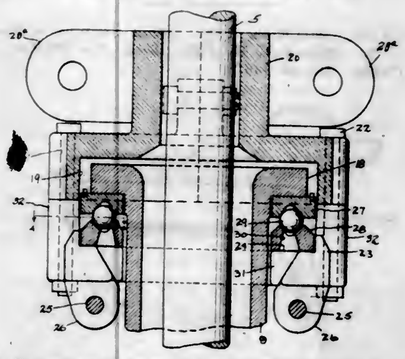
1. A filtering medium consisting of a porous structure formed from a compacted and baked mixture comprising mineral grains moistened with a resin solvent, and a synthetic resin, substantially as described.

1,576,441. FURNITURE SPRING. VINCENZO MASSACESE, New York, N. Y. Filed July 14, 1925. Serial No. 43,576. 4 Claims. (Cl. 5—269.)



1. In a volute furniture spring having a plurality of radial offset receiving loops for the looped terminals of connecting coiled contractile springs, retaining means for holding said looped terminals in the offset loops, comprising an arcuate link.

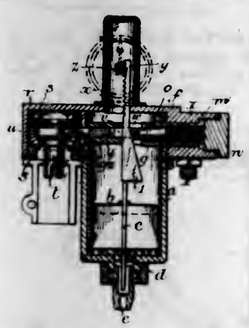
1,576,442. GATE. JOSEPH WILLIAM MATTHEWS, Menard, Tex. Filed Dec. 26, 1924. Serial No. 758,225. 3 Claims. (Cl. 39—5.)



1. In combination, a pair of runways comprising spaced rails having inwardly beveled confronting surfaces and having flaring ends, a gate, means for mounting the gate on the runways, and yieldable means for holding the gate in a vertical position.

1,576,443. TAMBOURINE. EUGENE C. MCELHANY, Kalamazoo, Mich. Filed May 3, 1924. Serial No. 710,823. 3 Claims. (Cl. 84—418.)

1. A tambourine including a frame, presenting a plurality of sides at angles to each other, and braces extending across the tambourine adjacent to each side of the frame; together with jingle elements carried by said braces.

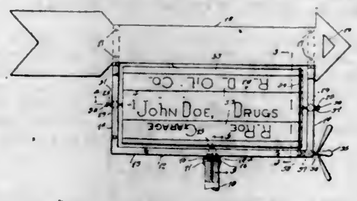


1,576,444. BELL-ROD MOUNTING FOR BLAST FURNACES. ARTHUR G. MCKEE, Cleveland, Ohio, assignor to Arthur G. McKee & Company, Cleveland, Ohio, a Corporation of Delaware. Filed Oct. 4, 1924. Serial No. 741,692. 5 Claims. (Cl. 214—37.)

4. The combination with a rotatable supporting rod; of a mounting for the upper end of said rod, said mounting including a laterally projecting circular flange on such rod end, an externally supported housing formed with a circular recess wherein such flange is received, a ring attached to such housing and formed with a ledge underlying the flange on said rod end; and a laterally open ball bearing, comprising upper and lower races with interposed balls, between said ledge and flange, space being left both between said ring and housing and between such lower race and said rod for the escape of dust and grid from said ball bearing.

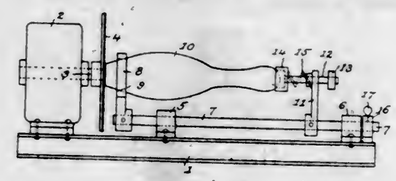
1,576,445. INSTRUMENT OR APPARATUS FOR INDICATING THE FLOW OR CONSUMPTION OF LIQUIDS SUCH AS LIQUID FUEL. WILFRID B. MITCHELL, Lisbon, Portugal. Filed Nov. 10, 1922. Serial No. 600,172. 11 Claims. (Cl. 103—38.)

1. An apparatus for indicating the flow of a liquid, such as liquid fuel, comprising a fuel storage and distributing chamber having an inlet adapted to be connected with the supply and a separate outlet adapted to be connected with a place of consumption, admission control means driven in accordance with an engine deriving power from such liquid, regulating means influenced by the amount of liquid present at any instant in the chamber, operative connection between said regulating



means and the admission control means to vary the admission, an indication device calibrated to indicate the flow of liquid, and operative connection between said regulating means and said indicating device whereby the state of the indicating device corresponds with the state of the adjustment of the regulating means.

1,576,446. DRAWING GLASS SHEETS. WILLIAM L. MONRO, Pittsburgh, Pa., assignor to Window Glass Machine Company, Pittsburgh, Pa., a Corporation of New Jersey. Filed Apr. 23, 1920. Serial No. 375,972. 7 Claims. (Cl. 49—17.)

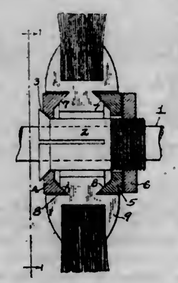


3. Apparatus for drawing sheet glass, comprising a bath from which a sheet of glass is drawn, a pair of bending roll portions engaging the edge portions only of a drawn sheet, the bending roll portions being a substantial distance above the bath, and width maintaining means associated with each sheet edge adjacent the bath.

1,576,447. WIND-OPERATED SIGN. JESSE I. MORELAND, Dodd City, Tex. Filed Sept. 25, 1924. Serial No. 739,898. 4 Claims. (Cl. 40—39.)

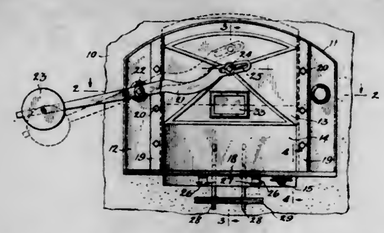
1. An advertising device comprising an upstanding U-shaped frame mounted for rotation in a horizontal plane, a vane secured to the side arms of said frame, a drum journaled on said arms, an operating shaft journaled on said frame, a wind wheel secured to said shaft, and a belt trained on said drum and shaft.

1,576,448. MACHINE FOR REFINISHING BOWLING-ALLEY PINS. BOHUMIL R. MUDRA, Chicago, Ill. Filed Jan. 28, 1924. Serial No. 688,960. 2 Claims. (Cl. 51—217.)



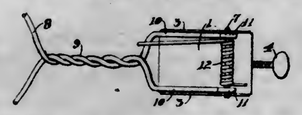
1. In a machine for refinishing bowling alley pins, the combination of a base, a stem mounted for turning and longitudinal adjustment on said base, work holding heads mounted in spaced relation on said stem with their upper ends formed for holding engagement with opposite end portions of the work, a transverse bridge piece having end bearings on the base and central engagement with an end of the aforesaid stem, means for fastening the bridge piece to said stem to hold the same against turning movement, and a power shaft revolubly mounted on the base and formed for end attachment of a refinishing tool or head.

1,576,449. FEED-CONTROLLING MEANS FOR ROCK DRILLS. WILLIAM G. NAISMITH, Denver, Colo., assignor to The Denver Rock Drill Manufacturing Company, Denver, Colo., a Corporation of Delaware. Filed July 1, 1920. Serial No. 393,373. 2 Claims. (Cl. 121—9.)



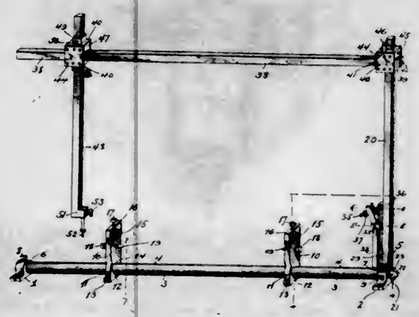
1. The combination with a tool-actuating motor, of fluid operated, extensible feeding means therefor including a cylinder member at the rear of the tool actuating motor and a piston operating in the cylinder member and having a portion that slidably projects from its rear end, connecting means interposed between the tool-actuating motor and the cylinder member, a reservoir for liquid on the cylinder member, a liquid conduit between the lower part of the reservoir and the cylinder member above the piston, said conduit extending through said connecting means, and valve mechanism in the connecting means controlling the passage of fluid to the tool-actuating motor and the reservoir and the passage of liquid through said conduit.

1,576,450. MOUNTING FOR CYLINDRICAL BRUSHES. LAURITS HENRIK NIELSEN, Kolding, Denmark, assignor to The Osborn Manufacturing Company, Cleveland, Ohio, a Corporation of Ohio. Filed Apr. 18, 1921. Serial No. 462,433. 5 Claims. (Cl. 15—179.)



1. A mounting for a segmental cylindrical brush comprising a longitudinally split sleeve provided with a beveled flange adjacent one end and exteriorly threaded at the other end, a nut on said threaded sleeve-end, and annular members surrounding said sleeve between said flange and nut and adapted to engage the bases of brush sections.

1,576,451. OVEN CLOSURE. JAMES NOLLA, New Brunswick, N. J. Filed Mar. 28, 1925. Serial No. 19,153. 6 Claims. (Cl. 107—65.)

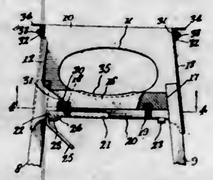


3. An oven closure comprising co-operative closure members mounted for controlling the oven opening in a manner to suit the introduction of goods of various sizes to and their removal from the oven to prevent the unnecessary escape of heat, one of said members being movable to opened and closed positions and being self-closing, and means for locking said self-closing closure member in opened position.

1,576,452. HAT HOLDER. EDMOND A. NOONAN and WALTER H. KERR, San Jose, Calif. Filed Sept. 27, 1923. Serial No. 665,216. 1 Claim. (Cl. 45—13.)

A device of the character described, comprising a plate having upwardly turned front and rear flanges and downwardly extending side flanges, a set screw operatively mounted in the rear flange, a pin mounted in and connecting said side flanges in parallel relation to said rear flange, and a wire loop having both ends twisted together for a distance and then separated and formed into parallel and spaced end portions provided with terminal loops engaging said pin, and a spring coiled upon said pin between said terminal loops and having one end extending rearwardly and engaging the under surface of said plate, and having the other end extending forwardly and engaging the under surface of one of the end portions of the wire loop.

1,576,453. TESTING MACHINE. JOHN R. NORDSTROM, Beloit, Wis., assignor of one-half to Elisha A. Beadle, Kewanee, Ill. Filed Mar. 12, 1924. Serial No. 698,750. 7 Claims. (Cl. 33—199.)

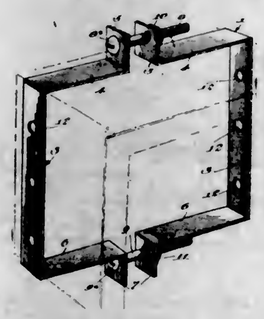


7. In a testing apparatus, the combination of a flat-sided standard, a flat-sided beam, a coupling head provided in opposite sides with a vertical groove and a horizontal groove, said grooves having flat walls and receiving the standard and the beam respectively, plates secured upon the sides of the head and extending across the grooves to retain the standard and the beam therein, and fastening devices mounted in the head and engaging the standard and the beam respectively whereby to secure them in set positions.

1,576,454. REFINING PROCESS FOR PEARL ESSENCE. JEAN PAISSEAU, Courbevoie, France. Filed Dec. 22, 1923. Serial No. 682,330. 2 Claims. (Cl. 252—1.)

1. A process of preparation of pearl essence wherein the raw material containing the brilliant crystalloids is treated by means of a biological reagent, the latter being of such nature as to provide a fermentation of the organic substances containing the said crystalloids, said treatment being continued until the said organic substances are destroyed, after which the crystalloids are separated from the dissolved residues of the fermentation process.

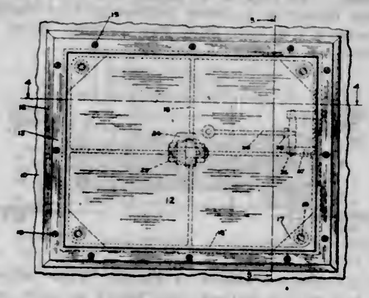
1,576,455. ADJUSTABLE LEG STRUCTURE. CLIFTON M. PARKER, Birmingham, Ala. Filed Mar. 26, 1925. Serial No. 18,569. 3 Claims. (Cl. 45—74.)



1. An adjustable leg structure comprising a frame having convergent casings, legs slidable in said casings, a locking bar slidable in said frame and having beveled ends to engage the legs, and yieldable means to urge the bar toward the convergent ends of the casings.

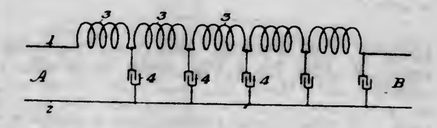
1,576,456. HAME. JAMES L. PARRISH, Valdosta, Ga. Filed June 8, 1922. Serial No. 566,820. 3 Claims. (Cl. 54—30.)

2. A hame having a wood body provided with a slightly tapered heavy metal strip on its outer margin, a heavy metal sleeve adapted to be forced while hot over a larger region of the hame and on cooling to grip edgewise said metal strip whether or not the wood portion shrinks, and trace and strap attaching devices carried by said sleeve.



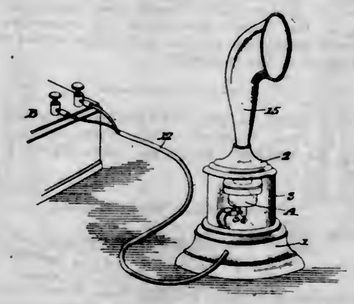
1,576,457. FIXTURE HOLDER. JOSEPH HENRY PETTY, Trenton, N. J. Filed Feb. 12, 1925. Serial No. 8,788. 3 Claims. (Cl. 248—30.)

1. A device for use in holding and mounting recessed type of fixtures in bath rooms having plastered walls, comprising a frame extending entirely around and embracing and directly engaging the fixture, the frame itself both framing and clamping the fixture, the frame having portions adapted to coact with fastening means for securing the frame to studding or the like.



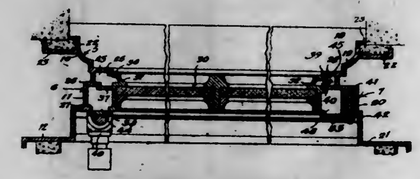
1,576,458. CORE-MAKER'S TABLE OR THE LIKE. GEORGE B. PICKOP, New Haven, Conn., assignor to The Malleable Iron Fittings Company, Branford, Conn., a Corporation of Connecticut. Filed Aug. 27, 1919. Serial No. 320,189. 26 Claims. (Cl. 22—56.)

3. A vibrating table provided with a vertically movable platen, means for yieldingly supporting said platen, a normally inoperative vibrator adapted to vibrate said platen, and means controlled by the pressure exerted in



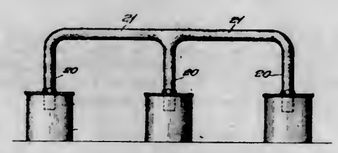
a downward direction upon said platen for setting the vibrator in operation.

1,576,459. ELECTRIC RETARDATION LINE. GEORGE W. PIERCE, Cambridge, Mass., assignor to Submarine Signal Company, Portland, Me., a Corporation of Maine. Filed Dec. 24, 1921. Serial No. 524,807. 8 Claims. (Cl. 178—44.)



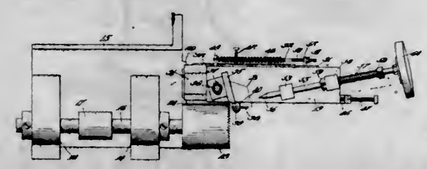
1. An electric retardation line having capacities in shunt and inductance elements in series and having the mutual inductance between adjacent inductance elements approximately equal to one-tenth of the self-inductance of the elements, substantially as described.

1,576,460. LOUD-SPEAKER SUPPORT. ALBERT PIHL, Murray, Utah, assignor to George F. Borkman, Salt Lake City, Utah. Filed Apr. 7, 1924. Serial No. 704,798. 3 Claims. (Cl. 179—146.)



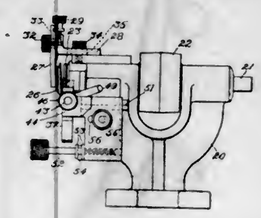
1. A loud speaker unit comprising in combination a supporting casing including a top having an opening, a loud speaker supported on said top and having its inlet end in communication with said opening, a receiver disposed within the casing, and means for supporting said receiver from said top including a plate attached to said receiver, and a nipple fixed to the plate and extending into the opening of the top, said nipple having a threaded connection with the wall of said opening.

1,576,461. CASEMENT WINDOW. JOHN POLACHEK, New York, JULIUS JEPSEN, Brooklyn, and EDMUND PEREMI, New York, N. Y., assignors to John Polachek, Long Island, N. Y., doing business as John Polachek Bronze & Iron Co. Filed May 2, 1923. Serial No. 636,157. 1 Claim. (Cl. 189—69.)



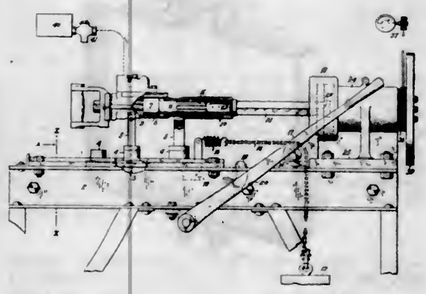
In a casement window, a metallic frame including side, top and sill sections, each having an outer, intermediate and inner flange arranged at spaced relation and a window sash pivotally connected to one of said side secions and having outer, intermediate and inner flanges overlapping and contacting respectively the outer, intermediate and inner flanges of said sections, said side sections each having a substantially L-shaped flange adapted to engage a wall on one vertical edge, and an encircling flange structure on the opposite edge, said encircling flange structure being positioned to partly encircle a projection from a wall for anchoring the frame in place.

1,576,462. FISH BRIDGE. HERMAN A. POLZIN, Chicago, Ill. Filed Feb. 4, 1924. Serial No. 690,472. 6 Claims. (Cl. 119—5.)



1. A fish bridge comprising an integral glass pipe having a bore therethrough adapted to be filled with water, the open ends of said pipe being down-turned and adapted to project into a water-filled receptacle, and means on the turned down ends for supporting the bridge and permitting vertical adjustment of the bridge with respect to the receptacle.

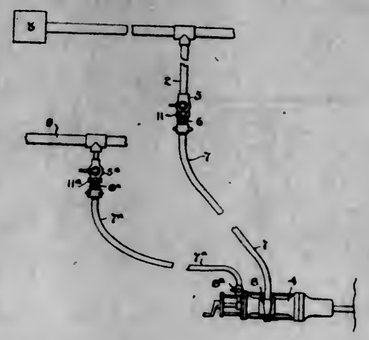
1,576,463. HEEL-BLANK-BREASTING MACHINE. LYMAN B. POPE, Bradford, Mass. Filed Oct. 4, 1923. Serial No. 666,600. 20 Claims. (Cl. 143—85.)



18. A machine for grooving or curving the breast face of a heel blank comprising a rotatable tubular saw, a carriage arranged to move in a direction substantially parallel to the longitudinal axis of the saw, and means on said carriage for holding a heel blank in a position wherein the front end portion of the blank is disposed in longitudinal alignment with a portion of said saw, said means being constructed so as to permit the blank to be set at different angles to vary the angle of the cut in the front end portion of the blank.

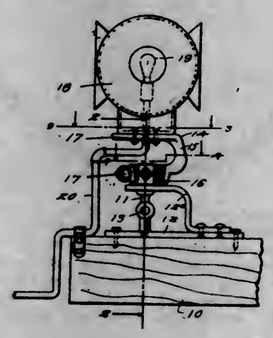
1,576,464. HEEL-TRIMMING MACHINE. LYMAN B. POPE, Bradford, Mass. Filed Feb. 26, 1924. Serial No. 695,336. 20 Claims. (Cl. 12—88.)

17. In a heel trimming machine, in combination, a rotary cutter, a cutter guard for controlling the position of the work with respect to said cutter, a table over which the work is guided, a slide guided for movement in the direction of the axis of said cutter, a screw for adjusting said slide, a fixed bracket by which said screw is carried, a trunnion on said table journalled in said slide on an axis transverse to the axis of said cutter, and a clamping bolt and an operating handle therefor for clamping said trunnion in adjusted position.



1,576,465. TESTING HAMMER ROCK DRILL. LESLIE PRYCE, Johannesburg, Transvaal, South Africa. Filed Oct. 5, 1923. Serial No. 666,826. 11 Claims. (Cl. 73—51.)

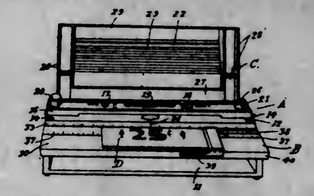
1. The process of testing a hammer rock drill in which the reciprocating movement of the piston and the rotative movement of the tool chuck are positive with one another, which consists in running the drill by means of working fluid at standard pressure and under a standard rotational load and measuring the angular speed of the chuck.



1,576,466. STRAINING FLUID IN FLUID-TRANSMISSION SYSTEM. LESLIE PRYCE, Johannesburg, Transvaal, South Africa. Filed Feb. 15, 1924. Serial No. 693,145. 6 Claims. (Cl. 183—34.)

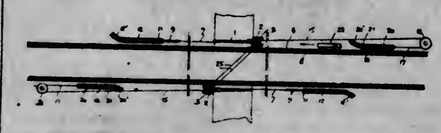
1. The process of cleaning a strainer in a pressure fluid transmission system comprising a source of supply of fluid, which consists in shutting off a single-way, unshunted section of the transmission system at both ends, so as to cut off such section from the source of supply and also to trap therein a body of the fluid under resilient

pressure tending to expel it from the said section; and thereafter evacuating such trapped fluid reversely through the strainer by such pressure.



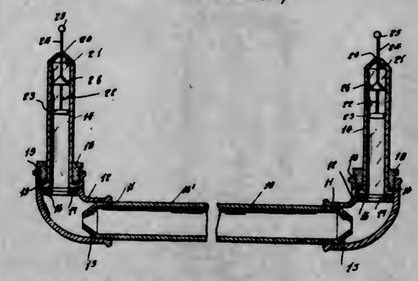
1,576,467. ELECTRIC SIGNAL LAMP FOR RAILWAY SWITCHES. CLARENCE J. RHOH, Altoona, Pa. Filed Sept. 24, 1925. Serial No. 58,390. 3 Claims. (Cl. 246—276.)

2. In combination with a stem operated by a switch, a bracket attachable to the stem, a signal lamp carried by the bracket, said bracket having an offset portion, a conduit extending to the lamp and adapted as a means for passage of conductors therethrough to the illuminating means of the lamp.



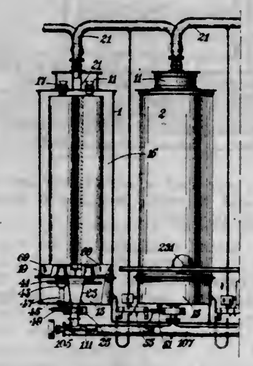
1,576,468. STENCILING DEVICE. JACOB J. REUSCH, St. Paul, Minn., assignor to National Sign Stencil Company, St. Paul, Minn., a Corporation. Filed Mar. 2, 1923. Serial No. 622,300. 4 Claims. (Cl. 101—126.)

1. A stenciling device including a series of stencils, means for holding said stencils in a concealed or display position, a stenciling table, a clamping means having a central point, a series of scales adapted to indicate the overall dimension of a card to be stenciled upon and to indicate the center of the card and to indicate the movement of the stencil whereby a display can be stenciled equally spaced on either side of the center of the card held in said clamp, a tray positioned in back and above said clamping device having a backwardly inclined



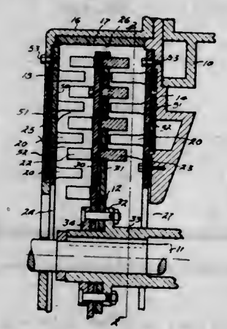
shelf, whereby a card may be passed over said stenciling table through said clamping means and beneath said tray while being stenciled.

1,576,469. RAILROAD GATE. CHARLES E. RICE, Delray, Fla. Filed Nov. 16, 1925. Serial No. 69,419. 2 Claims. (Cl. 246—293.)



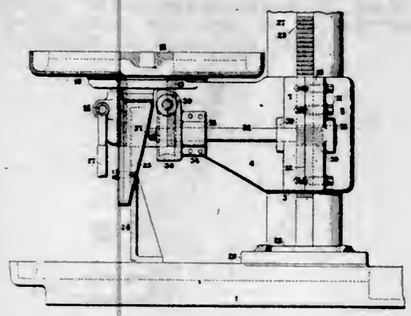
1. Means for automatically operating railroad gates, including a drum upon the pivot of the gate and having a cable wound thereon, a guideway spaced from said gate at one side thereof and having a slide working therein, said slide having a spring connection with one end portion of said cable and being operable by a ramp upon the car to tension said spring connection to thereafter set the gate to operative position, and a guideway spaced from said gate at the opposite side thereof and having a slide working therein, said slide having a spring connection with the other end portion of said cable and being operable by said ramp of the car to tension said spring and thereafter set the gate to inoperative position.

1,576,470. TERRACE LEVEL. JUAN RICHARDSON, Good Water, Ala. Filed Apr. 2, 1925. Serial No. 20,311. 1 Claim. (Cl. 33—209.)



A level of the class described comprising an elongated tube having frusto-conical ends, elbows threaded to said tube, said elbows having internal flanges, indicator tubes in parallel relation and having flanges engaging the first mentioned flanges, nuts engaging the elbows and securing the flanges in contact, said indicator tubes having frusto-conical ends providing vent openings and valve seats, said indicator tubes, first mentioned tube and elbows being adapted to contain a liquid, floats in the indicator tubes subject to the level of the liquid, rods rising from the floats and passing through said openings, and valves on the floats to coact with said seats.

1,576,471. EVAPORATOR FOR CONCENTRATING OR DRYING. THOMAS RIGBY, London, England. Filed Nov. 23, 1921. Serial No. 517,299. 2 Claims. (Cl. 159—12.)

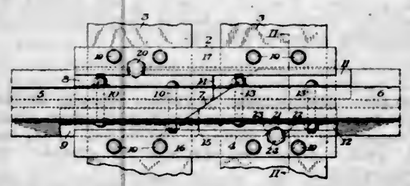


1. A drying apparatus comprising two casings, a hollow drying drum in each, a duct connecting the space within one of the casings with the inside of the drum in the other casing, means for applying material to be dried to the surface of each drum at a determinate portion of its periphery, means for removing such material from each drum at another portion of its periphery, and two devices for discharging material from the apparatus whereof one is associated with each of the aforesaid two casings and each of which devices is fed solely by the corresponding one of said removing means.

1,576,472. PULVERIZING MACHINE. ROBERT SANFORD RILEY, Worcester, Mass., assignor to Sanford Riley Stoker Company, Worcester, Mass., a Corporation of Massachusetts. Filed July 21, 1924. Serial No. 727,241. 14 Claims. (Cl. 83—11.)

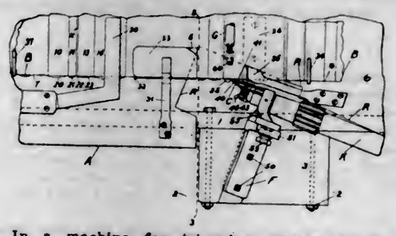
1. A pulverizing machine comprising a casing, a rotor mounted therein, metallic bodies mounted on one of said parts and arranged to pulverize material by impact thereagainst, and a substantially rigid mounting to hold each of said bodies fixedly in position on its supporting part under the normal stresses of pulverizing the material, but which permits a slight yielding movement of said body only under abnormal stresses.

1,576,473. FRONT HAND ELEVATOR FOR ARMS. LAWRENCE LEE SCHAUER, Cincinnati, Ohio, assignor to The Cincinnati Bickford Tool Company, Cincinnati, Ohio, a Corporation of Ohio. Filed June 13, 1921. Serial No. 477,145. 6 Claims. (Cl. 77—63.)



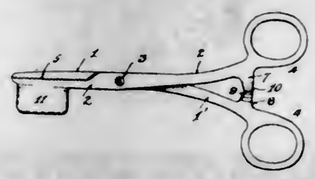
3. A drilling-machine combining a cylindrical column; an arm radiating therefrom and having its rear end in the form of a sleeve split transversely to the length of said arm; a work-support located upon the forward end of said arm, means embodying reduction gearing and located at the forward end of said arm for enabling it to be manually elevated; and means accessible at the forward end of said arm for manually clamping it on said column.

1,576,474. EXERCISER. SHERIDAN A. WALKER, New York, N. Y. Filed July 3, 1924. Serial No. 723,895. 2 Claims. (Cl. 272—82.)



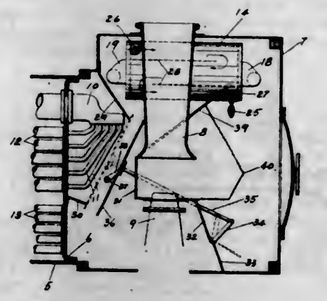
1. In an exerciser, a plurality of spring metal strips in substantial alinement with each other, a pair of handles having bifurcated holders adapted to fit over the ends of said strips, said strips and said holders being provided with apertures adapted to register with each other, and fastening bolts adapted to fit through said apertures and secure said strips and holders together.

1,576,475. RAIL JOINT. EZRA C. WELSH, New Middletown, Ohio. Filed Aug. 20, 1925. Serial No. 51,889. 7 Claims. (Cl. 238—210.)



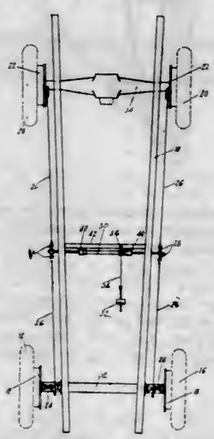
1. The combination with a pair of rails having cooperating angular end faces, of means cooperating with the flange of one rail for effecting a relative transverse movement of one rail when it moves longitudinally with respect to the other, whereby said angular end faces are maintained in contact.

1,576,476. SELVAGE-LOOP-TRIMMING MACHINE. FRED C. WHITTIER, Lowell, Mass., assignor to Massachusetts Cotton Mills, Lowell, Mass., a Corporation of Massachusetts. Filed Mar. 2, 1923. Serial No. 622,424. 9 Claims. (Cl. 26—7.)



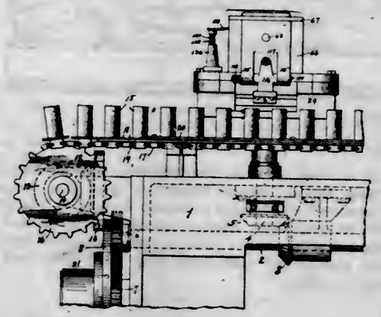
3. In a machine for trimming selvage loops from cloth, the combination of a table, guides to keep the cloth flat on the surface of the table, selvage guides so alined as to direct the selvage edge in a straight line, a power clipper with its cutting members proximate said line, a protector guide between the clipper and said line, power means to drive the clippers, and means above and below the level of the surface of the table to direct a current of air from said alinement towards said clipper.

1,576,477. DENTAL FILM HOLDER. PETER WIENS, Peoria, Ill. Filed Apr. 11, 1925. Serial No. 22,469. 7 Claims. (Cl. 250—34.)



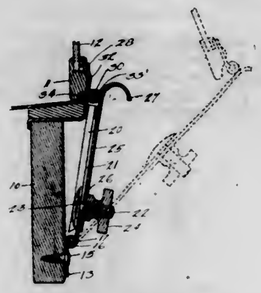
1. A dental film holder including a pair of jaws pivoted to one another between which to clamp a film, and each including a handle, a member extending laterally in a fixed position from one of the jaws in a plane substantially at right angles to the clamping faces of said jaws, and means to positively lock the jaws relatively.

1,576,478. COMBINED FEED-WATER HEATER AND ECONOMIZER. VIRGINIUS Z. CARACRISTI, Bronxville, N. Y. Filed Feb. 7, 1921. Serial No. 443,294. 11 Claims. (Cl. 122—42.)



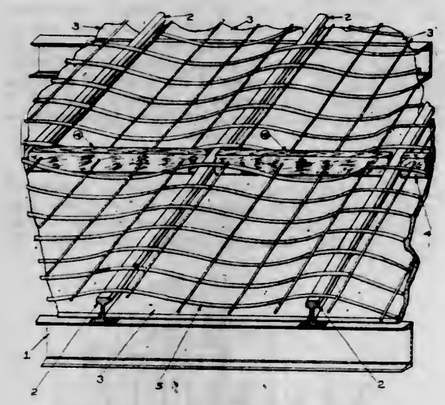
1. A feed water heater for locomotives, comprising in combination with the locomotive smoke box, a feed water drum arranged within the upper portion of the smoke box, a damper controlling the products of combustion from some of the fire tubes to allow the same to pass through said drum, a second damper, and connections between the same and said first damper whereby the second damper is closed by the opening of the first damper to cause the products of combustion from the remaining fire tubes to pass through the feed water drum.

1,576,479. VEHICLE BRAKE. ADIEL Y. DODGE and WILLIAM J. ANDRES, South Bend, Ind., assignors to Bendix Brake Company, Chicago, Ill., a Corporation of Illinois. Filed Sept. 23, 1925. Serial No. 58,077. 8 Claims. (Cl. 188—10.)



2. A vehicle having a pair of front wheels having brakes and a pair of rear wheels having brakes, and comprising, in combination therewith, a driver-operated rock-shaft extending crosswise of the vehicle, connections from each end of the shaft to the front brake and the rear brake on that side of the vehicle, and means for supporting the rock-shaft spaced substantially inwardly from its ends, the end parts of the rockshaft overhanging said means being reduced in diameter and free to flex slightly to equalize small differences in pressure between the front and rear brakes.

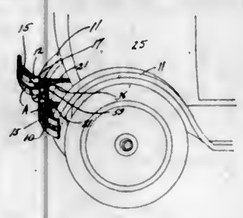
1,576,480. CLIP-ATTACHING MACHINE. ALFRED W. KATH, Detroit, Mich., assignor to Arthur Colton Company, Detroit, Mich., a Corporation of Michigan. Filed Sept. 19, 1924. Serial No. 738,655. 12 Claims. (Cl. 113—1.)



1. In a clip attaching machine, means embodying a pair of jaws to fold a clip-blank to V-shape and to carry it to position over the closed end of a container tube, and means to force the jaws together to secure the clip onto the end of the tube.

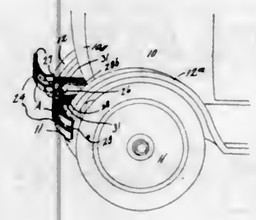
1,576,481. WINDSHIELD CONTROL. JOHN R. KING, Ruthven, Iowa. Filed Sept. 17, 1923. Serial No. 663,105. 2 Claims. (Cl. 296—94.)

2. A wind shield control device comprising a plate secured to the dash of an automobile, a swinging plate hingedly connected thereto, a control bar slidably mounted on said swinging plate, a connector member secured to the wind shield frame, means for hingedly connecting the control bar to said connector member, a finger piece at said last mentioned hinge and means for clamping said swinging plate and said control bar together when the windshield is in any of its adjusted positions.



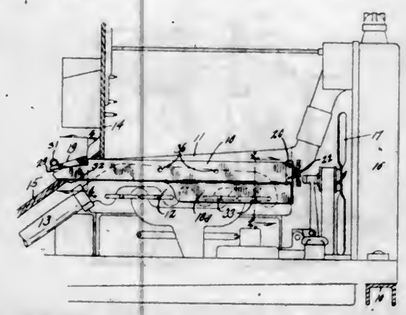
1,576,482. ROOF. GEORGE P. LEHN, Chicago, Ill., assignor to United States Gypsum Company, Chicago, Ill., a Corporation of Illinois. Filed Mar. 20, 1924. Serial No. 700,470. 6 Claims. (Cl. 108—6.)

1. In a roof or floor construction, flanged supporting members, plaster boards supported upon the flanges of said members, reinforcing members secured to the plaster boards between their edges extending between said supporting members, and a plastic body supported upon the plaster boards and embedding the reinforcing and supporting members.



1,576,483. BUMPER AND MOUNTING MEANS. ALGOT W. NORDGREN, St. Paul, Minn., assignor to Marquette Manufacturing Company, St. Paul, Minn. Filed Nov. 4, 1925. Serial No. 66,709. 8 Claims. (Cl. 293—55.)

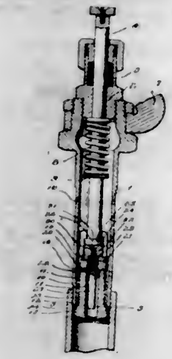
1. In a device of the class described, the combination of a car having a longitudinal and a transverse frame member with a bumper support having a portion arranged parallel with and secured to said longitudinal member, and a brace secured to said bumper support



and inclined laterally and upwardly therefrom and secured to said transverse member at a point substantially spaced from the longitudinal member.

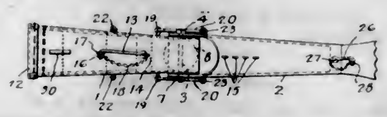
1,576,484. FENDER GUARD. ALGOT W. NORDGREN, St. Paul, Minn., assignor to Marquette Manufacturing Company, St. Paul, Minn. Filed Nov. 25, 1925. Serial No. 71,345. 10 Claims. (Cl. 293—55.)

1. A fender guard support, comprising a rigid supporting member having a portion adapted to be secured to a car frame and extending away therefrom and terminating in a curved portion inclined at a substantial angle to said first portion, and a supporting element pivoted to the latter portion of said first member and adapted to be mounted on the longitudinal frame member of the car.



1,576,485. VEHICLE HEATER. HAMPTON I. SURLS and JOHN T. KENNEDY, Iowa Falls, Iowa, assignors of one-third to William Dunning, Iowa Falls, Iowa. Filed Dec. 2, 1925. Serial No. 72,668. 5 Claims. (Cl. 237—12.3.)

5. In a vehicle heater, an enclosure member adapted to be placed over and receive a heated portion of an engine and having a channel adapted to extend from said heated portion into the body of a vehicle, a closure

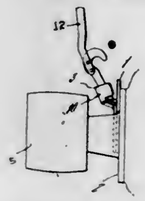


member at the front end of said enclosure, a shaft journaled in said closure member, a wind wheel on the front end of said shaft adapted to be actuated by the draft created by the ordinary engine fan, a fan on the other end of said shaft within the enclosure, and a movable closure member at the other end of said enclosure.

1,576,486. VALVE. JOHN J. FARRELL, Rochester, N. Y., assignor to Michaels, Stern & Company, Rochester, N. Y., a Partnership composed of Joseph Michaels, Henry M. Stern, Samuel M. Weil, Harry F. Leiter, Walter S. Meyers, Morley A. Stern, Morris M. Meyers, Isaac Stern, Malcolm W. Gillis, and Jacque L. Meyers, all of Rochester, N. Y. Filed July 21, 1924. Serial No. 727,116. 4 Claims. (Cl. 251—25.)

4. A valve comprising a valve stem having a shoulder near one end, a valve member having a screw threaded extension abutting said end of the stem and formed with a counter-sunk portion in said abutting portion and also with a central opening, a collar engaging the screw threaded extension of the valve member and formed with an internal shoulder engaging the shoulder on the stem, a packing ring carried by the valve member and having a central opening, a guide having a screw threaded extension passing through the central opening of the packing ring and engaging the valve member and having also an annular shoulder cooperating with the packing ring to hold the latter to the valve member, and a screw having its head received in the counter-sunk portion of the screw threaded extension of the valve member extending through the opening of the valve member into the screw threaded extension of the stem guide to hold the latter against movement.

1,576,487. ARTIFICIAL ARM. HARRIETTE E. HODGSON, New York, N. Y. Filed Aug. 22, 1923. Serial No. 658,765. 2 Claims. (Cl. 3—12.)

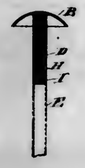


1. An artificial arm, comprising an upper arm section and a forearm section of rigid hollow construction, a joint connecting the sections, hook and eye devices on the sections for rigidly supporting the forearm section in various angular positions and other hook and eye devices on the sides of the sections for bracing them when straightened against lateral stresses.

1,576,488. ICE BAG. HARRIETTE E. HODGSON, New York, N. Y. Filed Feb. 2, 1924. Serial No. 690,137. 2 Claims. (Cl. 128—258.)

2. An ice bag for medical and surgical use, having walls of cellular absorbent fibrous material, characterized by the combination of two such bags slipping one within the other, the inner bag having one wall composed of two sections overlapping intermediate the ends of the bag.

1,576,489. CLUTCH-PEDAL DETENT FOR TRACTORS. VICTOR I. PEARSON, Hecla, S. Dak., assignor of one-half to Harry E. Bengtsson, Hecla, S. Dak. Filed June 9, 1925. Serial No. 36,066. 1 Claim. (Cl. 74—81.)



A clutch detent comprising a pivotally mounted hook, a bracket for supporting the same on a tractor in proximity to the driving pulley, and a spring tensioned between the detent hook and the bracket and tending to propel the hook in a direction away from the clutch lever, the bracket being provided with a belt guard in shielding relation to the detent.

1,576,490. FINISHING MOLDING. HOWARD D. RANDALL, Cincinnati, Ohio, assignor to The J. D. Randall Company, Cincinnati, Ohio, a Corporation of Ohio. Filed July 26, 1922. Serial No. 577,665. 15 Claims. (Cl. 155—184.)

1. A molding of the class described comprising a core, a cover for the core, and a strip extending lengthwise of the core, contacting the core and securing the cover upon the core.

1,576,491. SELF-CLEANING PATCH-APPLYING INSTRUMENT. EDWARD O. YOUNG, Cleveland Heights, Ohio. Filed Nov. 18, 1925. Serial No. 69,819. 5 Claims. (Cl. 152—26.)

1. In an instrument for applying a tire patch, said patch having a central stem extending from one side thereof, the said stem having a terminal enlargement, said instrument having an elongated tapering body open at one end to receive said enlargement and stem, the large extremity of said body being longitudinally slotted as far as the position of said enlargement therein, to form grasping fingers, said enlargement serving as a stopper to prevent the passage of cement into said body, said enlargement serving also as a wiper for cleaning said fingers when said body is withdrawn therefrom.

1,576,492. SLOT PROTECTOR FOR AUTOMOBILE FLOOR MATS. EDWARD O. YOUNG, Cleveland Heights, Ohio. Filed Dec. 12, 1925. Serial No. 75,012. 4 Claims. (Cl. 74—81.)

1. In a device of the character described a floor mat having a linear slot therethrough and vertically extended walls therefor, said walls being inclined to bring these outer edges closely together, the angles of union of

said walls with said mat being reinforced, said side walls being extended above and below said mat to afford a double protection for said slot.

1,576,493. SLOT PROTECTOR FOR AUTOMOBILE FLOOR MATS. EDWARD O. YOUNG, Cleveland, Ohio. Filed Dec. 16, 1925. Serial No. 75,726. 9 Claims. (Cl. 74—81.)

1. An automobile floor mat provided with a linear slot for the passage of the shank of a pedal lever, and an enclosure adjacent to said slot; said enclosure being provided with side, bottom and end retaining walls, and slabs of resilient water proof material, seated in said enclosure.

Patents Nos. 1,576,494 to 1,577,434.

THE OFFICIAL GAZETTE OF THE United States Patent Office.

Vol. 344—No. 3. TUESDAY, MARCH 16, 1926. Price—$5 per year.

The OFFICIAL GAZETTE is mailed under the direction of the Superintendent of Documents, Government Printing Office, to whom all subscriptions should be made payable and all communications respecting the Gazette should be addressed. Issued weekly. Subscription, $5.00 per annum; single numbers, 10 cents each.
PRINTED COPIES OF PATENTS are furnished by the Patent Office at 10 cents each. For the latter, address the Commissioner of Patents, Washington, D. C.
CIRCULARS OF GENERAL INFORMATION concerning PATENTS or concerning TRADE-MARKS, PRINTS, and LABELS will be sent without cost on request to the Commissioner of Patents, Washington, D. C.

Notice—Internal Revenue—Stamp—Powers of Attorney.

The following provision of the Act to Reduce and Equalize Taxation, etc., approved June 2, 1924—

power of attorney granting authority to do or perform some act for or in behalf of the grantor, which authority is not otherwise vested in the grantee, 25 cents (43 Stat. L. 253–336, sec. 807–10),

was repealed by the Act to Reduce and Equalize Taxation, etc., approved February 26, 1926, effective 30 days thereafter.

Powers of attorney filed in this Office which were executed after March 28, 1926, will therefore not require a revenue stamp.

THOMAS E. ROBERTSON,
Commissioner.

Interference Notices.

U. S. PATENT OFFICE, *Washington, Mar. 5, 1926.*

Tennessee Packing & Provision Company, its assigns or legal representatives, take notice:

An interference having been declared by this Office between the applications of Wagner & Company, 4123–29 West Grand Avenue, Chicago, Ill., and Neuhoff Packing Company, Nashville, Tenn., for registrations of trade-marks and trade-marks registered March 7, 1905, No. 44,290, and June 11, 1907, No. 63,296, to Tennessee Packing & Provision Company, Nashville, Tenn., and a notice of such declaration sent by registered mail to said Tennessee Packing & Provision Company at the said address having been returned by the post office as undeliverable, notice is hereby given that unless said Tennessee Packing & Provision Company, its assigns or legal representatives, shall enter an appearance therein within 30 days from the first publication of this order the interference will be proceeded with as in case of default. This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

WM. A. KINNAN,
First Assistant Commissioner.

U. S. PATENT OFFICE, *Washington, Mar. 4, 1926.*

John Densley, his assigns or legal representatives, take notice:

An interference having been declared by this Office between the application for patent of Enos Ashley, 83 Oliver Avenue north, Minneapolis, Minn., and John Densley, 89 South Thirteenth Street, Minneapolis, Minn., and a notice of such declaration sent by registered mail to said John Densley at the said address having been returned by the post office as undeliverable, notice is hereby given that unless said John Densley, his assigns or legal representatives, shall enter an appearance therein within 30 days from the first publication of this order the interference will be proceeded with as in case of default. This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

WM. A. KINNAN,
First Assistant Commissioner.

ADJUDICATED PATENTS.

(C. C. A. N. Y.). The Twitchell patent, No. 927,298, for pressure gauge for pneumatic tires, claims 1–3 *Held* valid and infringed. *A. Schrader's Sons* v. *Wein Sales Corporation*, 9 F. (2d) 306.

(D. C. Mich.) The Haynes patent, No. 1,057,423, for alloy of cobalt, chromium, and tungsten, claims 1 to 4 *Held* invalid and claims 5 to 8 *Held* valid, but not infringed. *Haynes Stellite Co.* v. *Chesterfield*, 8 F. (2d) 765. (Correcting notice in 343 O. G. 484.)

(D. C. N. Y.) The Armstrong patent, No. 1,113,149, for wireless receiving system having feedback to grid circuit, claims 9, 15, and 16 *Held* infringed. *Westinghouse Electric & Mfg. Co.* v. *Royal-Eastern Electrical Supply Co.*, 9 F. (2d) 397.

(C. C. A. Calif.) The Hoover patent, No. 1,191,306, for automobile bumper, claims 1, 3, and 6 *Held* valid, but not infringed. *Chester N. Weaver, Inc.*, v. *American Chain Co.*, 9 F. (2d) 372.

(C. C. A. N. Y.) The Block patent, No. 1,302,760, for insole with arch support, claim 1 *Held* valid and infringed. *Block* v. *Nathan Anklet Support Co.*, 9 F. (2d) 311.

(C. C. A. Mo.) The Noser patent, No. 1,313,412, for improvement in locks for automobile shift levers, claims 9 and 10 *Held* valid, but not infringed. *Johnson Automobile Lock Co.* v. *Noser Instant Auto Lock Co.*, 9 F. (2d) 265.

Condition of Applications Under Examination at Close of Business March 5, 1926.

Condition of Applications Under Examination at Close of Business March 5, 1926.

Room No.	(Total number of applications awaiting action, excluding Trade-Mark Division, 40,726; Trade-Mark Division, 2,017. Oldest new case, Aug. 7, 1925; oldest amended, Aug. 13, 1925. The dates given are 1925 except where † indicates 1926.) DIVISIONS, EXAMINERS, AND SUBJECTS OF INVENTIONS.	Oldest new application and oldest action by applicant awaiting office action. New.	Amended.	No. of applications awaiting action.
112	1. LOEFFLER, F. A., Closure Operators; Fences; Gates; Harrows and Diggers; Plant Husbandry; Plows; Planting; Scattering Unloaders.	Dec. 16	Dec. 19	572
126	2. HADEN, C. F., Bee Culture; Dairy; Preserving; Presses; Tobacco.	Nov. 14	Nov. 5	589
331	3. RICH, WM. J., Electric Heating; Electrochemistry; Heating; Metal Founding; Metallurgical Apparatus; Metallurgy; Metal Treatment; Plastic Metal Working.	Nov. 24	Nov. 25	893
234	4. MERRITT, A. D., Conveyers, Chutes, Skids, Guides, and Ways; Conveyers, Fluid Current; Conveyers, Power Driven; Excavating; Handling—Hand and Hoist-Line Implements; Material or Article Handling, Pushing and Pulling Implements, Traversing Hoists.	Dec. 12	Dec. 28	526
108*	5. MACNAB, J. F., Harvesters; Jewelry; Music; Acoustics; Sound Recording and Reproducing; Tying Cords or Strands.	Oct. 8	Oct. 8	850
318	6. LEWERS, A. M., Bleaching and Dyeing; Chemistry; Chemistry—Carbon Compounds; Explosive, Pyrotechnic, and Match Compositions; Fertilizers; Substance Preparation; Hides, Skins and Leather; Sugar and Starch; Concentrating Evaporators.	Nov. 25	Nov. 7	1,067
106	7. JARBOE, C. G., Amusement and Exercising Devices; Toys; Optics; Photography	Dec. 15	Dec. 14	784
123	8. HENRY, C. C., Beds; Chairs and Seats; Furniture; Kitchen and Table Articles; Store Furniture	Dec. 14	Dec. 16	1,028
221	9. TRYON, F. M., Air and Gas Pumps; Hydraulic Motors; Injectors and Ejectors; Motors, Fluid; Motors, Fluid Current; Pumps.	Dec 7	Oct. 23	535
118	10. HUNTER, O. F. (Acting), Motor Vehicles; Land Vehicles—Animal Draft Appliances, Bodies and Tops, Dumping.	Nov. 16	Nov. 17	963
148*	11. ARMSTRONG, H. C., Boot and Shoe Making; Boots, Shoes, and Leggings; Button, Eyelet, and Rivet Setting; Harness; Leather Manufactures; Nailing and Stapling; Whips and Whip Apparatus; Cutting and Punching Sheets and Bars; Driven, Headed, and Screw-Threaded Fastenings.	Dec. 9	Dec. 12	697
380	12. PIERCE, P. P., Machine Elements	Dec. 9	Dec. 8	643
154*	13. CLIFT, J. W., Bolt, Nail, Nut, Rivet, and Screw Making; Chain, Staple, and Horseshoe Making; Gear Cutting, Milling, and Planing; Metal Drawing; Metal Forging and Welding; Metal Rolling; Metal Working; Needle and Pin Making; Turning.	Dec. 10	†Jan. 5	597
102*	14. BRUMBAUGH, N. J., Compound Tools; Farriery; Metal Bending; Metal Tools and Implements, Making; Sheet-Metal Ware, Making; Tools; Wire Fabrics and Structure; Wire Working; Metal Working, Assembling, and Blanks and Processes.	Nov. 9	Dec. 4	911
320	15. REDROW, W. L., Glass; Paper Making; Plastic Block and Earthenware Apparatus; Plastics	Dec. 11	Dec. 14	580
342*	16. SPENCER, C. J., Batteries; Resistances and Rheostats; Telegraphy; Telephony	Nov. 14	Nov. 20	915
307	17. RAFTER, G. S., Label Pasting and Paper Hanging; Nut and Bolt Locks; Ornamentation; Paper Manufactures; Printing; Type Casting; Sheet-Material Associating or Folding; Sheet or Web Feeding or Delivering; Type Setting.	Dec. 1	Nov. 18	383
229	18. PORTER, M. E., Motors, Expansible-Chamber Type; Power Plants; Speed-Responsive Devices	Nov. 3	Oct. 22	791
236	19. GLASCOCK, E. S., Furnaces; Heating Systems; Liquid and Gaseous Fuel Burners; Stoves and Furnaces.	Oct. 28	†Jan. 2	523
179	20. GROVE, S. D., Miscellaneous Hardware; Closure Fasteners; Locks and Latches; Safes; Undertaking.	Dec. 11	Dec. 11	746
212	21. THURBER, W. L., Winding and Reeling; Textiles; Cloth Finishing	Dec. 7	Dec. 10	468
244*	22. COLWELL, J. H., Aeronautics; Amusement Devices, Games; Firearms; Ordnance; Ammunition and Explosive Devices; Ammunition and Explosive-Charge Making; Air Guns, Catapults, and Targets; Boats and Buoys; Ships; Marine Propulsion.	Dec. 11	Dec. 23	509
217	23. GROESBECK, W. D., Coin Handling; Recorders; Registers; Horology; Time-Controlling Mechanism.	Oct. 16	Oct. 14	284
147*	24. DURAS, C. O., Apparel; Apparel Apparatus; Garment Supporters; Sewing Machines	Dec. 22	†Jan. 6	464
314	25. LIGHTFOOT, J. H., Agitating; Butchering; Centrifugal-Bowl Separators; Cutlery; Mills; Threshing; Vegetable and Meat Cutters and Comminutors; Gas Separation.	Dec. 15	Dec. 16	782
238*	26. HODGES, J. S., Electricity, Generation; Motive Power; Prime-Mover Dyname Plants	Sept. 16	Sept. 19	763
214	27. ANDERSON, L. S., Brush, Broom, and Mop Making; Brushing, Scrubbing, and General Cleaning; Laundry; Washing Apparatus.	†Jan. 7	Dec. 29	533
225	28. BENSON, A. R., Internal-Combustion Engines	†Jan. 5	†Jan. 5	685
160*	29. MORRIS, B. N., Abrading; Boring and Drilling; Button Making; Chucks or Sockets; Coopering; Tool-Handle Fastenings; Wheelwright Machines; Wood Sawing; Wood Turning; Woodworking; Woodworking Tools.	Aug. 7	Aug. 13	1,106
248	30. SULLIVAN, M. R., Automatic Temperature and Humidity Regulation; Illuminating Burners; Illumination; Typewriting Machines; Thermostats and Humidostats.	Dec. 5	Dec. 7	810
312	31. HOLMES, W. N., Alcohol; Ammonia, Water, and Wood Distillation; Charcoal and Coke; Gas, Heating and Illuminating; Hydraulic Cement and Lime; Mineral Oils; Oils, Fats, and Glue.	†Jan. 11	†Jan. 11	718
249	32. BARTHOLOMEW, J. A., Gas and Liquid Contact Apparatus; Heat Exchange	Nov. 12	Nov. 12	588
152	33. WYMAN, W. I., Bridges; Hydraulic and Earth Engineering; Masonry and Concrete Structures; Metallic Building Structures; Roads and Pavements; Roofs; Wooden Buildings.	†Jan. 8	†Jan. 6	627
304	34. SIMPSON, G. R., Electricity-Transmission to Vehicles; Pneumatic Dispatch; Railways; Railway Rolling Stock; Railway Switches and Signals; Railways, Surface Track; Railway Wheels and Axles; Store Service; Track Sanders; Vehicle Fenders.	Oct. 3	Oct. 1	669
116*	35. REYNOLDS, E. C., Buckles, Buttons, Clasps, Etc.; Card, Picture, and Sign Exhibiting; Signals and Indicators; Toilet.	Dec. 15	Dec. 21	556
105	36. MORTON, G. L., Automatic Weighers; Geometrical and Measuring Instruments; Force Measuring	Nov. 24	Dec. 8	1,042
234*	37. TAYLOR, E. C., Electricity, Circuit Makers and Breakers	Dec. 5	Dec. 2	893
145	38. IDE, G. R., Animal Husbandry; Earth Boring; Fishing, Trapping, and Vermin Destroying; Mining, Quarrying, and Ice Harvesting; Stoneworking; Wells.	Sept. 14	Oct. 16	836
220	39. COWLES, A. W., Fluid-Pressure Regulators; Multiple Valves; Valves; Water Distribution	Dec. 17	Dec. 29	478
260	40. OBERLIN, J. J., Baggage; Bottles and Jars; Cloth, Leather, and Rubber Receptacles; Deposit and Collection Receptacles; Metallic Receptacles; Package and Article Carriers; Paper Receptacles; Special Receptacles and Packages; Wooden Receptacles.	Nov. 24	Dec. 4	1,051
125	41. BROWN, J. L., Land Vehicles, Wheels and Axles; Resilient Tires and Wheels; Wheel Substitutes	Dec. 17	Dec. 8	427
223*	42. CUTTING, H. O., Electrical Conduits and Housings; Electric Signaling	Nov. 13	Nov. 14	1,076
124*	42. HOPKINS, F. M., Baths, Closets, Sinks, and Spittoons; Sewerage; Electricity, Medical and Surgical; Medicines; Surgery; Dentistry; Artificial Body Members; Railway Draft Appliances.	Nov. 14	Dec. 1	810
253	44. SHAFFER, C. H., Bread, Pastry, and Confection Making; Dispensing; Dispensing Beverages; Filling and Closing Portable Receptacles; Refrigeration.	Sept. 28	Sept. 15	888
379	45. GILES, A. H., Pulleys and Shafting; Lubrication; Machine Elements; Bearings and Guides	Dec. 2	Dec. 2	515
233	46. WOLCOTT, C. L., Fluid Sprinkling, Spraying, and Diffusing; Fire Extinguishers; Liquid Heaters and Vaporizers.	Dec. 1	Nov. 25	624
264	47. BARKER, H., Brakes; Clutches and Power Stop Control; Elevators; Fluid-Pressure Brake and Analogous Systems; Motors; Spring Devices.	Nov. 10	Nov. 16	1,100

REPORT OF THE COMMISSIONER OF PATENTS TO CONGRESS

FOR THE YEAR ENDED DECEMBER 31, 1925.

DEPARTMENT OF COMMERCE,
UNITED STATES PATENT OFFICE,
Washington, D. C., January 31, 1926.

To the Senate and House of Representatives (through the Secretary of Commerce):

In compliance with section 494 of the Revised Statutes I have the honor to submit the following report of the business of the Patent Office for the year ended December 31, 1925:

By Executive order the Patent Office was transferred on April 1, 1925, from the Department of the Interior to the Department of Commerce, so that for the last three quarters of the year the Office has been under the jurisdiction of Secretary of Commerce Hoover.

It has many times been said that the condition of business throughout the country is reflected by the volume of business received by the Patent Office. If this be true, surely business conditions have been good throughout the country during the calendar year 1925, since during that year the Patent Office received 108,817 applications of all kinds as against 101,134 in the previous year. Patent applications alone increased from 80,756 to 84,525.

That the Patent Office has been a busy institution during the year may also be seen from the fact that the number of patents actually granted increased from 42,594 in 1924 to 46,450 in 1925. The total issues of patents, designs, trade-marks, etc., increased from 63,062 to 68,222 (including 2,278 trade-mark renewals).

The cash receipts also show a healthy increase. In 1924 the Patent Office received more fees than in any previous year in its history, $3,152,792.97; but this record was broken in 1925 by the receipts of $3,411,734.13, an increase during the year of $258,941.16.

Connecticut is still first among all the States of the country with respect to the number of patents granted per thousand inhabitants, 1 patent being issued for every 1,076 persons in that State. California, across the continent, is second, having a ratio of 1 patent for every 1,117 inhabitants. 5,347 patents were granted to citizens of foreign countries, Germany being first with 1,296 patents, England second with 1,225 patents, and Canada third with 798. It is interesting to observe that in Canada 69 patents were issued to citizens of this country to every 31 to citizens of Canada *and all the countries of the world.*

With the aid of the increased force given by Congress the Patent Office has been catching up with its work. Thus at the beginning of the year there were 55,931 patent applications awaiting action, and at the end of the year there were only 41,275, a gain of 14,656. Gains were also made in design, trade-mark, and print and label applications, so that the total gain amounted to 15,131.[1] In this connection it is well to note that these gains were made notwithstanding the additional receipts above referred to and also in spite of the fact that the Office received 15,124 amended cases more than in the previous year, so that the relative gain during the year was over 30,000.

GAIN IN DATES.

Notable gains have been made with respect to the time an applicant must await an official action, the average time having been reduced during the year from 4.5 to 2.6 months in new cases and from between 3 and 4 to 2.3 months in amended cases. The gain is also shown in the following table, indicating how far behind the various divisions were two years ago, one year ago, and at the end of 1925:

Two years ago (1923)	One year ago (1924)	Now (1925)
No division under 2 months.	1 under 2 months	6 under 2 months.
None under 3 months	3 under 3 months	25 under 3 months.
None under 4 months	5 under 4 months	39 under 4 months.
3 under 5 months	19 under 5 months	46 under 5 months.
46 OVER 5 MONTHS	34 OVER 5 MONTHS	7 OVER 5 MONTHS.
42 OVER 6 MONTHS	17 OVER 6 MONTHS	NONE OVER 6 MONTHS
39 OVER 7 MONTHS	5 OVER 7 MONTHS	
19 OVER 8 MONTHS		

RESIGNATIONS.

The foregoing gains can not be maintained if the resignations of the trained Examiners continue to come in at the present rate. Ninety-four resignations were received during the year; 54 during the last half of the year.[1] It takes several years for an Examiner to receive his full training, and when a trained man resigns and his place is filled by an inexperienced man it follows that the work drags and the quality of the work suffers. Invalid patents are likely to result, which may cause untold expense and embarrassment to honest manufacturers. While the primary function of the Patent Office is to grant valid patents, an equally

[1] In the first month of 1926, 14 resignations were received.

important duty is to prevent the grant of invalid patents to delay and hamper legitimate industry. These trained Examiners are resigning for the purpose of accepting positions with attorneys now in practice, with patent departments of corporations, or to go into practice for themselves. Naturally the profession and the corporations select those they consider the best of the younger men in the force. It is an unquestioned fact that the Patent Office could do more and better work with the present number of men if they were retained in the service. It would be actual economy to increase the salaries of the Examiners to the point where the constant turnover will be materially reduced. It is impossible for the Office to do as good work as it should with such a turnover as it has had during the last year.[1]

The present Principal Examiners are working under a great handicap in having to supervise the work of too large a number of assistants. There are now 53 examining divisions each having from 8 to 13 Assistant Examiners. Additional examining divisions should be provided, so that the average number of Assistant Examiners will not average more than 7 to a division. Furthermore, the Examiners should not be so crowded together as at present. Effective work can not be done in this manner. Since the war the Government of the Netherlands has erected a new patent office building, and each Examiner is provided with a separate room, so that his work is not constantly interrupted by conferences between attorneys and other Examiners in the same room. The Examiners should also be given an opportunity to visit industrial plants. During the last year the Office has had to train 180 inexperienced men, most of whom have had no practical experience in the industries to which they are assigned. The German Government is planning to send two of its Examiners to America to study certain American industries, and each junior Examiner in the German Patent Office is sent to some industrial plant in his own country each year at the expense of the Government in order that he may see the practical application of the inventions in the industry to which he is assigned. With a force of 600 in the examining corps of our Office the present appropriation of $800 per annum is woefully insufficient for this purpose. This appropriation should be largely increased, so that Assistant Examiners who are responsible for the granting of patents in the key industries may visit and actually witness the operations and activities in those industries to the end that they may properly discharge their important duties.

NEW BUILDING.

Provision must be made for the expansion of the Patent Office. The present building was planned when there were relatively few patents granted; but now that the Patent Office is granting upward of 40,000 patents and registering 15,000 trade-marks per year the building which was formerly more than adequate has become wholly inadequate. This is recognized by the Public Buildings Commission in assigning to this office 72 rooms in the Old Land Office Building across the street from the Patent Office and by its expressed purpose to eventually give the Patent Office all of that building. Even this will not properly take care of the needs of the office. It divides the personnel and the office activities and can be but a temporary expedient. As stated in my last annual report, the President's Commission on Economy and Efficiency *in 1912* reported that the patent building—

> is unsuited to the present needs of the Patent Office in almost every particular but especially for the peculiar needs of a modern Patent Office.

The commission therefore recommended that new office quarters be provided for the Patent Office "to be designed and equipped to meet the peculiar needs of the Office" and that the new quarters be fully appropriated for "so as to be completed within two years."

Since that report was made the business of the Patent Office has increased beyond all expectations. *In fact, since then the Patent Office has granted half as many patents as were issued up to that time.* But even as conditions were 14 years ago the commission, having in mind the character of work performed by the Examiners and the bulky and extensive records they must have in their rooms, always accessible for constant searching, recommended that in planning for a new building provision should be made for not less than 500,000 square feet of floor space and 10,000,000 cubic feet within the building. Such provision is more urgently needed now than ever before.

The urgency of the matter is shown by resolutions passed by the American Engineering Council at its recent annual meeting, after its committee had made a thorough inspection of the conditions of the Patent Office, that new quarters should be provided to meet the present and future needs of the Patent Office.

If provision is not made for new quarters for the Patent Office, the plans already made for remodeling the present building should be put into effect forthwith.

MODELS.

The Act of February 13, 1925, created a commission for the disposal of the 155,000 models filed in connection with patents prior to 1880. This commission consists of the Commissioner of Patents, the Secretary of the Smithsonian Institution, and a registered patent attorney, Wm. G. Henderson, Esq. Work was begun about the first of October, and at the present time it is about half completed. All of the models that are of historical value or of general interest are being retained by the National Museum, and such others as are not suitable for exhibition purposes or are of no value except for the materials of which they are made are being sent to the general supply committee of the Treasury for sale. The first sale was held December 8, 1925, at which time the first allotment was sold at auction for $1,575.

To date there have been many interesting models unpacked. In the sewing-machine art a very complete exhibit has been set aside for the National Museum, showing the development of the art from its earliest conception. In the textile art very complete exhibits show the development of the textile art in the United States almost from the spinning wheel to where the National Museum began with its exhibit. In the line of ordnance there are interesting models of the disappearing-gun carriage and the machine gun, one of the latter as early as 1829. In the line of horology there are numerous interesting models, one in particular of the so-called "mystery clock," which apparently functions without works of any kind. However, close study of this model reveals works concealed in one of the hands. The early models of the Schenkel fuse were found, and these are interesting because in general use in the Navy at one time. In the printing art there are a number of very fine models complete almost to the smallest detail. These will add materially to the exhibits now in the National Museum. In the line of surgery the models show the development of the artificial limb, and these have been turned over to the Army Medical Museum. These are only a few examples so far unpacked. There have been received about 3,000 requests for the return of models to the representatives or descendants of the patentees. The greater number of these have been found and, except where they are to be retained in the Museum as of historical interest, they will be returned to the claimants when the work of unpacking is finished. In addition a number of organizations have requested models for exhibits of various kinds, and with the cooperation of the National Museum it is believed that all of these requests can be granted.

I again urge the passage of the Cramton bill, H. R. 5811, as an absolute necessity to safeguard the interests of thousands of inventors whose business is transacted before this Office. Congress has provided by statute for the registration of attorneys before they are permitted to practice before this Office and also that advertising matter of attorneys who advertise must be submitted to the Commissioner before publication, to the end that the advertisement shall not contain deceptive or misleading statements. A growing number of parties, some of whom have been disbarred for financial irregularities and all of whom are unregistered, are advertising and holding themselves out as attorneys to prepare and prosecute applications for patents. The advertisements of these unregistered parties being beyond the control of the Patent Office are frequently deceptively worded. There is no control or restriction as to their activities and nothing to prevent their exploiting inventors who are not aware that such parties are unregistered attorneys. The above bill is designed to remedy this condition. A similar law is in effect in England. The passage of the bill is strongly urged.

The usual statistical tables are appended hereto.

Respectfully submitted.

THOMAS E. ROBERTSON,
Commissioner of Patents.

[1] In the first month of 1926, 14 resignations were received.

[1] Including patents, designs, and reissues.

[2] Caveat law repealed June 25, 1910.

Statement showing the number of the first patent, design patent, and reissued patent, and the number of the first certificate of registration of a trade-mark, label, and print issued in each calendar year since July 28, 1836, when the present series of numbers of Letters Patent commenced.

[The number of patents granted prior to the commencement of this series of numbering (July 28, 1836) was 9,957.]

[1] No change made in figures of last year's report, no information being available.

OTHER DETAILS OF BUSINESS.

During the year the Office received a total of 108,817 applications of all kinds, comprising 84,525 applications for patent, reissues of patents, and designs; 18,062 for trade-mark registrations; 3,420 for renewal of trade-mark registrations; 2,708 for registration of labels and prints; and 102 applications without fees under the act of March 3, 1883. There were also received 215,052 amendments in patent applications; 7,865 in designs; 21,838 in trade-marks; and 1,433 in labels and prints. This represents an increase of 7,683 applications and 13,904 amendments.

The fees received by mail and express amounted to $2,222,816.99, and the fees paid by hand amounted to $1,186,779.49. The number of letters indexed and filed, constituting the general correspondence of the Office, was 344,534, an increase of 11,809 over last year. In addition 42,895 letters of inquiry were returned with indorsements or circulars of information answering the questions propounded, an increase of 10,031 over last year. The number of parcels received by registered mail was 22,092, and the number of parcels by express was 1,238.

During the year 10,472 applications were forfeited by reason of failure to pay the final fee within the time prescribed by section 4885, Revised Statutes. Since March 3, 1861, about 248,846 forfeited cases have become abandoned.

In the drafting division 913 drawings were made for inventors, who paid $5,383.50 therefor, and 10,709 drawings previously filed were corrected upon request by the inventors, for which the Office received $14,222.84. The total fees received for work by the drafting division amounted to $19,606.34. In addition to this 6,403 corrections in drawings were made without cost to the inventors, 143,092 sheets of drawings were inspected, and 26,509 letters were answered.

In the assignment division 39,750 deeds, transferring the titles to patents, etc., and containing 17,538,850 words, averaging 441 words per deed, were recorded. For this work the Office received $74,408.71. In addition to this the assignment division prepared 3,246 abstracts of title and 4,139 briefs, for which fees amounting to $6,279.05 were paid. The total earnings of the assignment division were $80,687.76.

Typewritten copies of 17,401,000 words were furnished at 10¢ per hundred words. The Office certified to 9,969 manuscript copies, and furnished 9,334 miscellaneous certified copies. The Office also furnished 159,884 photostatic copies of manuscript pages; 68,653 photographic copies; 8,965 photostatic copies of grants forming part of certified printed copies of patents, etc.; 2,278 photostatic copies of renewals; and 251,028 photostatic copies of publications and foreign patents, for sale; 9,126 photostat-manuscript pages, 169 certified manuscript copies, and 3,812 photostatic copies were furnished for other departments without charge; 39,060 photostatic and 25,074 photographic copies were furnished for use of the Patent Office; in all, 474,173 photostatic and 93,727 photographic copies. (After allowing for salaries and overhead and deducting $22,100.52 for supplies over $36,000 actual cash profit was made from the sale of the photostat copies.)

Printed copies of specifications and drawings of patents to the number of 2,970,005 were sold at 10¢ each, bringing to the Office on this account $297,000.50. For 748,388 copies sold to libraries the Office received $800. The total received from the sale of copies of patents was $297,800.50, an increase of $28,374.40 over the receipts of last year. Copies to the number of 1,309,049 were shipped to foreign governments in exchange for copies of foreign patents, which would otherwise have cost the Office about $76,000; 492,151 copies were drawn for Office use. The total number of printed copies of patents distributed during the year was 5,556,728, including 37,135 furnished to other departments. In addition to fees for printed copies service fees amounting to $5,636.20 were received.

DECISIONS IN PATENT AND TRADE-MARK CASES.

Commissioner's Decision.

EX PARTE HUMPHREY.

Decided February 18, 1926.

INVENTION—ADVANTAGEOUS PROPERTIES—CLAIMS—UNDUE BREADTH OF.

Where the prior art disclosed an uncolored radiating element for gas stoves formed of earthy material, a claim for substantially the same element, its front portion having colored portions of the same material incorporated as a homogeneous part thereof, was allowed because of inherent advantages, but a claim broad enough to cover the element with its front portion stained or painted was refused.

Note.—This application has resulted in Patent No. 1,535,472, April 28, 1925.

Application for patent.

APPEAL from the Examiners in Chief.

RADIATING ELEMENTS FOR GAS HEATERS AND METHOD OF MANUFACTURING THE SAME.

Application filed June 12, 1920, Serial No. 388,612.

Messrs. Chappell & Earl for the applicant.

KINNAN, *First Assistant Commissioner:*

The applicant appeals from the decision of the Examiners in Chief affirming that of the Primary Examiner, denying patentability to some six claims.

The references relied upon are: (British) Wilson, 16,571, June 19, 1913; (British) Parkinson Stove Co., 11,761, 1915; (British) Parkinson Stove Co., 106,361, 1917.

The applicant states in his brief that he "withdraws from consideration claims 1–4, inclusive." The two claims, therefore, here for review are claims 5 and 6.

Claims 5 and 6 are as follows:

5. As an article of manufacture a foraminated tubular radiating element for gas stoves consisting of front and back portions formed of earthy material, the back portion being of uncolored material and the front portion having colored portions of the same material incorporated as a homogeneous part thereof.

6. As an article of manufacture, a foraminated, tubular radiating element for gas stoves formed of earthy material, having portions of the front thereof colored, said element being otherwise uncolored.

The prior art discloses a radiating element meeting substantially the terms of both claims save that such element does not have a front portion having colored parts. The Examiner regarded these limitations as to color as without effect upon the operation of the radiating element and in consequence as not involving any inventive concept.

Appellant has pressed the view that by reason of the colored front portion a more artistic appearance is produced when the element is lighted as well as when it is unlighted and that the glaring effect of the pure white radiating element is overcome and the tendency toward discoloration from the products of combustion and from dust settling on the radiating element is also partly overcome. The prior art does not disclose this feature and since it possesses utility to the extent above indicated it is believed claim 5 may be allowed.

Claim 6 does not include the limitation that the colored portions of the front are produced by incorporating material as a homogeneous part of the element. This claim in consequence is for no more than a stained radiating element or one painted by a fire-resisting paint, if such a paint exists. It is not believed there would be any invention in merely painting or staining some design or color upon the radiating element. It is believed this claim is too broad, but if amended by inserting after "colored" in line 4 some such words as *by material incorporated in and forming a part thereof* the claim may be allowed.

The decision of the Examiner in Chief is reversed as to claim 5 and affirmed as to claim 6.

Court of Appeals of the District of Columbia.

HO-RO-CO MANUFACTURING COMPANY *v.* MALONE, DOING BUSINESS UNDER THE STYLE OF PORO COLLEGE.

No. 1,774. Decided December 7, 1925.

1. COURT OF APPEALS OF THE DISTRICT OF COLUMBIA—SECTION 5, RULE 8—ERRORS NOT ASSIGNED.

Section 5, rule 8, of the rules of the Court of Appeals of the District of Columbia, which reads: "Errors not assigned, according to the rule of the court, will be disregarded, though the court, at its option, may notice and pass upon a plain error not assigned," presupposes consideration and exception below.

2. TRADE-MARKS — DESCRIPTIVE PROPERTIES — TOILET PREPARATIONS—PREPARATIONS FOR TREATMENT OF HAIR.

Certain toilet preparations, preparations for the treatment of the hair, and hairdressings are goods of the same descriptive properties.

APPEAL from Patent Office. Affirmed.

Mr. Wm. Small and *Mr. Wm. K. Small* for Ho-Ro-Co Mfg. Co.

Mr. J. D. Rippey and *Mr. L. C. Kingsland* for Malone, etc.

Before MARTIN, Chief Justice, ROBB, Justice, and SMITH, Judge U. S. Court of Customs Appeals.

ROBB, *J.*:

Appeal from a decision of the Patent Office sustaining in part the opposition of the appellee to the registration by the appellant of the mark "Ho-Ro-Co", for use on a variety of toilet and medicinal preparations.

Appellee is the owner and user of the mark "Poro", which it applies to preparations for the treatment of the hair and to hairdressings. The Examiner of Interferences ruled that the two marks were deceptively similar, that hair restorer, hair tonic, dandruff remedy, hair shampoo, and depilatory powders were of the same descriptive properties as the goods of appellee, and hence that the opposition should be sustained to that extent. Appellant acquiesced in this decision and filed an amendment to its application eliminating the articles named in the Examiner's decision. The appellee alone appealed, and in the first decision of the Assistant Commissioner who heard the case the decision of the Examiner was reversed. On motion of the Ho-Ro-Co Company a rehearing was had, at which that company conceded—

that the question of similarity of the marks of the respective parties is not before the Commissioner.

The Assistant Commissioner then ruled that the medicinal preparations put out by the Ho-Ro-Co Company were not goods of the same descriptive properties as the goods of the opposer, but that the toilet preparations were goods of the same descriptive properties. In his decision the Assistant Commissioner said:

It is to be remembered, however, that Malone (appellee) runs a college for the training of persons who establish so called beauty parlors for colored people. There may have been a time in our civilization when women were satisfied to have the hair alone treated, but it does not behoove us to shut our eyes to the facts which are patent everywhere that at the present time the activities of beauty parlors go much further than the hair. Certainly, they include the use, application and sale of talcum and complexion powders, cold cream, vanishing cream, massage cream, hair restorer for promoting the growth of the hair, hair tonic and dandruff remedy, hair shampoo, compact face powder, face rouge, lip rouge, eyebrow pencils, nail polish, toilet water, and possibly bay rum.

The Assistant Commissioner therefore was of the view that these goods were of the same class and that, even if Malone did not handle toilet preparations, the natural expansion of her business would include them. The Ho-Ro-Co Company alone appealed.

It is apparent from the statement of the case that the question of similarity of the marks is not before us, appellant having acquiesced in the decision of the Examiner of Interferences that the marks were similar.

[1] One other question is as easily disposed of here. Evidence was introduced by the opposer as to her title to the mark "Poro". In the petition for rehearing filed by the Ho-Ro-Co Company this question was not raised, and the assignments of error before us contain no mention of this contention. Appellant, however, attempts to invoke section 5 of rule 8 of the rules of this court, which reads:

Errors not assigned, according to the rule of the court, will be disregarded, though the court, at its option, may notice and pass upon a plain error not assigned.

But this rule presupposes consideration and exception below. Section 3 of Rule 5 provides that this court will not decide any point or question not fairly presented for decision by the court below. See *Cooper* v. *Sillers*, 30 App. D. C. 567; *Nicolopole* v. *Love*, 39 App. D. C. 343; *Traver* v. *Smolik*, 43 App. D. C. 150; *Dixon* v. *Gt. Falls & O. D. Ry.*, 43 App. D. C. 206. There is no room here, of course, for the application of the rule that in certain criminal cases errors may be noticed although there be no objection, exception or assignment. See *Freed* v. *U. S.*, 49 App. D. C. 392; 266 Fed. 1012.

[2] We agree with the ruling below that the toilet preparations, preparations for the treatment of the hair, and hairdressings are goods of the same descriptive properties, within the meaning of the Trade-Mark Act. See *Plough Chemical Co.* v. *Bullion*, 336 O. G. 256; 5 Fed. (2d) 117; 55 App. D. C. 294; *Cal. Packing Corp.* v. *Price-Booker Mfg. Co.*, 308 O. G. 451; 52 App. D. C. 259; *E-Z Waist Co.* v. *Reliance Mfg. Co.*, 311 O. G. 709; 52 App. D. C. 291; *Simplex Elec. Heating Co.* v. *Gold Car H. & L. Co.*, 213 O. G. 1117; 43 App. D. C. 28.

The decision is affirmed.

Affirmed.

Court of Appeals of the District of Columbia.

MALONE, DOING BUSINESS UNDER THE STYLE AND NAME OF PORO COLLEGE, *v.* HAY.

No. 1,778. Decided Jan. 4, 1926.

TRADE-MARKS—OPPOSITION—RES JUDICATA.

Where in a former opposition proceeding between the same parties the court stated in the decision that the trade-mark which the applicant then sought to register consisted of the word "Hay-Po", but that it appeared that the applicant had never used the word alone in trade, and consequently it was unnecessary to pass upon his right to register it, since "there must be actual trade-mark use to entitle the owner to registration", and the court accordingly affirmed the decision of the Commissioner of Patents which sustained the opposition and denied registration, *Held*, when the applicant afterwards sought to register the same word on a new application, that since the applicant's proposed trade-mark in each proceeding was the word "Hay-Po", the only variation being in the specimens filed in the first proceeding, the two proceedings presented the same issue, and the second application was merely an attempt to relitigate the issue notwithstanding the former decision.

APPEAL from the Commissioner of Patents. Reversed.

Mr. J. D. Rippey and *Mr. L. C. Kingsland* for Malone, etc.

Mr. L. F. Randolph, Mr. John F. Byrne, Mr. Joseph W. Milburn, and *Mr. Chas. M. Bryan* for Hay.

Before MARTIN, Chief Justice, ROBB, Justice, and SMITH, Judge U. S. Court of Customs Appeals.

MARTIN, *J.*:

This is an appeal from a decision of the Commissioner of Patents overruling an opposition filed by the appellant in a trade-mark registration proceeding.

The appellee, Clarence Hay, applied for the registration of a trade-mark consisting of the hyphenated term "Hay-Po", for use on rouge, dandruff remedy and hair tonic, face powder, pressing oil and dandruff dissolvent, and ointment for straightening the hair.

The appellant, Annie M. Malone, doing business under the name of Poro College, filed an opposition to the application because of the alleged similarity of "Hay-Po" with her registered trade-mark "Poro", used upon preparations for the treatment of the hair and for hairdressings.

The opposer claimed that the issue thus raised by the opposition had been passed upon in similar proceedings between the same parties, and that both the Patent Office and this court had entered decisions against the applicant upon said issue, and that these were still in full force and effect. The opposer accordingly contended that the applicant was barred by the rule of res judicata from again contesting said opposition. The opposer cited, among other proceedings, the case of *Hay* v. *Malone*, 288 O. G. 431; 50 App. D. C. 899, claiming that it involved the same issue as the present contest; that it was between the same parties; that the court decided the issue in favor of the opposer, and that the decision is still in full force and effect between the parties.

The Examiner of Interferences sustained the opposition. This decision was reversed by the Commissioner of Patents, from whose ruling this appeal was taken.

We think that the appellant's claim of res judicata should have been sustained because of the decisions of the Patent Office in opposition No. 2,777, *Malone* v. *Hay*, which were affirmed by this court in *Hay* v. *Malone*, supra; and that the applicant was effectually barred by these decisions from contesting the opposition now at issue. In both proceedings the applicant applied for the registration of "Hay-Po" as his trade-mark for hair preparations. Each application was opposed by the appellant because of her registered trade-mark "Poro" for similar preparations. The first opposition was sustained, and that decision remains in full force and effect. The applicant's proposed trade-mark in each proceeding is "Hay-Po," the only variation being in the specimens filed in the first proceeding to show the manner of its use upon applicant's goods. The two proceedings accordingly present the same issue, and the second application is merely an attempt to relitigate the issue notwithstanding the former decision.

It is claimed by the appellee that in the former case this court did not pass upon his right to register the word "Hay-Po" alone, but only passed upon the registration of that word in combination with certain pictures and lettering. This claim is not correct. The court stated in the decision that the trade-mark which the applicant sought to register consists of the word "Hay-Po," but that it appeared that the applicant had never used the word alone in trade, and consequently it was unnecessary to pass upon his right to register it, since "there must be actual trade-mark use to entitle the owner to registration". The court accordingly affirmed the decision of the Commissioner of Patents which sustained the opposition and denied registration.

This affirmance gave full force and effect to the concurring decisions entered below in the case by the Examiner of Interferences and the Commissioner of Patents, whereby the opposition of Malone to Hay's application for the registration of "Hay-Po" alone was fully sustained.

The doctrine of res judicata or estoppel by former judgment applies to adjudications made in the Patent Office. *Blackford* v. *Wilder*, 127 O. G. 1255; 28 App. D. C. 353; *Horine* v. *Wende*, 129 O. G. 2858; 29 id. 415; 133 O. G. 1680; *Newcomb Motor Co.* v. *Moore*, 30 id. 464; *Carroll* v. *Hallwood*, 135 O. G. 896; 31 id. 165; *Carter Medical Co.* v. *Barclay*, 162 O. G. 785; 36 id. 123; *Sutton* v. *Wentworth*, 204 O. G. 320; 41 id. 582.

The decision of the Commissioner of Patents, overruling the decisions of the Examiner of Interferences refusing registration, is reversed.

Court of Appeals of the District of Columbia.

MALONE, DOING BUSINESS UNDER THE STYLE AND NAME OF PORO COLLEGE, *v.* HAY.

No. 1,779. Decided January 4, 1926.

APPEAL from the Commissioner of Patents. Reversed.

Mr. J. D. Rippey and *Mr. L. C. Kingsland* for Malone, etc.

Mr. L. F. Randolph, Mr. John F. Byrne, Mr. Joseph W. Milburn, and *Mr. Chas. M. Bryan* for Hay.

Before MARTIN, Chief Justice, ROBB, Justice, and SMITH, Judge U. S. Court of Customs Appeals.

MARTIN, *J.*:

This is an appeal from a decision of the Commissioner of Patents overruling an opposition filed by the appellant in a trade-mark registration proceeding.

The appellee, Clarence Hay, applied for the registration of a trade-mark consisting of the word "Hay-Po" for use on shampoo soap. The appellant, Annie M. Malone, doing business under the name of Poro College, filed an opposition to the application because of the alleged similarity of "Hay-Po" with her registered trade-mark "Poro", used upon preparations for the treatment of the hair and hair dressings. The opposer claimed that the issue thus raised by the opposition had been passed upon in similar proceedings between the same parties and that both the Patent Office and this court had entered decisions against the applicant upon said issues, which decisions were still in full force and effect. The opposer accordingly contended that the applicant was barred by the rule of res judicata from again contesting said opposition.

We sustain this claim of the appellant, and refer to our opinion in *Malone* v. *Hay*, No. 1,778, handed down concurrently herewith, for the grounds of this decision.

The decision of the Commissioner of Patents is accordingly reversed.

TRADE-MARKS

OFFICIAL GAZETTE, MARCH 16, 1926.

[VOL. 344. No. 3.]

The following trade-marks are published in compliance with section 6 of the act of February 20, 1905, as amended March 2, 1907. Notice of opposition must be filed within thirty days of this publication.

Marks applied for "under the ten-year proviso" are registrable under the provision in clause (b) of section 5 of said act as amended February 18, 1911.

As provided by section 14 of said act, a fee of ten dollars must accompany each notice of opposition.

Ser. No. 168,351. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) BERNHAN CHEMICAL & METAL CORP., New York, N. Y. Filed Aug. 17, 1922.

EAGLE

Particular description of goods.—Corn Sugar, Being Solidified Glucose, Bleached and Unbleached, in Chips, Slabs, Granular, and Solid Forms, Used in Tanning.
Claims use since about Nov. 15, 1921.

Ser. No. 169,822. (CLASS 39. CLOTHING.) DAVID L. PRANSKY, Philadelphia, Pa. Filed Sept. 22, 1922.

No claim is made herein to the expression "Hard-to-Tear" apart from the mark shown in the drawing, the applicant reserving, however, his rights thereto under the common law.

Particular description of goods.—Hosiery; Dress, Negligee, and Work Shirts; Overalls; and Leather, Rubber, and Fabric Gloves.
Claims use since Apr. 14, 1921.

Ser. No. 184,061. (CLASS 39. CLOTHING.) BEAR BRAND HOSIERY CO., Chicago, Ill. Filed Aug. 4, 1923.

BEAR BRAND

The word "Brand" is disclaimed apart from the mark shown in the drawing.
Particular description of goods.—Textile Articles—Namely, Hosiery.
Claims use since Oct. 24, 1904.

Ser. No. 184,062. (CLASS 39. CLOTHING.) BEAR BRAND HOSIERY CO., Chicago, Ill. Filed Aug. 4, 1923.

The mark essentially involves a symbol comprising the association of the representation of a bear's head, the words "Bear Brand," and two concentric circles, the representation of the head being shown within the inner circle and encompassed thereby and the expression "Bear Brand" being shown circularly arranged between the circles and around the head. No claim is made to the exclusive use of the word "Brand" apart from the other specified features of the mark shown in the drawing.

Particular description of goods.—Textile Articles—Namely, Hosiery.
Claims use since Oct. 24, 1904.

Ser. No. 189,461. (CLASS 34. HEATING, LIGHTING, AND VENTILATING APPARATUS, NOT INCLUDING ELECTRICAL APPARATUS.) PRESTON KENNEDY, Binghamton, N. Y. Filed Dec. 10, 1923.

No claim is made for the words "Trade-Mark" or "Coal Gas Consumer" or for the representation of the goods apart from the mark as shown.

Particular description of goods.—Mixers for Use in Furnaces for Facilitating the Consumption of Coal Gas.

Claims use since Feb. 8, 1922.

Ser. No. 189,888. (CLASS 22. GAMES, TOYS, AND SPORTING GOODS.) THE EMBOSSING COMPANY, Albany, N. Y. Filed Dec. 19, 1923.

No claim is made to the words "Modeling Materials" and "The Embossing Company's" apart from the mark shown.

Particular description of goods.—A Modeling Set for Children (Used as a Unit).

Claims use since Oct. 10, 1923.

Ser. No. 196,434. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) CHEMISCHE FABRIK POTT & Co., Dresden, Germany. Filed May 2, 1924.

ISOMERPIN

Particular description of goods.—Preparations for Treating Textile Fasers and Fabrics During Dyeing and Sizing Operations.

Claims use since March, 1923.

Ser. No. 202,470. (CLASS 2. RECEPTACLES.) UNITED STATES ENVELOPE COMPANY, Springfield, Mass. Filed Sept. 10, 1924.

No claim is made to the corporate name "U. S. Envelope Co." or to the words "Springfield, Mass." apart from the mark shown on the drawing.

Particular description of goods.—Merchandise Envelopes and Paper Drinking Cups.

Claims use since Jan. 1, 1899.

Ser. No. 203,621. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) LES ETABLISSEMENTS POULENC FRERES, Paris, France. Filed Oct. 9, 1924.

PROPIDEX

Particular description of goods.—Pomatum with a Base of Propidon Vaccine.

Claims use since Apr. 8, 1924.

Ser. No. 203,623. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) LES ETABLISSEMENTS POULENC FRERES, Paris, France Filed Oct. 9, 1924.

NARSENOL

Particular description of goods.—Novarsenbenzol in Tablet Form.

Claims use since May 8, 1923.

Ser. No. 203,624. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) LES ETABLISSEMENTS POULENC FRERES, Paris, France. Filed October 9, 1924.

TECARINE

Particular description of goods.—Theol ninacetate of Soda.

Claims use since July 3, 1923.

Ser. No. 204,158. (CLASS 39. CLOTHING.) COHN-GOLDWATER MANUFACTURING CO., Los Angeles, Calif. Filed Oct. 20, 1924.

BOSS

Particular description of goods.—Work Clothing or Outer Clothing for Men or Women—Namely, Overalls and Shirts, Mackinaw Coats, Leather Coats and Vests, Hiking Pants, Riding Breeches, Cotton Pants, Children's Play Suits.

Claims use since 1889.

Ser. No. 204,545. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) DRAKE CORPORATION, Norfolk, Va. Filed Oct. 29, 1924.

No claim is made to the use of the words "Warp Dressing Service Improves Weaving" apart from the trade-mark shown in the drawing.

Particular description of goods.—Warp Dressings.

Claims use since 1920.

Ser. No. 204,599. (CLASS 42. KNITTED, NETTED, AND TEXTILE FABRICS.) FORSTMANN & HUFFMANN COMPANY, Passaic, N. J. Filed Oct. 30, 1924.

Kashmirella

Particular description of goods.—Woolen Piece Goods.

Claims use since Sept. 15, 1924.

Ser. No. 204,734. (CLASS 12. CONSTRUCTION MATERIALS.) UNIVERSAL GYPSUM COMPANY, Chicago, Ill. Filed Nov. 1, 1924.

No claim is made to the exclusive use of the word "Gypsum" apart from the mark shown in the drawing.

Particular description of goods.—Hair-Fibered Plaster.

Claims use since June 18, 1924.

Ser. No. 204,972. (CLASS 19. VEHICLES, NOT INCLUDING ENGINES.) JOHN RAYMOND MCMAHON, Des Moines, Iowa. Filed Nov. 7, 1924.

ARROWPOINT

Particular description of goods.—Vehicle Signals of a Mechanical Nature.

Claims use since Nov. 1, 1924.

Ser. No. 205,247. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) HENRY C. THOMPSON, Hartford, Conn., assignor to The Thompson Specialties, Inc., Springfield, Mass., a Corporation of Massachusetts. Filed Nov. 13, 1924.

The lining on the drawing indicates the colors blue and yellow.

Particular description of goods.—Cements—Namely, Liquid Radiator Cements.

Claims use since Oct. 31, 1924.

Ser. No. 207,145. (CLASS 35. BELTING, HOSE, MACHINERY PACKING, AND NONMETALLIC TIRES.) PIONEER RUBBER MILLS, San Francisco, Calif. Filed Dec. 23, 1924.

No claim is made to the word "Diagonal" per se aside from its relative position and arcuate form in the general assemblage of the mark, nor to the representation of the goods.

Particular description of goods.—Piston Packing.

Claims use since about Aug. 11, 1924.

Ser. No. 207,234. (CLASS 42. KNITTED, NETTED, AND TEXTILE FABRICS.) EMPIRE SILK COMPANY, Wilmington, Del., and New York, N. Y. Filed Dec. 26, 1924.

Mellowcrepe

Particular description of goods.—Silk Piece Goods.

Claims use since October, 1924.

Ser. No. 207,402. (CLASS 34. HEATING, LIGHTING, AND VENTILATING APPARATUS, NOT INCLUDING ELECTRICAL APPARATUS.) PREMIER WARM AIR HEATER COMPANY, Dowagiac, Mich. Filed Dec. 29, 1924.

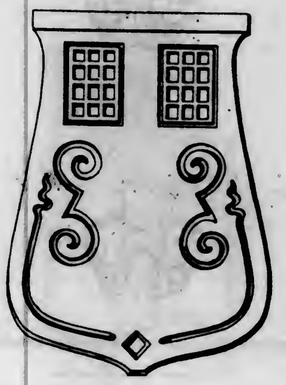
The ornamental design for a cover for a cold cream jar or like container, as shown.

69,711. ARM FOR CHANDELIERS OR SIMILAR ARTICLES. HARRY PERRY, Brooklyn, N. Y., assignor to Metropolitan-Columbia Mfg. Co., Inc., a Corporation of New York. Filed Dec. 19, 1925. Serial No. 15,795. Term of patent 3½ years.



The ornamental design for an arm for chandeliers or similar articles, substantially as shown.

69,712. BACKPLATE FOR LIGHTING FIXTURES. HARRY PERRY, Brooklyn, N. Y., assignor to Metropolitan-Columbia Mfg. Co., Inc., a Corporation of New York. Filed Dec. 19, 1925. Serial No. 15,793. Term of patent 3½ years.

The ornamental design for a back plate for lighting fixtures, substantially as shown and described.

69,713. BRACKET BACK FOR LIGHTING FIXTURES. ROSCOE C. PFLEAGER, Cleveland, Ohio, assignor to Benjamin F. Klein, Cleveland, Ohio. Filed Dec. 2, 1925. Serial No. 15,601. Term of patent 3½ years.

The ornamental design for a bracket back for lighting fixtures, substantially as shown.

69,714. CANDLE CUP FOR LIGHTING FIXTURES. ROSCOE C. PFLEAGER, Cleveland, Ohio, assignor to Benjamin F. Klein, Cleveland, Ohio. Filed Dec. 2, 1925. Serial No. 15,603. Term of patent 3½ years.

The ornamental design for a candle cup for lighting fixtures, substantially as shown.

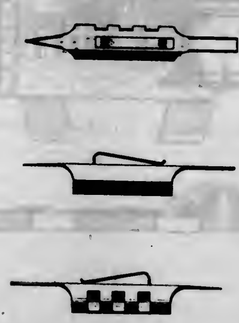
69,715. LOOP FOR LIGHTING FIXTURES. ROSCOE C. PFLEAGER, Cleveland, Ohio, assignor to Benjamin F. Klein, Cleveland, Ohio. Filed Dec. 2, 1925. Serial No. 15,604. Term of patent 3½ years.

The ornamental design for a loop for lighting fixtures, substantially as shown.

69,716. LOOP FOR LIGHTING FIXTURES. ROSCOE C. PFLEAGER, Cleveland, Ohio, assignor to Benjamin F. Klein, Cleveland, Ohio. Filed Dec. 2, 1925. Serial No. 15,605. Term of patent 3½ years.

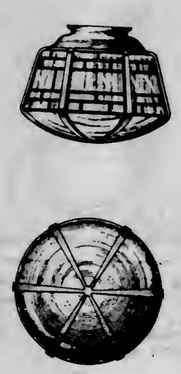
The ornamental design for a loop for lighting fixtures, substantially, as shown.

69,717. RING. MEYER L. ROBBINS, New York, N. Y., assignor to Untermeyer, Robbins & Co., New York, N. Y., a Corporation of New York. Filed Oct. 31, 1925. Serial No. 15,815. Term of patent 7 years.



The ornamental design for a ring, as shown.

69,718. FINGER RING SET WITH GEMS. MEYER L. ROBBINS, New York, N. Y., assignor to Untermeyer, Robbins & Co., New York, N. Y., a Corporation of New York. Filed Oct. 31, 1925. Serial No. 15,817. Term of patent 7 years.



The ornamental design for a finger ring set with gems, as shown.

69,719. PENCIL KNIFE. JACOB SCHICK, Orange, N. J., assignor to Miller Reese Hutchison, West Orange, N. J. Filed Oct. 10, 1923. Serial No. 7,445. Term of patent 3½ years.

The ornamental design for pencil knife, as shown.

69,720. GLASS LIGHTING UNIT. ROBERT F. SCHLEICHER, Rockville Center, N. Y., assignor to London Lightingwares Corporation, a Corporation of New York. Filed Jan. 22, 1926. Serial No. 16,216. Term of patent 3½ years.

The ornamental design for a glass lighting unit, as shown.

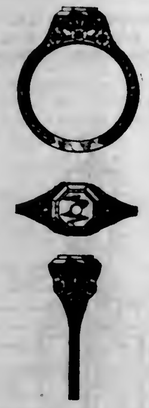
69,721. PAPER WEIGHT. HARRY SLATKO, Philadelphia, Pa. Filed Nov. 6, 1925. Serial No. 15,361. Term of patent 3½ years.

The ornamental design for a paper weight, as shown.

69,722. LIGHTING FIXTURE. WILMER STANLEY SNOW, Oak Park, Ill., assignor to Crown Electrical Manufacturing Company, St. Charles, Ill., a Corporation of Illinois. Filed Nov. 28, 1925. Serial No. 15,568. Term of patent 3½ years.

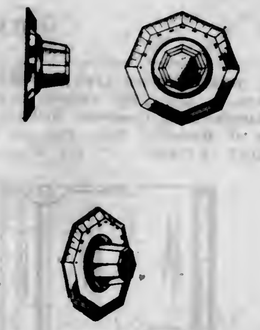
The ornamental design for a lighting fixture, as shown.

69,723. FINGER RING. MICHAEL E. SOMAN, New York, N. Y., assignor to David Klebanoff and Samuel Grossman, Copartners trading as Klebanoff and Grossman, New York, N. Y. Filed Jan. 23, 1926. Serial No. 16,243. Term of patent 3½ years.



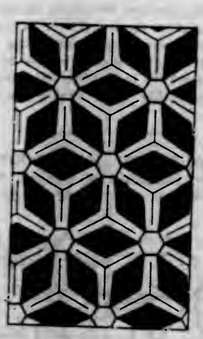
The ornamental design for a finger ring as shown.

69,724. FINGER RING. MICHAEL E. SOMAN, New York, N. Y., assignor to David Klebanoff and Samuel Grossman, Copartners trading as Klebanoff and Grossman, New York, N. Y. Filed Jan. 23, 1926. Serial No. 16,244. Term of patent 3½ years.



The ornamental design for a finger ring as shown.

69,725. FINGER RING. MICHAEL E. SOMAN, New York, N. Y., assignor to David Klebanoff and Samuel Grossman, Copartners trading as Klebanoff and Grossman, New York, N. Y. Filed Jan. 23, 1926. Serial No. 16,245. Term of patent 3½ years.

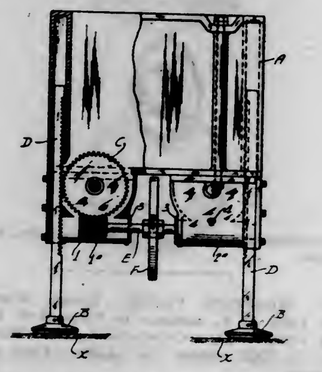


The ornamental design for a finger ring as shown.

69,726. COMBINED DIAL AND KNOB. LOUIS STEINBERGER, Brooklyn, N. Y. Filed July 1, 1922. Serial No. 2,918. Term of patent 14 years.

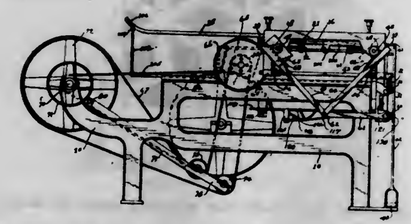
The ornamental design for a combined dial and knob, as shown.

69,727. WRAPPING PAPER. ROBERT WERTHEIMER, New York, N. Y., assignor to Cohn, Hall, Marx Co., New York, N. Y., a Corporation of New York. Filed Oct. 31, 1925. Serial No. 15,309. Term of patent 14 years.



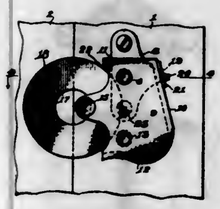
The ornamental design for wrapping paper as shown.

PATENTS



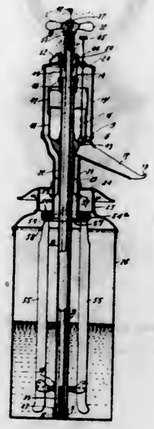
GRANTED MARCH 16, 1926.

1,576,494. PRESSING OR LIFTING DEVICE. FRANK ACKERMAN, St. Louis, Mo., assignor to Curtis & Company Manufacturing Company, Wellston, Mo., a Corporation of Missouri. Filed Feb. 18, 1924. Serial No. 693,617. 9 Claims. (Cl. 254—97.)



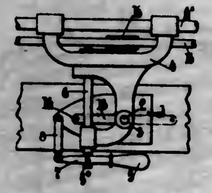
1. In a device of the kind described, a plurality of spaced members that are adapted to contact with a surface, an element in which said members are reciprocatingly mounted, pinions rotatably mounted on said element and arranged in mesh with racks on said members, and an operating mechanism comprising worms in mesh with said pinions that are adapted to be moved endwise to cause said members to engage said surface and thereafter rotated to bodily shift said element relatively to said members.

1,576,495. MECHANISM FOR MAKING BOX BOTTOMS. JOHN ALBRECHT, Kewaunee, Wis. Filed Apr. 26, 1922. Serial No. 556,674. 26 Claims. (Cl. 144—7.)



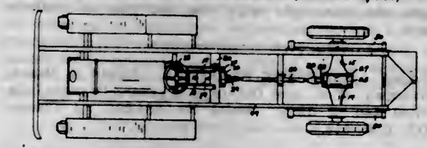
1. In a device of the character described, the combination with a supporting table arranged for the continuous assembly thereon of a strip of matched material, an automatic cut-off saw mounted for bodily reciprocation transversely of the path of said material, whereby to sever blanks from a strip assembled on said table, a clamp operable upon said material in a plane parallel with the path of said saw, and a second clamp operable upon said material in a plane substantially parallel with the path of movement of said material on said table, said first mentioned clamp being automatically operable prior to the movement of the saw into the said material.

1,576,496. DOORCHECK. ROBERT ARCHER, Sr., Fort Washington, Pa. Filed Mar. 31, 1925. Serial No. 19,559. 4 Claims. (Cl. 16—86.)



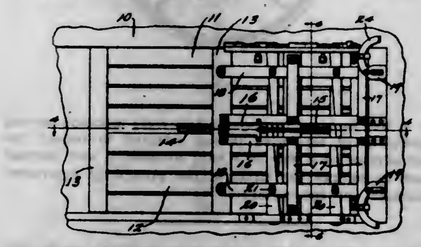
2. A door check, comprising a hollow member, means for pivotally mounting said member upon a door jamb, means to limit the oscillatory movement of said member with respect to said first means, and an annular rubber member having an enlarged central aperture, and means carried by said first member and extending loosely through said aperture to support said rubber member and to permit the rubber member to freely alter its position with respect to said first supporting member.

1,576,497. MILK DISPENSING AND MEASURING DEVICE. ELIAS N. AUSTIN, New York, N. Y. Filed June 12, 1925. Serial No. 36,645. 6 Claims. (Cl. 221—100.)



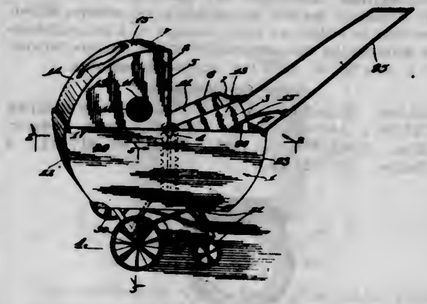
2. In a milk dispensing and measuring device a measuring vessel comprising a lower stationary section, to serve as a measure of lesser capacity, and an upper section removably mounted on said lower section, to form therewith a measure of larger capacity.

1,576,498. IRONING MACHINE. WILLIAM EXCELL BAKER, Brighton, England. Filed June 22, 1925. Serial No. 38,938. 1 Claim. (Cl. 68—9.)



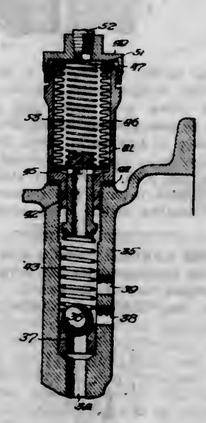
In an ironing machine in which a flat iron carried by a bracket is caused to travel to and fro over a fixed table, is free to rise and fall relative to said table, and in which the to and fro movement is controlled by mechanism operated through a shaft to which an axial rocking movement is imparted by a hand lever carried by said shaft; the improvement which consists in pivotally mounting the iron on a vertical pivot in said bracket, pivoting the hand lever on a vertical pivot in said shaft, extending said hand lever beyond its pivotal point, and in providing a link loosely pivotally connected both to the hand lever extension and the iron to enable a horizontal pivotal movement to be imparted to the iron by the hand lever.

1,576,499. CONVERTIBLE TRACTOR TRUCK DEVICE. JAMES A. BELL, Clintonville, Wis. Filed Mar. 31, 1924. Serial No. 703,067. 20 Claims. (Cl. 180—70.)



1. In a device of the character described, the combination with a truck frame and a tractor body from which the rear axle housings have been removed, of closure plates bolted to said body in the place of said housings and provided with arms engaging said frame for the support of said body therefrom.

1,576,500. CAR DOOR. IVER P. BENDIKSON, Mandan, N. Dak. Filed Apr. 8, 1924. Serial No. 705,093. 4 Claims. (Cl. 292—26.)



1. A locking device for a car door comprising a plurality of uprights secured to the said door, a pair of swinging arms pivotally connected to the said uprights, a plurality of tapered bars hingedly connected to the swinging arms, means associated with the bars for engaging the said tapered bars, guide plates mounted on the uprights for guiding the said swinging arms, means for retaining the swinging arms in position when the door is closed, and means for preventing removal of the said arms.

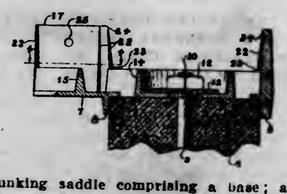
1,576,501. FOLDABLE BABY CARRIAGE. VALENTIN BIBO, Los Angeles, Calif. Filed Nov. 6, 1924. Serial No. 748,177. 7 Claims. (Cl. 280—36.)

1. A foldable baby carriage, comprising in combination a bed element, a pair of angular brackets depending therefrom, a pair of upright parallel bars connected to each of said brackets, a central tube between the bars and connected to the bracket, a wheel frame having top plates with apertures therethrough for the rods and the central tubes, axles operatively connected to the wheel frame and springs positioned between the brackets and the wheel frame.

1,576,502. LUBRICANT-PRESSURE-CONTROLLING MEANS FOR INTERNAL-COMBUSTION ENGINES. FRANK E. BLANCHARD, Chicago, Ill. Filed Mar. 26, 1923. Serial No. 627,553. 4 Claims. (Cl. 123—196.)

1. A valve for internal combustion engine pressure lubricating systems comprising, a casing divided into a plurality of chambers, one of said chambers having lubricant inlet and outlet ports and a check valve normally closing one of said ports, a second chamber having an expansile and contractile element therein arranged and constructed to be responsive to pressure variations in the engine fuel feeding means, means interposed between said second chamber and the said feeding means whereby said element lags in response to a variation in pressure and a mechanical fluid-tight connection between said element and said valve.

1,576,503. POLYMERIZATION OF BUTYRALDEHYDE. CHARLES BOGIN, Terre Haute, Ind., assignor to Commercial Solvents Corporation, Terre Haute, Ind., a Corporation of Maryland. Filed June 4, 1924. Serial No. 717,736. 5 Claims. (Cl. 260—140.)

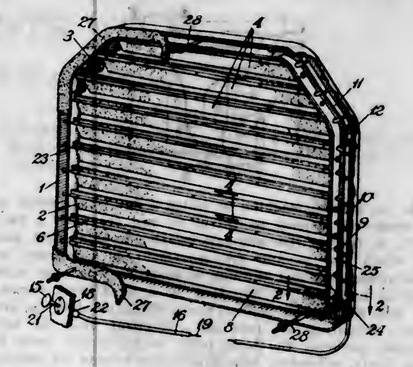


1. A process for the production of parabutyraldehyde consisting in adding an acidic catalyst to n-butyraldehyde and maintaining the temperature of the mixture between 15° C. and 50° C. until the reaction is complete.

1,576,504. BUILT-UP JACKET FOR JORDAN-ENGINE PLUGS. ARCHER LE ROY BOLTON, North Andover, Mass. Filed Feb. 8, 1923. Serial No. 617,811. 5 Claims. (Cl. 92—27.)

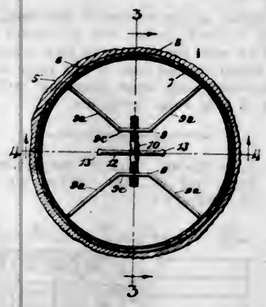
3. In a Jordan engine, the combination of a conical plug body with a unitary transportable jacket built up of a body, a plurality of bars fastened thereto, woods between said bars, and means to fasten said jacket to the plug body.

1,576,505. TRUNKING SADDLE. JAMES EDGAR CLOUGH, La Grange, Ky. Filed Apr. 12, 1923. Serial No. 631,651. 6 Claims. (Cl. 247—27.)



1. A trunking saddle comprising a base; a plurality of parallel vertical flanges secured thereto, forming channels above and below said base; said parallel vertical flanges secured to and forming channels above said base, having a plurality of horizontal holes therein, said base having a vertical hole centrally located therein and a plurality of vertical ribs, positioned about said vertical hole, secured thereon in said upper channel; means for securing said trunking saddle to a support.

1,576,506. DOOR CASING. WILLIAM N. DAVIS, Detroit, Mich., assignor to General Motors Corporation, Detroit, Mich., a Corporation of Delaware. Filed Mar. 19, 1923. Serial No. 626,058. 14 Claims. (Cl. 296—44.)

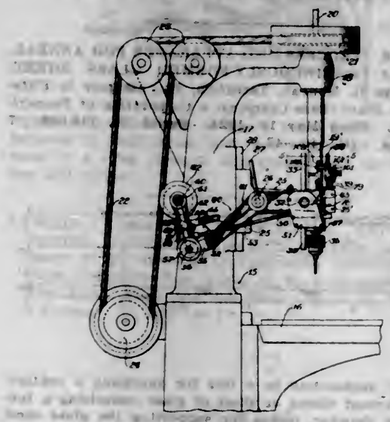


4. A door casing comprising a sheet-metal jamb member bent to have two alined door engaging channel portions separated by a latch-receiving gap having a bottom wall.

1,576,507. RADIATOR COVER. LAD ELIASEK, Chicago, Ill. Filed Jan. 13, 1922. Serial No. 528,983. 6 Claims. (Cl. 257—132.)

2. In a radiator cover, the combination of a marginal frame having a hollow wall at one side thereof, a plurality of shutters extending between and pivoted on the side walls of the marginal frame, a number of said shutters being of successively shorter length, and an operating member within the hollow wall for simultaneously operating all of the shutters of equal length and having an angularly disposed extension in the hollow wall for operating the shutters of successively shorter length simultaneously with the shutters of uniform length.

1,576,508. STOVEPIPE FASTENER. EDWIN R. HISEY, Guernsey, Wyo., and OLIVER C. PATTON, Denver, Colo. Filed Jan. 3, 1924. Serial No. 684,202. 4 Claims. (Cl. 126—318.)

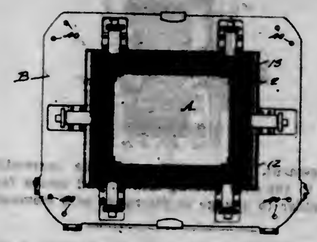


1. A flue fastener comprising two rigid members having a plurality of separated prongs adapted to indent the inner surface of a flue in circuit alinement, and manual means to enlarge the circle of the prongs by separative adjustment of the members.

1,576,509. FEED ATTACHMENT FOR DRILL PRESSES. GEORGE HOFMANN, Chicago, Ill. Filed Nov. 29, 1922. Serial No. 603,921. 14 Claims. (Cl. 77—33.)

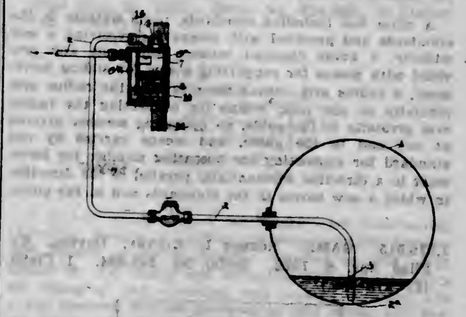
1. In a power-feed attachment, for a normally-manual drill-press that provides a frame, a driving element, a spindle driven in rotation therefrom, manual means for feeding the spindle vertically which includes a feed shaft, spring means to return the spindle to raised position, and stop means movable vertically by and with the spindle; the combination with an attaching-frame having

provision for ready attachment to the drill-press frame, of power-receiving means on said attaching frame adapted and arranged to coact with said driving element of the drill-press, power-delivering means mounted in said attachment frame and adapted and arranged to coact with said feed shaft of the drill press to rotate the latter, power-transmission means intervening between said power



receiving means and power delivering means and including a breakable power connection, and trip means controlling the breaking of said power connection, carried by said attachment frame and having a part adapted and arranged for interposition in the path of vertical movement of said stop means of the drill press to be actuated by the latter on its down-stroke.

1,576,510. SAFETY RAZOR. JOHN HOLTZMAN, New York, N. Y., assignor of one-half to Alfred Krafft, Brooklyn, N. Y. Filed Apr. 18, 1922. Serial No. 555,483. 11 Claims. (Cl. 30—12.)

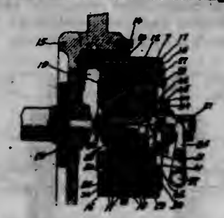


1. In a safety razor the combination of a blade with a holder therefor, a guard for the blade, a main frame to which the guard is permanently attached, a handle attached to said frame, an auxiliary frame to which the holder is attached and means for adjusting the relation of the frames to each other to regulate the relation of the edge of the blade to the edge of the guard including a screw rotatably mounted in said handle and secured to said auxiliary frame.

1,576,511. PHOTOGRAPHIC-PRINTING APPARATUS. WILLIAM C. HUEBNER, Buffalo, N. Y., assignor to Huebner-Bleistein Patents Company, Buffalo, N. Y. Original application filed Feb. 27, 1919, Serial No. 279,493. Divided and this application filed Mar. 20, 1922. Serial No. 545,074. 11 Claims. (Cl. 95—79.)

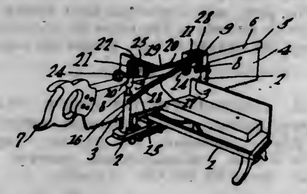
1. The combination of a printing plate holder having a transparent supporting plate secured thereon, and means for securing a transparent printing plate on said supporting plate, said supporting plate having an opaque border which extends to the edges of said printing plate to prevent the leakage of light around the printing plate.

1,576,512. LIQUID-LEVEL INDICATOR. MAUNSELL B. JACKSON, Toronto, Ontario, Canada, assignor to himself, Edward McMahon, and Thomas Cameron Bate, both of Ottawa, Ontario, Canada, trustees. Filed Oct. 9, 1923. Serial No. 667,485. 6 Claims. (Cl. 116—118.)



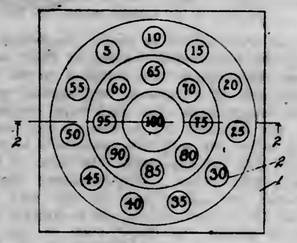
4. A liquid level indicating device comprising a chamber having two legs communicating at their lower ends and having their upper ends adapted to be connected in a supply pipe of a vacuum feed system which also includes a supply tank, the said pipe communicating with the tank adjacent the bottom thereof and having an opening above the said communication to permit air to be drawn into the pipe when the level of the liquid in the tank falls below a predetermined minimum; a bleed between the upper ends of the said two legs whereby the air in the inlet leg will be quickly exhausted therefrom to permit the liquid level in the inlet leg to rise quickly when the liquid level in the tank is again raised above the said opening, and means for indicating the rise and fall of the liquid in the chamber.

1,576,513. CLUTCH CONSTRUCTION. FRANK JOHNSON, Detroit, Mich., assignor to General Motors Corporation, Detroit, Mich., a Corporation of Delaware. Original application filed July 18, 1918, Serial No. 245,471. Divided and this application filed Oct. 9, 1922. Serial No. 593,211. 8 Claims. (Cl. 192—69.)

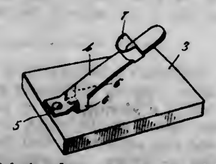


1. In a disk clutch, a hollow clutch barrel, driving and driven elements on the exterior of said barrel, the outer

end of the barrel provided with slots, a spider having arms extending through said slots, means outside the barrel at the inner end thereof for forcing said elements



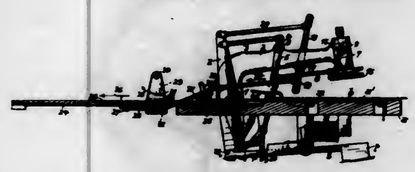
into engagement, means connecting the extremities of said arms to the said forcing means, and means for moving said spider to engage or disengage said elements.



1,576,514. SAW LIFT. JOHN H. KEETER, Charlotte, N. C. Filed Feb. 16, 1925. Serial No. 9,565. 1 Claim. (Cl. 143—66.)

A miter box including standards, posts slidable in the standards and provided with means for receiving a saw slidably, a guide disposed between the posts and provided with means for supporting a saw for sliding movement, a radius arm, means for mounting the radius arm pivotally on one post, means for connecting the radius arm pivotally to the guide, an operating member pivoted at one end to the guide, and means carried by one standard for supporting the operating member for movement in a direction substantially parallel to the direction in which a saw moves in the standards and in the guide.

1,576,515. GAME. ROBERT L. KINNEY, Dayton, Ky. Filed Apr. 6, 1922. Serial No. 549,984. 1 Claim. (Cl. 273—95.)



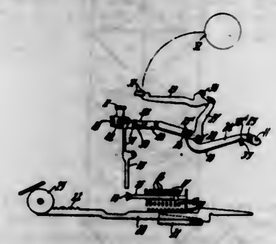
Pieces with which to play a game, comprising a board piece with rounded depressions in the board adapted to form counting spaces, projectiles adapted to form counters comprising pieces adapted to stand upright with weights in round bottomed portions of the pieces and a projector comprising a spring disposed at an angle extending away from the board with a segmentary member disposed on the front face of the spring below the end thereof adapted to support the projectile during intervals of aiming the said projectile with the spring tensioned away from the direction of the board.

1,576,516. PROCESS AND APPARATUS FOR ANNEALING A CONTINUOUSLY-FORMED GLASS SHEET. WALTER G. KOUPAL, Tarentum, Pa., assignor to Pittsburgh Plate Glass Company, a Corporation of Pennsylvania. Filed May 13, 1924. Serial No. 713,086. 7 Claims. (Cl. 49—47.)

1. In combination in a leer for annealing a continuously formed ribbon or sheet of glass comprising a tunnel leer chamber, means for supporting the glass sheet above the floor of the chamber and carrying it through the chamber, and gas heating means located in the leer chamber along its side walls below the level of the glass extending longitudinally thereof and directed inwardly so that a greater amount of heat from said means is applied to the side portions of the sheet than to the central portion.

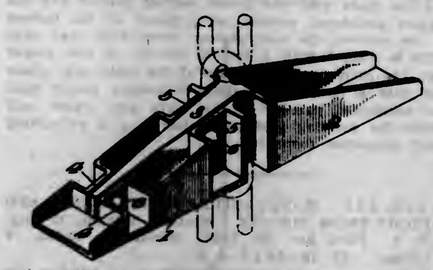
1,576,517. PRINTING MACHINE. JOSEPH KRELL, Berlin-Pankow, Germany. Filed Feb. 13, 1923. Serial No. 618,828. 11 Claims. (Cl. 101—57.)

1. In a machine of the kind described, a printing plate, an impression pad, means for feeding paper between said plate and said pad, auxiliary means for completing the printing movement upon a partial printing movement of said plate and said pad, and means controlled in conjunction with said last named means for actuating said feeding means.



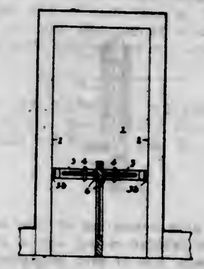
1,576,518. AUTOMATIC RAZOR-BLADE SHARPENER. WILLIAM H. KRUSOE, Wilkes-Barre, Pa. Filed June 15, 1922. Serial No. 568,552. 2 Claims. (Cl. 51—68.)

1. In a stropping device, in combination, a bracket adapted to be secured to a support, a rod mounted in said bracket, a casing supported on said rod, a spring receptacle removably and non-rotatably mounted in said casing, a drum rotatably mounted on said rod and extending into said receptacle, a spring arranged in said receptacle and having one end connected to the receptacle and the other end connected to said drum, whereby a strop connected to said drum will be automatically wound thereon when unwound therefrom, a guide frame



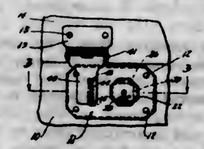
rigidly secured to said casing, a blade holder pivotally mounted in said frame, and means operated by movement of a strop through said guide frame for oscillating said holder.

1,576,519. COMBINED TYPEWRITING AND COMPUTING MACHINE. ADOLPH G. KUPERT, New Rochelle, N. Y., assignor to Underwood Computing Machine Company, New York, N. Y., a Corporation of New York. Filed Aug. 23, 1924. Serial No. 733,693. 8 Claims. (Cl. 235—60.)



1. In a combined typewriting and computing machine, the combination of indexing mechanism including numeral-key-levers arrested at the completion of their indexing strokes, a set of numeral-type-bar-operating levers operable by said indexing levers, and a platen, said type-operating levers and the type-bars movable independently of the indexing keys after the arrest of the latter, whereby the type-bars subsequently continue in motion and strike against the platen.

1,576,520. DETACHABLE CONVEYER BUCKET. FRANK H. LAMB, Hoquiam, Wash. Filed Dec. 4, 1923. Serial No. 678,421. 2 Claims. (Cl. 198—176.)



1. A conveyer bucket formed of two scoop like sections, one section being provided with inwardly extending box like portions and the other section being provided with a shank adapted to fit between said box like portions, said shank and box like portions being provided with registering openings and bolts extending through said openings for securing said sections together.

1,576,521. CARPENTER'S WORK SUPPORT. EMIL LASSE, Paterson, N. J. Filed Sept. 17, 1925. Serial No. 56,867. 8 Claims. (Cl. 144—286.)

1. In a support for the purpose described, the combination of a pair of members each adjustable slidably and substantially rectilineally on the other and respectively adapted to bear against the inner sides of a building opening and be thereby supported, and a pair of devices for clamping said members in the position to which they are adjusted having co-acting work-holding cheek portions projecting from said support, one of said devices being adjustable toward and from the other substantially parallel with the path of adjustment of said members with respect to each other.

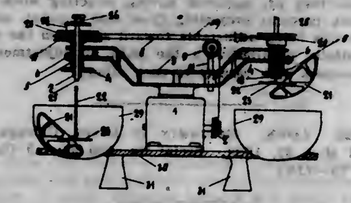
1,576,522. LOCK. BENJAMIN H. LEVIN, Chicago, Ill. Filed Mar. 31, 1923. Serial No. 629,009. 9 Claims. (Cl. 70—115.)

1. A lock comprising a top plate with downwardly extending flanges, a locking member mounted between said flanges, a casing movably mounted on said plate, means on said casing and extending through said plate for engaging and operating said locking member, and a key operated member mounted in said casing and having means movable in one part of a slot in said plate to hold said locking member locked and movable in another part of said slot to permit release movement thereof.

1,576,523. DIALYZING AND EVAPORATING MEMBRANES AND PROCESS OF MAKING THE SAME. JOSEPH M. LOONEY, Somerville, Mass., assignor, by mesne assignments, to Philip A. Kober, Hastings-on-Hudson, N. Y. Filed Nov. 23, 1921. Serial No. 517,386. 3 Claims. (Cl. 18—57.)

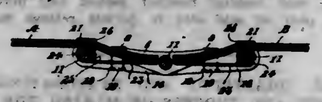
1. The process of making permeable membranes, which comprises mixing a nitrocellulose with ethyl alcohol, dissolving the nitrocellulose by mixing ether with the aforesaid mixture and agitating, adding a water soluble ester, spreading and finally removing the solvent, thus forming a membrane.

1,576,524. VALVE. JAMES A. MARK, Madison, Kans. Filed May 9, 1925. Serial No. 29,189. 3 Claims. (Cl. 251—101.)



1. A valve for use in connection with a tank to supply a supplemental charge to the mixture from the carbureter comprising a coupling having an opening registering with

the manifold intake pipe, a tubular valve-casing extending through the coupling and having a plurality of apertures in one side thereof discharging into the manifold intake pipe, connections between the tank and valve.



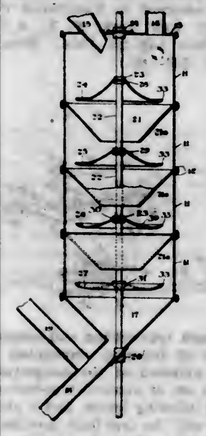
and a turning plug consisting of plug-members closing the ends of the tubular casing and a stem connecting said plug members, one of said plug-members being cut away on a line with the inlet opening in the valve-casing.

1,576,525. AGITATING AND BATTING MACHINE. FRIEDRICH MAYER, Munich, Germany. Filed Mar. 4, 1924. Serial No. 696,896. 1 Claim. (Cl. 259—108.)

An agitating machine driven by electro-motor comprising in combination an electro-motor, a vessel, a one-winged eccentrically arranged flat agitating body in said vessel adapted to be adjusted in known manner vertically and having small working faces one of which conforms with and is arranged close to the wall of said vessel while the inner face is oblique and describes a surface which gets larger from the bottom to the upper end of the vessel and is funnel-shaped, and means for rotating said agitating body.

1,576,526. BELT CONNECTER. ANTON MAZAC, Polar, Wis. Filed Aug. 6, 1925. Serial No. 48,531. 2 Claims. (Cl. 24—33.)

1. In a belt connecter of the type described, a frame, a fulcrum pin passing transversely through said frame, pairs of links pivoted to each end portion of said pin outwardly of the frame sides, fulcrum pins connecting the ends of the links located on opposite sides of the frame, belt end gripping means carried by the last mentioned fulcrum pins, said means including a member having belt engaging teeth, and a strap opposing the teeth to prevent the belt from moving away from the latter.



1,576,527. MOLDING. CLARENCE O. MCBRIDE, Detroit, Mich. Filed May 8, 1923. Serial No. 637,585. 1 Claim. (Cl. 296—29.)

In combination, a trim molding and a body having a groove therein; said molding having a tongue projecting therefrom and adapted to project into the groove; a lining for said groove; gripping members formed on said lining adjacent the upper end thereof, and spaced apart at their edges, when in alignment, a less distance

than the thickness of said tongue, said members being inclined inwardly of said groove and in engagement with said tongue when the same is passed between said members.

1,576,528. CENTRIFUGAL DRIER. ALEXANDER MCKAY, Montreal, Quebec, Canada. Filed Oct. 18, 1924. Serial No. 744,476. 3 Claims. (Cl. 34—10.)

3. In a centrifugal drier, a drier column, inverted conical hoppers mounted in said column, a plurality of dished drier plates rotatably mounted in the drier column, each plate being dished to provide elevated central and peripheral portions, the central and peripheral portions of the several plates being made of varying height, the plate with the highest central portion and shallowest peripheral portion being placed at the top of the column and the plate with the lowest central portion and the highest peripheral portion being placed at the bottom of the column, the arrangement being such that each plate is formed with a central portion of less height than the corresponding portion of the plate next above and with a peripheral portion of greater height than the peripheral portion of the plate next above, and means for rotating said plates including a supporting shaft connected therewith.

1,576,529. MANUFACTURE OF FILAMENTS AND FILMS FROM VISCOSE. WILLIAM MENDEL, Beverly, N. J. Filed Apr. 29, 1925. Serial No. 26,826. 7 Claims. (Cl. 18—54.)

1. The process of treating products of cellulose for the removal of undesirable sulphur bearing constituents thereof, which consists in subjecting the same to the action of trisodium phosphate (Na_3PO_4).

2. The process of treating viscose which has been subjected to a solidifying process in an acidulous bath, which consists in subjecting the solidified product to the action of tri-sodium phosphate before drying it.

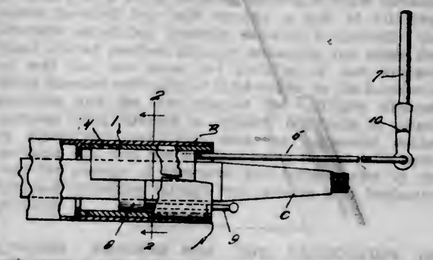
1,576,530. MANUFACTURE OF FILAMENTS AND FILMS FROM VISCOSE. WILLIAM MENDEL, Beverly, N. J. Original application filed Apr. 29, 1925, Serial No. 26,828. Divided and this application filed Apr. 29, 1925. Serial No. 26,830. 7 Claims. (Cl. 18—54.)

2. The process of manufacturing articles from viscose by precipitating such viscose in an aqueous solution containing sodium bisulphite, and subjecting the same to the action of tri-sodium phosphate (Na_3PO_4).

1,576,531. MANUFACTURE OF FILAMENTS AND FILMS FROM VISCOSE. WILLIAM MENDEL, Beverly, N. J. Original application filed Apr. 29, 1925, Serial No. 26,825. Divided and this application filed Apr. 29, 1925. Serial No. 26,827. 6 Claims. (Cl. 18—54.)

1. The process of manufacturing articles from viscose by precipitating such viscose by heat, and subjecting the same to the action of tri-sodium phosphate (Na_3PO_4).

1,576,532. CORE FOR TIRE VULCANIZATION. THOMAS MIDGLEY, Hampden, Mass., and RALPH B. NAYLOR, Pasadena, Calif., assignors to The Fisk Rubber Company, Chicopee Falls, Mass., a Corporation of Massachusetts. Original application filed Sept. 24, 1921, Ser. No. 503,030. Divided and this application filed Sept. 10, 1925. Serial No. 55,420. 1 Claim. (Cl. 18—45.)



A tire vulcanizing core, a tubular annulus having a partition therein and having a continuous passage throughout its circumferential extent from one side to the other side of said partition, a fluid-inlet at one side of and adjacent to said partition, and a fluid-outlet at the other side of and adjacent to said partition, said fluid-outlet and fluid-inlet extending inwardly of the core, so that these fluid carrying elements extend between the beads of the tire casing when the core is in the casing, and so that the current of fluid can be effected substantially through the circumferential extent of the core for the purpose specified.

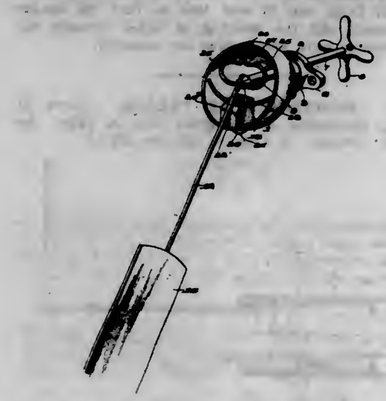
1,576,533. MOISTENER FOR POSTAGE STAMPS, ENVELOPES, AND THE LIKE. KURT MIKELEITIS, Schlaupitz, Germany. Filed Apr. 18, 1925. Serial No. 24,290. 1 Claim. (Cl. 15—138.)

A moistener for postage stamps, envelopes and the like comprising in combination a sleeve of suitable material tapering at the lower open end and open at the upper end, a tightly fitting cap closing the upper end of said sleeve, a tube inserted in said sleeve designed to be filled with water, the lower end of said tube being tapered and having longitudinal slits to make this end of the tube elastic, a sponge in the lower end of the tube projecting from the end of said tube, and clamping screws mounted in the sleeve for pressing together the elastic slit front end of said tube so that the sponge is compressed and the filtering of water through the same prevented until said screws are loosened.

1,576,534. BEARING-SLEEVE PULLER. DAVID O. MILLER, Macksville, Kans. Filed Sept. 8, 1924. Serial No. 736,548. 1 Claim. (Cl. 29—88.2.)

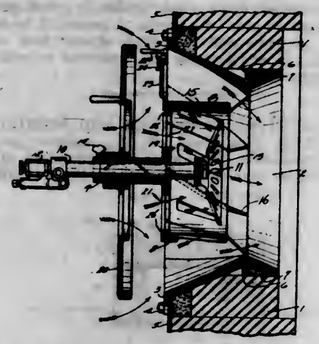
A bearing sleeve puller comprising a head section adapted to be inserted into the sleeve to be pulled, said section being relatively long and substantially semi-circular in cross section, a rod detachably connected to the outer end of said section and extending outwardly therefrom, a lever pivotally connected to the outer end of the rod, said lever comprising a handle, and a block-like connection between the handle and rod, said connection forming an impact member which is adapted to receive the blows from a hammer used in driving out the sleeve, and a supporting member for said head section, said supporting member being semi-circular in cross section, and comparatively short in length to permit it to be engaged with the intermediate portion of said first named section, and a handle forming rod connected to said supporting member.

1,576,535. SHIPPING CONTAINER AND STERILIZER. JOSEPH MUIR, New York, N. Y., assignor to The Radium Emanation Corporation, a Corporation of Delaware. Filed June 8, 1924. Serial No. 717,905. 3 Claims. (Cl. 250—34.)



1. A combined shipping container and steriliser comprising a container and steriliser section having a pocket provided with an open top, a foraminous closure for the said top of the pocket having a depending flange provided with a resilient normally outwardly sprung bearing portion, the said flange being frictionally received within the open top of the pocket, and a cover section for the first-mentioned section.

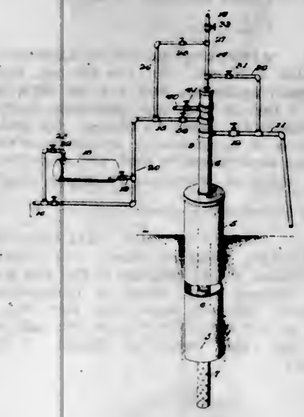
1,576,536. SIGNAL. ROBERT S. PARKER, Ottawa, Kans. Filed Aug. 22, 1925. Serial No. 51,857. 9 Claims. (Cl. 116—47.)



1. In a signal, a casing having a bearing, an operating shaft rotatably and slidably fitted in the bearing, a signaling arm, means for hinging the arm to the shaft to permit it to swing in one plane relative to the shaft while constraining it to rotate with the shaft, means on the casing co-operable with the arm for swinging the arm

to an outwardly and downwardly inclined position when the shaft is pulled inwardly a short distance, means on the casing co-operable with the arm and causing the arm to swing upwardly and outwardly when the shaft

is rotated after having been pulled inwardly a short distance, and means on the casing co-operable with the arm for holding the same in an extended and substantially horizontal position when the shaft is pulled inwardly as far as it may be.

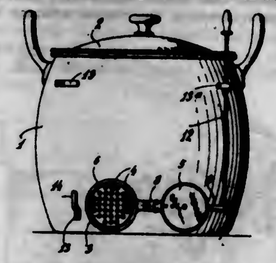


1,576,537. AIR REGISTER FOR FUEL BURNERS. ERNEST H. PEABODY, Pelham Manor, N. Y. Filed Apr. 19, 1923. Serial No. 633,169. 12 Claims. (Cl. 158—1.5.)

1. An air control register comprising an atomizer adapted to deliver fuel in the shape of a conical spray into a combustion chamber, a frusto-conical ring-like member adapted to fit into an opening in the front of the combustion chamber, a cylindrical member coaxial with the frusto-conical member, a plurality of spirally arranged deflector plates interposed between and connecting the conical member and the cylindrical member and adapted to direct the air into the combustion chamber, and rotatable and slidable means for the control of the air through the passages between the two members.

1,576,538. GAS-WELL EQUIPMENT. CHARLES S. PEALER, Danville, Ohio. Filed Jan. 21, 1924. Serial No. 687,662. 1 Claim. (Cl. 166—1.)

In a gas well equipment, the combination of inner and outer tubings, a main gas outlet member connected to said outer tubing and having a valve, a supplemental gas outlet member connecting said inner tubing to said main gas outlet member and having a valve, a fluid pressure line connected to said inner tubing and having a branch line connected to said inner tubing outwardly of the point of connection of said supplemental gas outlet member with said inner tubing, separate valve for said fluid pressure line and the branch thereof whereby a cleaning fluid or a solvent may be forced under pressure alternately in opposite directions through said inner and outer tubings for removing salt water and cleaning the productive strata, the valves in said main and supplemental gas outlet members forming a means whereby the gas in either tubing in advance of the salt water may be recovered, and a salt water outlet member connected to said outer tubing.

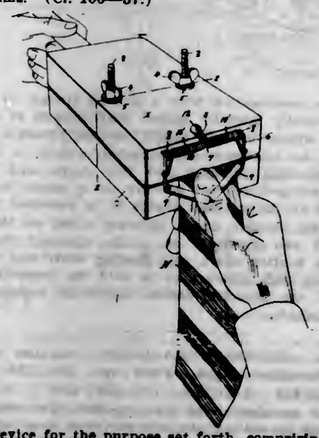


1,576,539. LIFT FOR SHOE HEELS. ANTONIO PENTIFALLO, Hollidaysburg, Pa. Filed Sept. 11, 1924. Serial No. 737,138. 1 Claim. (Cl. 36—35.)

In a lift for shoe heels comprising a piece of resilient material of substantially convexo-concave formation, a depression formed in the upper surface of said lift, raised sections formed laterally of said depression, opposing upwardly directed and longitudinally converging walls connecting the surface of said raised sections and the surface of said depression, said raised sections having their upper surfaces transversely convexed throughout their length, and means for securing said lift upon a shoe heel.

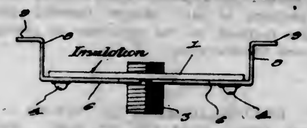
1,576,540. UTENSIL. ARTURO PERNO, New York, N. Y. Filed Oct. 30, 1924, Serial No. 746,720. Renewed Jan. 30, 1926. 4 Claims. (Cl. 53—8.)

1. A utensil of the character specified provided with a drainage outlet and a valve seat adjacent thereto, with a valve movably attached to the exterior of the utensil to close the said seat, and means to movably retain the valve closed, said means comprising an arm movably attached to said valve, a keeper for the arm attached to the



utensil to retain the valve closed against the seat, a rod movably attached to said arm, and retaining means on the utensil for said rod.

1,576,541. SAFETY BAND. GUSTAV W. PETERSON, Bradford, Pa. Filed Apr. 22, 1924. Serial No. 708,200. 2 Claims. (Cl. 24—3.)

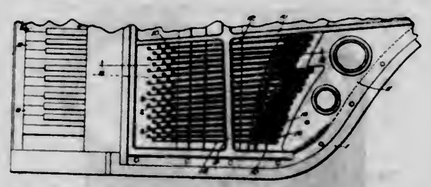


1. A device of the character described comprising, a cylindrical retaining collar, a plurality of pointed projections or prongs formed on the upper edge of the said collar, and an extension formed on the side of the collar adapted to act as an eraser.

1,576,542. NECKTIE PRESSER. LE PHILLIPS, Washington, D. C. Filed Jan. 8, 1926. Serial No. 80,034. 2 Claims. (Cl. 100—57.)

1. A device for the purpose set forth, comprising pressing blocks held in operative position by bolts, means on said bolts for clamping the blocks together, diverging rollers yieldably held against one of the blocks.

1,576,543. ELECTRIC-FIXTURE MOUNTING BRACKET. CHARLES PICKER, Albany, N. Y. Filed Apr. 17, 1924. Serial No. 707,220. 1 Claim. (Cl. 240—85.)



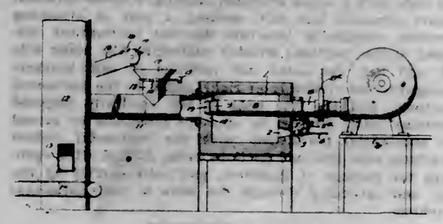
A fixture mounting bracket of the class described comprising a bar of insulation material provided between its ends with a screw threaded opening, a screw threaded sleeve threaded into said opening, a pair of attaching brackets embodying inwardly directed horizontally disposed slotted portions slidably contacting the under side of said bar, the outer end portions of said brackets being directed vertically at right angles to the horizontal portions, and the free ends of the vertically disposed portions being directed in opposite directions to extend in substantial parallelism with the horizontal slotted portions, said free end portions being formed with openings for passage of fasteners, and bolts carried by the bar and extending through the slots in said horizontal portions.

1,576,544. PROCESS FOR THE PRODUCTION OF BUTYRIC ALDEHYDE. CLARENCE E. PIGG, Terre Haute, Ind., assignor to Commercial Solvents Corporation, Terre Haute, Ind., a Corporation of Maryland. Filed July 25, 1924. Serial No. 728,176. 9 Claims. (Cl. 260—138.)

1. A process for the production of butyric aldehyde consisting in passing a mixture of normal butyl alcohol vapor and water vapor over a dehydrogenating catalyst at a temperature of 200–350° C., and condensing the vapors.

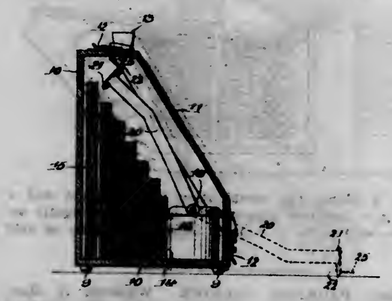
1,576,545. PIANO. EDWARD W. POWERS, Boston, Mass. Filed Dec. 16, 1921. Serial No. 522,741. 18 Claims. (Cl. 84—197.)

1. In a piano, the combination with a plate and a string, of a resilient support for said string, rigidly secured to said plate at a point between the ends of said string.



1,576,546. PACKAGE CARRIER. WEBSTER H. RANSOM, Spokane, Wash. Filed Feb. 14, 1925. Serial No. 9,309. 1 Claim. (Cl. 224—57.)

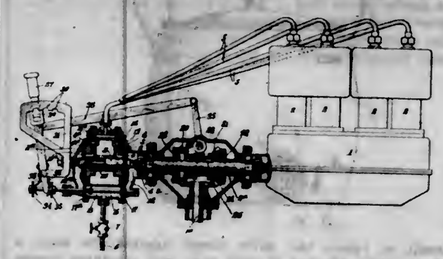
A package carrier comprising a blank bent to U-shape cross-section with relatively high parallel side arms spaced apart sufficiently to receive therebetween a package cord for free movement, the ends of said blank at the upper edges of the arms being rounded and bent



inwardly to form retaining flanges terminating in slightly spaced relation intermediate the arms to permit passage of a package cord therebetween only by forcing, the rounded portions of said flanges forming converging guide edges inclined in the direction of passage of a package cord therebetween.

1,576,547. DRYING APPARATUS. EDWARD C. READER, Cleveland, Ohio. Filed Feb. 12, 1925. Serial No. 8,702. 8 Claims. (Cl. 34—7.)

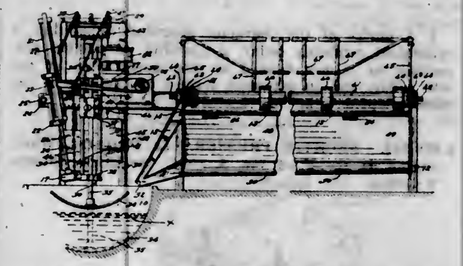
8. An apparatus of the character described comprising in combination a heating chamber, a conduit extending from said chamber and communicating therewith, means for delivering material to be dried into said conduit, a conduit in the said chamber and having a frusto-conical delivery end arranged within and spaced from the inlet of the first conduit, and means for forcing a drying fluid through the second conduit.



1,576,548. STENCILING APPARATUS. JACOB REUSCH, St. Paul, Minn. Filed Aug. 4, 1924. Serial No. 729,914. 6 Claims. (Cl. 101—126.)

1. In apparatus of the class described, the combination with a casing adapted to contain stencil plates, of a gauge bar adapted to be held in rigid spaced relation with the front of said casing to engage a card to be printed, said bar having a surface adapted to constitute a guide for a stencil in use, and means on said bar adapted to facilitate centering cards beneath said bar.

1,576,549. ENGINE-STARTING DEVICE. OLAF L. RIEGELS, Christiania, Norway, assignor of two-thirds to Marburg Brothers, Inc., New York, N. Y., a Corporation of New York. Filed Oct. 27, 1919. Serial No. 333,720. 3 Claims. (Cl. 60—16.)

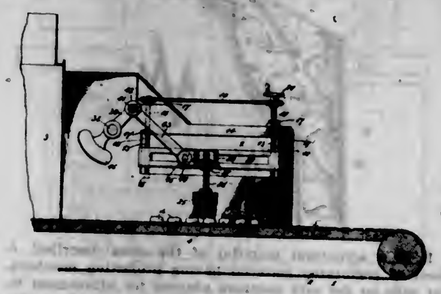


1. An engine having a reversing mechanism between the same and a driven shaft, in combination with a starting device for said engine, and a control member adapted to set said device to start the engine to turn in either direction, and means interlocking said control member with said reversing mechanism whereby the operation of said control member to change the direction of rotation of the engine, shifts said reversing mechanism.

1,576,550. REFRACTORY CEMENT COMPOSITION. WILLIAM F. ROCHOW, Pittsburgh, Pa., assignor to Harbison-Walker Refractories Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Aug. 26, 1921. Serial No. 495,543. 1 Claim. (Cl. 106—9.)

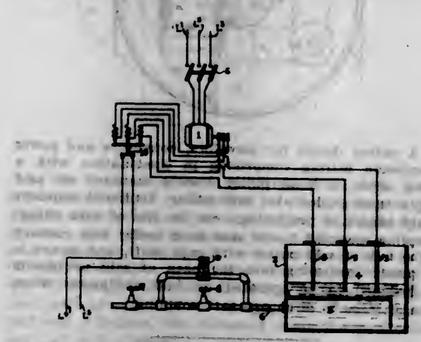
A dry powdered refractory cement composition consisting of silica, fire clay, calcined silica, and from 5 to 20% of sodium silicate.

1,576,551. PAINT OR STAIN MIXING AND COATING APPARATUS FOR PORCH SHADES AND THE LIKE. ZACHARY E. RUSSELL, St. Cloud, Minn., assignor to Clyde W. Warren, Sauk Rapids, Minn. Filed June 29, 1925. Serial No. 40,248. 14 Claims. (Cl. 91—46.)



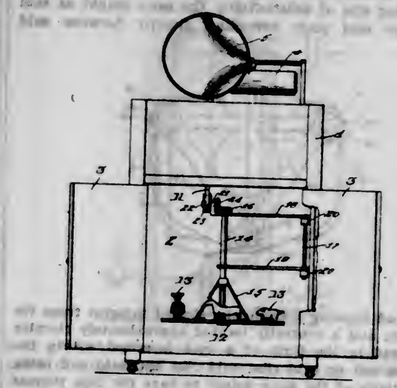
11. The combination with a dipping trough, of a pair of horizontally laterally spaced shafts, pairs of aligned sprocket wheels on said shafts, endless sprocket chains arranged to run over the sprocket wheels, a floating shaft extending between said two shafts and having rollers arranged to rest directly on a shade and hold the same on the sprocket chains to be conveyed thereby through the trough, and a sprocket wheel on the floating shaft and engaging one of the sprocket chains to drive the floating shaft, said floating shaft and its rollers having such pressure as to hold the respective portions of the sprocket chains depressed between said pairs of shafts.

1,576,552. BRUSHING MACHINE. CHARLES G. SANDS, Brookline, Mass. Filed Apr. 29, 1924. Serial No. 709,884. 5 Claims. (Cl. 107—44.)



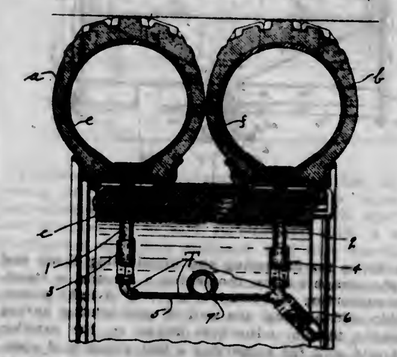
2. In a machine of the type specified, the combination comprising spaced upright side supports, a set of spaced adjusting screws on each of said supports, means for arranging the screws whereby they will turn on said supports without endwise movement, guides mounted on each of said sets of screws and through which guides

the threaded bodies of the screws extend, means connecting with the respective screws whereby the screws may be simultaneously and uniformly turned, a brush, a brush carrier interposed between said guides and connecting therewith to be slidable thereon, and means connecting with the brush carrier for reciprocating it on said guides.



5. In a machine of the type specified, the combination comprising spaced upright side supports, a set of spaced adjusting screws on each side of said supports, means for arranging the screws whereby they will turn on the side supports without endwise movement, guides mounted upon each of said sets of screws and through which guides the threaded bodies of the screws extend, a brush, a brush carrier interposed between said guides and connecting therewith to be slidable thereon, cranks mounted to turn respectively upon said side supports, link connections between said cranks and the opposite ends of said brush carrier whereby the carrier may be reciprocated on said guides as the cranks are turned, means connecting said crank and link connections respectively whereby they may operate in unison upon an application of power to one of said cranks, and means for applying power to one of said cranks.

1,576,553. ELECTRICAL CONTROLLER. EDWIN W. SEEGER, Milwaukee, Wis., assignor to The Cutler-Hammer Mfg. Co., Milwaukee, Wis., a Corporation of Wisconsin. Filed Apr. 13, 1922. Serial No. 552,296. 8 Claims. (Cl. 172—274.)

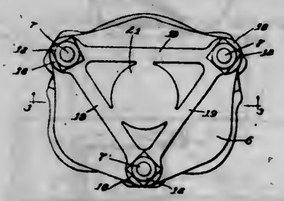


2. The combination with an induction motor, of a fluid rheostat for controlling an electrical condition of said motor, pneumatic means for varying the immersion of the electrodes of said rheostat, control means for said pneumatic means including means for constantly increasing the immersion of the electrodes at a given minimum rate, and means responsive to variations in such electrical condition of said motor to vary the rate of immersion of said electrodes in accordance with variations in the load on said motor.

1,576,554. ATTACHMENT FOR PHONOGRAPHS. CHARLES FREDRICK SMITH, Schmidt, N. Dak. Filed Apr. 17, 1928. Serial No. 632,750. 2 Claims. (Cl. 272—81.)

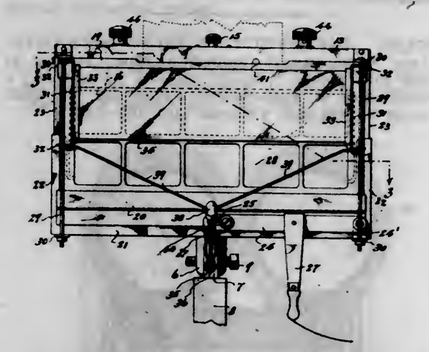
1. In a toy of the character described in combination with a phonograph, a cabinet, a disk carrying a series of animal figures, means for supporting said disk in the cabinet of the phonograph, means for swinging said disk partially out of said cabinet, and means connecting said disk with the motor of the phonograph for revolving said disk when swung out and upon the playing of the phonograph.

1,576,555. PNEUMATIC-TIRE VALVE MECHANISM. LEON N. SOUTHMAYD, Springfield, Mass., assignor to The Fisk Rubber Company, Chicopee Falls, Mass., a Corporation of Massachusetts. Filed Apr. 28, 1923. Serial No. 635,225. 2 Claims. (Cl. 152—12.)



1. A valve mechanism for dual tires comprising two independent normally open valves, mounted one in the valve stem of each tire, a manifold connecting the two valve stems, and a normally closed inflating valve located in the manifold, whereby the tires can be inflated to and maintained at equal pressures, but the air in either tire will be retained in it by a closure of its normally open valve upon a sudden decrease in pressure in the other tire.

1,576,556. DENTAL FLASK. WILLIAM A. STEPHEN, Rockford, Ill. Filed July 30, 1924. Serial No. 729,018. 1 Claim. (Cl. 18—33.)



In a dental flask comprising a lower and upper hollow mold body, a cover plate arranged to be bolted to the lower mold body with the upper mold body clamped there-

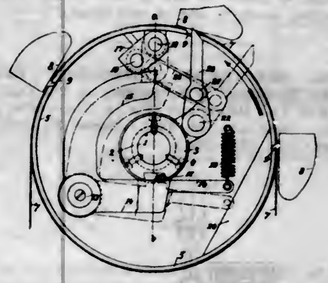
between and aligned therewith, there being at least three bolts for fastening said cover plate, three heavy bosses at the edges of said plate arranged in substantially equally spaced relation and having openings to receive said bolts, reenforcing ribs of substantially the same height as said bosses on said plate extending directly between said

bosses and forming a triangular-shaped integral truss for the plate, and a centrally located approximately circular thrust pad in the form of a boss inscribed within the figure formed by said ribs, said ribs and said pad being substantially of the same height to have the tops thereof flush with one another.

1,576,557. X-RAY-FILM VIEWING STAND FOR SURGEONS. JACQUES M. STRULLY, Brooklyn, N. Y. Filed Feb. 11, 1925. Serial No. 8,381. 8 Claims. (Cl. 88—39.)

1. A device for displaying and illuminating X-ray and other photographic films, comprising a housing, a standard for supporting said housing, a source of light mounted within said housing, one wall of said housing having an opening therein, adjustable means on the exterior side of said wall for supporting a film across said opening, comprising a stationary channel member fixed to said wall, a vertically slidable carrier plate provided with a second channel member opposed to said stationary channel member, means on said wall for slidably supporting said carrier plate, and a means for actuating said carrier plate.

1,576,558. CERAMIC MATERIAL. RAY T. STULL, Columbus, Ohio, assignor to Stull Process Company, Savannah, Ga., a Corporation of Georgia. Filed Mar. 20, 1924. Serial No. 700,714. 33 Claims. (Cl. 106—11.)

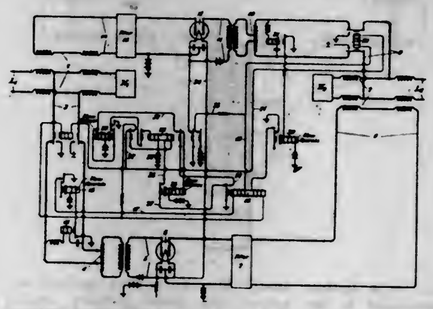


1. As a composition of matter, a synthetic clay suitable for making light-colored brick composed of a mixture of natural highly colloidal secondary kaolin deficient in alkali and alkaline earth fluxes, with a pegmatite.

1,576,559. STRUCTURAL MATERIAL. JOSEPH KAY SWIFT, Brooklyn, N. Y. Filed Aug. 8, 1925. Serial No. 47,735. 6 Claims. (Cl. 189—34.)

1. In a structural material of the class described, a sheet of perforated material having projecting members, flat ends on the said members adapted for attachment to a panel or the like, and tongues projecting from the surface of the said sheet opposite to that first described, secured to the said sheet a secondary sheet also perforated and with the said perforations coinciding with those of the first sheet, tongues projecting from the said secondaary sheet in contact with the tongues of the first and forming with them bifurcated clips adapted to secure the whole to a basic structure substantially as shown and described.

1,576,560. SAFETY DEVICE FOR ELEVATORS, CONVEYERS, AND LIKE APPARATUS. ALBERT TEICHMANN, Zeitz, Germany. Filed Feb. 16, 1925. Serial No. 9,628. 5 Claims. (Cl. 198—232.)



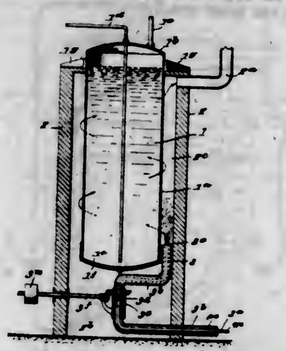
1. A safety device for elevators, conveyers and power transmission belting comprising in combination with a driving shaft, a band pulley loosely mounted on said shaft, a band guided over said pulley, abutment members on said band and projecting over the rim of said pulley, a coupling mounted inside said band pulley and connecting the hub of said pulley with said shaft, and means in said pulley projecting into the path of said abutments and designed to be operated by said abutments when the band stops to disengage said coupling.

1,576,561. ARRANGEMENT FOR EXERCISING REMOTE CONTROL OVER REPEATERS. JOHN F. TOOMEY, New York, N. Y., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed June 2, 1925. Serial No. 34,466. 2 Claims. (Cl. 179—171.)

1. A transmission line comprising two line sections interconnected by repeater apparatus, a circuit associated with one of said line sections and controlled by signaling

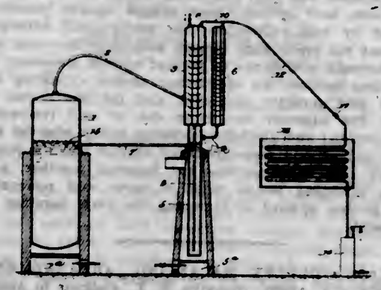
current coming in over said line section, a relay in said circuit, means controlled thereby for applying signaling current to the other of said line sections, a second relay in said circuit, means controlled by the initial operation

and release of said second relay for rendering said repeater apparatus operative and for short circuiting said first relay, and means controlled by a second operation and release of said second relay for restoring said arrangements to normal.



1,576,562. EMBROIDERY. JACOB D. VOSS and SIMON UBY, Chicago, Ill. Filed Sept. 23, 1925. Serial No. 58,004. 3 Claims. (Cl. 41—36.)

1. The combination with a flexible fabric of a flexible waterproof beaded embroidery thereon, comprising a plastic adhesive foundation and a layer of beads applied thereto, said adhesive foundation comprising a vehicle and a pigment, the pigment being the predominate part of said foundation, said vehicle containing fir seed oil and oil of turpentine, the fir seed oil being the predominant part of said vehicle, said pigment containing white lead and lithopone, the lithopone being the predominant part of said pigment.

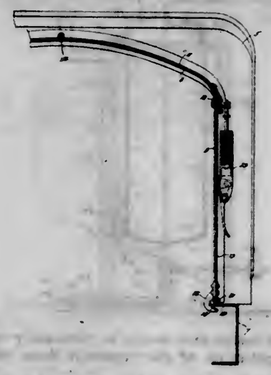


1,576,563. HEATING SYSTEM FOR OIL STILLS. FRANK E. WELLMAN, Kansas City, Kans., assignor to The Kansas City Gasoline Company, Kansas City, Kans., a Corporation of Kansas. Filed Dec. 17, 1921. Serial No. 523,062. 13 Claims. (Cl. 196—116.)

1. The combination of a vertical still, a furnace setting enclosing the same with an annular combustion space between the two, a stack adapted to receive products of combustion from the upper part of said space, means to produce localized combustion of fuel in the lower

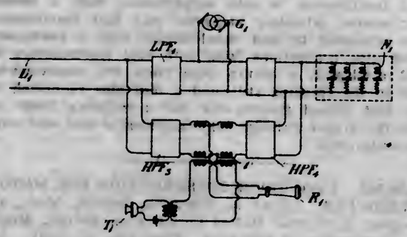
part of said space and means to constantly change the point of application of the resultant flame to the still wall.

1,576,564. APPARATUS FOR DISTILLING HYDROCARBONS. FRANK E. WELLMAN, Kansas City, Kans., assignor to The Kansas City Gasoline Company, Kansas City, Kans., a Corporation of Kansas. Filed June 3, 1922. Serial No. 565,635. 1 Claim. (Cl. 196—99.)



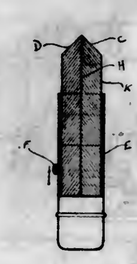
A system for the treatment of hydrocarbon oil comprising a cracking still, a fractionator, a vapor line therebetween, a supplemental still, a down pipe from said fractionator to said supplemental still, a second fractionator extending alongside said first fractionator and connected to said supplemental still, a condenser, vapor line connections from both said fractionators to said condenser, a return pipe from the supplemental still to the cracking still, and a feed pipe connected to the first named fractionator for introducing fresh oil into the system through said fractionator and said supplemental still.

1,576,565. HOOD-DOOR CONSTRUCTION FOR MOTOR VEHICLES. FRANK A. WHITTEN, Detroit, Mich., assignor to General Motors Corporation, Detroit, Mich., a Corporation of Delaware. Filed July 23, 1921. Serial No. 487,206. 12 Claims. (Cl. 180—69.)



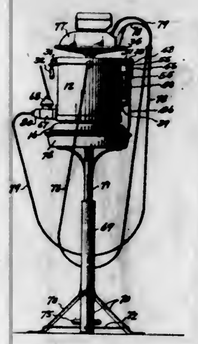
1. In a hood structure of the class described and in combination with a radiator and cowl, and a frame member located adjacent the lower ends and extending between said elements and having a substantially horizontal upper flange; a removable door section extending between said radiator and cowl and the side edges of which lie adjacent said elements; holding members located adjacent the lower end of said door section and which members have portions extending beneath said

upper flange to thereby prevent upward movement of said door section; and yieldable means operatively connected with the upper end of said door section and tending to move the same upward.



12. In a hood structure of the class described and in combination with a radiator and cowl, a removable door section capable of slight upward movement when assembled in the hood structure, and which section extends between said radiator and cowl; a stationary frame member channel shaped in cross section and having a substantially flat upper portion extending between said radiator and cowl and along the lower edge of said removable door section; hook shaped holding members carried by said removable door section and arranged adjacent the lower edge thereof, and which members engage beneath said flange to prevent upward movement of said door section; an upper door section extending between said radiator and cowl and the lower end of which lies adjacent the upper end of said removable door section; and yieldable fastening means whereby the upper end of said removable door section and the lower end of said upper section are fastened together, and which fastening means tends to move said removable door section upward in fastening the parts together as aforesaid.

1,576,566. DUPLEX BALANCING ARRANGEMENT. HERMAN A. AFFEL, Brooklyn, N. Y., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed Apr. 1, 1920. Serial No. 370,429. 8 Claims. (Cl. 179—2.)

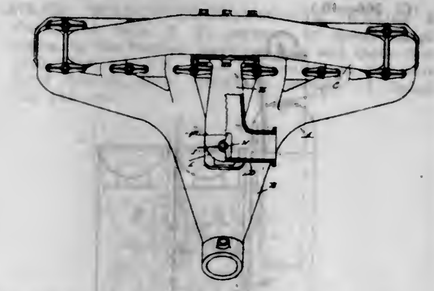


1. In a signaling system adapted for the simultaneous transmission of frequencies constituting a plurality of channels of transmission the combination of a transmission line, means for impressing a plurality of groups of frequencies on the said line, selective networks adapted to discriminate between the fundamental frequencies of the said groups, and a balancing network designed to balance said line for predeterminate harmonics only of one of said groups which are liable to interfere with the frequencies of the other of said groups.

1,576,567. LIP STICK. LUCILLE BUHL-BONANNO, Mount Vernon, N. Y., assignor to Lucille Buhl Vanity Products Co., Inc., New York, N. Y., a Corporation of New York. Filed Mar. 21, 1925. Serial No. 17,158. 5 Claims. (Cl. 132—79.)

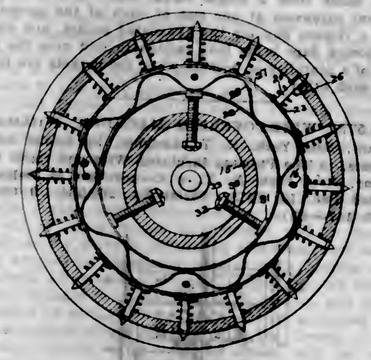
1. A cosmetic consisting of a semi-cylindrical body of cold cream and a semi-cylindrical body of rouge adjacent each other and in a common wrapper and a cylindrical metal container therefor.

1,576,568. GENERATOR FOR STEAM PRESSING IRONS. CHARLES A. BREWER, Noroton Heights, Conn., assignor to Cannon Engineering Co., Brooklyn, N. Y., a Corporation of New York. Filed Apr. 29, 1925. Serial No. 26,606. 18 Claims. (Cl. 219—19.)



1. A portable steam generator for the purposes described, comprising a boiler body, heating means therefor, means for supporting the boiler body, a combined filling funnel and iron rest at the upper end of said boiler body, and a valve means intermediate said boiler body and filling funnel manipulatable to establish at will either water intake communication between the latter and the former or steam discharge from the boiler interior.

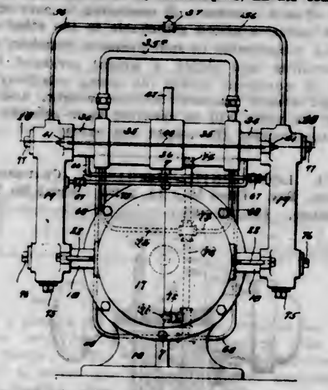
1,576,569. MANIFOLD CONSTRUCTION FOR INTERNAL-COMBUSTION ENGINES. ALANSON P. BRUSH, Detroit, Mich. Filed Mar. 26, 1920. Serial No. 369,151. 2 Claims. (Cl. 123—122.)



2. The combination with an exhaust manifold and an inlet manifold having a horizontal inlet portion, a vertical outlet portion leading therefrom, and an angling portion therebetween, a pocket within said exhaust manifold and extending transversely of said inlet manifold,

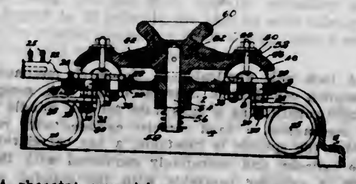
the bottom of said pocket lying in a horisontal plane only slightly below the horisontal portion of said inlet manifold, and a downwardly sloping passage connecting

the angling portion of said intake conduit with said pocket, whereby liquid fuel falling out of suspension will drain into said pocket and will be returned as vapor to the intake.



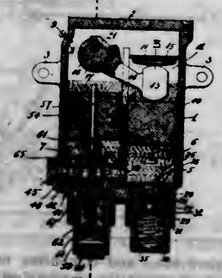
1,576,570. EMERGENCY WHEEL AND NONSKIDDING DEVICE. KASIMIR LUSCH, Chicago, Ill. Filed Sept. 30, 1925. Serial No. 59,489. 7 Claims. (Cl. 301—47.)

6. A device of the class described comprising a housing including a disk like member having an inner and an outer annular flange, means for fastening the device to the rim lugs of a wheel and to support the inner flange on the brake band box of said wheel, elements movably mounted in openings in the outer flange, springs for moving said elements inwardly in said flange, concentric bands and resilient means for urging said elements outwardly, and threaded means mounted in the inner flange for actuating said bands, resilient means and elements.



1,576,571. AIR COMPRESSOR. JOHN O. CARREY, St. Louis, Mo., assignor to Carrey-Morse Engineering Company, St. Louis, Mo., a Corporation of Missouri. Filed Aug. 8, 1922. Serial No. 580,386. 19 Claims. (Cl. 230—27.)

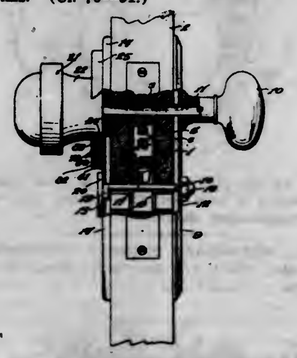
1. An air compresser comprising a primary piston, means for actuating said piston, operative connections in said means for automatically varying the speed of said piston during each stroke, a pressure chamber adapted to be wholly filled with liquid, said liquid being arranged to be placed under pressure by said piston, a secondary piston operating in said pressure chamber and adapted to be actuated by said liquid, an air compression



chamber, an air piston operating in said chamber and interconnected to said secondary piston, and valves for said air compression chamber.

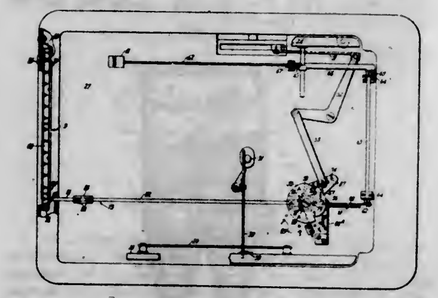
1,576,572. RHEOSTAT. PIERRE I. CHANDEYSSON, St. Louis, Mo. Filed Apr. 18, 1922. Serial No. 554,469. 2 Claims. (Cl. 201—48.)

1. A rheostat comprising a substantially dome shaped casing provided with a plurality of sets of spaced contacts, an arcuate contact plate arranged adjacent each set of spaced contacts, a resistance element supported in the dome of said casing and connected with certain of the contacts, said resistance element comprising a series of spiral coils with interconnecting loops, said loops adapted to straddle the aforesaid contacts, a rotatable element journaled on the casing, and U-shaped conductors carried thereby and adapted to bridge the spaces between the plates and the spaced contacts.



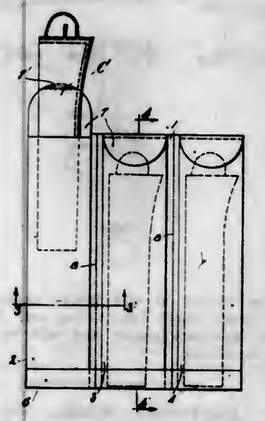
1,576,573. SHOCK ABSORBER. FREDERICK E. CLARKE, Somerville, Mass., assignor to James S. Lang, Watertown, Mass. Filed Nov. 10, 1924. Serial No. 748,852. 17 Claims. (Cl. 188—88.)

1. A fluid check shock absorber for controlling the movement of relatively movable parts comprising a casing attachable to one of said parts and having a pressure



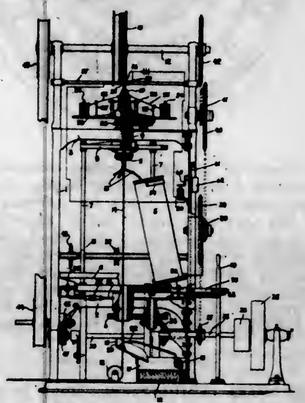
chamber in it, said casing being provided also with means permitting of the circulation of a contained fluid into and out of said chamber and consisting in part of a controllable outlet, a piston attachable to the other of said parts and reciprocable in said pressure chamber, a valve for controlling said outlet, a weight arranged to have freedom of movement within the casing relatively to the valve, an elastic support for the weight, and means whereby the valve will be operated upon relative change in position between the weight and valve.

1,576,574. LOCK UNIT. HERMAN H. CLAUSSEN, San Antonio, Tex. Filed May 13, 1924. Serial No. 713,058. 10 Claims. (Cl. 70—91.)



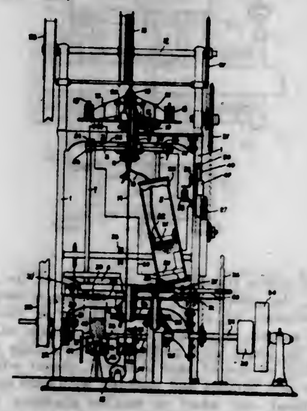
1. A lock unit applicable to the latch mechanism of an installed combination door latch and lock, comprising a spindle constituting a substitute for the spindle of the latch mechanism, a fixed tumbler cylinder with relation to which the spindle is rotatable, a key barrel rotatable in the cylinder and operatively connected with the said spindle, a cylinder rotatable with the spindle, a knob rotatable upon the first mentioned cylinder, and key controlled means operable to lock the key barrel with the first mentioned cylinder and permit rotation of the knob and also operable to disconnect the key barrel from the said cylinder and lock the knob and second mentioned cylinder for rotation in unison.

1,576,575. COMBINED TYPEWRITING AND COMPUTING MACHINE. FREDERICK U. CONARD, Brooklyn, N. Y., assignor to Underwood Computing Machine Company, New York, N. Y., a Corporation of New York. Filed June 13, 1924. Serial No. 719,744. 28 Claims. (Cl. 235—60.)



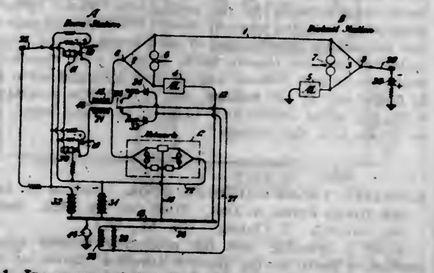
1. In a typewriting and computing machine, the combination with state-setting mechanism and a general operator, of state-controlling mechanism including a ratchet-driven cam operated by the general operator to cause a definite schedule of computations to be carried out.

1,576,576. UNITARY FOLDABLE PACKAGE. CHARLES M. CONNOLLY, Troy, N. Y., assignor to Cluett, Peabody & Co. Inc., Troy, N. Y., a Corporation of New York. Filed Sept. 29, 1924. Serial No. 740,583. 2 Claims. (Cl. 206—46.)



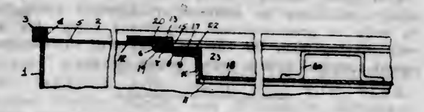
1. A unitary foldable container for articles of the character referred to, comprising a series of pockets detachably connected together, the backs of the pockets being made from a single blank, said blank having an integral extension at one end of each of the pockets to form a closure flap for the associated pocket, and one of the closure flaps being long enough to fold over the open ends of a plurality of pockets when the pockets are folded over each other.

1,576,577. WIRE-COVERING MACHINE. WILLIAM E. COOK, New York, N. Y., assignor, by mesne assignments, to The Peerless Insulated Wire and Cable Company, New York, N. Y., a Corporation of Delaware. Filed Dec. 13, 1918. Serial No. 266,564. 9 Claims. (Cl. 117—40.)



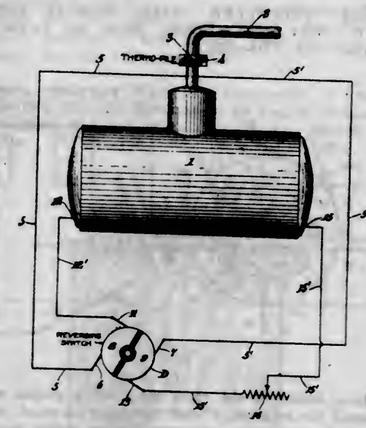
1. An insulating wire covering machine embodying therein a rotatable horizontal platform, a container or containers for a coil of cotton sliver or other material supported by said platform, means adapted to hold said container or containers at an incline towards the axis of rotation of said platform, wire feeding means whereby a wire is continuously fed axially of said platform, means applying adhesive to the wire before the sliver, or other material, is wound thereon, means for compacting the sliver, or other material, upon the wire, means for applying binding cords or strands to the compacted sliver, and actuating means for said platform, said wire feeding means and said last named means.

1,576,578. WIRE-COVERING MACHINE. WILLIAM E. COOK, New York, N. Y., assignor, by mesne assignments, to The Peerless Insulated Wire and Cable Company, New York, N. Y., a Corporation of Delaware. Filed Dec. 13, 1918. Serial No. 266,565. 8 Claims. (Cl. 117—40.)



1. A wire covering machine embodying therein a rotatable horizontal platform adapted to receive a container or containers for cotton sliver, or other material, means feeding a wire axially of said platform, means applying adhesive to said wire before the sliver, or other material, is applied thereto, actuating means for said platform and said wire feeding means, and an automatic stop mechanism whereby said actuating means is made inoperative with the exhaustion of the sliver in any container, consisting of electrical contacts adjacent the bottom of the container or containers carried by said platform, a movable circuit closing device adapted to be sustained by the coil of sliver within a container and to descend therein as the sliver is withdrawn therefrom, said device being adapted to electrically connect said contacts when the supply of sliver is substantially exhausted, an electromagnet included in circuit with said contacts, and means controlled by said magnet and operatively connected with said actuating means, whereby with the closing of said electrical circuit, said actuating means will be made inoperative.

1,576,579. GROUND-POTENTIAL-NEUTRALIZING SYSTEM. SAMUEL I. COBY, Elmhurst, N. Y., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed Mar. 9, 1922. Serial No. 542,879. 11 Claims. (Cl. 178—58.)

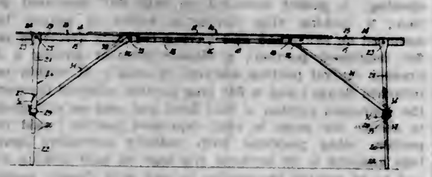


1. In a grounded telegraph system, the combination with telegraph stations and a telegraph line uniting the same, of a ground connection for said line at each station, an artificial network simulating electrically said line and said stations, and means associated with and controlled by a difference of currents in said line and said network for neutralizing differences in ground potential between the said ground connections.

1,576,580. CLOSURE MEMBER FOR CONTAINERS. HARTLEY ELLIS, Cleveland, Ohio. Filed Mar. 16, 1925. Serial No. 15,784. 8 Claims. (Cl. 220—40.)

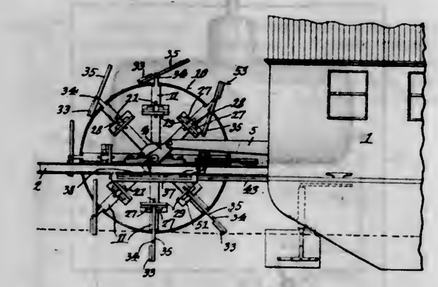
1. In a closure for containers, the combination with a container head having a central opening with an inturned flange; a flat depressed portion adjacent such opening; a gasket mounted on said flat depressed portion; a locking ring having a series of spaced lugs mounted on said head and having the lugs overlying said flat depressed portion; a closure member having a depressed central portion adapted to snugly fit within said inturned flange; and a flat ring portion adapted to overlie the depressed portion of said head and rest on said gasket to secure the same in said depressed portion; said ring portion being provided with radially extending spaced lugs adapted to fit between the lugs on said locking ring and to be rotated thereunder to lock said closure member tightly on said barrel head and gasket.

1,576,581. METHOD AND APPARATUS FOR PROTECTION OF METALLIC SURFACES. GUY H. ELMORE and HENRY J. CREIGHTON, Swarthmore, Pa., assignors to Antiscale Corporation, Philadelphia, Pa., a Corporation of Delaware. Filed Apr. 9, 1925. Serial No. 21,772. 10 Claims. (Cl. 204—25.)



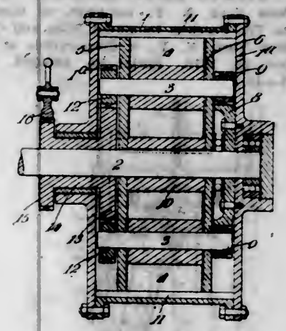
1. The process of protecting a surface of a metallic body against encrustation or scaling which comprises passing an electric current through the body and maintaining throughout the body of which the surface is to be protected a potential gradient below that which will accelerate normal electrolytic corrosion thereof while maintaining a cross sectional density of current in the body whereby encrustation and scaling of the surface will be eliminated.

1,576,582. PHONOGRAPH RECORD AND METHOD FOR PRODUCING SAME. VICTOR H. EMERSON, New York, N. Y. Filed Oct. 20, 1920. Serial No. 418,245. 4 Claims. (Cl. 18—48.4.)



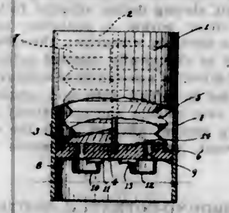
1. A tablet having a body member of nonrecord material, containing in uniform arrangement throughout its body in predetermined proportions silica clay and resin, having upon the surface a layer of thermoplastic record material with a sound record therein.

1,576,583. COLLAPSIBLE AND EXTENSIBLE TRESTLE. JAMES FREDRICK ENGLAND, Lebanon, Mo. Filed June 23, 1925. Serial No. 39,112. 6 Claims. (Cl. 304—6.)



4. A trestle comprising a beam having depending and upper flanges, pairs of legs, the upper end portions of said legs and depending flanges having portions to engage one another, the upper flanges having slots to receive the upper ends of said legs, and means for connecting the legs of each pair with one another and with the beam for bracing the legs and beam relatively to one another.

1,576,584. PROPELLER. FRANK ERDMANN, Buffalo, N. Y. Filed Sept. 5, 1925. Serial No. 54,789. 3 Claims. (Cl. 170—108.)



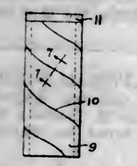
1 In a device of the class described, a paddle wheel supported for rotation, a blade pivotally mounted on the paddle wheel, a spring actuated locking device movably mounted on the paddle wheel and engaging the blade to hold the blade in working position, the locking device embodying cam parts, means under the control of an operator for operating the locking device to free the blade, said means coacting with one of the cam parts of the locking device, and the blade cooperating with the other of the cam parts, to move the locking device, and to permit the blade to engage with the locking device, as the blade swings to working position.

1,576,585. POWER-TRANSMITTING APPARATUS. ALBERT EDWARD ESCOTT, Upper Norwood, London, England. Filed Aug. 4, 1925. Serial No. 48,063. 6 Claims. (Cl. 74—34.)

1. In a power transmitting apparatus of the kind referred to, the combination with a driving element and a driven element, of a drum containing a quantity of liquid, a system of paddles arranged within said drum, supports in which said paddles are rotatably mounted, a sun-wheel on one of said elements, planet wheels connected to said paddles and meshing with said sun wheel, an additional sun wheel of smaller diameter than the former sun wheel, and other planet wheels connected to said paddles and meshing with said additional sun wheel.

1,576,586. TALKING-TOY MECHANISM. FRED EVANS, Summit, N. J., assignor, by mesne assignments, to Voices Incorporated, a Corporation of Delaware. Filed Mar. 21, 1923, Serial No. 626,493. Renewed July 7, 1925. 7 Claims. (Cl. 46—46.)

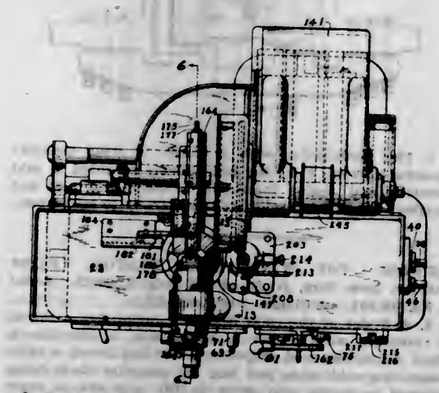
8. A sounding device having in combination a tubular casing, a tubular bellows having one of its heads fixed with respect to the casing and its other head free to move longitudinally of the casing, the freely movable head being weighted whereby it will compress and expand the bellows by gravity, one of said heads having a plurality of orifices therethrough, a reed pipe associated with one of said orifices, and adapted to sound when air is forced out of the bellows, and a reed pipe associated with the other orifice and adapted to sound when air is drawn into the bellows.



1,576,587. VALVE-GRINDING TOOL. GEORGE F. FERRIS, Grand Forks, N. Dak. Filed Feb. 16, 1922. Serial No. 537,575. 7 Claims. (Cl. 51—29.)

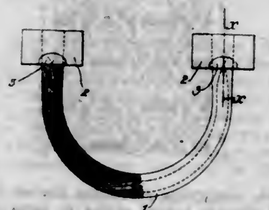
1. In a grinding tool for producing reverse rotary motion, a shaft having grooves provided therein of different pitches, and a handle mechanism reciprocably mounted on said shaft including independent clutch

mechanisms slidable upon the shaft engaging in different grooves of the same, whereby upon reciprocation of the handle mechanism, the clutch mechanisms will automatically engage and disengage to cooperate with the grooves in said shaft to effect rotary movement of the shaft in different directions at different speed ratios.



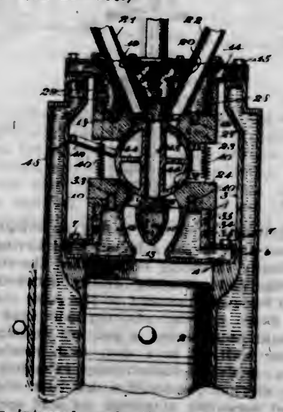
1,576,588. ART OF MANUFACTURING FOUNTAIN-PEN CAPS AND BARRELS. MARX FINSTONS, New York, N. Y. Filed Feb. 20, 1925. Serial No. 10,709. 6 Claims. (Cl. 18—56.)

1. The method of manufacturing pen barrels or caps which consists in forming a piece of stock around a mandrel and fusing the edges of the stock together.



1,576,589. ROLL-GRINDING MACHINE. JOHN F. FLAHERTY, Toledo, Ohio, assignor to The Bock Bearing Company, Toledo, Ohio, a Corporation of Ohio. Filed July 12, 1920. Serial No. 395,589. 8 Claims. (Cl. 51—97.)

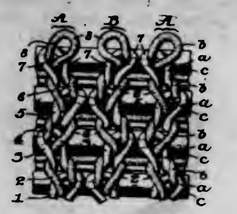
3. In apparatus of the class described, the combination of a plurality of grinding wheels, one of which has a straight grinding face and the other of which has a curved grinding face, and means for automatically moving the work parallel to said straight grinding face while being operated upon thereby and for oscillating the work about the center of said curved face while being operated upon thereby.



6. In a grinding machine, the combination of a carriage, a work-holder on said carriage adapted to be swung about an axis to move the work in a curved path while being acted upon by a grinding wheel, a wheel-dressing device mounted on said carriage and adapted to be swung about an axis parallel to the axis of the work-holder, and a plurality of stops cooperating with said carriage to accurately position the work or said device interchangeably in operative relation to the grinding wheel.

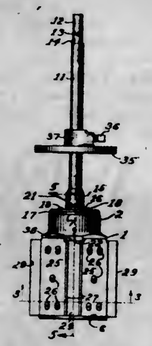
1,576,590. RAIL BOND FOR ELECTRIC RAILWAYS AND METHOD FOR PRODUCING THE SAME. ROBERT FORTER, Zurich, and HULDREICH ALTORFER, Ruti, Switzerland, assignors to Embru-Werke A.-G., Ruti, Switzerland. Filed June 10, 1924. Serial No. 719,062. 3 Claims. (Cl. 172—262.)

1. A rail bond comprising an electric conductor, an iron terminal block secured to each end of the conductor, each block comprising a tubular portion having a central opening in which one end of the conductor is inserted and having diametrically opposite broad longitudinal ribs, the cylindrical walls of said tubular portion being pressed inwardly toward the conductor throughout a portion of their length to flatten a portion of the conductor and the central opening said longitudinal ribs serving to prevent spreading of the conductor and the central opening in a lateral direction so that the cross-sectional area and also the periphery of the conductor and the opening are reduced whereby the pressed-in material of said tubular walls compacts the conductor and fills all interstices.



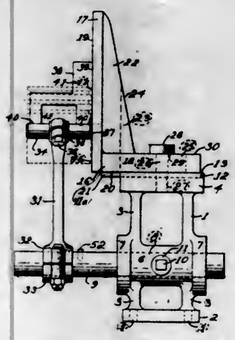
1,576,591. ROTARY VALVE. CHRISTIAN C. FOSS, Pinecastle, Fla., and DOUGLAS D. DE LOACH, Savannah, Ga. Filed Nov. 13, 1924. Serial No. 749,728. 3 Claims. (Cl. 23—190.)

1. In an internal combustion engine, an engine block having a cylinder bore and a space above said bore, a



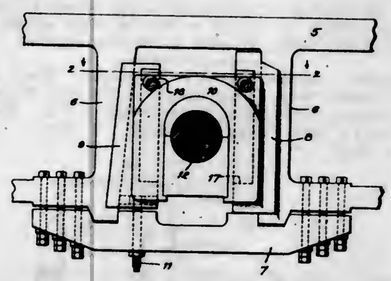
cylinder cover having an extension upstanding therefrom of circular cross sectional contour, a cover for the space above said cylinder bore, said last named cover having a portion depending therefrom of circular cross-sectional contour and overlying said upstanding extension, a lower valve seat member supported on said upstanding extension and movable vertically, an upper valve seat member slidably engaged with said depending portion of the second cover, a rotary valve supported between said valve seat members, said valve having a transverse passage therethrough, and tension spring means connecting said valve seat members.

1,576,592. FABRIC. WILLIAM J. FOX, Philadelphia, Pa., assignor to James R. Kendrick Co., Inc., Philadelphia, Pa., a Corporation of Pennsylvania. Filed Dec. 24, 1923. Serial No. 682,421. 11 Claims. (Cl. 66—190.)



2. A fabric comprising successive courses of pairs of interknitted threads having chains of loops on the opposite faces of the fabric, one thread of each of certain pairs forming loops in the chains on one face of the fabric and forming relatively short and long loops in the chains on the opposite face of the fabric, the said short loops embracing loops formed by the other thread of the same pair, and said long loops embracing loops formed by a thread of the next adjacent pair.

1,576,593. GRINDER. ALBERT F. FROUSSARD, St. Louis, Mo. Filed Mar. 24, 1923. Serial No. 627,267. 4 Claims. (Cl. 51—206.)

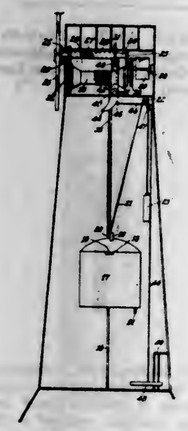


1. In a grinder, a spindle having an integral flange formed at one end thereof, a hollow head having a series of longitudinally extending slots formed therein secured to said flange and extending axially outwardly therefrom, a cap removably secured to the outer end of said head, said flange and cap adapting said head to carry lubricant, said head having a pair of openings formed in the inner wall of each slot, said openings being adapted for receiving diametrically extending springs, an abrasive element positioned within each slot adapted to be forced outwardly therefrom by said springs, and means for permitting lubricant to be discharged from said hollow head by centrifugal force.

1,576,594. PISTON ALIGNER. ALBERT F. FROUSSARD, St. Louis, Mo. Filed May 7, 1923. Serial No. 637,288. 3 Claims. (Cl. 33—180.)

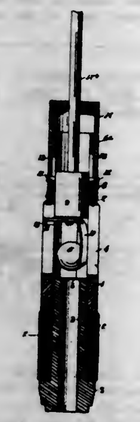
1. A piston-aligner comprising a supporting member, a mandrel borne by the supporting member, and a member having a surface perpendicular to the axis of said mandrel and borne by the said supporting member, the connection between the two members including a flat upper plate carried by the supporting member and grooved in the longitudinal direction of the mandrel and the surface member having a lower base arm carrying a depending rib slidable in the groove of the plate and means for holding the base arm and plate in adjusted positions.

1,576,595. LATERALLY-ADJUSTABLE DRIVING BOX. IVAN O. GARDNER, Somerset, Pa., assignor of one-half to George H. Emerson, Baltimore, Md. Filed June 6, 1925. Serial No. 35,396. 22 Claims. (Cl. 105—81.)



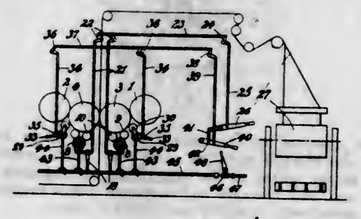
1. The combination with a frame, of wear members mounted therein, a driving box slidably mounted in said members and means insertable between said box and members for shifting said box transversely to said frame.

1,576,596. TOY WINDMILL ELEVATOR. FRANK GOFF, New York, N. Y. Filed July 2, 1925. Serial No. 40,991. 3 Claims. (Cl. 46—37.)



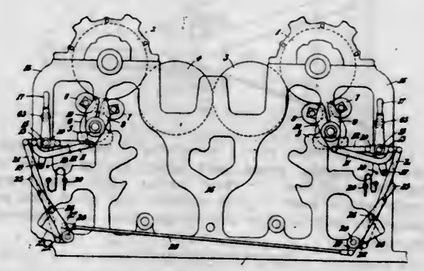
1. A device of the class described comprising a tower, a vertically movable car in said tower, a propeller, a shaft supporting said propeller, a winding drum, a cable connecting said drum and car, the propeller shaft being adapted to rotate said drum to lift said car, a shaft supporting said drum, a sleeve on said shaft, the propeller shaft and drum shaft having inter-meshing gears thereon, the gear on the propeller shaft being integral with the sleeve slidably mounted on the propeller shaft,

a trip lever pivoted on said tower, the trip lever having bifurcated arms, a disk mounted between the bifurcated arms of the lever on the sleeve, and means on said



car cooperating with the lever for rotating the latter to disengage the gear on the sleeve from the gear on the drum shaft when the car reaches its uppermost position.

1,576,597. COMBINATION TUBING DRAINER AND PULLER. GEORGE WILSON GOSS, Wichita Falls, Tex. Filed Aug. 8, 1925. Serial No. 48,969. 8 Claims. (Cl. 103—221.)

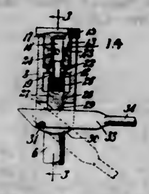


1. In a standing valve, having a ball valve therein, including in combination with the traveling valve; a slotted collar mounted beneath said traveling valve; a plunger reciprocable within said standing valve; a tongue depending from said plunger; means on said standing valve to receive said slotted collar upon downward movement of said traveling valve to effect contact of said tongue with said ball valve; means to effect limited upward movement of said plunger and tongue to unseat the said valve, and means to lock said plunger in said latter position.

1,576,598. MEANS FOR CLEANING THE OFFSET OR IMPRESSION SURFACES OF ROTARY OFFSET PRINTING MACHINES. BENJAMIN JOSEPH JOHN GOULDING, Altrincham, England, assignor to Linotype and Machinery Limited, London, England, a British Company. Filed July 11, 1924. Serial No. 725,323. 6 Claims. (Cl. 101—425.)

2. In a rotary offset printing machine, the combination with a blanket cylinder, of blanket-cleaning apparatus comprising a cleaning fluid trough, a power-operated roller adapted to receive fluid from said trough and means adapted to bring the roller into and out of contact with the blanket, and blanket-drying apparatus comprising a sulphur trough and a power-operated roller adapted to transfer sulphur therefrom to the blanket.

1,576,599. MEANS FOR WASHING LITHOGRAPHIC PRINTING SURFACES. BENJAMIN JOSEPH JOHN GOULDING, Altrincham, England, assignor to Linotype and Machinery Limited, London, England, a British Company. Filed July 11, 1924. Serial No. 725,324. 11 Claims. (Cl. 101—425.)

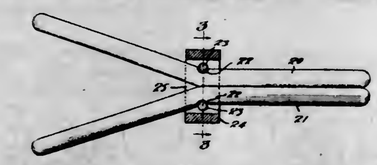


1. In a lithographing printing press, the combination with a plurality of plate cylinders of plate washing mechanism appropriate to each plate cylinder comprising a fluid trough and a plate washing device adapted to receive fluid from the trough, and means operative to bring the washing devices into and out of operation either individually or a plurality of thereof collectively.

1,576,600. INLET-VALVE MECHANISM FOR FLUSH TANKS. PHILIP HAAS, Dayton, Ohio. Filed June 9, 1925. Serial No. 35,872. 3 Claims. (Cl. 137—104.)

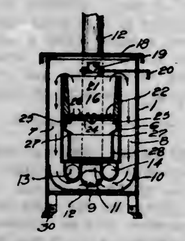
1. Inlet valve mechanism for flush tanks, comprising a valve casing provided with an interior partition having an aperture therein, said casing having apertures in its upper and lower portions co-axial with said partition aperture, a plug fitting in the upper aperture in the casing and closing the same and having a sealing engagement with said partition, said plug having an

interior bore and lateral openings communicating with the bore and with the interior of the valve casing, a collar detachably secured to said plug extending through the aperture in said partition, and provided at its lower end with a valve seat, a plunger valve engaging in the



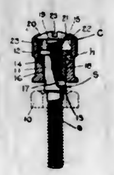
bottom aperture of the casing, having a recess at its upper end co-axial with the valve seat and a removable valve proper seated in the said recess for engaging said valve seat and movable float actuated means having portions operatively engaging said plunger valve.

1,576,601. PROCESS OF MAKING CARBON AND OTHER COATED PAPERS. ALFRED HAIGH, Staffordshire, England. Filed Sept. 7, 1922. Serial No. 586,772. 3 Claims. (Cl. 91—68.)



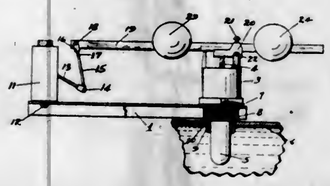
2. A process including moistening and superposing webs of paper; pressing said webs together for causing said webs to cohere in a manner to permit ready separation of the webs; and while the webs are still cohered coating the exposed face of one of the webs with carbon for forming copying paper.

1,576,602. EXERCISING DEVICE. PHILIP L. HAIMS, Cleveland, Ohio. Filed Feb. 24, 1925. Serial No. 11,218. 4 Claims. (Cl. 272—68.)



1. An exercising device comprising a pair of complementary angular levers, said levers having a pair of transverse notches at their medial point upon relatively remote sides, a body member, and pivot pins arranged in said notches and having their ends mounted on said body.

1,576,603. HEATING STOVE. HENRY C. HAMILTON and GEORGE W. BAILEY, Spokane, Wash. Filed May 1, 1925. Serial No. 27,190. 2 Claims. (Cl. 126—6.)



1. The combination in a heating stove having an interior elevated casing to form a base flue and spaced from the side walls of the stove to form downdraft flues communicating with the base flue, of a pair of open end, spaced hot air tubes beneath the casing forming a smoke flue in the upper portion of the base flue, a smoke or stove pipe communicating with the smoke flue, and a fire pot in the casing.

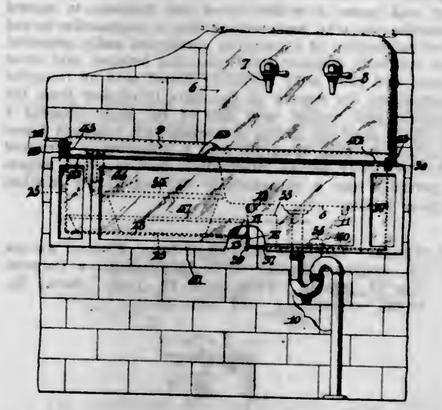
1,576,604. BINDING POST. CHARLES HARDY, New York, N. Y., assignor to Amsco Products, Inc., New York, N. Y., a Corporation of New York. Filed June 17, 1925. Serial No. 37,652. 5 Claims. (Cl. 173—259.)

1. An electrical binding post comprising a stem having a threaded shank adapted to receive a clamping member and having a flanged head provided with a smooth cylindrical exterior wall of a diameter greater than that of the shank, whereby a stop shoulder for the clamping member is provided, the said stem head being also provided with an axial tapped bore open at the top and with a transverse conductor receiving orifice located adjacent said stop shoulder and communicating with the tapped bore, and a clamping cap movable on the stem head to and from the clamping member, said cap being provided with a smooth cylindrical interior wall slidably mating with the smooth cylindrical exterior wall of the stem head and cooperating with said flanged head to prevent cap withdrawal, the cap being also provided with a centrally arranged separate depending screw member fixed to the cap and threadedly mating with the tapped bore of the stem.

1,576,605. REGULATOR. JESSE B. HARRIS, Minneapolis, Minn. Filed Feb. 18, 1925. Serial No. 10,031. 3 Claims. (Cl. 236—99.)

1. In a regulator, the combination with a base of a thermostatically operated element mounted on said base and including a movable pin, a lever mounted on said element and in hinged relation thereto, an adjustable weight element on said lever, an electrical switch mechanism mounted on said base and link mechanism interposed between said switch mechanism and said lever, whereby the movement of said pin will actuate said switch.

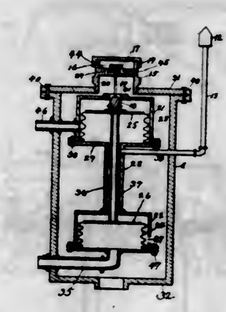
1,576,606. RECIPROCATING PUMP. CHARLES O. HASKELL, San Francisco, Calif. Filed Aug. 5, 1922. Serial No. 579,877. 3 Claims. (Cl. 103—224.)



1. In a pump, the combination of the pump cylinder, a secondary cylinder inside the same, a hollow pump

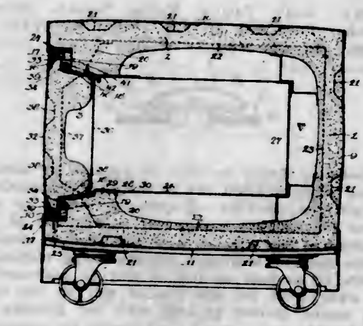
plunger movable within the second cylinder and within the outer cylinder, the secondary cylinder and pump

plunger forming two air chambers for balancing the operation of the pump plunger and valves to allow the discharge of the fluid through the hollow pump plunger.



1,576,607. DOMESTIC SINK CABINET. WILLIAM S. HASSKARL, Philadelphia, Pa. Filed Nov. 21, 1925. Serial No. 70,503. 9 Claims. (Cl. 4—189.)

1. The combination with a domestic sink and draining slab of removable suspended rods adapted to sustain shelving which affords underlying storage for sink accessories.

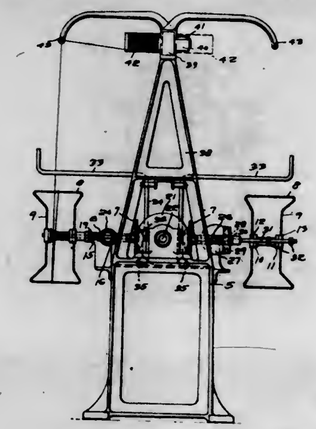


1,576,608. STEAM HEATING SYSTEM. OTTO HELPHINGSTINE, Los Angeles, Calif. Filed June 28, 1924. Serial No. 721,629. 22 Claims. (Cl. 137—101.)

21. In a steam trap, in combination, a receiver, one or more chambers mounted in said receiver, one or more pistons adapted to be reciprocated in said chamber or chambers, means for subjecting one of said pistons to live steam pressure, and means for neutralizing the

effect of said live steam pressure, thereby permitting the water of condensation in said receiver to flow therefrom by its own weight.

1,576,609. FIRE-RESISTING SAFE. DAVID E. HUNTER, Muskegon, Mich., assignor to Shaw Walker Company, Muskegon, Mich., a Corporation of Michigan. Filed Dec. 31, 1923. Serial No. 683,758. 13 Claims. (Cl. 109—2.)

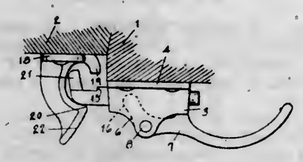


1. A fire resisting safe comprising a box-like body having metal side walls with rectangular marginal edges meeting at substantially right angles to each other, the central portions of said walls being convex with respect to said body, and insulating means in supporting engagement with the interior surfaces of said walls.

1,576,610. SKEINING MACHINE. CHARLES C. JESSEN, Wilmington, Del., assignor to Atlas Powder Company, Wilmington, Del., a Corporation of Delaware. Filed Feb. 5, 1925. Serial No. 7,070. 3 Claims. (Cl. 242—49.)

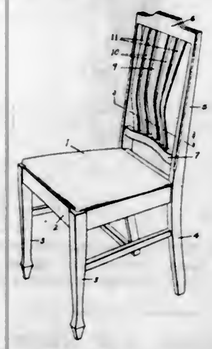
1. A machine of the character described, comprising a longitudinally extending main drive shaft, a plurality of swift carrying shafts extending in opposite directions therefrom, friction discs upon the inner ends of said swift carrying shafts, friction discs upon the main drive shaft, with which the first named friction discs engage, spring means upon the swift carrying shafts, tending to move the said shafts to bring their discs into engagement with the discs of the main drive shaft, pivoted manually operable levers which extend across the faces of the discs of the swift carrying shafts, and brake elements

carried by said levers and bearing upon the friction discs of the swift carrying shafts and handle extensions upon said levers projecting outwardly toward the swifts,



movement of said levers shifting said discs out of engagement with the discs of the main drive shaft and applying a brake thereto.

1,576,611. CAP. SAMUEL KANER, Toronto, Ontario, Canada. Filed Aug. 3, 1925. Serial No. 47,837. 1 Claim. (Cl. 24—206.)

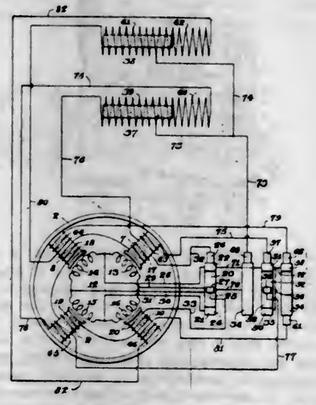


A fastening device for caps or apparel for securing opposing edges of a slit one to the other, comprising a rigid plate, a plurality of apertures therein, a snap fastener for selective engagement in any one of said apertures and for attachment to one edge of aforesaid slit, the head of said snap fastener being inclined to one side of its base so that it may be positioned to slant away from the direction of pull on the same, spring means carried by said plate for gripping the neck of said snap fastener, and means for connecting the rigid plate to the other edge of the slit.

1,576,612. LATCH. ISAAC S. KEELER, Grand Rapids, Mich., assignor to Keeler Brass Company, Grand Rapids, Mich. Filed Nov. 17, 1924. Serial No. 750,372. 5 Claims. (Cl. 292—173.)

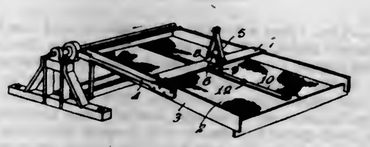
1. In a latch, the combination of a housing having an opening in the top thereof, the end walls of the housing being provided with opposed bolt openings, a bolt reciprocatingly mounted on said bolt openings and having an inwardly projecting finger at its front end and a shoulder like catch on its inner side engageable with the front end of the housing when the bolt is retracted, said bolt having a slot therein alined with said opening in said housing, a spring for projecting said bolt arranged within said housing, a retracting lever pivotally mounted on said housing and having an arm projecting through said opening in said housing into engagement with said slot in said bolt, the rear wall of the slot being rearwardly inclined so that when the bolt is retracted its front end swings inwardly to engage its said catch, and a strike having a projection disposed in a plane in front of its keeper and with which said finger on said bolt engages on the closing of the door to disengage the bolt catch.

1,576,613. CHAIR. JOHN H. KELLOGG, Battle Creek, Mich., assignor to Sanitarium and Hospital Equipment Company, Battle Creek, Mich. Filed July 21, 1924. Serial No. 727,282. 3 Claims. (Cl. 155—178.)



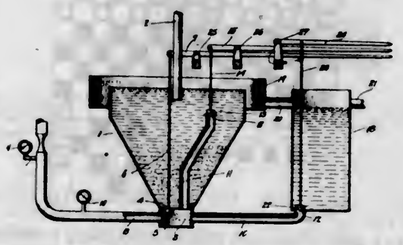
1. In a chair, the combination with a rearwardly inclined seat, of a back comprising rearwardly inclined posts, a straight top cross bar connecting the upper ends of said posts, a bottom cross bar disposed in spaced relation to said seat and having a rearwardly bowed central portion of substantial curvature, and a plurality of vertically disposed slats extending between said cross bars, said slats being forwardly bowed with an irregular curvature, the bowing of the slats increasing from the central slat toward each side of the back, whereby a back is provided having a horizontally concaved lower portion merging upwardly into a horizontally concaved and vertically convex intermediate portion which merges upwardly into a substantially flat rearwardly inclined upper portion.

1,576,614. LOCKER HINGE. JOHN KNELL, Aurora, Ill., assignor to All-Steel-Equip Company, a Corporation of Illinois. Filed June 17, 1925. Serial No. 37,669. 10 Claims. (Cl. 189—46.)



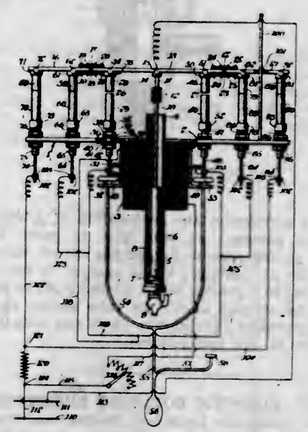
1. In combination, a locker having an opening in one wall thereof, a reinforcing angle bar along one side of said opening, a closure for said opening comprising a sheet metal plate having one edge bent to form a flange, the apex of the angle formed by said angle bar having a portion cut away to form a slot, and portions adjacent said slot pressed out to form sockets, a strap having a pintle for engaging said sockets, means for attaching said strap to said angle bar, and means for holding said pintle in said sockets.

1,576,615. ELECTRIC-CURRENT-SUPPLYING DEVICE. LOUIS PAULERO, Petersburg, Va., assignor to Industro-Electric Tools, Inc., a Corporation of Virginia. Filed July 27, 1922. Serial No. 578,016. 4 Claims. (Cl. 172—240.)



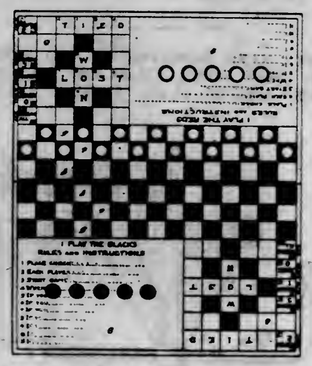
1. The combination of two electrical translating devices, a generator having a plurality of pairs of pole pieces, a plurality of pairs of series windings supplementing the main field windings of the generator, means forming electric circuits including certain of said series windings therein and a commutator for supplying impulses from the generator to one of said devices, and means forming electric circuits including certain of said series windings therein and a commutator for supplying electrical impulses from the generator to the other of said devices, one of said means supplying a greater number of impulses to its series windings and its translating device per revolution of the generator armature than the other.

1,576,616. SCREEN CLEANER. LEE COLLIN PHARO, Thetford Mines, Quebec, Canada, assignor to Asbestos Corporation of Canada, Limited, Montreal, Canada, a Corporation. Filed Sept. 19, 1925. Serial No. 57,379. 2 Claims. (Cl. 209—382.)



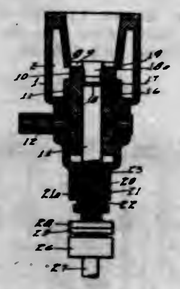
1. The combination with an oscillatory screen having means for oscillating same in a longitudinal direction, of a cross-piece carried by the screen frame transversely thereof and spaced from the upper surface of the screen-cloth, said cross-piece having vertical guiding apertures therethrough and carrying a bracket-piece apertured in line with the apertures in the cross-piece and acting as a support for a rocking striker; a steel strip extending longitudinally of and secured to the upper surface of the screen-cloth; a pair of bumper pins secured at their lower ends to said steel strip and projecting upwardly through the guiding apertures in the cross-piece and bracket piece; a rocking striker formed of a flat metal strip bent into triangular form and pivoted centrally of its base to said bracket-piece and in such relation to the bumper pins that upon oscillation of the screen the striker will be rocked and each pin alternately struck thereby.

1,576,617. SAND DEWATERING AND MIXING DEVICE. JOHN PRINCE, Kansas City, Mo. Filed May 1, 1925. Serial No. 27,166. 9 Claims. (Cl. 302—15.)



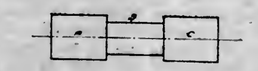
1. A sand dewatering and mixing apparatus comprising a hopper, a mixing chamber below and communicating with the hopper, a stand pipe opening to the mixing chamber and to an upper portion of the hopper, valves controlling flow from the hopper to the mixing chamber and to said stand pipe, and a discharge pipe, leading from the mixing chamber.

1,576,618. ARC FLASH LIGHT. LYLE S. RENNICK, Los Angeles, Calif. Filed June 26, 1922. Serial No. 570,882. 5 Claims. (Cl. 176—41.)



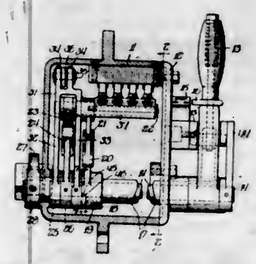
1. In an arc flash light, a light circuit including a pair of arcing electrodes normally in contact, a switch comprising a par of electrodes normally a slight distance apart, means for moving one of the electrodes of said switch into contact with the other switch electrode to close the light circuit, and means for quickly moving apart said switch electrodes and said arcing electrodes to cause an arc flash light between said switch electrodes and an arc flash light between said arcing electrodes.

1,576,619. CROSS-WORD-PUZZLE GAME. MARK REUBIN, Brooklyn, N. Y. Filed Apr. 15, 1925. Serial No. 23,384. 5 Claims. (Cl. 273—131.)



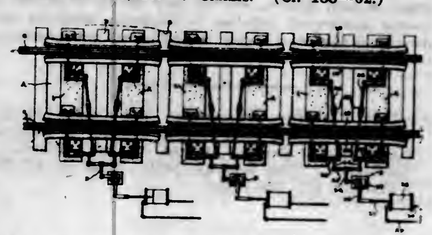
1. A game of the class described comprising a checker-board playing surface and a checker-board recording surface having a plurality of designated blocks and a set of playing objects, said playing objects having designations on one face thereof corresponding to the designated blocks of the recording surface.

1,576,620. CARBURETOR. GEORGE E. RIBLET, Erie, Pa. Filed Apr. 13, 1922. Serial No. 552,080. 2 Claims. (Cl. 261—49.)



1. In a carburetor, the combination of a body having a suction passage; an air valve in axial alinement with the passage; means for moving the air valve axially to vary the air opening; a fuel passage in the air valve terminating in a nozzle; and a metering pin in the nozzle varying the opening as the air valve moves, said metering pin extending through the valve and forming a fuel connection to the fuel passage.

1,576,621. ELECTRIC ROTATING RESISTANCE FURNACE. FRIDTJOF ANDERSEN, Trollhattan, Sweden, assignor to Trollhättans Elektrothermiska Aktiebolag, Stockholm, Sweden. Filed Mar. 22, 1923. Serial No. 626,975. 2 Claims. (Cl. 204—64.)

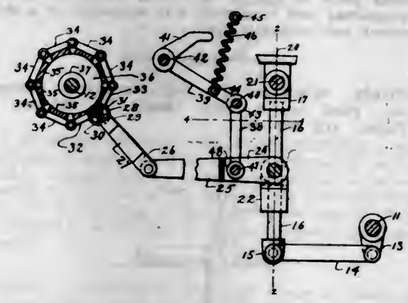


1. A resistor for electric furnaces, in which the specific electric resistance of the material, constituting the current-supplying parts of the resistor, is lower than that of the material constituting the intermediate part of the resistor in the proportion of at least 1 : 2.

1,576,622. CONTROL MECHANISM. FRITZ BALZER, Moline, Ill., assignor to Troy Laundry Machinery Co., Ltd., Chicago, Ill., a Corporation of New York. Filed Sept. 10, 1924. Serial No. 736,817. 12 Claims. (Cl. 192—148.)

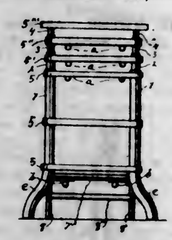
2. In a washing machine, in combination, a shell including a door, a rotary cylinder having a plurality of circumferentially disposed doors each adapted to register with said shell door, brake control means for said cylinder, electric switch means, operating means for said brake control means and said switch means, automatic mechanism for moving said operating means, said automatic mechanism comprising a movable member responsive to the motion of said cylinder, means for interrupting the operative connection between said motion responsive means and said operating means, propelling means for said cylinder, electrical controlling circuits for said propelling means, said electrical controlling means including a circuit closer responsive to the position of said shell door, and means for shunting said circuit closer whereby said propelling means may operate independently of said shell door.

1,576,623. TRACK BRAKE FOR RAILWAY. MARSHALL E. BARR, Franklin Park, Ill. Filed Sept. 27, 1924. Serial No. 740,327. 7 Claims. (Cl. 188—62.)



2. A car brake structure comprising spaced ties having pockets opening into the space between the ties, saddle plates spaced longitudinally of the ties, rail seats between the saddle plates, wheel grippers upon opposite sides of said rail seats and having depending rocker arms pivotally mounted upon said saddle plates and extending into said pockets, links in said pockets extending longitudinally of the tie and pivotally connected with said rocker arms, and actuating means including draw bars extending longitudinally between the ties and having lever bars pivotally connected therewith and extending into said pockets and pivotally connected with said links, each lever bar having one link pivotally connected with its inner end and the other link pivotally mounted intermediate its length.

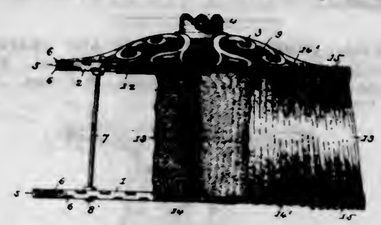
1,576,624. MECHANISM FOR POWER TRANSMISSION AND SPEED VARIATION IN AUTOMOBILES. ISRAEL BENJAMINS, Brooklyn, N. Y. Filed July 11, 1922. Serial No. 574,194. 5 Claims. (Cl. 74—53.)



1. In a means for power transmission and speed variation a friction wheel and a flexible member encircling

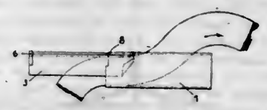
the same, an oscillating member, pivotally connected to said flexible member at one end thereof, to swing in the plane of said wheel, and a corresponding member at the other end of said flexible member, said oscillating member having a curved periphery, the curvature of which is deviating from the center of the pivot of said oscillating member, and said corresponding member being so disposed as to be in engagement with the part of

said periphery, which is transpivotal with relation to said corresponding member, when said oscillating member is turned in one direction and out of engagement therewith when said oscillating member is turned in the opposite direction, thereby alternately tightening said flexible member on to said wheel and loosening the same thereon, combined with means for turning said oscillating member alternately in opposite directions, thereby turning said wheel.



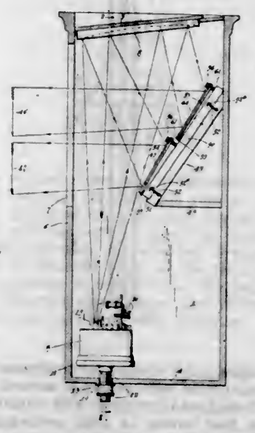
1,576,625. STEPLADDER. ARTHUR WALDRON BLODGETT, Grand Rapids, Mich. Filed Jan. 14, 1925. Serial No. 2,267. 2 Claims. (Cl. 228—39.)

1. In step ladder construction, side rails each made of several sections of round tubing having solid walls and telescoped together in pairs, steps made of sheet metal with downwardly folded edges and having tubular bearings at the ends adapted to be welded around the side rail sections, each side rail section having a hole through it on one side immediately below the end of the step, and each upper pair of side rail sections having corresponding holes near its lower ends, spring actuated latches mounted upon the lower side of each top step on each section of the ladder in position to be made to pass into the holes in the rail sections and hold each section of the ladder in desired positions so the ladder cannot be shortened or extended when the sections are locked in place.



1,576,626. LAMP SHADE. LESLIE H. BURLIN, Chicago, Ill., assignor to Burlin Co., a Firm composed of Leslie H. Burlin and Walter H. Sedgwick, Chicago, Ill. Filed June 19, 1924. Serial No. 720,991. 7 Claims. (Cl. 240—108.)

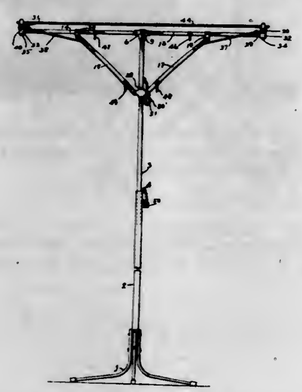
4. In a lamp shade of the type described, the combination of upper and lower frame rings arranged in spaced relation and formed with holding grooves in their outer surfaces, a shade member formed by a plurality of layers of fabric, individual windings of thread



for securing opposite margins of said layers in the aforesaid holding grooves, and means for spreading said rings apart to tension said lays of fabric.

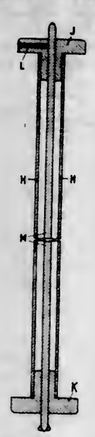
1,576,627. REMOVABLE TAG FOR LACES. RENÉ LOUIS CHASSELON, Paris, France. Filed Apr. 5, 1923. Serial No. 630,163. 4 Claims. (Cl. 24—143.)

1. A removable tag for laces, cards, ribbons and the like including a pair of members both of which are open longitudinally throughout the lengths thereof, the opening in one of the members being adapted to receive a portion of the lace, means on one of the members for impinging the lace, and the members being arranged in longitudinal sliding and partial telescopic engagement with each other so as to be closed together and effect a binding of the impinging means on the lace.



1,576,628. TELEGRAM-EXHIBITING MACHINE. NATHANIEL B. CREGIER, Chicago, Ill., assignor to Rothschild-Cregier Liquid Lens, Inc., Chicago, Ill., a Corporation of Illinois. Filed Jan. 7, 1922, Serial No. 527,553. Renewed Sept. 4, 1925. 8 Claims. (Cl. 178—1.)

1. A telegraph register receiving apparatus comprising in combination, a tape, electrically operated mechanism for printing and feeding said tape, a magnifying mirror located in the region of said mechanism, a reflector op-

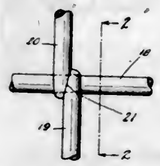


eratively positioned relative to said mirror and means for conducting said tape across the field of the magnifying mirror concurrently with the feeding thereof by said mechanism.

1,576,629. COMBINED HALL TREE AND DRAPERY RACK. OTIS C. CULP, Elkhart County, Ind. Filed June 27, 1925. Serial No. 40,064. 8 Claims. (Cl. 211—24.)

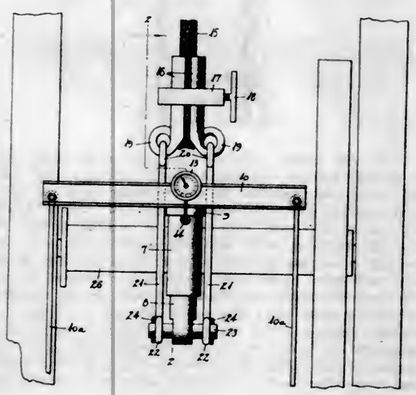
1. In a rack or stand, a standard, a pair of bars hinged thereto in opposed relation, means connected with the standard for raising and lowering said bars simultaneously, a movable element mounted upon each of said bars, and means for actuating said movable elements simultaneously and when said bars are raised or lowered.

1,576,630. MUSIC ROLL FOR PLAYER PIANOS. ERNEST RUIZ DE ARANA, Madrid, Spain. Filed June 14, 1923. Serial No. 645,255. 1 Claim. (Cl. 242—69.)



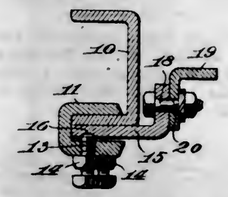
An adjustable roller support for perforated note sheets, comprising a tubular member, heads secured in the opposite ends thereof and provided with radially extending flanges, each head having an axial opening therethrough, a journal support disposed in the openings of the heads, and means passing radially through the flange of one head and engaging the support to secure the same against relative movement.

1,576,631. PROCESS FOR THE CONSERVATION OF THE PELLICLES OF HYDRATE OR OF HYDRATED ETHERS OF CELLULOSE. JEAN DEFAUCAMBERGE, Paris, France, assignor to Societe Francaise des Crins Artificiels, Paris, France, a French Corporation. Filed Jan. 12, 1924. Serial No. 685,933. 3 Claims. (Cl. 23—250.)



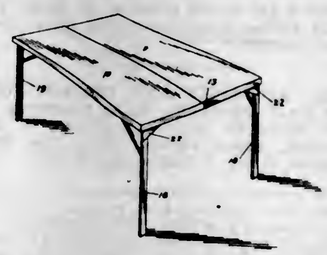
1. The method of preserving hydrated cellulose compounds liable to change on drying, which consists in impregnating said compounds with a solution of a deliquescent and antiseptic agent.

1,576,632. WIRE JOINT. GUY DINCOGNITO, Chicago, Ill. Filed Jan. 6, 1923. Serial No. 610,981. 1 Claim. (Cl. 287—51.)



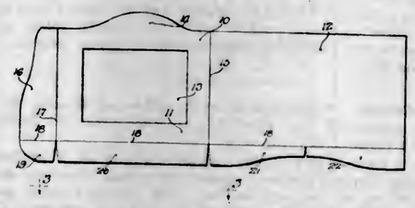
A joint of the character described comprising a supporting member, a second member having its end reduced and tapering to its extremity and clasped about said supporting member, said reduced portion having its side edge bevelled, and another member having its end reduced and tapering to its extremity and clasped about said supporting member, said last member having its side edge oppositely bevelled and abutting against a bevelled edge of said second member.

1,576,633. STRAIN METER. ARTHUR DIX, Taft, Calif. Filed June 6, 1925. Serial No. 35,402. 3 Claims. (Cl. 265—68.)



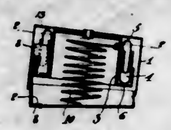
1. A strain meter comprising strain indicating means including a cylinder and a plunger working in the cylinder and projecting downwardly therefrom, means for connecting said cylinder with the frame or base of a drilling rig, a clamp above the cylinder for engaging the drilling cable of the rig, and means connecting said clamp and plunger.

1,576,634. CLAMP FOR BUMPER-SUPPORTING BRACKETS. WILLIAM W. DONEGAN, Los Angeles, Calif. Filed Mar. 16, 1925. Serial No. 15,943. 4 Claims. (Cl. 293—55.)



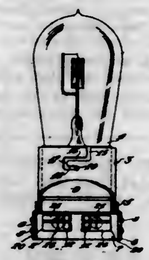
1. A bumper supporting arm clamp comprising a substantially U-shaped member that is adapted to be applied to a fixed part of a motor vehicle frame, set screws passing through one of the legs of said U-shaped member, and an L-shaped member, one of the legs of which is adapted to be engaged by the set screws in the other member.

1,576,635. FOLDING TABLE. WALLACE R. DOUGLAS, Crete, Nebr. Filed Oct. 2, 1924. Serial No. 741,175. 1 Claim. (Cl. 45—116.)



A table leg and means for securing said leg to the table top on the under side thereof, said means including a plate which is adapted to be secured to the table top at the under side thereof, spaced ears on said plate, a triangular brace rigidly secured to said leg adjacent its upper extremity, said triangular brace and leg being pivotally connected with the ears of the said plate, said leg being thus foldable into parallelism with the table top, a support which is adapted to be secured to the table top in the path of the leg, and a foldable brace pivotally connected with said leg and with said support, said foldable brace being adapted to hold said leg in perpendicular relation to the table top.

1,576,636. ADVERTISING DEVICE. SIDNEY B. EGAN, Oak Park, Ill. Filed Nov. 21, 1924. Serial No. 751,275. 4 Claims. (Cl. 40—149.)

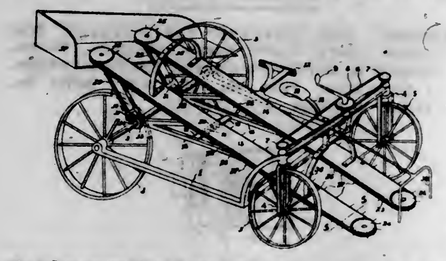


1. An advertising device possessing physical resemblance to a stage comprising a blank for providing the front of said device and having extensions, one of said extensions being bent in a regular arc and being adapted to form the back of said device, said front and back having upturned extensions adapted to form pockets to receive replaceable advertising matter whereby to change the character of advertising displayed in said device.

1,576,637. BOX ADAPTED PARTICULARLY FOR CLIPS. ERNST CONNY EGELIN, Stockholm, Sweden, assignor to Aktiebolaget Autopins, Stockholm, Sweden, a Corporation. Filed Apr. 20, 1925. Serial No. 24,644. 9 Claims. (Cl. 211—8.)

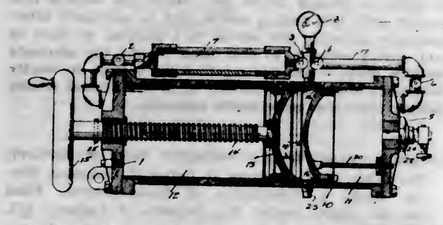
1. A box adapted particularly for clips, gramophone needles or similar objects having the same or about the same thickness, and for holding and projecting said objects singly into a position, which adapts them to be conveniently seized, said box comprising in combination two relatively movable parts, means for forcing said parts apart, a holder for the objects within the box, said holder comprising a channel formed in one of said parts of the box and fitting to the shape of the objects, a seizing member upon which the objects may be caused to strike, a feeding device for moving the objects into contact with said seizing device, and an abutment intermittently arresting the objects in a position in front of said seizing member, so that upon forcing the aforesaid movable parts of the box together the objects are singly forced out of the holder proper by means of said seizing member and thus made easily accessible.

1,576,638. ELECTRICAL SOCKET. JOHN S. ELLIOTT, Providence, R. I., assignor to Coto-Coil Company, Boston, Mass., a Corporation of Massachusetts. Filed Oct. 28, 1922. Serial No. 597,500. 8 Claims. (Cl. 173—328.)



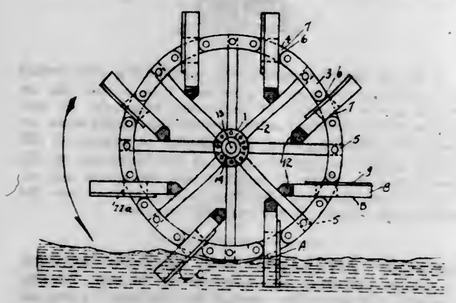
1. In an electrical socket, the combination with means for receiving the base of a vacuum tube or the like on which are a plurality of projecting terminals, of contact-members provided with cooperating spring-arms arranged in offset relation and adapted to engage at different points on opposite sides of the terminals on the tube, when the latter is inserted into the socket and rotated in one direction and then carried farther into the socket and rotated in the opposite direction.

1,576,639. APPARATUS FOR LOADING SHOCKS. SAMUEL COUNTESS ENGLISH, Orillia, Ontario, Canada. Filed Aug. 22, 1924. Serial No. 733,561. 2 Claims. (Cl. 56—354.)



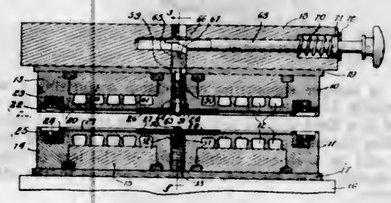
1. In an apparatus for loading shocks, a wheeled frame, a pair of parallel sections constituting an articulate frame, means for securing one of said sections to the main frame, means for adjustably securing the other sec-

tion to said main frame, a pair of rigid straps arranged to overlap each other, one of said straps extending from each section of the articulate frame, a bolt engaged in one of a series of apertures provided in each of said



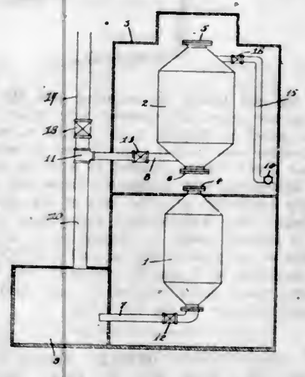
straps to unite them together, a pair of inclined endless conveyors, one mounted upon each of the aforesaid sections and having its rear end supported thereby, and arcuate members suspending the frontal ends of said conveyors from the aforesaid main frame.

1,576,640. DISPENSING MACHINE. MANUEL M. ENOS, Oakland, Calif. Filed Apr. 14, 1925. Serial No. 23,005. 2 Claims. (Cl. 221—47.2.)



1. In a machine for dispensing grease, the combination of an air cylinder, a piston therein, means to advance and retract the piston, an auxiliary air chamber connected to opposite ends of the air cylinder, cocks in said connections, a grease cylinder, a floating piston therein, and connections provided with valves from the air cylinder to opposite ends of the grease cylinder, said grease cylinder having an outlet at one end.

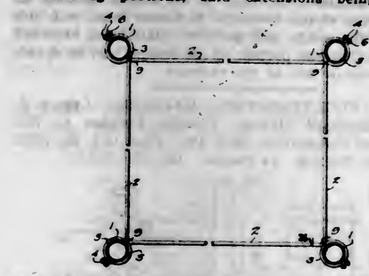
1,576,641. MARINE PROPULSION PADDLE WHEEL. WILBER S. BEEKLEY, Glendale, Ohio. Filed Sept. 14, 1925. Serial No. 56,190. 8 Claims. (Cl. 170—143.)



1. A feathering blade paddle wheel comprising a hub portion, spokes and a rim, the rim having interspaced grooves on the sides thereof, paddles pivotally retained in the rim, said paddles composed of arm portions with blades attached to the arms, the paddles having slots of equivalent width of the rim between the grooves, weights on the paddles at their inner ends, and the weighted ends adapted to abut the spokes thereby limiting the feathering of the paddles.

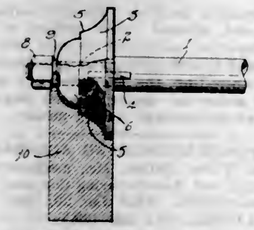
1,576,642. MOLDING DIE. JOSEPH W. BISHOP, Muskegon, Mich., assignor to The Brunswick-Balke-Collender Company, Wilmington, Del., a Corporation of Delaware. Filed Apr. 20, 1923. Serial No. 633,642. 11 Claims. (Cl. 18—5.3.)

1. In a die for molding phonograph records or the like, an ejector pin slidably journaled in the die, yielding means for holding the ejector pin in an extended position relative to the die, a manually operable plunger journaled in the die for actuating the ejector pin, and a second yielding means for holding the plunger in a retracted position.



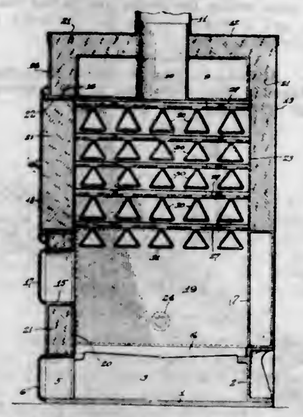
1,576,643. APPARATUS AND PROCESS FOR GAS AND HEAT RECOVERY FROM DIGESTER BLOW-OFF EXHAUST VAPORS. LEMUEL B. DECKER, Kenogami, Quebec, Canada. Filed June 22, 1925. Serial No. 38,891. 6 Claims. (Cl. 92—7.)

4. An apparatus for recovering gas and heat from digester blow-off vapor in the cooking of wood, comprising a digester having an exhaust and an inlet, a chip bin adapted to communicate with the digester inlet, and means for conducting vapor from the digester exhaust to said bin.



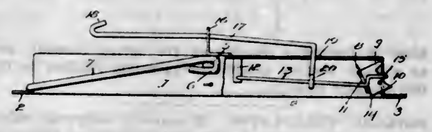
1,576,644. DERRICK BRACE. CHARLES DRAKE, Mannington, W. Va. Filed May 4, 1925. Serial No. 27,973. 3 Claims. (Cl. 189—19.)

1. In a device of the character described, a horizontally disposed member adapted to extend from one derrick leg to the adjacent one, said members being provided with portions adapted to partially surround the derrick legs, said members being provided with flattened portions inwardly of said surrounding portions and being further provided with openings in said flattened portions whereby two adjacent members may be secured to each other, and extensions arranged outwardly of said surrounding portions, said extensions being provided



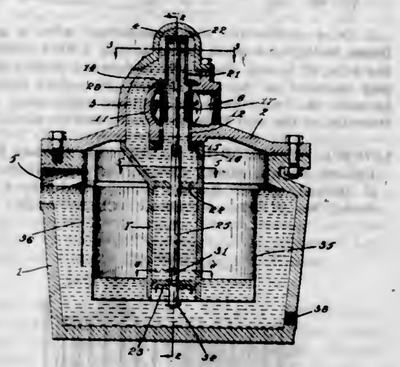
with openings for the reception of bolts whereby said surrounding portions may be clamped around the derrick leg.

1,576,645. DEVICE FOR SURFACING MOLDINGS OR THE LIKE. SIDNEY E. ESKEW and LEWIS HARRIS, Benton, Ill. Filed Jan. 11, 1924. Serial No. 685,674. 3 Claims. (Cl. 144—115.)



1. The combination with a rotatable mandrel of a supporting form removably carried thereby, said form having an irregular contour, a metal shell having its interior and exterior conforming to the contour of the form and arranged to be slipped over the latter and to engage the form frictionally, said shell being provided with an exterior abrading surface, and means common to said shell and said form for securing the shell and the form to the mandrel to prevent the relative rotation thereof.

1,576,646. HOT-WATER FURNACE. THOMAS FARMER, Birmingham, Mich. Filed Feb. 20, 1925. Serial No. 10,519. 2 Claims. (Cl. 122—218.)

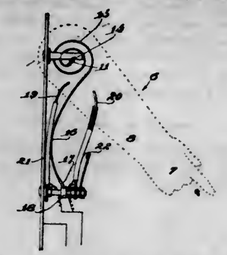


1. In a hot water furnace, a casing having a combustion chamber therein, a set of superposed headers in said casing adapted to have water circulated therethrough, tubes connecting the headers of one set to the headers of the other set, said tubes being triangular in cross section and disposed with upwardly presented apices to provide soot shedding walls, and baffle members on said tubes provided with openings at the apices of said tubes cooperating therewith in providing sinuous passages from the top of said combustion chamber to the upper portion of said casing.

1,576,647. RAT TRAP. SADAHMI FURUYA, Sacramento, Calif. Filed May 23, 1925. Serial No. 32,386. 2 Claims. (Cl. 43—83.)

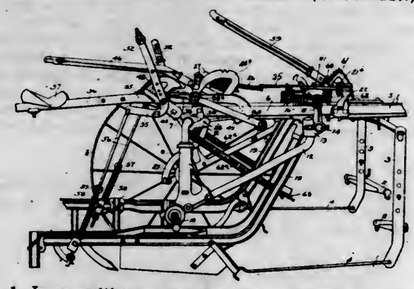
1. An animal trap comprising a base having an apertured wall, a spring actuated yoke pivotally connected with the base and having its bight arranged to be positioned adjacent to said wall and the outer side thereof, a swingable release member connected with the base and having a projection adapted to be moved outwardly through the aperture in said wall and also having below said projection a cam arranged to be engaged by the bight of the yoke, a retaining rod for said release member, and an animal actuated trip connected with said rod.

1,576,648. STEAM TRAP. JOSEPH A. GAGNON, Three Rivers, Quebec, Canada. Filed June 18, 1923. Serial No. 646,211. 10 Claims. (Cl. 137—103.)



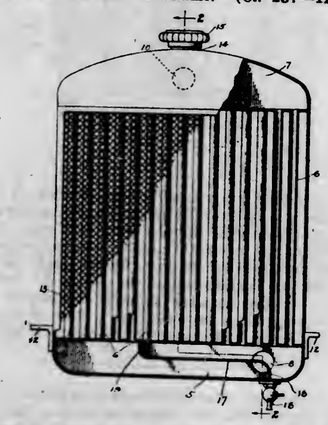
1. A steam trap comprising a casing having an inlet and an outlet tube, said tube having a passage therethrough, a by-pass communicating directly with both ends of the passage, means for preventing direct communication between said inlet and the by-pass, whereby said passage receives fluid in opposite directions when the trap is discharging, a valve member slidably disposed in said passage for controlling the tube, and a float device disposed in the casing and connected to the valve member.

1,576,649. MOTOR FOR ANIMATED ADVERTISING SIGNS. ELI E. GREGORY, Brooklyn, N. Y. Filed Feb. 26, 1925. Serial No. 11,900. 4 Claims. (Cl. 172—126.)



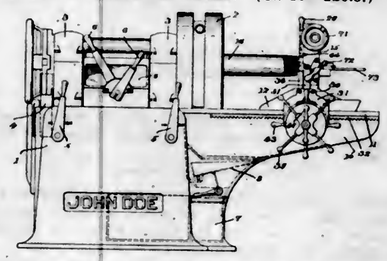
1. The combination, with a movable feature, of its actuating element, a compressed spring element in opera-

tive relation to the actuating element, a fulcrum on which a free end of the spring element rocks, a thermostatic ele-



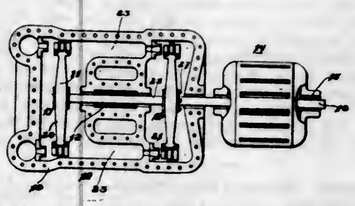
ment in operative relation to the spring element, and an electric heating element in operative relation to the thermostatic element.

1,576,650. CULTIVATOR. RICHARD H. GRIFFITH, Bellevue, Ohio, assignor to The Ohio Cultivator Company, Bellevue, Ohio, a Corporation of Ohio. Filed Oct. 27, 1923. Serial No. 671,265. 8 Claims. (Cl. 97—147.)



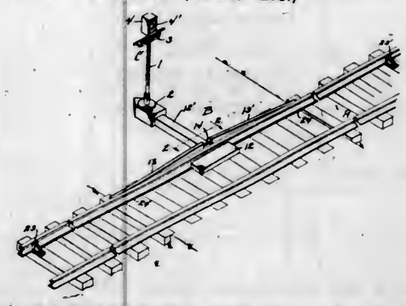
1. In a cultivator, the combination with a general frame including a draft frame having a fixed relation to the axle, of a seat frame whose forward portion is slidably mounted on the draft frame, and rollers interposed between the two frames to facilitate adjustment to the traveling of the seat frame backward and forward.

1,576,651. AUTOMOBILE RADIATOR. EDWARD HAGEN, Pelican Rapids, Minn., assignor of one-half to Alvin C. Meland, Pelican Rapids, Minn. Filed May 1, 1925. Serial No. 27,197. 4 Claims. (Cl. 257—125.)



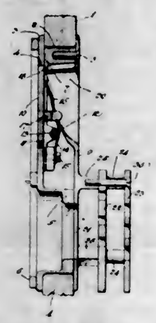
1. In an automobile radiator, the combination of a manifold having an outlet opening, a manifold having an inlet opening, a series of passageways connecting the two manifolds, and a partition plate extending across the outlet manifold in front of the outlet opening, so that a portion of the discharge is drawn from each side of the partition plate, said partition plate being extended laterally so that one portion of the stream will be drawn from the remote side of the radiator.

1,576,652. PIPE-THREADING MACHINE. LESLIE S. HALL, Brantford, Ontario, Canada, assignor to Williams Tool Corporation, Erie, Pa. Filed Oct. 23, 1923. Serial No. 670,236. 14 Claims. (Cl. 10—120.5.)



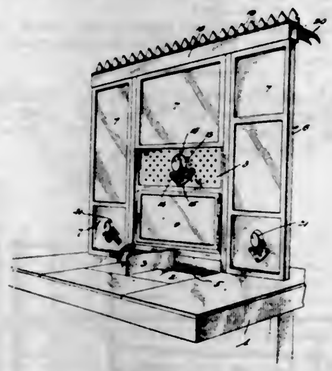
1. In a threading machine, a movable carriage thereon carrying a head, slidable chaser holders in said head, means for imparting movement to said head, rotatable means connected to and operated by said carriage moving means for controlling the movement of said chaser holders, and means for operating said rotatable means independent of the carriage moving means.

1,576,653. POWER-DEVELOPING APPARATUS. IVAN S. HANSON, Winter Harbor, Me., assignor to Westinghouse Electric and Manufacturing Company, a Corporation of Pennsylvania. Filed Jan. 20, 1923. Serial No. 613,985. 6 Claims. (Cl. 253—39.)



1. In an elastic-fluid turbine, the combination of a casing, a rotor within the casing and having blade-carrying disks and a single bearing for the rotor arranged between the disks.

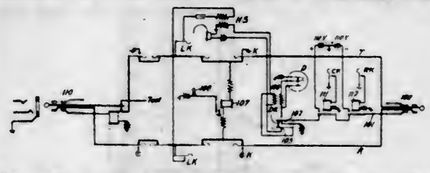
1,576,654. SIGNAL. JOHN R. HILL, Knoxville, Tenn. Filed Apr. 15, 1925, Serial No. 23,359. Renewed Jan. 23, 1926. 5 Claims. (Cl. 246—293.)



1. A signal of the class described comprising a signal member, a train operated tread member, means for normally holding the signal member in operative position and the tread member in raised position so that when the tread member is lowered by a train the signal will be moved to inoperative position, a latch member for holding the tread member in lowered position and a train operated trip member for moving the latch member to releasing position.

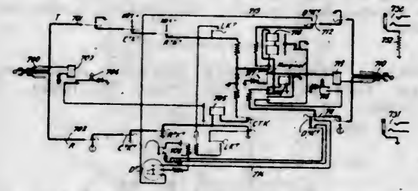
1,576,655. BANK FIXTURE. CHARLES A. HONSINGER, Detroit, Mich. Filed Apr. 24, 1925. Serial No. 25,568. 7 Claims. (Cl. 89—36.)

1. The combination with a partition having an opening, of plates clamped against said partition at the opening thereof, a speaking tube carried by one of said plates and extending into the partition opening, an outwardly opening trap door supported by the same plate, and baffle members carried by the other of said plates at said speaking tube.



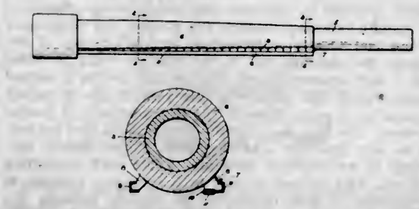
1,576,656. BANK FIXTURE. CHARLES A. HONSINGER, Detroit, Mich. Filed Nov. 10, 1924. Serial No. 749,092. 1 Claim. (Cl. 89—36.)

A bank fixture including a partition having a loophole, an outwardly opening closure for said loophole, a gun engaging means on the inner side wall of said closure adapted under gun pressure to cause said closure to start opening before the gun is within the loophole, and means holding said closure normally in a closed position.



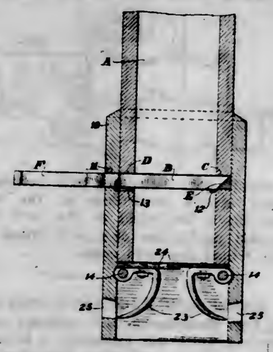
1,576,657. TELEPHONE-EXCHANGE SYSTEM. EMIL JACOBSEN, Port Washington, N. Y., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed Nov. 18, 1920. Serial No. 424,941. 2 Claims. (Cl. 179—6.3.)

1. In a telephone system, a toll line, a toll operator's position, a subscriber's line, means whereby the toll operator can control a talking circuit between said lines comprising a cord circuit at the toll operator's position, serially related automatic switches, and a trunk conductor separate from the talking circuit extending from



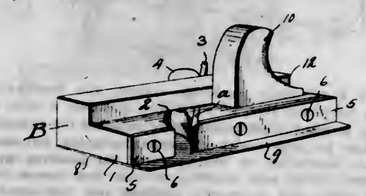
the cord circuit for controlling the setting of said switches, pay station mechanism at the subscriber's station, and means individual to the cord circuit for controlling said mechanism over said trunk conductor to collect or refund deposited coins.

1,576,658. TELEPHONE-EXCHANGE SYSTEM. EMIL JACOBSEN, Port Washington, N. Y., assignor to American Telephone and Telegraph Company, a Corporation of New York. Original application filed Nov. 18, 1920, Serial No. 424,941. Divided and this application filed Jan. 23, 1923. Serial No. 614,418. 12 Claims. (Cl. 179—27.)



1. In a telephone exchange system, the combination with a telephone line, an operator's position, a head set thereat, means including automatic switches for extending said line to said position, means including automatic switches controlled by the operator for building up a connection from said position to said line, means controlled from said operator's position and individual to said line for transmitting a tone to the operator's telephone set over said first connection, a key mechanism at said operator's position, means controlled jointly by the operation of said key mechanism from said operator's position over said first connection and by the seizure of said line through said second connection for breaking down said first connection, and means individual to the line for transmitting a tone to the operator's head set operative over the first mentioned connection.

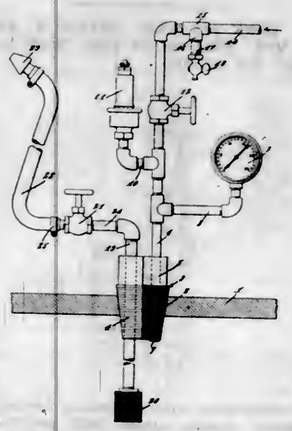
1,576,659. SLIDE FOR GUNS. BRYAN P. JOYCE, Davenport, Iowa, assignor to Thomas A. Conlon, Silver Spring, Md. Filed Dec. 3, 1924. Serial No. 753,602. 5 Claims. (Cl. 89—37.) (Granted under the act of Mar. 3, 1883, 22 Stat. L., 625.)



5. A gun barrel, flange members formed on and extending longitudinally thereof to constitute slides for the gun, said flange members provided with a plurality of spaced slots.

1,576,660. COMBINED BAG HOLDER AND CUT-OFF. PETER LASSEN, Roanoke, Tex., assignor of one-half to Erich G. Lassen, Roanoke, Tex. Filed Dec. 19, 1924. Serial No. 756,972. 5 Claims. (Cl. 83—26.)

1. In combination with a chute, pair of rock shafts journaled within the same, hooks carried by the rock shafts and movable outwardly through openings in the chute, a cut-off also carried by the rock shafts, and means for simultaneously operating the cut-off and moving the hooks.

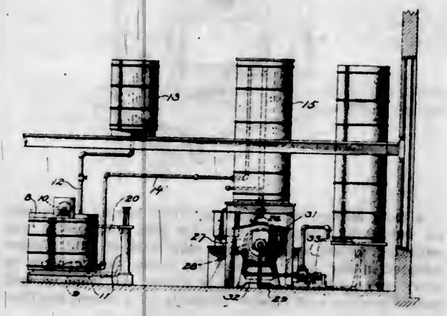


1,576,661. PLANE. AUGUST LAWRENCE, McKeesport, Pa. Filed Mar. 17, 1925. Serial No. 16,229. 2 Claims. (Cl. 164—83.)

1. A plane for trimming the edge of a strip of floor covering comprising a stock, a plate overlying a face of said stock and extending beyond a marginal portion of the stock, the extended portion of the plate being adapted to underlap the marginal portion of the strip to be trimmed, and a cutting bit held by the stock and projecting beyond the margin of the stock with which the extension of the plate is associated.

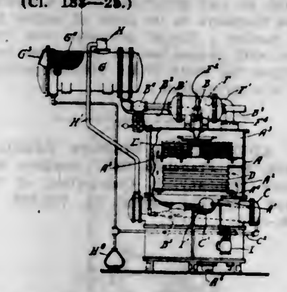
1,576,662. SPRAY DEVICE. DAVID G. LEONARD, Lexington, N. C., assignor to Ben F. Greene, Lexington, N. C. Filed Aug. 16, 1922. Serial No. 582,209. 1 Claim. (Cl. 299—95.)

In a device of the class described, a threaded plug-closure provided at its upper end with a wrench head, an air conduit extended through the closure and terminated at one end closely adjacent to the inner end of the closure, the opposite end of the conduit being provided with a first lateral branch, the conduit having a second lateral branch, the conduit having a third lateral branch disposed at a point between the first and second lateral branches, the first and second lateral branches projecting in one direction, and the third lateral branch projecting in an opposite direction, a pet cock projecting from the first lateral branch in a direction parallel to the conduit, a hand valve in the conduit between the first and third branches and extended laterally from the conduit beneath the petcock, a gage carried by the second lateral branch and disposed closely adjacent to the valve, a pop valve located parallel to the conduit and connected to the third branch, and a delivery conduit extended through the closure and located on the same side of the air conduit as the third branch, the delivery conduit comprising a lateral portion; said lateral portion and the second branch being spaced above the wrench head,



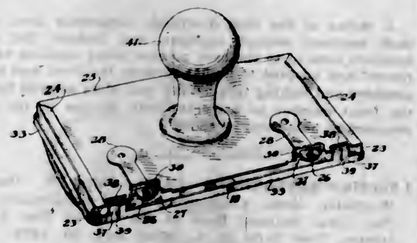
and all of the branches, the petcock, the valves and the delivery conduit being located in the same vertical plane, thereby leaving the space open and unencumbered on either side of said plane, to facilitate the application of a wrench to the wrench head of the closure.

1,576,663. STENCIL SHEET. GUY LEONARD, Baltimore, Md. Filed July 11, 1925. Serial No. 43,027. 7 Claims. (Cl. 41—38.6.)



1. A stencil sheet of loose-fibered paper coated with a solution of shellac, triacetin and diethylphthalate.

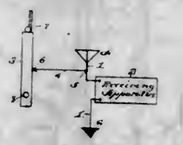
1,576,664. MANUFACTURE OF BREAD COMPOUND. ERNEST E. LINDSEY and PATRICK J. SHORTT, San Francisco, Calif. Filed Feb. 11, 1925. Serial No. 8,391. 3 Claims. (Cl. 99—10.)



1. A method of producing a bread compound of the character indicated, which consists of first dissolving, mixing, and heating sugar, salt, and milk, adding a starch solution thereto, and continuing the mixing and heating until gelatinization takes place, and thereafter adding a liquid shortening and combining the same with the other ingredients.

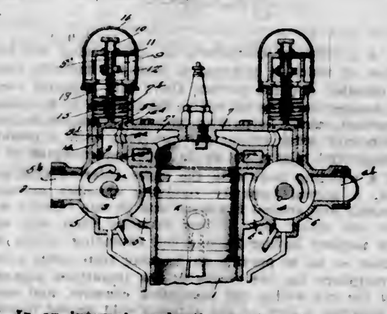
1,576,665. APPARATUS FOR HEATING AND DEAERATING WATER. PERCY S. LYON and VICTOR A. ROHLIN, Philadelphia, Pa., assignors to Cochrane Corporation, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Apr. 14, 1925. Serial No. 23,087. 2 Claims. (Cl. 122—25.)

1. Water heating and deaerating apparatus comprising in combination a deaerating chamber having an upper water inlet from which the water heated passes through the upper portion of the chamber in divided form, a closed heater comprising steam-containing tubes in the lower portion of said chamber for boiling the water in contact therewith, and a closed water heater external to said chamber comprising a steam space traversed by tubes, means for passing the water treated to said chamber inlet through the last mentioned tubes, and a common source of steam supply for the steam space of the external heater and for the tubes of the first mentioned heater.



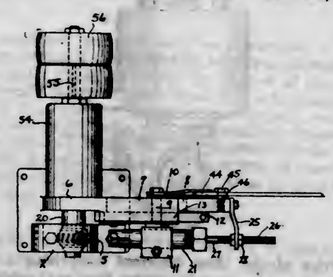
1,576,666. HAND DUPLICATOR. WILLIAM PORTER MASON, Norfolk, Va. Filed Oct. 2, 1924. Serial No. 741,229. 14 Claims. (Cl. 101—125.)

1. In a hand duplicator, the combination of a main frame having side and end walls and a flange projecting inwardly therefrom and defining an opening through the bottom of said frame, a diaphragm provided with a flange arranged to fit within said walls and rest with its flange upon said inwardly projecting flange, said diaphragm having a downwardly projecting curved surface projecting through said opening, an inking pad, unitary means for securing the diaphragm and pad to the main frame with the pad about the curved surface of said diaphragm, and means for securing a stencil frame and stencil sheet to the main frame in position for stamping.



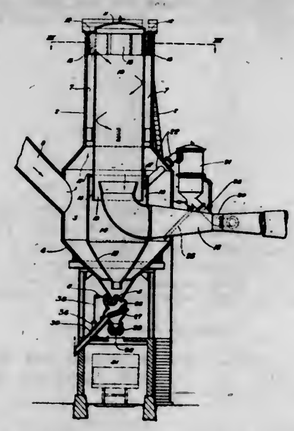
1,576,667. SYSTEM FOR ELIMINATING INTERFERENCE. JOSEPH O. MAUBORGNE and GUY HILL, Washington, D. C. Filed Feb. 9, 1924. Serial No. 691,550. 10 Claims. (Cl. 250—20.)

4. In an apparatus for eliminating undesired high frequencies in receiving systems, a wave coil consisting of an insulating tube, a single layer winding of insulated wire in the form of a helix wound thereon, said wire being uninsulated in part to permit contact to be made therewith by a slider provided with a terminal for connecting said coil to the remainder of the receiving apparatus, an extensible strip of metal electrically connected to one end of said coil, and means for coiling and extending said strip of metal in prolongation of said wave coil.



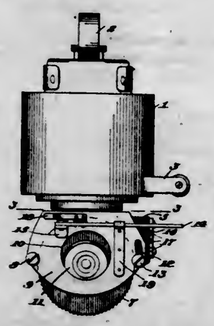
5. A system for the reception of radio signals comprising in combination an antenna circuit, a receiving circuit coupled with said antenna circuit, a resonance wave coil, and an independent connection from the said antenna to a point on said resonance wave coil, said connection on said wave coil being adjustable.

1,576,668. ROTARY VALVE. JAMES IVEN MAY, Niles, Ohio. Filed Apr. 30, 1925. Serial No. 26,982. 6 Claims. (Cl. 123—190.)



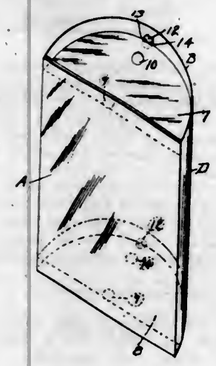
1. In an internal combustion engine, the combination with the cylinder, of a valve casing, a rotary ported valve therein, there being a passage leading from the valve casing to the cylinder, a ported packing member located in said passage, means for positively holding said packing member in contact with the valve, and means for automatically adjusting said holding means to take up wear.

1,576,669. SCREEN-BUTTON-CUTTING APPARATUS. JOSEPH H. MCEVOY, Houston, Tex. Filed Aug. 4, 1923. Serial No. 655,588. 10 Claims. (Cl. 29—69.)



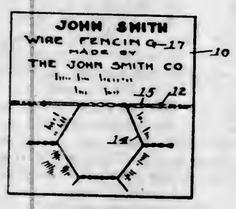
9. In a device of the character described a saw, a support, a reciprocable work holder, a stationary expanding rod therein, means to advance said work holder to said saw, and means on said rod to expand said holder when said holder is withdrawn.

1,576,670. DUST CATCHER. FRANK R. MCGEE, Steubenville, Ohio. Filed Apr. 6, 1921. Serial No. 458,988. 4 Claims. (Cl. 183—81.)



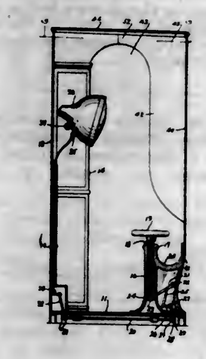
1. A gas cleaner comprising an outer casing, the lower portion of which is enlarged to form an impurity receiving chamber and the portion above said impurity receiving chamber forming an uptake for the gas to be cleaned, a vertical tubular separator member arranged centrally within said outer casing and provided with a plurality of tangential inlet ports at its upper end adapted to impart a whirling motion to the gases entering said separator, a second impurity receiving chamber extending upwardly and around the lower end of said tubular separator, an outlet pipe of less diameter than said separator member having its one end extending within said member so as to provide an annular trap space around its periphery for the escape of the impurities separated from the gas within the separating chamber, and means for inducing a flow of gas through said second impurity receiving chamber.

1,576,671. MEAT SAW. HENRY ANDREW MEYER, Cincinnati, Ohio, assignor to The Wolf Machine Company, Cincinnati, Ohio, a Corporation of Ohio. Filed Mar. 23, 1925. Serial No. 17,678. 1 Claim. (Cl. 143—43.)



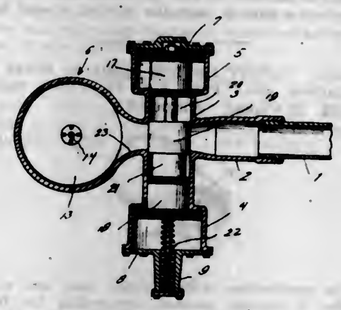
A device of the class described comprising a casing for a motor, a housing depending from said casing and mounting a shaft secured to the motor shaft, said housing having a part thereof projecting downwardly and provided with a bearing, a shaft mounted in said bearing, a rotary saw mounted on said shaft to rotate therewith, said housing and projecting part being recessed and widened to receive and project laterally to the front and rear of the saw and to provide a guard for one side thereof, lying closely adjacent thereto and beyond which only a small portion of the saw projects, a combined gauge and guard for the other side of the saw adjustably secured to said projecting part, a handle on the gauge rigid therewith in its plane of motion for setting same and having a lateral movement into and out of engagement with means on the projecting part of the housing within the width of its widened portion to hold the gauge in a set position.

1,576,672. ADVERTISING DISPLAY EASEL. AUGUST F. MILLER, San Francisco, Calif., assignor to Schmidt Lithograph Company, a Corporation of California. Filed Apr. 28, 1924. Serial No. 709,355. 1 Claim. (Cl. 229—45.)



A carton of the class described, comprising front and back members secured together, and foldable flat end members secured to the back member along opposite edges thereof and adapted to lie flat between the front and back members and locking tabs having open slots secured inside the front member to cooperate with notches in the end members to hold them extended.

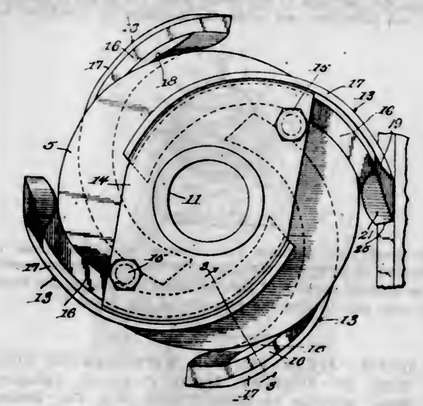
1,576,673. ADVERTISING CARD. JOHN W. ODLIN, Worcester, Mass., assignor, by mesne assignments, to The Chase National Bank of the City of New York, trustee, New York, N. Y. Filed Nov. 20, 1924. Serial No. 751,111. 3 Claims. (Cl. 211—34.)



1. As an article of manufacture, an advertising card consisting of a piece of sheet material centrally folded to form a simple folder and provided with two perforation therethrough along the line of said fold spaced widely apart, and adapted to have an article to be advertised having a pair of oppositely projecting points extending through said perforations in opposite directions and in alignment with each other, whereby the article is pivotally mounted on the folder.

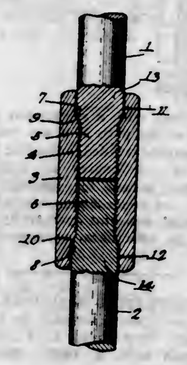
1,576,674. PHOTOGRAPHIC CABINET. ROBERT E. OLSEN, Ocean Park, Calif. Filed July 30, 1925. Serial No. 46,941. 8 Claims. (Cl. 95—82.)

1. A photographic cabinet comprising a base, a top, a back, a front, an artificial light, a seat for the subject being photographed, and light excluding strips on each side of the front and extending towards the back.



1,576,675. AUTOMATIC SUCTION-LINE VALVE. OLIVER H. ROBRIG, Dana, W. Va. Filed Mar. 11, 1925. Serial No. 14,764. 2 Claims. (Cl. 137—101.)

1. In a structure of the class described, an open ended cylinder, a valve slidable in said cylinder, suction chambers at the opposite ends of said cylinder, suction operated pistons connected with said valve and reciprocable in said cylinder, a suction line connected with said cylinder, a float chamber connected with said cylinder, a float operable in said chamber, a valve carried by said float, and suction by-pass pipes affording automatically controlled suction for said chambers.

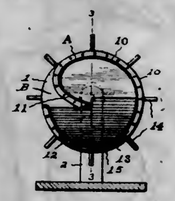


1,576,676. CUTTER. MARION RUBLE, Portland, Oreg. Filed Mar. 23, 1925. Serial No. 17,745. 2 Claims. (Cl. 144—218.)

1. A device of the character described comprising a body having substantially L-shaped in cross section longitudinally curved grooves, a blade in each groove including a web, a flange carried thereby and received in the

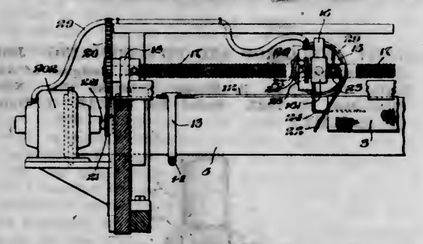
groove, a second flange extending from the web, the ends of such flanges being beveled in different planes.

1,576,677. WELL ROD AND PIPE COUPLING. JOHN H. SCHNEIDELER, Nebraska City, Nebr., assignor of one-fourth to Andrew P. Moran, Nebraska City, Nebr. Filed Jan. 17, 1923. Serial No. 613,217. 1 Claim. (Cl. 287—117.)



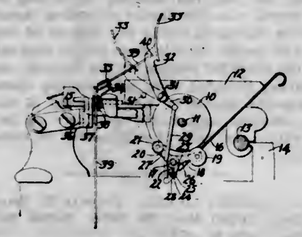
A pump and well rod coupling comprising a coupling member having a longitudinally extending threaded channel, annular shoulders within the channel of the coupling member and spaced slightly from but in proximity to the ends of the threaded portion of the channel, coupled elements having threaded ends, said coupled elements each having annular shoulders, the shoulders of the coupled elements abutting against the shoulders of the coupling member within the walls of said member to form a water tight joint.

1,576,678. CEMENT MIXER. THOMAS W. SHAW, Hayesville, Ohio. Filed Mar. 28, 1924. Serial No. 702,538. 4 Claims. (Cl. 83—73.)



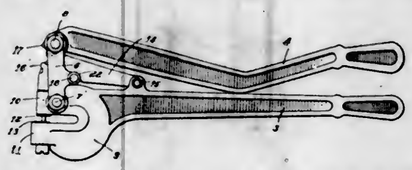
1. A mixing device of the character described, including a hollow mixing drum having a polygonal cross section and mounted to rotate about a horizontal axis, said drum being arranged symmetrically about the axis and having a longitudinally extending opening in one side thereof, a longitudinally extending blade projecting into

the drum toward the axis thereof from one of the edges of the opening so that it will successively elevate and drop the contents of the drum when the drum is rotated in one direction and cause the contents of the drum to



be discharged through the opening when the drum is rotated in a reverse direction, the blade cooperating with the angular corners of the polygonal interior of the drum to mix and agitate the contents of the drum.

1,576,679. APPARATUS FOR WITHDRAWING MOISTURE BY SUCTION. HARRY C. SMITH, Arlington, Mass., assignor to Blake Electric Mfg. Co., Boston, Mass., a Corporation of Massachusetts. Filed Mar. 14, 1924. Serial No. 699,390. 12 Claims. (Cl. 34—48.)



2. The combination with a suction-box and end-closures at opposite sides of the path of a web traveling past said suction-box, of screw-threaded adjusting means by rotation of which the end-closures are adjusted lengthwise of the suction-box, means for reversibly rotating said adjusting means, and feeler-means controlled by the opposite margins of said web and operatively controlling said rotating means to effectuate adjustments of the end-closures.

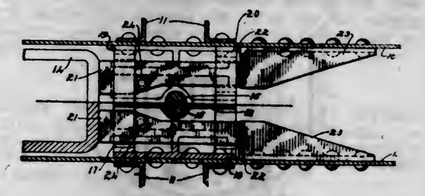
1,576,680. TYPEWRITING MACHINE. JESSE A. B. SMITH, Stamford, Conn., assignor to Underwood Typewriter Company, New York, N. Y., a Corporation of Delaware. Filed Sept. 5, 1922. Serial No. 586,063. 7 Claims. (Cl. 197—65.)

1. In a typewriting machine, the combination with a platen and a letter-feeding carriage therefor, of a releasable work-holding pressure device bearing against the platen, means effective without requiring attention or use of either hand of the operator for automatically releasing the work from the control of the pressure device, and for maintaining the pressure device released to permit the operator to withdraw the typed work-piece with one hand, and insert a fresh work-piece with the other hand, including a carriage-returning pedal, means for connecting said pedal to said pressure device to release the same simultaneously with the return of the carriage and maintain the pressure device released until after the completion of the return of the carriage, and means for mechanically restoring the work-holder upon the release of the pedal.

1,576,681. PUNCH. GEORGE H. SPENGLER, Rockford, Ill., assignor to W. A. Whitney Manufacturing Company, Rockford, Ill., a Corporation of Illinois. Filed July 20, 1925. Serial No. 44,656. 2 Claims. (Cl. 164—120.)

1. In a punch, a stationary handle, a movable handle, links pivotally connecting said handles, a tool having a bearing in the one end of said stationary handle for movement into and out of the work, a tool reciprocating element intermediate said handles and pivoted on the stationary handle, an operating connection between said movable handle and said tool reciprocating element to move said tool in the punching operation by bringing said handles to closed position, and a pin extending between said links behind said tool reciprocating element engaging a smooth surface provided thereon whereby to raise said element and retract the tool when said handles are moved apart, said element having a shoulder at the end of said surface to be engaged by said pin to serve as a stop to limit the opening of said handles.

1,576,682. SAFETY DEVICE. CHARLES MOTEN STAFF, Springfield, Mo. Filed Feb. 21, 1925. Serial No. 10,922. 2 Claims. (Cl. 81—3.)



1. In combination with a chisel head and a handle therefor, a cup-like member surrounding the face end portion of the head and extending beyond the face end, the inner portion of the member being adaptable for close contact with the head adjacent the eye thereof, the inner portion of the member having an outstanding socket to straddle the handle immediately adjacent to the head, means for clamping the socket to the handle, the inner end of the member substantially opposite to the socket being provided with an open slot, and an outstanding part carried by the handle engaging within said slot when the member is in applied position.

1,576,683. DRAFT GEAR. SVEN JULIUS STRID, Chicago, Ill., assignor to Fred Mathews, Chicago, Ill. Filed Oct. 19, 1925. Serial No. 63,385. 8 Claims. (Cl. 213—50.)

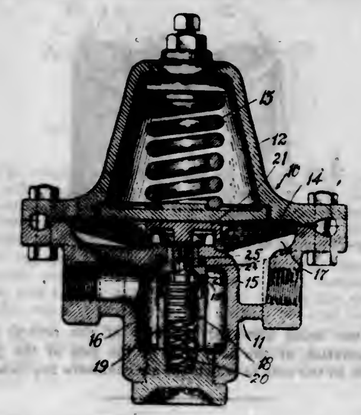
1. In a structure of the kind described a center-sill, a body-bolster disposed transverse thereto including a center filler casting, a draw-bar yoke positioned upon

one side of said casting, a back-stop therefor upon the opposite side of said casting and connected to said center-sill, and means extending from said back stop to said

draw-bar yoke whereby the thrust from the latter is transmitted through said stop to the center-sill independently of the center filler casting.

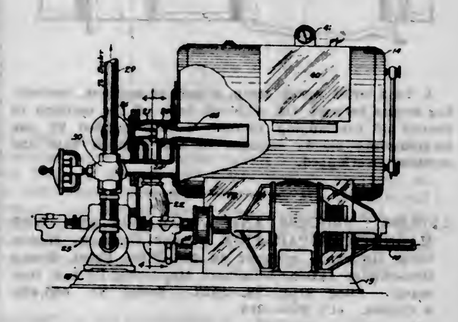
1,576,684. OSCILLATING FAN. HARVE R. STUART, Springfield, Ohio, assignor to The Robbins & Myers Company, Springfield, Ohio, a Corporation of Ohio. Filed July 21, 1924. Serial No. 727,135. 5 Claims. (Cl. 74—36.)

1. The combination of a rotary housing, a separate bottom plate for said housing, a threaded member extending through an open ended recess in the side wall of said housing, said threaded member being provided with an annular groove to receive the upper portion of the wall of said recess to hold said member from longitudinal movement, an eccentric pin threaded on said member and projecting through a slotted opening in the bottom of said housing.



1,576,685. COLLAR BUTTON AND TIE HOLDER. JAMES A. TAYLOR, Richmond, Ky. Filed Oct. 24, 1925. Serial No. 64,606. 3 Claims. (Cl. 24—63.)

1. In a combined collar button and tie holder, a base, a stud carried by the base, and a head connected with the stud, a pin, a retaining plate formed integral with the pin, means connecting the retaining plate with the head, the pin extending longitudinally of the head and overlying the outer face thereof in spaced relation thereto.

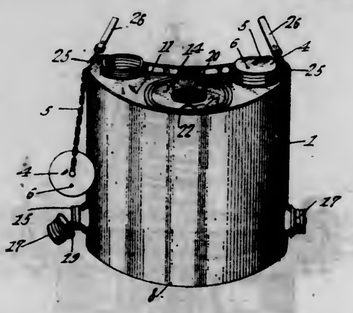


1,576,686. VALVE. CHARLES M. TERRY, Decatur, Ill., assignor to A. W. Cash Co., Decatur, Ill., a Corporation of Delaware. Filed Apr. 3, 1922. Serial No. 548,908. 2 Claims. (Cl. 50—23.)

1. In a pressure-reducing valve, the combination of a casing having a partition separating the high-pressure space from the low-pressure space, there being two ports in tandem for the fluid-flow from the high-pressure space to the low-pressure space and between said ports an intermediate pressure space of substantially larger diameter than either of said ports; pressure-controlled valve operating means responsive to pressure conditions in the low-pressure space and a valve controlled thereby

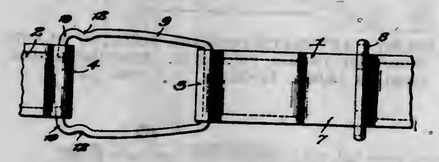
and coacting with both of said ports to give partial opening to the port near the high-pressure space before opening the port near the low-pressure space.

1,576,687. AUTOMATIC-CONTROL HEATING PLANT. RICHARD H. THOMAS, Chicago, Ill. Filed Mar. 9, 1925. Serial No. 14,083. 12 Claims. (Cl. 103—5.)



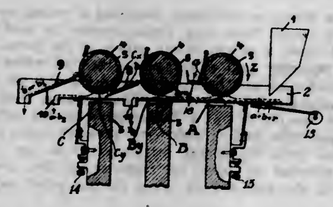
1. In a device of the class described a piping system, a tank, a return from said piping system to said tank, a second tank, a power driven pump, a jet pump, connections whereby said power pump receives water from said second tank and delivers it to either the jet pump or the piping system, a connection between said first tank and the jet pump, a float controlled air relief in said second tank and an automatic pressure valve in the connection from the power driven pump to the piping system adapted to open in response to the pressure created in the second tank when the air relief valve is closed.

1,576,688. BAIT AND TACKLE CONTAINER. HENRY F. THOMPSON, Decorah, Iowa. Filed Dec. 31, 1924. Serial No. 759,151. 4 Claims. (Cl. 43—55.)



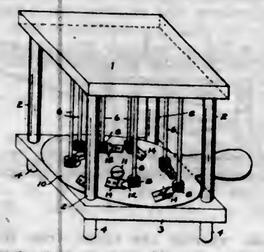
4. In a bait can, a body portion, said body portion having air chambers arranged therein and disposed laterally of the central line of gravity of the body portion,

said body portion having openings arranged at the bottom thereof, a cover having an opening to admit fluid to the interior of the body portion and the opening of



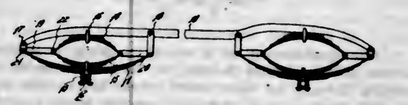
the cover being arranged laterally of the central line of gravitation of the body and at the side of the body opposite to the side in which the air chambers are located.

1,576,689. WRIST-WATCH STRAP. CHARLES R. TOST, Centerdale, R. I., assignor to The Hadley Company, Providence, R. I. Filed July 15, 1925. Serial No. 43,795. 5 Claims. (Cl. 24—71.)



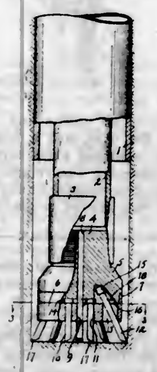
4. In a wrist watch strap, a pair of sections, connecting means between the adjacent ends of the sections to permit of overlapping thereof, a loop carried by one section, and means engaged in the loop to hold the sections overlapped.

1,576,690. PROCESS AND APPARATUS FOR WET MAGNETIC SEPARATION. GEORG ULLRICH, Magdeburg, Germany, assignor to the Firm Fried. Krupp Grusonwerk Aktiengesellschaft, Magdeburg-Buckau, Germany. Filed Sept. 28, 1923. Serial No. 665,465. 4 Claims. (Cl. 209—214.



1. The process of magnetic separation consisting in passing the material to be separated through a plurality of magnetic fields, freeing the magnetic material attracted in one of said fields and the resultant unattracted residues from external magnetic influence, and passing said magnetic material and residues in superposed layers into the influence of a succeeding magnetic field.

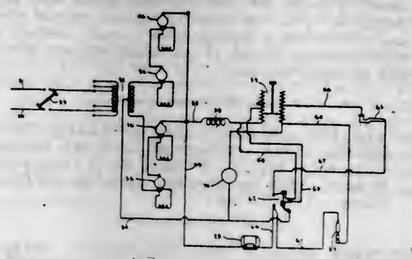
1,576,691. MOLD-INSERT-FEEDING MECHANISM. DICK M. VEASEY, Fort Wayne, Ind. Filed Mar. 1, 1923. Serial No. 622,055. 7 Claims. (Cl. 18—1.)



1. In a mechanism of the class described, a vertically disposed guide for a column of insert washers, a movable member normally supporting the column of insert washers and having means therein adapted to register with the lower end of said column to release the lowermost washer-insert when the said member is moved toward said column, and a member secured to the movable member and adapted to be moved thereby toward, and into, said column immediately above the lowermost washer-insert prior to the release of the latter washer-insert.

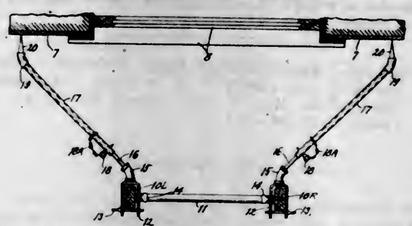
1,576,692. SPRING. JOHN BAPTIST VIDACH, Chicago, Ill. Filed Sept. 26, 1923, Serial No. 664,974. Renewed Jan. 11, 1926. 2 Claims. (Cl. 267—46.)

1. The combination with a curved leaf spring and means for connecting the spring with a vehicle axle, of a second and relatively short leaf spring of a greater degree of curvature mounted intermediate of the ends of the spring first named and connected with the axle, shackles for connecting the spring first named with the vehicle frame, and links connecting the shackles with the ends of the second spring and normally extending in substantial alinement with each other and with the chords of the springs specified.



1,576,693. DRILL BIT. JAMES E. WALKER, La Habra, Calif. Filed Nov. 4, 1924. Serial No. 747,724. 3 Claims. (Cl. 255—75.)

1. A drill comprising supporting means having a radially elongated longitudinal opening therein forming a shoulder and an inclined abutment surface above the

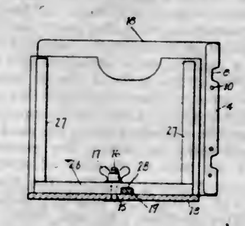


shoulder, and a cutter longitudinally slidable in said opening and having a head adapted to either rest upon the shoulder for suspending the cutter parallel to the axis of the drill or impinge against the inclined abutment surface for slanting the cutter in the radially elongated opening so that its projecting cutting edge extends laterally beyond the supporting means.

1,576,694. WATER-COOLED ULTRA-VIOLET APPARATUS. JULIUS B. WANTZ, Oak Park, Ill., assignor to Victor X-Ray Corporation, Chicago, Ill., a Corporation of New York. Filed Oct. 22, 1924. Serial No. 745,263. 4 Claims. (Cl. 250—34.)

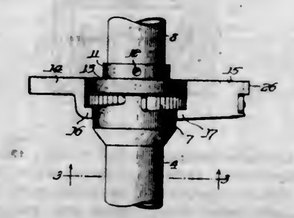
1. The combination with an ultra-violet apparatus including a plurality of lamp circuits of different voltage values, of a cooling system comprising a jacketed lamp casing, a source of electro-motive force, conduits to and from said casing for the flow of a liquid cooling medium, and a cabinet enclosing a selector switch and a pump, prime mover, radiator, and fan for circulating and cooling said medium, said prime mover comprising an electric motor directly driving said pump and fan, and said selector switch being adapted to open and to close the circuit to said motor according to the voltage value of said lamp circuits.

1,576,695. LADDER-BRACING ATTACHMENT. FRANK R. WEBER, St. Paul, Minn. Filed Feb. 12, 1925. Serial No. 8,628. 1 Claim. (Cl. 228—60.)



In a ladder bracing attachment a pair of diagonally disposed arms, means for detachably securing each arm to a rail of a ladder, said arms extending from the ladder to engage a wall and means for lengthening said arms to spread the wall contacting parts and hold the ladder in spaced relation to a wall, and means holding said arms in a plane at substantially right angles to the plane of the ladder when in operative position, said detachable securing means comprising for each arm a U-shaped yoke adapted to straddle a rail of the ladder, means for connecting the spaced ends of said yoke and a screw in said yoke to engage the rail and hold the yoke at any desired position on the rail, said arms comprising each a bar pivotally secured in the closed end of the respective yoke, a tube slidable on said bar and detachably secured thereto in selective telescoped positions, and wall engaging means on the outer end of said tube.

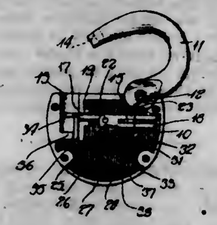
1,576,696. LOOSE-SHEET DEVICE. GEORGE P. WIGGINTON, Kalamazoo, Mich., assignor to Kalamazoo Loose Leaf Binder Company, Kalamazoo, Mich. Filed Oct. 16, 1924. Serial No. 743,988. 9 Claims. (Cl. 129—1.)



9. The combination of a binder comprising binder members, post bars removably engageable with said binder members and each provided with posts of unequal length, one post bar having a hole therein adapted to receive the longer post of the other bar whereby the entire sheet body is engaged by the longer post and the post projects to engage one of the binder members when assembled therein, and a sheet holder adapted to receive the sheets as a unit when removed from the binder, the said holder having a hole therein adapted to receive the projecting end of the post of the post bar superimposed upon the sheet body to facilitate the manipulation of the sheet body as a unit.

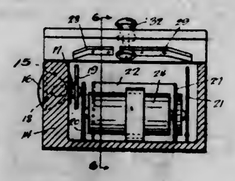
1,576,697. LOOSE-SHEET DEVICE. GEORGE P. WIGGINTON, LEON L. ALLYN, and NICHOLAS H. STUART, Kalamazoo, Mich., assignors to Kalamazoo Loose Leaf Binder Company, Kalamazoo, Mich. Filed Jan. 6, 1925. Serial No. 790. 14 Claims. (Cl. 129—1.)

7. The combination with sheets, of removable binding members, and a sheet holder having side and end members disposed so that the sheets may be arranged on the side member with their side edges abutting the end member, said holder having sheet alining means with which the sheets may be engaged to aline them with their binding edges projecting to facilitate the engagement and disengagement of the binding members therewith.



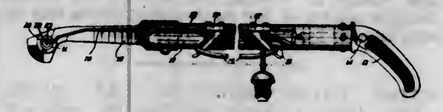
1,576,698. PIPE CONNECTION. RICHARD J. WILLIAMS, Virginia, Minn. Filed June 22, 1921. Serial No. 479,549. 1 Claim. (Cl. 285—177.)

In a pipe connection, an enlarged socket member having a seat formed therein, a plurality of circumferentially extending cam shoulders upon the outer face of said socket member, a second member having a shouldered



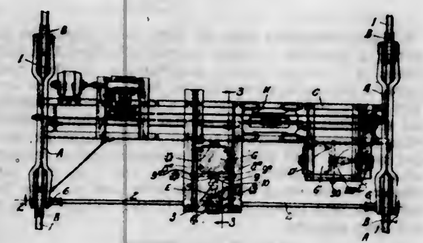
head adapted to fit within said socket member, a collar fitted upon said head behind the shoulder, operating arms carried by the collar, lugs extending from the collar having portions adapted to engage under the cam shoulders of the socket member, serrations on the outer faces of the cam shoulders, a spring pressed plunger carried by the collar and having a foot adapted to engage the serrations to prevent relative rotation between the socket member and the collar, said plunger having a rotatable head, and a shoulder adjacent the head adapted to normally lock the head against rotation and to receive the head when withdrawn and rotated and retain it in withdrawn position with the foot out of engagement with the serrations.

1,576,699. PADLOCK. ROBERT L. WILLIAMSON, Erwin, Tenn. Filed May 7, 1925. Serial No. 28,705. 2 Claims. (Cl. 70—106.)



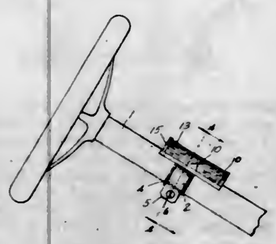
1. A lock including a keeper, a bolt mounted for rectilinear movement toward and from the keeper, the bolt carrying a transversely extending pivot pin, a plurality of tumblers mounted on the bolt, the bolt and said tumblers each having a longitudinally extending slot, each of the tumblers having at its forward end a downwardly extending lug, a stop disposed behind the bolt and tumblers and with which the slot of the bolt engages, the tumblers being movable into a position where the slots are in register with each other to permit the retraction of the tumblers and the bolt, a plurality of springs, one for each tumbler, each spring engaging the downwardly extending lug and urging the tumblers downwardly into their obstructive position, the lock being formed with means for limiting the downward movement of the tumblers under the action of said springs, and key-actuated means for shifting the tumblers into position with their slots in alignment with the stop and then retracting the bolt with its tumblers.

1,576,700. FLASH LIGHT. PAUL C. ZIRSCHANG, Columbus, Ohio. Filed Nov. 6, 1925. Serial No. 67,314. 4 Claims. (Cl. 240—10.5.)



1. A flashlight including a box forming therein a battery compartment, upright conductor walls fixed within the box for the reception of batteries in contact therewith, a bulb socket fixed through one wall of the box and in contact with one of said walls, an upright contact member in connection with said socket, and a cover for said box having contact pieces movable with the cover into and out of engagement with said contact member and the other conducter wall.

1,576,701. VACUUM SWEEPER. CHRISTIAN AALBORG, Pittsburgh, Pa. Filed Sept. 2, 1922. Serial No. 586,878. 5 Claims. (Cl. 242—85.)

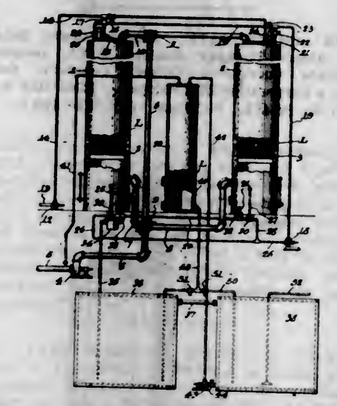


1. In a portable motor-driven device, in combination, a conductor cord for connecting the device to a power source, a handle for operating said device, said handle having an open cord receiving chamber formed therein and cord receiving clips mounted in said chamber, said clips extending outside of the handle whereby the cord may be wound thereon.

1,576,702. ELECTRICALLY-OPERATED BRIDGE CRANE. FRANK ACKERMAN, St. Louis, Mo., assignor to Curtis & Co. Mfg. Co., Wellston, Mo., a Corporation of Missouri. Filed Dec. 31, 1924. Serial No. 759,052. 17 Claims. (Cl. 105—133.)

1. A crane provided with a bridge, and a power unit mounted on said bridge in such a manner that it is capable of practically a universal movement relatively to the bridge.

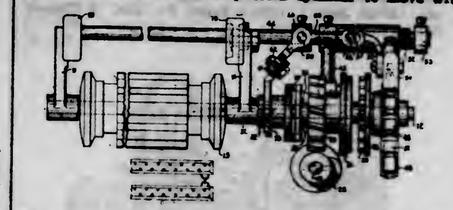
1,576,703. REGISTRATION-CARD HOLDER. HARRY ANDERSON and GEORGE W. V. HACKETT, Los Angeles, Calif. Filed Mar. 7, 1925. Serial No. 13,751. 2 Claims. (Cl. 40—17.)



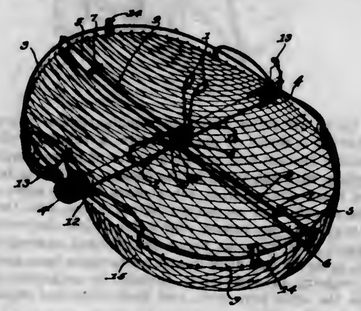
1. A card holder comprising a frame having grooved edges adapted to receive a card in said groove, one of the grooved edges being detachable from the frame, and the ends of the grooved edges meeting the ends of the detachable grooved edge being extended to form tabs adapted to be bent over the detachable grooved edge for releasably fixing the same relative to the frame.

1,576,704. DOOR-CONTROL MECHANISM. CHARLES H. ATKINSON, Saratoga, Calif. Filed July 6, 1925. Serial No. 41,518. 8 Claims. (Cl. 268—9.)

1. A door control mechanism for a hinged door comprising a bracket mounted on and projecting inwardly of the door, a horizontal and transversely movable element mounted inwardly of the door, and disposed in a plane between the door and the inner end of the bracket, a pivoted link extending from the inner end of the bracket to the element in the direction away from the hinged edge of the door, whereby when said link is pulled by movement of the element in one direction the door will be opened, until the pivot of the link with the bracket is past the dead center line of the door hinge and pivot of the link with the element when a push on said link will then further open the door, an endless cable in which said element is interposed, a manually operated control means applied to one run of the cable, and a weight applied to said run.



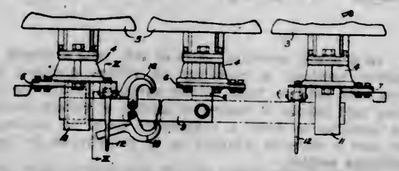
1,576,705. APPARATUS FOR MAKING SULPHITE LIQUOR. FRED J. BABCOCK, Dexter, N. Y., assignor to Stebbins Engineering & Manufacturing Company, Watertown, N. Y. Filed July 24, 1924. Serial No. 727,979. 1 Claim. (Cl. 23—283.)



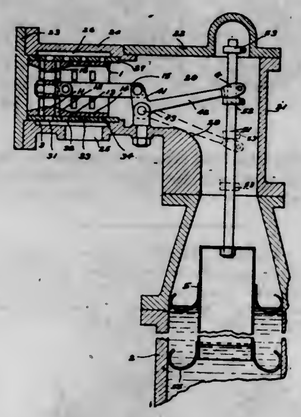
In an acid liquor tower system the combination with separate reversible limestone towers and a tank for receiving acid liquor from either of the towers, of means for building up the acid liquor in the tank, said means including a supplemental tank in communication with the first named tank for receiving relief gas, a supplemental limestone tower, means for directing gas to said supplemental limestone tower, and means for recirculating liquor through said supplemental tank and said supplemental tower while gas is being supplied to the tower.

1,576,706. MULTIPLIER FOR LOOMS. LANDRUM EARL BAGWELL, Drayton, and DAVID C. JONES, Greenville, S. C., assignors to Crompton & Knowles Loom Works, Worcester, Mass., a Corporation of Massachusetts. Filed July 14, 1924. Serial No. 725,773. 5 Claims. (Cl. 139—326.)

1. In pattern mechanism for looms, a pattern chain cylinder, an actuating disc having a regular motion, a multiplying disc, a transmitter cooperating with the discs to cause both discs to move in unison periodically, mechanism movable to cause the pattern cylinder to move with the actuating disc, and means controlled by the multiplier disc to move said mechanism to cause the pattern chain cylinder to move with the actuating disc.

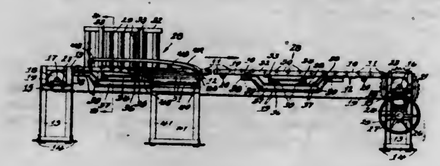


1,576,707. ANIMAL TRAP. VERNON BAILEY, Washington, D. C., assignor to Government and People of the United States. Filed Dec. 17, 1925. Serial No. 76,125. 1 Claim. (Serial No. 43—63.) (Granted under the act of Mar. 3, 1883, 22 Stat. L., 625.)



In an animal trap, a base, a trigger supported by said base and comprising two vertical rods, a cross brace for said rods, loops attached to the base of said rods, a hairpin spring encircled by said loops, cross wires extending from the sides of said spring to the jaws of the trap, said cross wires being provided with latch members adapted to normally hold the jaws in their inactive positions, and coiled springs supported on said base and engaging the jaws for normally urging the jaws toward each other.

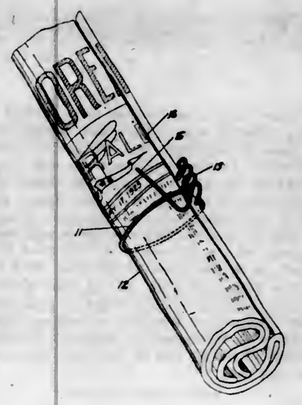
1,576,708. DISCONNECTING SWITCH. ANDREW H. BAKKEN, Edgewood Park, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Nov. 3, 1922. Serial No. 598,723. 8 Claims. (Cl. 200—169.)



8. The combination with a movable switch member, and a support of a latch for the switch member movably carried by the support therefor and means secured to the switch member and movable with respect thereto for moving the latch out of the path of movement of the said switch member when the switch member approaches its closed position.

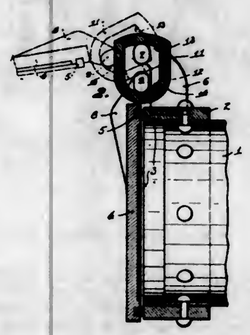
1,576,709. AIR-RELIEF VALVE. CARLOS J. BASSLER, Portland, Oreg., assignor to American Liquid Meter Company, Portland, Oreg., a Corporation of Washington. Filed Jan. 2, 1925. Serial No. 139. 8 Claims. (Cl. 137—69.)

1. In an air relief valve, in combination, a valve casing having a series of ports therein, a tubular valve reciprocable therein and having a series of ports adapted to cooperate with the ports in the casing, said ports in each series being spaced from other ports in the same series in the direction of movement of the valve, and the several ports in the casing and valve being disposed and arranged relatively to bring the several corresponding ports, upon movement of the valve towards open position, into registry in succession, thereby to progressively increase the open port area, and float-controlled means for moving said valve.



1,576,710. LIVE-ROLLER CONVEYER. GORDON W. BEULKE, St. Paul, Minn., assignor to Standard Conveyor Company, a Corporation of Minnesota. Filed Dec. 11, 1922. Serial No. 606,028. 2 Claims. (Cl. 198—127.)

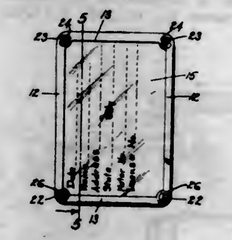
1. In a power conveyer, pairs of side rails arranged in separate sections, a plurality of rollers disposed between said rails to form carrier surfaces, means for rotating said rollers, a removable section of rollers joining said sections to form a continuous path for merchandise, and a diverter adapted to be substituted for said removable section.



1,576,711. NEWSPAPER AND PERIODICAL TIE. JOSEPH D. BISHOW, Los Angeles, Calif. Filed Mar. 5, 1925. Serial No. 13,113. 3 Claims. (Cl. 24—27.)

1. In a newspaper or periodical tie, a pliant metallic wire having a series of integrally formed convolutions at one end, said convolutions being free, open and unobstructed, and a continuation for said convolutions of a length sufficient to encompass a folded newspaper or periodical, said continuation being locked, when in use, with

one of the convolutions, by being turned back on itself to form a locking loop around the wire forming one of the convolutions.

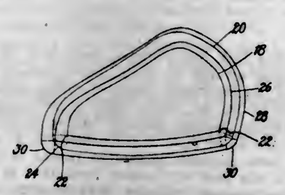


1,576,712. CHECK GATE. ALBERT JOSEPH BOLD and KARL JOHAN THORSEN, Oakland, Calif., assignors to California Corrugated Culvert Company, Oakland, Calif., a Corporation of California. Filed May 6, 1925. Serial No. 28,473. 8 Claims. (Cl. 251—123.)

1. A check gate comprising a seat member; a gate member cooperating therewith; bearing pins carried by said seat and gate members; and a single tubular link surrounding both said bearing pins to form a hinge connection for said gate member, the axis of said link being parallel to the axis of said pins and transverse to the direction of movement of said gate member.

1,576,713. HOLDER FOR REGISTRATION CARDS. BÖRJE H. BÖRJESON, St. Paul, Minn. Filed Sept. 2, 1924. Serial No. 735,390. 6 Claims. (Cl. 40—10.)

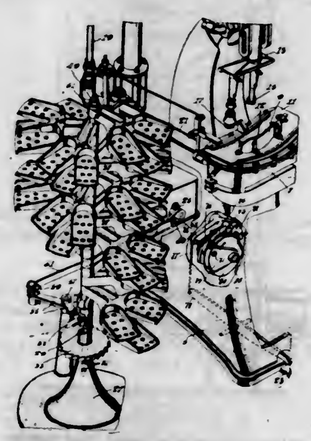
1. A certificate or card holder comprising a support for the same, a frame adapted to contain a card or certificate, means for attachment of the frame to the support, said means and frame at the point of attachment to the support being formed to co-operate in providing



a progressive gripping tension joint in moving the frame to closed position, and means for holding the frame in closed position against its support.

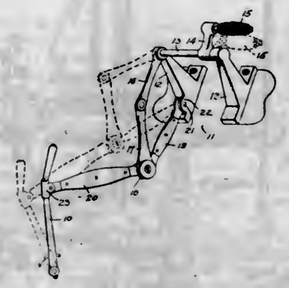
1,576,714. ANIMAL-CONTROL DEVICE. GUSTAF L. BOWMAN, Valparaiso, Ind. Filed Sept. 19, 1922. Serial No. 589,172. 8 Claims. (Cl. 119—142.)

1. In animal control devices, a suitable neckband, a permanently attached pain inflicting nose ring, a pair of curved metallic members slidable on the neck band, a second pair of curved metallic members slidable on the nose ring, a spacing bar, means for adjustably holding the curved members on such bar, adjustable means cooperating with the spacing bar adapted to hold the device approximately central of the animal's forehead, and a pad secured to the neckband and beneath the upper curved members.



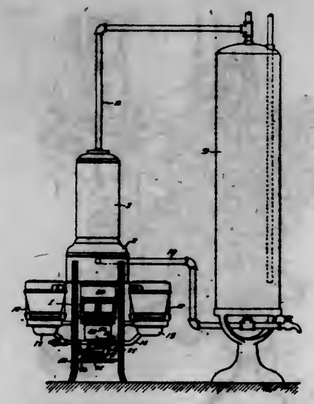
1,576,715. LAST MAKING. STANLEY E. BOYNTON, Rochester, N. Y., assignor to Fitz-Empire Double Pivot Last Company, Auburn, Me., a Corporation of Maine. Filed May 21, 1921. Serial No. 471,395. 21 Claims. (Cl. 142—1.)

1. That improvement in the art of pattern copying which consists in cutting the work from an oversize model in a pattern copying machine having a wheel which is undersize to the same extent that the model is oversize.



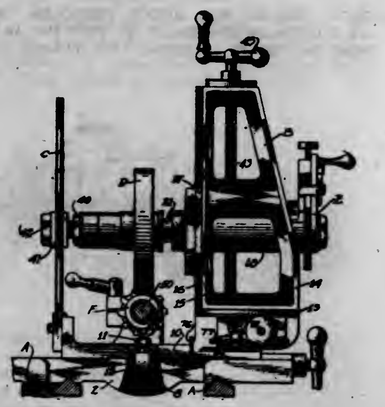
7. An oversize model as defined in claim 6 having the stubs and dog marks by which it was turned.

1,576,716. CONVEYING APPARATUS. LOUIS A. CARBRAIN, Beverly, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Sept. 21, 1920, Serial No. 411,760. Renewed July 31, 1925. 8 Claims. (Cl. 34—26.)



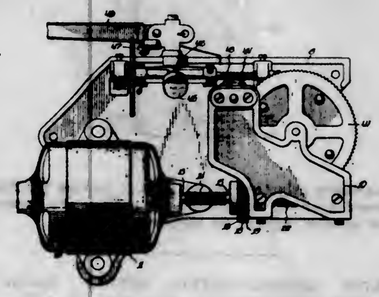
1. The combination with a machine having a member movement of which controls the operation of the machine, of a support for holding pieces of work which are to be presented manually by the operator to the machine, and means responsive to movement of the member for actuating the work support to bring the pieces of work successively into positions accessible to the operator.

1,576,717. BRAKE FOR MOTOR VEHICLES. NICHOLAS A. CATENARO, Brooklyn, N. Y. Filed Dec. 19, 1924. Serial No. 756,937. 2 Claims. (Cl. 74—89.)



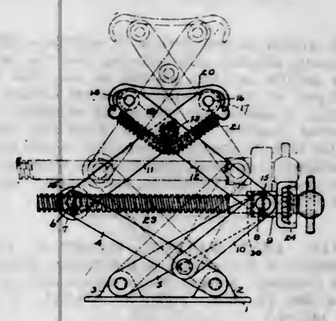
1. A pedal attachment for an emergency brake lever, comprising a pair of brackets, a rock shaft mounted in said brackets, a pair of links pivoted at their free ends on a bracket and the lever, respectively, and a second set of links having their free ends attached to the rock shaft and pivotal connection between the first links to lift the latter and cause the rearward movement of the lever.

1,576,718. THERMOSTATIC CONTROL FOR HEATING DEVICES. LEE S. CHADWICK, Shaker Heights Village, and MARC RESEK and JOHN ALGER DAHLSTROM, East Cleveland, Ohio, assignors to Perfection Stove Company, Cleveland, Ohio, a Corporation of Ohio. Filed Sept. 26, 1923. Serial No. 664,854. 31 Claims. (Cl. 236—20.)



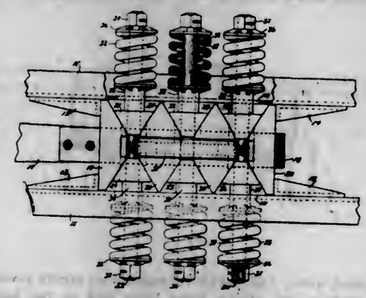
1. In combination with a liquid fuel burner of the wick type, means for raising the wick, means tending to lower the wick, latch mechanism for retaining the latter means in ineffective condition, and thermostatic means for releasing the latch.

1,576,719. MILLING-MACHINE ATTACHMENT FOR LATHES. MANLEY J. CHAPLIN, San Francisco, Calif., assignor of one-half to Alfred J. Bayley, Berkeley, Calif. Filed May 1, 1922. Serial No. 557,622. 7 Claims. (Cl. 90—11.)



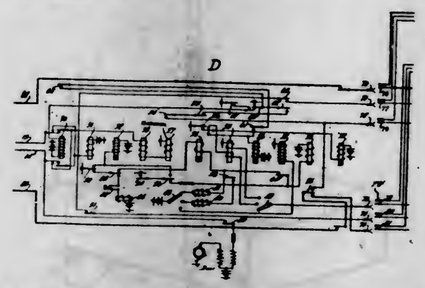
1. In combination with a lathe, of a spindle head, a supporting standard adapted to be mounted on the carriage of the lathe, a connection between said standard and the transverse feed screw in the carriage whereby turning movement of the feed screw will impart transverse movement to the standard, and means associated with the standard and the carriage adapted to audibly announce the fact that the standard has reached the end of its travel in one direction.

1,576,720. CONSTANT-SPEED ELECTRIC DRIVE FOR TALKING MACHINES. FOREST CHENEY, Grand Rapids, Mich., assignor to Cheney Talking Machine Co., Chicago, Ill., a Corporation of Illinois. Filed Aug. 13, 1921. Serial No. 492,209. 7 Claims. (Cl. 185—40.)



1. In a driving mechanism, a driven spindle, a driving electric motor, a driving spring interposed between the motor and spindle, said spring being adapted to store energy to compensate for fluctuation in motor speed, and means adapted to be automatically applied to retard the motor speed when the stored energy reaches a predetermined point.

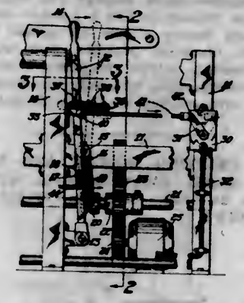
1,576,721. LIFTING JACK. EARL W. CONRAD, Warsaw, Ind. Filed Aug. 21, 1925. Serial No. 51,588. 2 Claims. (Cl. 254—122.)



2. A lifting jack comprising a base, lugs on the base, crossing links pivoted at their lower ends to the lugs respectively, an internally threaded collar member pivotally connected to the upper ends of one pair of said links, a thrust bearing member having a pivotal connection to the upper ends of the other pair of said links, a pair of links pivotally connected to one of said members and to the pair of crossing links that is connected to the other member, crossing links pivotally connected at their lower ends to said links being pivoted together at their crossing points, a roller between the upper ends of each pair of the latter links, a plate slidably engaged on the rollers and a spring engaged to the opposite ends of the plate, also engaged under the pivot connecting the latter links at their crossing points, and a screw revolubly mounted in the bearing member and in threaded engagement with the collar member.

1,576,722. DRAFT GEAR. WALTER H. COTTON, Chicago, Ill., assignor to Union Draft Gear Co., a Corporation of Illinois. Filed Mar. 23, 1923. Serial No. 627,073. 15 Claims. (Cl. 213—23.)

1. In a draft gear, in combination, a follower the inner face of which is wedge-shaped, a friction plate on the longitudinal median line of the gear and normally out of engagement with the follower, a friction block bearing against each face of the plate and having a face receding from the adjacent wedge face of the follower, a wedge block interposed between the named face of the block and such adjacent face of the follower, spring means for advancing the wedge block, and means for resisting lateral movement of the friction block away from the wedge block.



1,576,723. WIRE CHIEF'S TEST CIRCUITS FOR TELEPHONE SYSTEMS. THOMAS F. CROCKER, Chicago, Ill., assignor, by mesne assignments, to Automatic Electric Inc., Chicago, Ill., a Corporation of Delaware. Filed July 28, 1922. Serial No. 578,174. 16 Claims. (Cl. 179—175.)

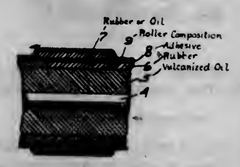
14. The combination, with a wire chief's test circuit, of a directively controlled automatic switch, a test conductor extending from said test circuit to said switch, a line including two line conductors and a third conductor, means including said automatic switch for connecting said test conductor to one of said line conductors, and means in said switch for disconnecting said test conductor from said line conductor and connecting said test conductor to said third conductor at will.

1,576,724. REVERSING SHIPPING MECHANISM FOR LOOMS. EDWARD J. DACEY and ALBERT A. GOSSOW, Worcester, Mass., assignors to Crompton and Knowles Loom Works, Worcester, Mass., a Corporation of Massachusetts. Filed Sept. 20, 1923. Serial No. 59,414. 9 Claims. (Cl. 74—83.)

1. In loom controlling mechanism, driving mechanism, a shipper lever to connect the loom with the driving mechanism in normal running position when the mechanism is driving the loom in forward direction, and means

to reverse the driving mechanism and also prevent said shipper handle from moving to normal driving position.

1,576,725. APPARATUS FOR APPLYING COATING. HERBERT W. DAY, Wollaston, Mass., assignor to Painting & Finishing Equipment Sales Co., a Corporation of Massachusetts. Filed Mar. 1, 1922. Serial No. 540,171. 11 Claims. (Cl. 91—45.)

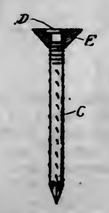


1. Means for applying coating comprising means to supply coating material, means to subject the same to the action of a motive agent, thereby effecting the discharge of the coating material, and means to discharge a motive agent supplementally upon the discharge coating material in any one of a plurality of predeterminedly spaced planes, the control of the discharge of the motive agent supplementally being effected wholly by change in position of the means to discharge the motive agent supplementally said change in position cutting off the supplemental discharge when not in said predeterminedly spaced planes.

6. Means for applying coating comprising means for maintaining a film of coating material, means for causing a motive agent to break through and discharge said film, and means to discharge the motive agent supplementally upon the discharged film to transform the latter into a mass having a different cross section, the means to discharge the motive agent supplementally upon the discharged film having a plurality of predeterminedly spaced positions in each of which the motive agent is supplementally discharged thereby and intermediate predetermined positions in which no supplemental discharge of the motive agent occurs.

7. A tool for applying coating comprising a body having passages for coating material and for a motive agent

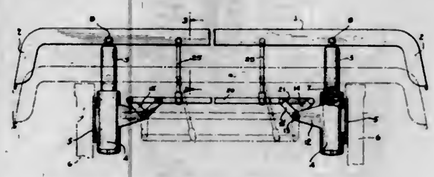
under pressure there being in said body a plurality of pairs of spaced, supplemental, motive passages leading from said motive agent passage and distributed in a circular series thereabout and a member supported upon said body and having a pair of opposed supplemental motive agent discharge passages, said member having turning movement, without necessary substantial longitudinal movement, upon said body into and out of communication with selected supplemental motive passages.



1,576,726. PRINTING ROLLER AND METHOD OF MAKING SAME. ARTHUR B. DAVIS, Springfield, Ohio. Filed Apr. 24, 1924. Serial No. 708,717. 13 Claims. (Cl. 91—67.8.)

4. The combination, with a printing roller formed of soft resilient material, of a sleeve of soft resilient material removably secured to the surface of said roller, and a thin coating of roller composition on the outer surface of said sleeve.

12. The method of providing a printing roller with a removable inking surface which consists in removably securing to said roller a sleeve of soft resilient material by a substance which can be softened under the action of water or heat without impairing the character of said roller.

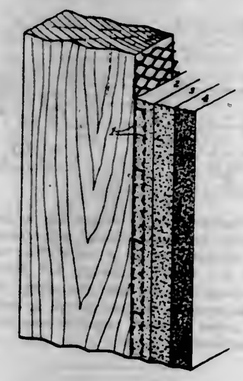


1,576,727. FASTENING DEVICE FOR SHEET-METAL ROOFING AND SIDINGS. ALBERT J. DENISTON, Jr., Chicago, Ill. Filed Aug. 6, 1925. Serial No. 48,523. 3 Claims. (Cl. 85—50.)

1. A unitary fastening device for the purposes described, comprising a shank, a head integral therewith, and a soft metal washer encircling and snugly fitting the portion of the shank directly beneath the head and the lower side and periphery of the latter, and on its upper side substantially flush with the top surface of said head.

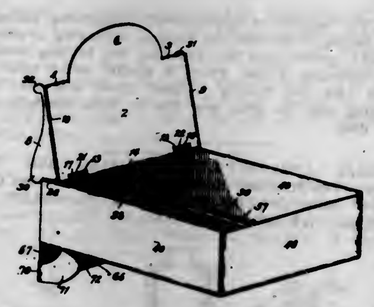
1,576,728. VEHICLE BUMPER. MANUEL D. DOMINGUEZ, New Orleans, La., assignor to Charles A. Denis and George Sarpy, both of New Orleans, La. Filed Apr. 4, 1925. Serial No. 20,646. 2 Claims. (Cl. 293—55.)

2. A vehicle bumper comprising cylinders adapted for connection to vehicle members, plungers in the cylinders, means urging the plungers outward, a bumper bar connected to the plungers, brackets on the cylinders, bell cranks pivotally mounted in the brackets and each having an upper and a lower arm disposed substantially at right angles to each other, a cross link connecting the upper bell crank arms, a cross link connecting the lower



bell crank arms, and parallel longitudinal struts pivotally connected to one of the cross links and to the bumper bar to guide the latter in parallel relation to its normal position and distribute impact forces substantially equally to the plungers and springs.

1,576,729. ILLUMINATING-GAS BLOWPIPE. FRANZ GEISS, Neukolln, near Berlin, Germany, assignor to the Firm Oeltanks Gesellschaft m. b. H., Berlin, Germany. Filed Mar. 30, 1925. Serial No. 19,431. 1 Claim. (Cl. 158—27.4.)

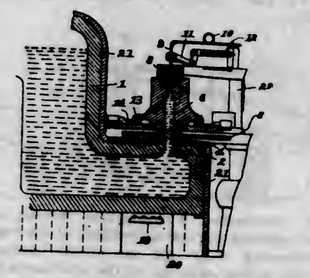


An illuminating gas welding and cutting blow-pipe comprising a handle having oxygen and illuminating gas supply pipes, a mixing tube removably seated in said handle, a sleeve at the inner end of said mixing tube forming the wall of a central illuminating gas aspirating chamber, said sleeve being spaced from the inner wall of said handle and having openings formed through its wall, a nozzle removably secured in the inner end of said sleeve and spaced from the wall thereof, forming an annular illuminating gas passage delivering into said central aspirating chamber between said nozzle and mixing tube, an oxygen supply pipe connected with said passage being the quintuple of the diameter of the outlet of the said oxygen nozzle.

1,576,730. PLASTER OR CONCRETE OPAQUE TO X-RAYS. PHILIP E. HARTH, St. Louis, Mo., assignor to National Pigments & Chemical Company, St. Louis, Mo., a Corporation of Missouri. Filed Apr. 4, 1924. Serial No. 704,168. 8 Claims. (Cl. 72—128.)

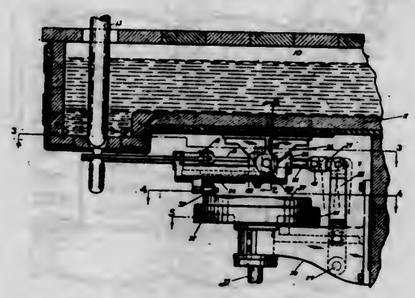
8. A wall covering for excluding X-rays, consisting principally of a cemented mixture of sand and powder both of which are opaque to X-rays, the proportion of the powder increasing towards the surface of the wall.

1,576,731. DISPLAY CARTON. CHARLES W. JACK, Chicago, Ill. Filed July 20, 1922. Serial No. 576,179. 22 Claims. (Cl. 206—44.)



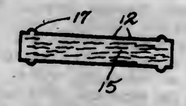
5. A container composed of a one-piece sheet bent to form a body, a cover therefor and a support, said support being hinged to an end and to the bottom of said body.

1,576,732. ARC-RESISTING MATERIAL AND PROCESS OF MAKING. OTTO H. ESCHHOLZ and PAUL G. GUNSY, Wilkinsburg, Pa., assignors to Westinghouse Electric and Manufacturing Company, a Corporation of Pennsylvania. Filed July 30, 1920. Serial No. 400,238. 7 Claims. (Cl. 18—47.5.)



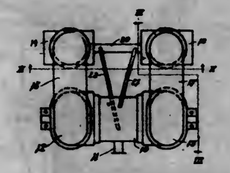
1. A refractory article comprising a refractory base including silica and a hydrous inorganic binder of sodium silicate, and having a thin glaze of anyhydrous sodium silicate on the surface thereof.

1,576,733. PROCESS OF MAKING GLASSWARE. ENOCH FERNGREN, Washington, D. C. Filed Jan. 20, 1920. Serial No. 352,725. 10 Claims. (Cl. 49—77.)



1. The process of obtaining mold charges from a supply of molten glass comprising causing glass to issue continuously from a discharge orifice in a stream of periodically increasing and decreasing velocity, shearing a mold charge from each portion discharged with increased velocity, and moving with the shear with the said charge during severance.

1,576,734. CUTTING APPARATUS. ENOCH T. FERNGREN, Toledo, Ohio, assignor to The Owens Bottle Company, Toledo, Ohio, a Corporation of Ohio. Filed June 12, 1922. Serial No. 567,518. 13 Claims. (Cl. 49—55.)

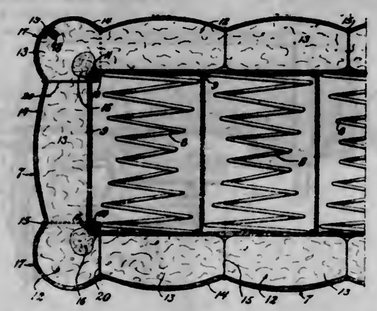


1. In glass severing apparatus, the combination of shears, means to move said shears horizontally for cutting, and means to tilt them during the cutting stroke in the same direction about a common horizontal axis perpendicular to their direction of cutting movement.

1,576,735. INFUSOR. REGINALD A. FESSENDEN, Chestnut Hill, Mass. Filed Oct. 8, 1921. Serial No. 506,889. 5 Claims. (Cl. 53—3.)

1. A comparatively thin elastically deformable infusor, having one of its dimensions in the ratio of approximately one to ten, or less, to its greatest dimension, so constructed as to give a rate of infusion closely approximating that of the unconfined infusive material.

1,576,736. EXPANSIBLE TURBINE-CONDENSER STRUCTURE. WARREN B. FLANDERS, Philadelphia, Pa., assignor to Westinghouse Electric and Manufacturing Company, a Corporation of Pennsylvania. Filed Nov. 11, 1920. Serial No. 423,831. 12 Claims. (Cl. 60—95.)

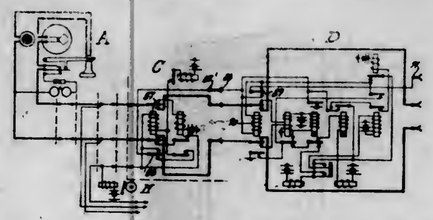


1. In combination, a double-flow turbine, condensers disposed opposite the exhaust outlets of the turbine, flexible supporting means for one of the condensers, and means for moving said one of the condensers in a direction parallel with the turbine as the turbine cylinder expands.

1,576,737. RESINOUS CEMENT. LESLIE E. FROST, Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed June 15, 1921. Serial No. 477,702. 5 Claims. (Cl. 87—17.)

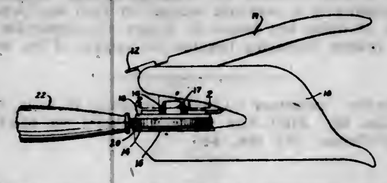
2. A cement comprising a gum resin dissolved in a water-free benzol, a solid phenolic condensation product and an inert filling material.

1,576,738. MATTRESS. SIEGFRIED FOLD, Philadelphia, Pa. Filed Jan. 9, 1923. Serial No. 611,558. 2 Claims. (Cl. 5—360.)



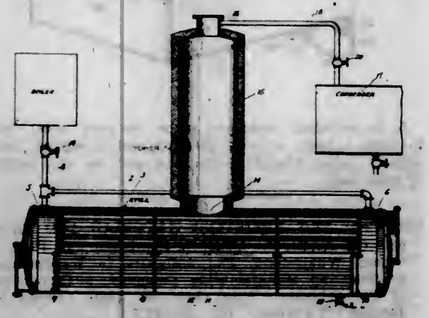
1. A mattress comprising a core arrangement characterized by being composed of compressible springs arranged within a covering and by having foundation members holding the springs in position; a casing of uniform thickness completely enveloping the core, and filler expansions arranged within the casing in positions to rest over and to be reenforced by, said foundation members, substantially as described.

1,576,739. PROCESS OF RECOVERING SODIUM CHLORIDE FROM SALINE LIQUORS. ALFRED W. GAUGER and HENRY HERMAN STORCH, Westend, Calif., assignors to Burnham Chemical Company, Reno, Nev., a Corporation of Nevada. Filed Feb. 16, 1925. Serial No. 9,414. 6 Claims. (Cl. 23—41.)



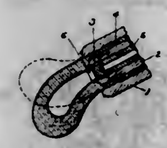
1. The process of recovering sodium chloride from liquors containing the same and other salts, which comprises evaporating the liquor whereby sodium chloride and other salts are crystallized out, separating the deposited crystals from the concentrated liquor, grinding the crystals to finely divided form and washing the ground crystals with original liquor to wash out the other salts.

1,576,740. AUTOMATIC TELEPHONE SYSTEM. CHARLES GILLINGS and RICHARD MERCER, Liverpool, England, assignors, by mesne assignments, to Automatic Electric Inc., Chicago, Ill., a Corporation of Delaware. Filed Oct. 12, 1921. Serial No. 507,265. 17 Claims. (Cl. 179—9.)



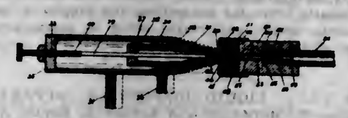
1. In a telephone system embracing a number of exchanges, means for establishing connections from one exchange to another, means in the calling exchange controlled from the called exchange for determining the charge to be made for the call, and circuit arrangements such that the exercise of the control is delayed until a plurality of series of digit impulses are transmitted to the called exchange.

1,576,741. SEAL. SAMUEL A. HAMNETT, Los Angeles, Calif. Filed Apr. 20, 1925. Serial No. 24,455. 5 Claims. (Cl. 18—47.5.)



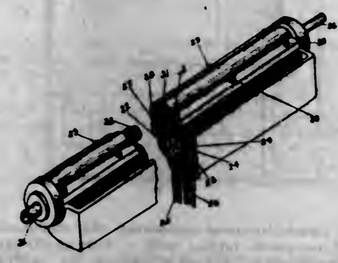
1. The method of making seals comprising taking a seal having a movable die thereon, arranging a heating element against said die, removing the heating element and arranging a disc which is plastic under heat, beneath said die, placing a band about said disc and bringing said die upon said disc to form characters in said disc.

1,576,742. APPARATUS FOR REFINING OILS. WILLIAM TEE HANCOCK and MURAT BOYLE, Kansas City, Mo. Filed Oct. 8, 1923. Serial No. 667,231. 2 Claims. (Cl. 196—127.)



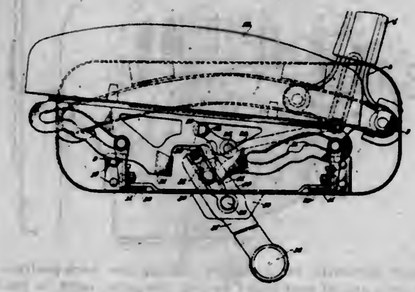
1. In a system for converting heavy hydrocarbon oils into lighter hydrocarbon oils, the combination with a horizontal still having perforate pipes running longitudinally thereof, crown sheets supporting the ends of the pipes, the crown sheets being spaced from the ends of the still to provide steam spaces at the respective ends thereof, steam inlets at the respective ends of the still, a separator chamber connected to the upper portion of the still, and a condenser connected to the top of the separating chamber.

1,576,743. GLASS-FORMING APPARATUS AND METHOD OF FORMING GLASS. ORIN A. HANFORD, Columbus, Ohio, assignor to The Federal Glass Company, Columbus, Ohio, a Corporation of Ohio. Filed Apr. 14, 1921. Serial No. 461,267. 15 Claims. (Cl. 49—20.)



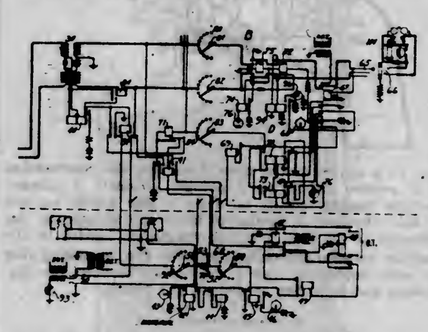
15. Glass blowing apparatus comprising means for oscillating a blank at an angle from the vertical and about its own axis, the oscillation of said blank being such that the sides will be alternately stretched and compressed.

1,576,744. APPARATUS FOR BLOWING GLASSWARE. ORIN A. HANFORD, Columbus, Ohio, assignor to The Federal Glass Company, Columbus, Ohio, a Corporation of Ohio. Filed Aug. 22, 1921. Serial No. 494,078. 10 Claims. (Cl. 49—18.)



1. Means for introducing fluid to glass blanks comprising a pipe leading to the blank retaining head, a normally closed valve in said pipe, a nozzle structure through which fluid is adapted to flow continuously, means for moving said nozzle intermittently into position to supply fluid to said pipe and means for opening said valve prior to or at the instant of positioning of said nozzle.

1,576,745. APPARATUS FOR BLOWING GLASS. ORIN A. HANFORD, Columbus, Ohio, assignor to The Federal Glass Company, Columbus, Ohio, a Corporation of Ohio. Filed Oct. 17, 1921. Serial No. 508,128. 9 Claims. (Cl. 49—18.)

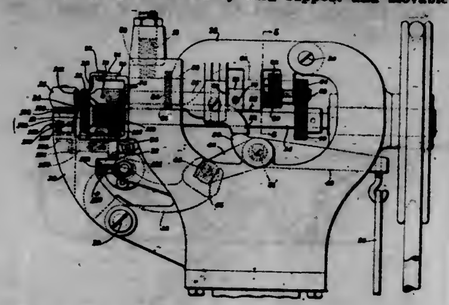


1. Apparatus for delivering air to the interior of a glass blank comprising a receptacle containing a moistening fluid, a wick member over which the air passes, said wick member having a portion immersed in said moistening fluid.

1,576,746. CAR SEAT. CONRAD T. HANSEN, Philadelphia, Pa., assignor to American Motor Body Company, Philadelphia, Pa., a Corporation of Delaware. Filed Mar. 10, 1922. Serial No. 542,555. 8 Claims. (Cl. 155—102.)

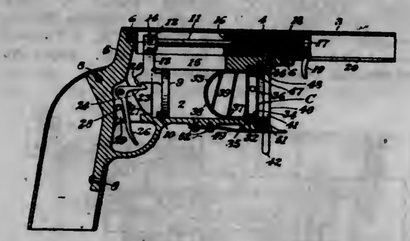
1. In a car seat, in combination, an end plate, an angle plate secured to the end plate, a cross rail secured to the angle plate, said angle plate having a flange fitting over the top of said rail constituting a firm superposed bearing therefor.

1,576,747. TELEPHONE SYSTEM. HENRY L. HOFFMANN, East Orange, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Dec. 22, 1923. Serial No. 682,198. 32 Claims. (Cl. 179—27.)



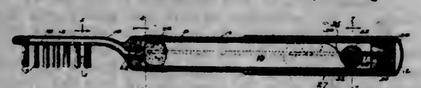
1. A telephone system comprising trunk lines, an operator's telephone set, a first subscriber's line, means responsive to the connection of said first subscriber's line to any one of said trunks to connect the operator's telephone set thereto, a second subscriber's line, a link circuit for connecting to said second subscriber's line, and means operative upon the connection of said link circuit to said second subscriber's line to connect said link circuit to the said trunk circuit.

1,576,748. STOCK-FITTING MACHINE. ALBERT E. JOHNSON, Beverly, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Aug. 4, 1920. Serial No. 401,127. 7 Claims. (Cl. 12—30.)



1. A machine for operating on lipped soles having, in combination, a shaft, a feed roll mounted thereon to bear against one face of the lip, a second feed roll for engaging the opposite face of the lip, a work-positioning roll to bear against the unlipped side of the sole, a support therefor, means for moving said support and work-posi-

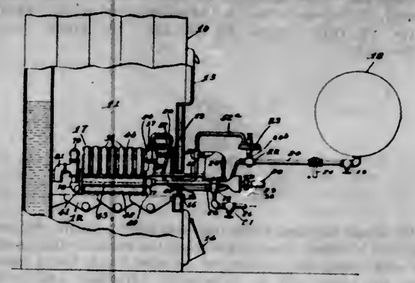
tioning roll toward and from said feed rolls, and gearing including a driving gear rigidly secured to said shaft and a driven gear carried by said support and movable



bodily therewith for positively driving the work-positioning roll, one of said gears having elongated teeth so that said gears will remain in mesh whatever the position of said support and its roll.

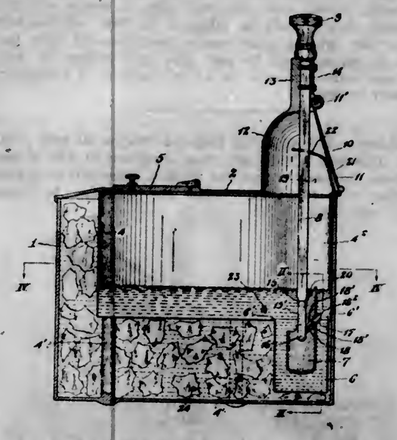
1,576,749. PNEUMATIC PISTOL AND GUN. CHARLES D. KING, Rutherford, N. J. Filed Apr. 15, 1921. Serial No. 461,517. Renewed June 3, 1925. 12 Claims. (Cl. 46—46.)

1. In a device of the class described, the combination of a portion embodying a plunger chamber, a plunger movable therein, means to clamp a film across an end of said chamber, a spring to move the plunger in the direction of the film, a rubber diaphragm located in the chamber between the plunger and the film, a holding ring for said diaphragm, and a coil spring between the diaphragm and said ring to distend the former.



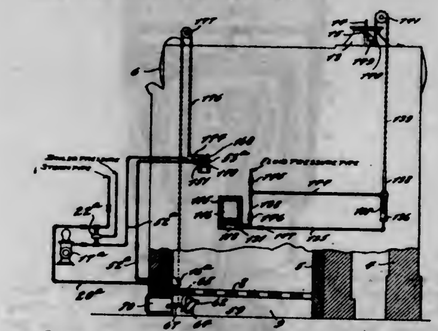
1,576,750. DISPENSING DEVICE. WILLIAM W. KINSLEY, Jamestown, Kans. Filed Dec. 6, 1922. Serial No. 605,244. 6 Claims. (Cl. 221—60.)

1. In a device of the kind described, a tubular casing adapted to receive a collapsible tube, a rotatable device movable lengthwise of the casing to squeeze the collapsible tube transversely, a threaded tube surrounding said rotatable squeezing device and fixed against endwise movement and rotatable in opposite directions to advance and retract the rotatable device longitudinally of the casing.



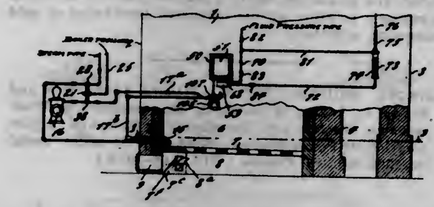
1,576,751. BURNER. GEORGE LEICH, Rockville Center, N. Y. Filed Aug. 6, 1924. Serial No. 730,351. 29 Claims. (Cl. 158—56.)

25. A burner of the class described comprising a plurality of substantially U-shaped tubular sections mounted side by side, means for coupling said sections together and for placing the chambers thereof in communication to form a continuous coil from one end of the burner to the other, a fuel nozzle in communication with one of the end sections of the burner, burner tubes in communication with the other end section whereby fuel from said nozzle passes through said sections prior to its discharge through the burner tubes, a steam boiler mounted longitudinally of and within said sections, means for placing said steam boiler in communication with said fuel nozzle whereby the steam generated by said



boiler will control the entrainment of fuel into said sections and whereby said fuel and steam will be converted into a combustible gas in its passage through said sections, air admission means between the discharge of said sections and said burner tubes, gas burner tubes mounted in said sections and beneath said boiler by means of which steam may be initially generated, means for automatically maintaining a fixed water level in said boiler, an automatic valve for controlling the supply of fuel to said nozzle device, said valve being in communication with the steam boiler.

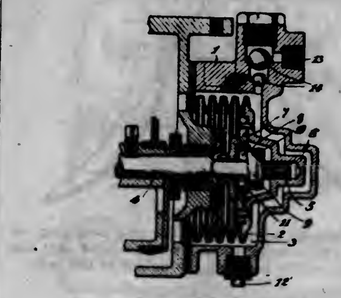
1,576,752. LIQUID-DISPENSING APPARATUS. CHARLES R. MCDONALD and ALBERT E. BEVAN, Akron, Ohio. Filed Apr. 21, 1923. Serial No. 633,657. 4 Claims. (Cl. 221—97.)



1. In liquid-dispensing apparatus, the combination of a liquid receptacle formed with a downwardly-extended well compartment; a bucket; means for raising and lowering the latter from and into said well, the receptacle being formed with a discharge opening; a pivotally-mounted cover for said opening; a pivoted frame controlled by the bucket movements for opening said cover, the latter being free to close under the force of gravity and adapted when closing to move said frame back to normal position; a lug attached to said bucket and formed with an inclined groove; and a pin fixed in the wall of said receptacle adjacent said cover in the line of movement of said lug and adapted to engage the walls of said groove to tilt the bucket upon its upward movement and to realign the bucket upon its downward movement.

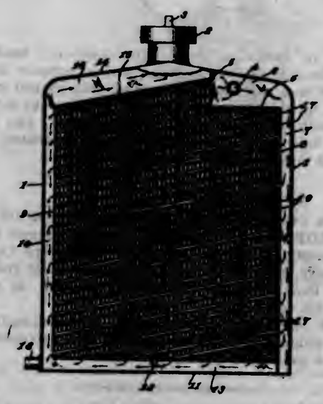
1,576,753. FURNACE CONTROL. EMBURY MCLEAN, Brooklyn, N. Y., assignor to The Engineer Company, New York, N. Y., a Corporation of New York. Filed June 25, 1920. Serial No. 391,779. Renewed Apr. 22, 1925. 10 Claims. (Cl. 236—15.)

3. The method of operating a fluid fuel-fired furnace which consists in controlling the area of the distribution of air supplied to the furnace in accordance with a characteristic of the flow of fluid fuel supplied to the furnace.



1,576,754. FURNACE CONTROL. EMBURY MCLEAN, Brooklyn, N. Y., assignor to The Engineer Company, New York, N. Y., a Corporation of New York. Filed Dec. 10, 1921, Serial No. 521,818. Renewed Apr. 22, 1925. 12 Claims. (Cl. 236—15.)

1. In a fluid fuel fired furnace in combination, means for feeding fluid fuel to the furnace, means for varying a characteristic of the flow of fluid fuel fed to the furnace, means for controlling the supply of air to the furnace for combustion, means controlled by furnace gas pressure for operating said means for controlling the supply of air, and means capable of acting in accordance with a characteristic of the flow of the fluid fuel to the furnace for varying the action of said means controlled by furnace gas pressure.

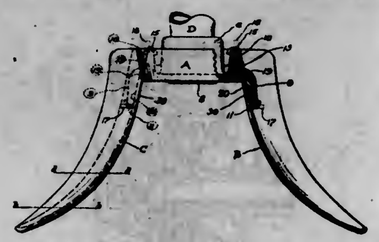


1,576,755. PUMP. ROBERT F. METCALFE, Brooklyn, N. Y., assignor to Socony Burner Corporation, Brooklyn, N. Y., a Corporation of Delaware. Filed Oct. 3, 1924. Serial No. 741,302. 8 Claims. (Cl. 103—148.)

1. In a pump having a reciprocable pumping element adapted to alternately draw in and discharge fluid, of means for moving said element in one direction of reciprocation to discharge fluid from the pump, and dominated by discharge conditions for determining the amount and speed of said movement, and means, including a cam

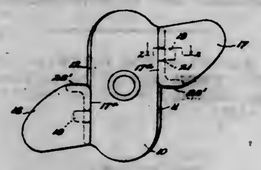
and a coacting ball, for moving said pumping element in the reverse direction of reciprocation to draw fluid into the pump, whereby the pumping action of said element varies in accordance with discharge condition.

1,576,756. RADIATOR FOR INTERNAL-COMBUSTION ENGINES. WELLINGTON W. MUIR, Lockport, N. Y. Filed Aug. 16, 1922. Serial No. 582,217. 6 Claims. (Cl. 251—125.)



1. In a radiator the combination of an outer shell; plates located inside said shell and spaced from the opposite walls thereof to form a pair of chambers and a pair of passages joined to said chambers; an imperforate partition inside said shell separating said chamber from each other; means to conduct the fluid to be cooled into one of said chambers; a plurality of water tubes inclined to the horizontal plane joining said pair of passages; a vent leading from the other of said chambers; and means to withdraw the cooled fluid from the radiator.

1,576,757. AUTOMATIC TRAIN-PIPE COUPLING HEAD. JOSEPH V. ROBINSON, New York, N. Y. Filed Mar. 6, 1920, Serial No. 363,634. Renewed June 12, 1925. 13 Claims. (Cl. 285—58.)



1. An automatic train pipe coupling head, comprising in combination a base having a substantially flat cou-

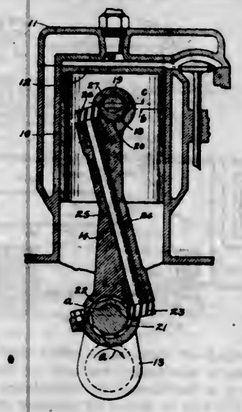
ping face arranged substantially at right angles to the longitudinal axis of the head, a pair of rigid guides arranged diagonally on opposite sides of said base and

extending forwardly beyond said face and diverging outwardly, said guides being formed separately of said base and means for rigidly securing the guides to the base.

1,576,758. CONNECTER HEAD. JOSEPH ROBINSON, New York, N. Y. Filed Apr. 12, 1921, Serial No. 460,775. Renewed June 12, 1925. 5 Claims. (Cl. 285—58.)

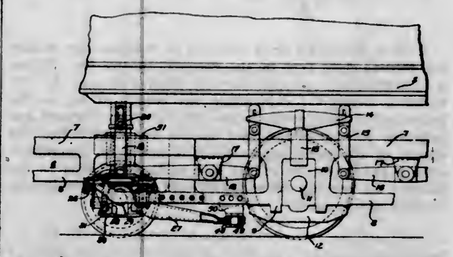
1. In an automatic train pipe connecter head comprising in combination, a base and a support integral with said base, said support having a yoke shaped forward end, the forward ends of the arms of the yoke being integral with the rear portion of the base, and guides for said base, said guides being formed separately therefrom and rigidly secured thereto.

1,576,759. CARTRIDGE WAD AND METHOD OF MAKING THE SAME. ALFONS G. SCHURICHT and GEORGE T. WRIGHT, Alton, Ill., assignors to Western Cartridge Company, East Alton, Ill., a Corporation of Delaware. Filed Feb. 25, 1924. Serial No. 695,098. 22 Claims. (Cl. 102—42.)



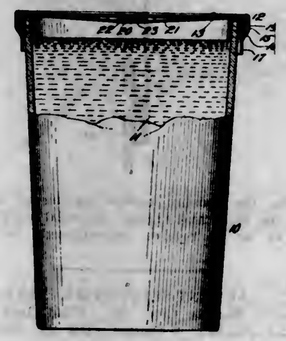
20. A cartridge wad comprising, an individually compressed mixture of bindable material and polymerized oil cemented to form a pliable article.

1,576,760. THRASHING MACHINE. FRED D. TOLLIVER, Henry, Ill. Filed May 9, 1919, Serial No. 295,884. Renewed May 3, 1924. 20 Claims. (Cl. 130—26.)



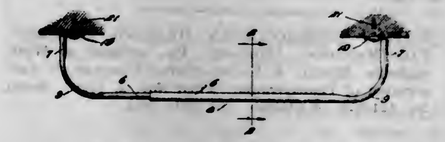
1. In a thrashing machine for handling and separating a mixture of different sizes of grains or seeds, the combination with means for separating the mixture of grains from the straw, a preliminary grain and seed separating mechanism receiving such mixture from the straw-separating mechanism and embodying means for effecting a separation of the larger grains from the smaller grains and for delivering such separated grains to different points of discharge, and grain cleaning and separating mechanisms located in position for receiving grain independently from the several discharging points of said preliminary grain and seed separating mechanism.

1,576,761. INTERNAL-COMBUSTION ENGINE. ZACHARIAH S. HOFFMAN, Irvington, N. J. Filed Nov. 25, 1924. Serial No. 752,085. 7 Claims. (Cl. 123—78.)



7. In a power transmitting device, the combination with a reciprocatory member, of means to which said reciprocatory member is connected, said means comprising a rotatable eccentric, a connecting structure having pivotal engagement with said eccentric to reciprocate with said reciprocatory member and whereby the relation of said structure to said reciprocatory member is varied, and means for rotating said eccentric as aforesaid including a rotating spindle extending lengthwise of said connecting structure.

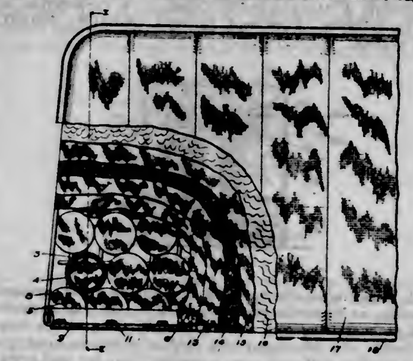
1,576,762. GUIDING TRUCK. HAROLD A. HOUSTON and FRANK L. ALLEN, Wilkinsburg, Pa., assignors to Westinghouse Electric and Manufacturing Company, a Corporation of Pennsylvania. Filed Nov. 1, 1922. Serial No. 598,308. 7 Claims. (Cl. 105—174.)



1. The combination with a locomotive cab and trucks for carrying the cab, of a radial truck having lateral restraining means between its frame and the axle thereof, said means comprising a thrust bearing located on the axle in engagement with co-operating bearing plates provided in said frame.

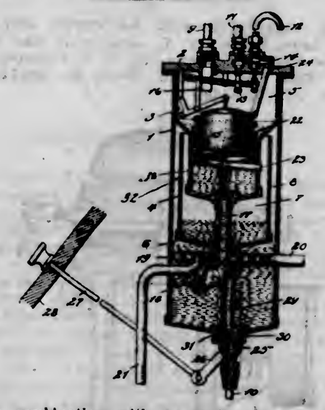
1,576,763. CLOSURE FOR TUMBLERS, JARS, AND OTHER RECEPTACLES. HARRY INGRAM, Brooklyn, N. Y. Filed Feb. 4, 1924. Serial No. 690,376. 8 Claims. (Cl. 215—56.)

1. A closure for sealing tumblers and other receptacles comprising a cap of disk outline having a skirt portion and formed in its top with an outlet hole and said top about said hole being capable of limited vertical flexion, and a sealing surface supported closely below the top of the cap at said hole for sealing the same, said top under the force of pressure generated within the receptacle being adapted to flex upwardly from said sealing surface to open said hole for the relief of said pressure and to thereafter engage said surface for sealing said hole.



1,576,764. CURTAIN ROD. WILLIAM C. KENNEY, Cranston, R. I., assignor to Kenney Manufacturing Company, a Corporation of Rhode Island. Filed Nov. 13, 1924. Serial No. 749,627. 4 Claims. (Cl. 156—22.)

1. The combination of a curtain rod comprising a flat body and lateral inturned flanges oppositely disposed on the inner face thereof, an inwardly directed projection upon the body, an attaching plate, a flat lateral lug upon the plate disposed at right angles thereto slidably engaged in the flanges, and a transversely disposed shoulder upon an intermediate portion of the lug adapted to engage the projection.

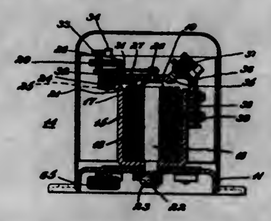


1,576,765. SEAT STRUCTURE. FRED B. KING, Toledo, Ohio, assignor, by mesne assignments, to The Willys-Overland Company, Toledo, Ohio, a Corporation of Ohio. Filed Oct. 3, 1919. Serial No. 328,116. 5 Claims. (Cl. 155—181.)

1. In a spring seat structure having a plurality of coil springs and a cushion supported thereby, a border frame for said seat comprising a wire bent to extend across the back and the two ends of said seat and a flat metal strip extending across the front of said seat, said strip having its ends secured to the ends of said wire and having a bead formed thereon at its front edge,

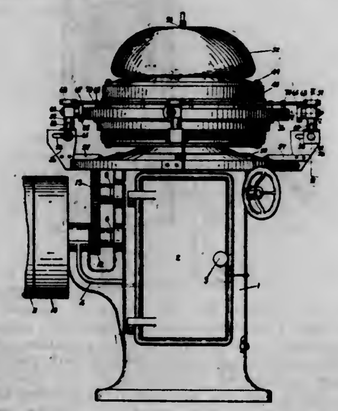
thereby increasing its stiffness and providing a rounded edge substantially throughout its length to engage an upholstery covering.

1,576,766. HYDROCARBON-SUPPLY APPARATUS FOR INTERNAL-COMBUSTION ENGINES. VALENTINE C. KLOEPPEL, St. Louis, Mo., assignor of one-half to Ralph Kalish, St. Louis, Mo. Filed July 2, 1921. Serial No. 482,291. 7 Claims. (Cl. 123—127.)



2. In combination with an engine of internal combustion type, a hydrocarbon supply apparatus comprising a tank having a hydrocarbon containing chamber adapted for hydrocarbon supply communication with the engine, a heating coil having communication with the engine exhaust and disposed in the tank for vaporizing some of the hydrocarbon of said chamber, a second chamber within the tank also adapted for hydrocarbon supply communication with the engine and having communication with the first chamber for receiving condensing vapors therefrom, and means for controlling hydrocarbon supply communication selectively between the tank or shell and the engine.

1,576,767. PROTECTION OF PIPES BY USE OF LATEX. CHAUNCEY C. LOOMIS, Yonkers, and HORACE E. STUMP, Brooklyn, N. Y., assignors, by mesne assignments, to The Hevea Corporation, a Corporation of New York. Filed Apr. 21, 1923. Serial No. 633,776. 2 Claims. (Cl. 91—70.)



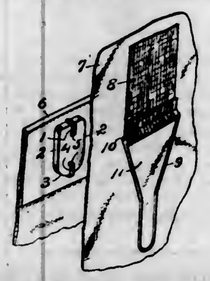
1. The process of protecting pipes, which comprises, coating them internally with latex and coagulating the latex to form a rubber coating.

1,576,768. VOLTAGE-REGULATOR SYSTEM. WARREN P. LOUDON, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Sept. 12, 1921. Serial No. 500,247. 7 Claims. (Cl. 171—222.)

1. A regulator comprising a base having a yoke secured thereto, an electromagnet within said yoke and comprising an energizing coil, a series compensating coil, a magnetizable core associated with said coils and an armature co-operating with said core, a flexible hinge for said armature secured to the yoke, a stud mounted within said armature and adapted to engage said core, a spring engaging said stud, an adjustable tension screw therefor, a U-shaped bimetallic support for said screw and also constituting a fulcrum for said spring, a contact member carried by said armature, a second contact member co-operating therewith and adjustable supporting means for said second contact member also secured to said yoke.

1,576,769. MACHINE FOR GRINDING ROLLERS. HANS LUTZ, Elmira, N. Y., assignor to The Willys-Morrow Company, Elmira, N. Y., a Corporation of Ohio. Filed May 29, 1919. Serial No. 300,713. 20 Claims. (Cl. 51—130.)

1. In a grinding machine, an upper grinding member, a lower grinding member, means for rotating said members in opposite directions, a roller retaining member having a portion thereof interposed between the adjacent surfaces of the grinding members, and means independent of the grinding members for guiding the retaining member in a path eccentric to the path of movement of the grinding member.



1,576,770. SUSPENDERS. JOHN C. MABRY, Kansas City, Mo. Filed July 24, 1923. Serial No. 653,504. 1 Claim. (Cl. 241—25.)

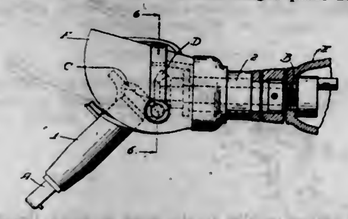
In suspenders, a trouser attaching device comprising a base plate having a laterally extending ear provided with an edge notch, and having two reversely turned tongues, and a pin clamped under said tongues and disposed in said notch, and a housing member longitudinally slidable on said base plate over said ear and said pin and adapted to be moved to cover and uncover the point

of said pin, the housing member having an opening for receiving the shirt and trouser material with the latter disposed so as to receive therethrough the point of said pin.

1,576,771. GARMENT-SUPPORTING DEVICE. JOHN C. MABRY, Kansas City, Mo. Filed July 14, 1924. Serial No. 725,890. 5 Claims. (Cl. 24—245.)

1. A button of the kind described comprising an oblong flat flexible body having a rounded end edge and parallel side edges merging into said end edge and having through the body from side to side two holes respectively adjacent to the ends of the body adapted to receive fastening means.

1,576,772. THERMOCOUPLE HEATING ELEMENT. PAUL MACGAHAN, Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Nov. 2, 1920. Serial No. 421,254. 6 Claims. (Cl. 201—63.)

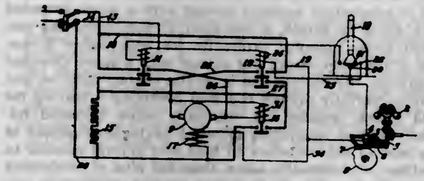


1. An article of manufacture comprising a single integral body of high-resistance conducting material and a filamentary coating of relatively low-resistance material intimately engaging the same and extending therealong from each terminal thereof to a position spaced from the other coating to provide a concentrated heat zone spaced from said terminals between the coatings.

1,576,773. JOINTED DRIVE SHAFT. MICHAEL W. MCARDLE, Chicago, and HORACE C. WRIGHT, Oak Park, Ill., assignors to Chicago Flexible Shaft Company, a Corporation of Illinois. Filed Nov. 14, 1925. Serial No. 68,983. 4 Claims. (Cl. 74—101.)

1. A casing for a jointed power shaft comprising two parts hinged together and separable by axial movement of one part with respect to the other, said parts having

inter-membering features which prevent such axial separation through a portion of the angular range of positions permitted by the hinged connection, said features being disengageable only when the hinged parts are sub-



stantially aligned and a yoke attached by its ends at the hinge axis, and having a portion interposed between the two members to block them apart and prevent their alignment.

1,576,774. PRODUCT FOR CLEANSING THE SKIN. GEORGE MCGRAW, New York, N. Y., assignor to The Oakland Chemical Company, New York, N. Y., a Corporation of New York. Filed Aug. 20, 1923. Serial No. 658,251. 1 Claim. (Cl. 167—9.)

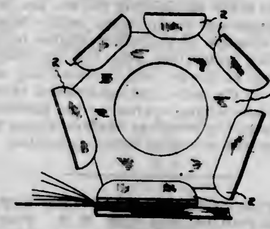
A cosmetic paste for external use, comprising a mixture of hydrogen peroxide and a vegetable flour.

1,576,775. SYSTEM OF CONTROL. RALPH W. MCNEILL, Edgewood, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Jan. 8, 1921. Serial No. 435,787. 8 Claims. (Cl. 172—152.)

1. The combination with a motor-operated reciprocating device and speed-governed means for limiting the rate of operation thereof, of means comprising said limiting means for restricting the operation of the device to a predetermined range of movement.

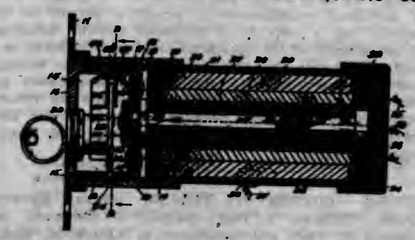
1,576,776. CONVERSION OF CUPROUS MATERIALS. MARION H. MERRISS, Westbury, N. Y., assignor to Nichols Copper Company, New York, N. Y., a Corporation of New York. Filed Aug. 1, 1925. Serial No. 47,638. 12 Claims. (Cl. 75—62.)

1. The method of treating black copper or the like materials embodying impurities which are largely in metallic form to obtain blister copper directly therefrom, which comprises preliminarily heating the mass of black copper or the like until it is at least partially melted, then blowing air therethrough, controlling the quantity and pressure of the air to effect rapid oxidation of the impurities, and relying substantially upon the heat produced by such oxidation for producing blister copper from the mass.



1,576,777. MOP CLOTH. WILLIAM J. MOORE, Philadelphia, Pa. Original application filed May 8, 1923, Serial No. 636,788. Divided and this application filed Sept. 23, 1924. Serial No. 739,256. 1 Claim. (Cl. 15—229.)

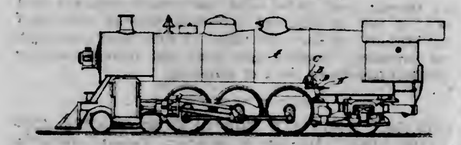
A mop-cloth comprising strands; a flexible band embracing the strands midway of their length, said band being secured to said strands by rows of stitching along the edges of said band and by two rows of stitching extending parallel to each other through the center of said band and strands; a core positioned between said central parallel rows of stitching, said band and strands being folded over said core; a row of stitching extend-



ing through said folded band and strands adjacent said core; a row of stitching extending through said band and strands adjacent the edges of said band; and eyelets extending through said band and strands between said last-mentioned rows of stitching.

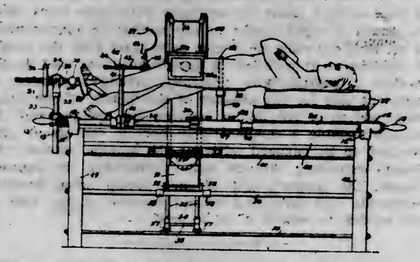
1,576,778. MOUNTING FOR RUBBER STAMPS AND THE LIKE. HAROLD P. MORTON, Toronto, Ontario, Canada. Filed July 7, 1925. Serial No. 42,098. 4 Claims. (Cl. 101—109.)

4. A polylateral plate-like holder and a plurality of stamps secured about its periphery with their faces lying in planes at right angles to the holder, or approximately so, thus enabling the device to be used with the holder in upright or approximately upright position, said holder having a substantially centrally arranged opening of sufficient size for the passage of the fingers of one hand, that portion of the holder between the opening and the stamps forming a comparatively narrow continuous grip adapted to be engaged adjacent the stamps between the fingers extending through said opening and the opposed thumb, the forward end of each stamp being bevelled forwardly and extending beyond the end of the side of the holder to which it is secured.



1,576,779. BURGLARPROOF INDUCTION COIL. HOWARD J. MURRAY, New York, N. Y. Filed Oct. 11, 1921. Serial No. 507,011. 13 Claims. (Cl. 175—360.)

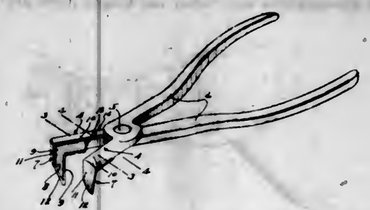
1. In an induction coil unit, the combination of cylindrical metallic burglar proof casing open at opposite ends and provided with a barrier for dividing the casing into a circuit closer containing compartment and into a



coil receiving compartment, an induction coil having one end fitted in said coil receiving compartment and projecting therefrom, said coil including a core bolt with one end secured to said barrier, means accessible through the open end of the circuit closer containing compartment for locking the bolt in place, said barrier provided with an opening extending therethrough, a circuit closer disposed within the circuit closer containing compartment for controlling the coil, a conductor leading from the primary windings of the coil through said opening to the circuit closer and a burglar proof closure for the open end of the circuit closer containing compartment.

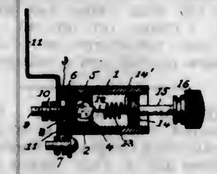
1,576,780. METHOD OF STEAMING LOCOMOTIVES. SPENCER OTIS, Chicago, Ill. Filed Nov. 9, 1921. Serial No. 513,985. 1 Claim. (Cl. 122—36.)

In a steam locomotive, a fire box, a boiler constructed in part around the fire box, an injector located in the portion of the boiler surrounding the fire box, in position to induce circulation of the boiler water through said portion, and standing in propelling relation to the water, and means for connecting said injector with an extraneous source of steam; said injector being submerged in the water of the boiler and constructed to admit the boiler water into mixing relation to the admitted steam, and to discharge the resultant mixture within the boiler and in a direction to induce boiler circulation.



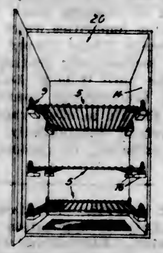
1,576,781. FLUOROSCOPIC FRACTURE APPARATUS. HERMAN B. PHILIPS, New York, N. Y. Filed Apr. 22, 1924. Serial No. 708,108. 2 Claims. (Cl. 250—84.)

1. Apparatus for making fluoroscopic observations which include transformers arranged with their axes at an angle to each other, and screens to co-operate with the individual transformers to permit a patient to be observed from a plurality of directions without changing the adjustment of the apparatus, said screens being secured together at an angle, one of said screens having movable engagement with one of the transformers to permit the screens to be nested close against the transformer or to be moved outwardly therefrom for the taking of observations in conjunction with said transformers.



1,576,782. COTTER-PIN PULLER. HENRY ERNEST PIEH, Williston, N. Dak., assignor of one-fourth to George H. Pieh and one-fourth to Lillian M. Pieh, both of Minneapolis, Minn. Filed Mar. 27, 1925. Serial No. 18,744. 1 Claim. (Cl. 29—86.2.)

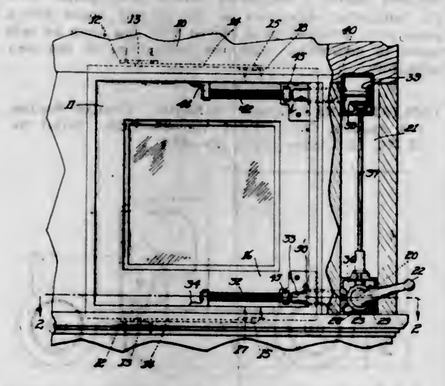
A cotter pin puller comprising a pair of handle-equipped pivotally connected jaws having at their outer ends a laterally projecting relatively sharp bill, the inner faces of the jaws and bill being recessed to leave contacting relatively sharp marginal clamping edges, certain of



which extend parallel to the plane in which the opening and closing movements of the jaws take place and certain others of which extend transversely thereof.

1,576,783. RADIODETECTOR. JOHN B. PITTS, Winnetka, Ill. Filed Jan. 31, 1925. Serial No. 5,983. 2 Claims. (Cl. 250—31.)

1. In a radio detector, the combination of a main casing of conducting material formed with a screw threaded bore along its length, a container of non-conducting material screw threaded externally for engagement in one end of the main casing and formed with a screw threaded cavity for the reception of a crystal contact member and with a centrally orificed end wall providing a bearing for said crystal member, an externally screw threaded follower head of conducting material having engagement in the bore of the container to hold said crystal member in position, an externally screw threaded plug of conducting material carrying an electrical contact member in operative relation to the crystal member and formed with a screw threaded periphery in adjustable engagement with the bore of the main casing, a terminal member connected to the main casing, and a companion terminal member connected to the aforesaid follower head of the container.



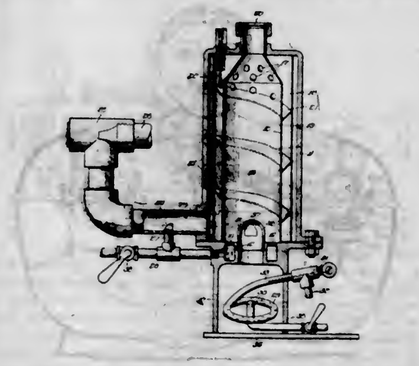
1,576,784. ANT-PROOF SHELVING. FRED E. PLANETT, Oakland, Calif. Filed Mar. 23, 1925. Serial No. 17,582. 7 Claims. (Cl. 43—109.)

3. An ant proof shelf device, comprising a shelf having hangers attached thereto, containers adapted to surround the lower part of said hangers, and means for supporting the said hangers and containers; each of the hangers being U-shaped with the lower part thereof

below the shelf and the upper part above the shelf, and said upper part provided with an eye to receive the said supporting means, and the top part of each of the containers also provided with an eye to receive the same supporting means, and each container being of such depth so as not to contact the end of the hanger.

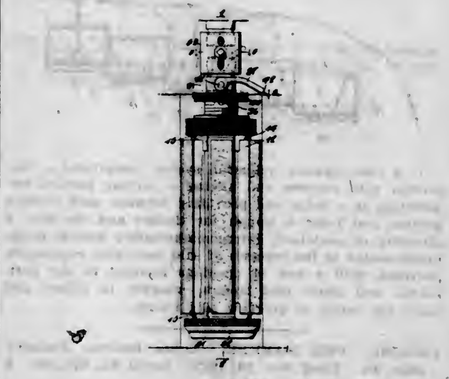
1,576,785. SASH-OPERATING DEVICE. WILLIS E. PUTNAM, Worcester, Mass. Filed Sept. 2, 1924. Serial No. 735,255. 6 Claims. (Cl. 268—14.)

1. In a sash operating device, the combination with a casing and sash, of two screws located constantly in horizontal position at the top and bottom of the casing for simultaneously and equally moving the top and bottom of the inner edge of the sash away from the adjacent edge of the casing, means for actuating said screws, and means acting directly on the top and bottom of the outer end of the sash for swinging it outwardly.



1,576,786. ELECTRIC BATTERY. WELLINGTON J. QUIRK, Chicago, Ill. Filed Mar. 23, 1925. Serial No. 17,635. 3 Claims. (Cl. 136—170.)

1. An electric battery including a jar, a cover for the jar, battery electrodes extending through the cover from the interior of the jar to the exterior of the battery said cover having a vent formed therethrough and being continued at the vent above the top side of the cover, the cover having a cavity in its bottom side between the electrodes and at which the vent commences.

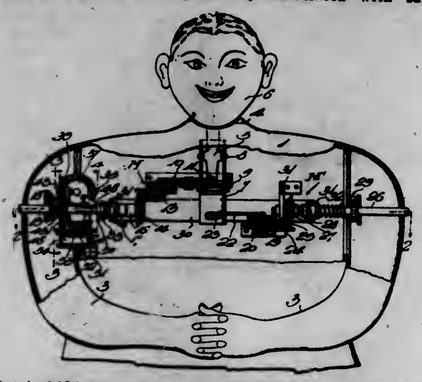


1,576,787. METHOD OF PRODUCING GAS. GEORGE L. REICHHELM, New York, N. Y., assignor to The Gasifier Company, Elizabeth, N. J., a Corporation of New Jersey. Filed Nov. 15, 1920. Serial No. 424,069. 14 Claims. (Cl. 48—212.)

4. The method of producing gas from hydrocarbon fuel consisting in vaporizing the fuel and causing a gravitational movement in a constantly changing direction, free of abrupt bends, of said vaporized fuel in and by a vehicle

of combustion gas while said vaporizing is being accomplished to prevent the deposit of carbon.

1,576,788. CYLINDER HONE OR LAPPING TOOL. THEODORE RESTEL, Cleveland, Ohio. Filed Mar. 1, 1924. Serial No. 696,206. 5 Claims. (Cl. 51—206.)

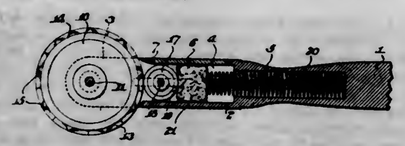


1. A cylinder hone comprising a slotted stock, a pair of longitudinally alined expanding members, a slotted sleeve connecting said members, a transverse pin carried by the stock and extending through the slotted sleeve, a coil spring arranged within the sleeve between said pin and one end of the sleeve, a set of radially adjustable stone carrying shoes mounted upon the stock, and portions carried by the shoes to engage the expanding members and adjust the stones upon axial movement of the members.

1,576,789. MECHANICALLY-OPERATED FIGURE TOY. ROBERT H. ROBERTSON, Bangor, Me. Filed July 9, 1925. Serial No. 42,551. 4 Claims. (Cl. 46—40.)

1. A toy comprising a body having a pivoted arm and a head, the latter being mounted on both vertical and horizontal axes, means for moving said head on its vertical axis, means for moving said head on its horizontal axis, driving mechanism for both of said means operatively connected to said arm to be actuated thereby and includ-

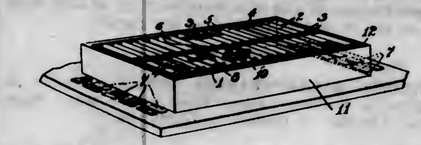
ing a clutch for each of said means, clutch-shifting means operatively connected with said arm for actuation thereby, a chance device operatively associated with said



clutch-shifting means for controlling the latter, and means operatively connected with said arm for actuating said chance device.

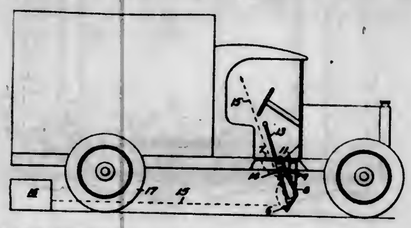
1,576,790. IRRIGATION SYSTEM. GEORGE ROESSNER, Los Angeles, Calif. Filed Jan. 21, 1925. Serial No. 3,781. 2 Claims. (Cl. 61—13.)

1. A subterranean irrigation system comprising a base formed with recesses and having a curving portion terminating in a ledge and providing between such curving portion and ledge a trough for cinders and the like, a plurality of conjoined, intercommunicating hollow receptacles seated in the recesses of said base, said receptacles provided with a row of openings inclined to the horizontal, and above said trough, whereby to collect and cause the water to overflow said trough.



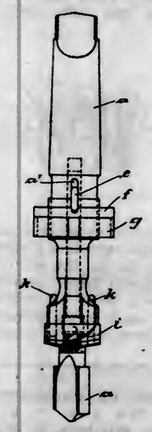
1,576,791. FUR MARKER. LOUIS ROSNER, Philadelphia, Pa. Filed Nov. 16, 1923. Serial No. 675,049. 5 Claims. (Cl. 101—328.)

1. An instrument of the character described comprising a handle, a marking device connected therewith, a holder for a pulverulent marking substance, and a roller for abrading said substance and distributing it to said marking device.



1,576,792. GAME APPARATUS. ROBERT L. ROSS, Indianapolis, Ind. Filed Nov. 27, 1925. Serial No. 71,541. 3 Claims. (Cl. 273—94.)

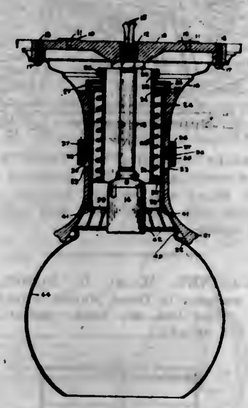
1. A game apparatus comprising a playing board having on its surface indicia comprising a series of parallel lines extending transversely thereof uniform distances apart to indicate a foot ball field and having at each end thereof a plurality of indicating characters, of a series of play indicators provided in duplicate each indicator having indicia thereon to indicate a play and having at



one end thereof a column of indicia to co-operate with the indicating characters on the playing board and a game piece arranged to be moved back and forth on said board in accordance with the indications of the play indicators.

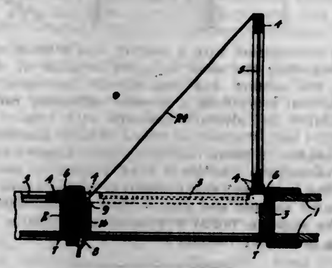
1,576,793. REAR-VISION MIRROR. LUTHER SADLER, Los Angeles, Calif. Filed Apr. 25, 1925. Serial No. 25,779. 3 Claims. (Cl. 45—97.)

3. The combination with a vehicle having an opening in the floor thereof, of a door movable to open and close the opening, a rear view mirror mounted below the floor and visible through the opening when open, said mirror being movable from operative to inoperative position and means connecting the door and the mirror whereby the door and the mirror are moved together to simultaneously open the door and place the mirror in operative position and vice versa.



1,576,794. DRILLING TOOL. WILHELM SASSE, Spandau, Germany. Filed July 7, 1925. Serial No. 41,953. 2 Claims. (Cl. 77—65.)

1. A drilling tool comprising disc-shaped drilling cutter, a holder for said drilling cutter, an anchoring bolt inserted into an axial bore of said holder and having a collar for detachably securing said drilling cutter



to said holder in a central position therein, a key and a nut provided on said anchoring bolt for fastening the latter to said holder, an advance cutter fastened to said anchoring bolt, said advance cutter being of non-circular cross-sectional configuration and engaging a similar bore in said drilling cutter.

1,576,795. DECK-LAMP LIGHTING FIXTURE. EDWARD J. SCHROEDER, Summit, N. J. Filed Mar. 8, 1923. Serial No. 623,575. 4 Claims. (Cl. 240—78.)

1. In a lighting fixture a spider adapted to be rigidly secured to the ceiling, a canopy rigidly secured to said spider, spring clamping fingers mounted in said canopy under constant spring tension upwardly against the lower part of said canopy, and means on the outside of said canopy for releasing said spring clamping members and a socket support rigidly secured to said spider within said canopy.

1,576,796. CONTROLLING DEVICE FOR CASEMENT WINDOWS. ANDREW SCHUEHLE, Minneapolis, Minn. Filed Feb. 23, 1923. Serial No. 620,722. 14 Claims. (Cl. 268—15.)

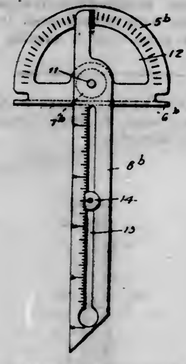
1. The combination with a hinged window and the casement thereof, said casement having an opening therethrough of substantially uniform cross section, of a rectilinear plunger extending through and slidable in said opening in said casement and adapted to abut said window adjacent its free edge whereby said window can be pressed outwardly to partially open position by said plunger.

1,576,797. PRECISION MEASURING INSTRUMENT. GEORGE SCHUSTARICH, Chicago, Ill. Filed June 11, 1924. Serial No. 719,301. 15 Claims. (Cl. 33—165.)

5. In an instrument of the type described, a main staff provided with a longitudinally arranged scale, a normally stationary jaw, means for securing said jaw to said staff, a micrometer mechanism, a carriage for said mechanism slidingly mounted on said staff, means for clamping said carriage to said staff, said micrometer mechanism comprising a tubular headstock secured to the aforesaid carriage, a revoluble sleeve mounted for rotation in said headstock, a micrometer screw having fixed axial attachment in said sleeve, a tubular head sliding in said sleeve and having screw threaded engagement with the micrometer screw, the aforesaid sleeve, headstock and tubular head carrying a plurality of scales reading in opposite directions, a travelling jaw having a carriage slidingly mounted on the main staff, and means for attaching said tubular head to the travelling jaw in a manner permitting a turning adjustment of the tubular head.

1,576,798. WEED PULLER. PETER P. SPIEGEL, Kansas City, Mo. Filed Sept. 8, 1925. Serial No. 55,030. 6 Claims. (Cl. 55—68.)

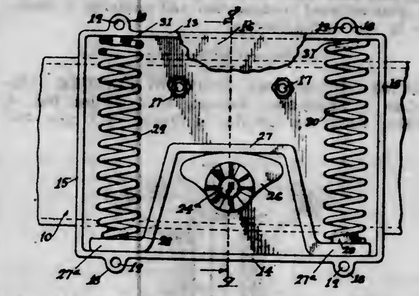
2. A tool of the character described consisting of a staff, a tubular member fixed to the lower end of said staff and terminating at its lower end in a fixed jaw, a movable jaw operably connected to said fixed jaw, and a lever for actuating said movable jaw.



2. A tool of the character described consisting of a staff, a member fixed to the lower end of said staff and embodying a fixed jaw, a movable jaw operably connected to said fixed jaw, a lever for actuating said movable jaw, and a bracket secured to the staff and to which said lever is fulcrumed.

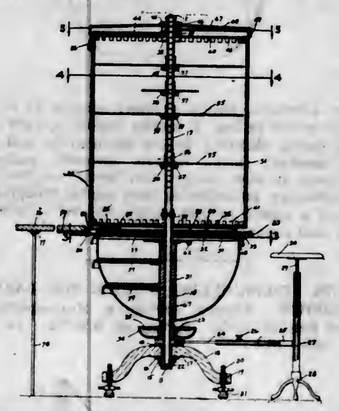
1,576,799. ELECTRIC SWITCH. JOSEPH S. THOMPSON, San Francisco, Calif. Filed May 11, 1925. Serial No. 29,282. 7 Claims. (Cl. 200—166.)

1. In an electric switch, a pair of spaced contacts, and a contact element intermediate said spaced contacts comprising two adjacent plates, means between the same normally urging said plates apart and means limiting the separation of the same said plates being supported to permit a limited vertical and horisontal movement.



1,576,800. COMBINATION PROTRACTOR AND COMPASS. HENRY TIBONY, New York, N. Y. Filed Nov. 21, 1923. Serial No. 676,078. 1 Claim. (Cl. 33—75.)

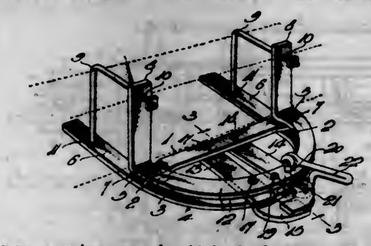
In a universal gauge; a semi-circular plate having a substantially rectangular flange along the straight edge thereof and the central portion of the plate being depressed below the upper face of the marginal portion; a blade having a free end, a finger end, a graduated scale, and a longitudinal slot terminating in an enlarged aperture; an index member slidably mounted in the said slot and provided with an opening adapted to receive marking means; and means for pivotally attaching the said blade to the said plate comprising a pin having a tapered lower extremity and a threaded top portion, and a threaded thumb nut adapted to engage with the said top portion of the said pin.



1,576,801. COMBINED SHOCK ABSORBER AND SNUBBER. HAROLD A. ADAMS, East Bakersfield, Calif., assignor of one-fourth to John Nelson and one-fourth to C. R. Dougherty, both of Bakersfield, Calif., and one-fourth to O. R. Dunbar, Long Beach, Calif. Filed June 9, 1924. Serial No. 718,791. 5 Claims. (Cl. 267—9.)

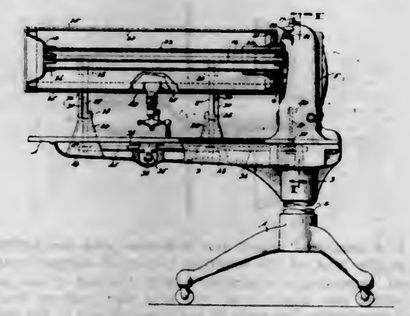
1. A combined shock absorber and snubber comprising a housing adapted to be mounted upon the frame of a vehicle, a cam shaft having a cam thereon rotatable in said housing, a movable member disposed within said housing and extending across said cam shaft adjacent said cam, compression springs disposed within said housing and engaging said movable member upon opposite sides of said cam shaft, a crank rigid with said cam

shaft, and means connecting said crank to an axle of the vehicle whereby any relative movment between the axle and the frame will produce rotation of said cam shaft and cause said cam to move said movable member against said springs.



1,576,802. CABINET. HARRY D. ALFREY, Crawfordsville, Ind., assignor to Dema Martin Alfrey, Crawfordsville, Ind. Filed Oct. 30, 1922. Serial No. 597,852. 1 Claim. (Cl. 45—16.)

The combination with a cabinet, and a table, of means for connecting the same to allow rotation of the table about the cabinet and also pivotal movement toward the cabinet, comprising a member extending radially of the cabinet and pivotally mounted with respect thereto, a support extending similarly and slidably associated with said member, a hinge connecting said support and table and transversely positioned with respect to the pivotal axis, and a pin and slot connection between said slidably associated member and support for simultaneously securing the same in radial alignment and limiting relative sliding movement thereof.

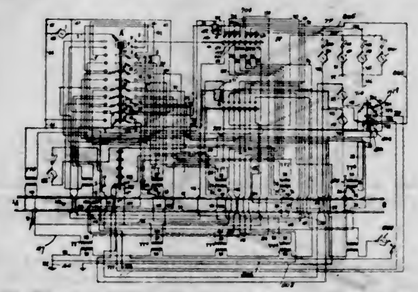


1,576,803. VEHICLE COUPLER. EDWIN B. ANDERSON, Taunton, Minn. Filed Aug. 3, 1925. Serial No. 47,892. 2 Claims. (Cl. 280—33.15.)

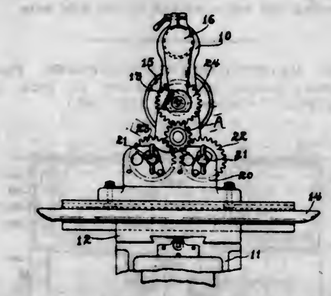
1. A vehicle coupler comprising a horisontal transverse bar, upper and lower U-shaped bars disposed in spaced horisontal planes and having their arms longitudinally disposed and secured to the upper and lower sides of said transverse bar, the arm-connecting portions of said U-shaped bars being horizontally spaced from said transverse bar, a pair of horisontal hook shanks passing between said arm-connecting portions of said U-shaped bars and having co-acting hooks at their outer ends,

means securing one of said hook shanks to all of said bars, means pivoting the inner end of the other shank to said transverse bar, and a locking pin for normally holding said other shank against pivotal movement, said arm-connecting portions of the U-shaped bars having openings to receive said pin.

1,576,804. IRONING MACHINE. THOMAS J. ARERON, Detroit, Mich., assignor to The Perfection Appliance Co., Detroit, Mich., a Corporation of Michigan. Filed May 16, 1923. Serial No. 639,275. 7 Claims. (Cl. 68—9.)



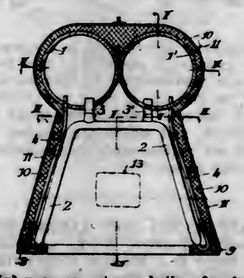
1. An ironing machine comprising a driven revoluble roll, a tiltable ironing shoe movable toward and from the roll, levers upon which the shoe is pivotally mounted, an equalizing bar having its ends universally connected to said levers, and resilient means actuating the equalising bar, whereby the shoe is yieldably held against the roll for swinging movement about horisontal and transverse axes to adapt itself to varying thicknesses of material being ironed.



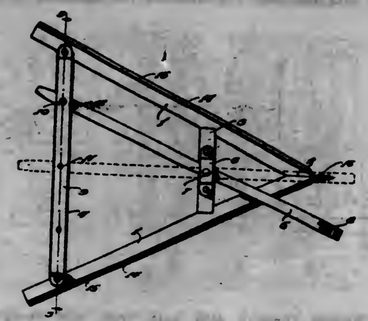
5. An ironing machine including a casing, a hollow stud protruding from said casing, a power driven shaft protruding from said casing through said stud and having an outer free end, a tube fixed in said stud and through which extends said shaft, and a roll about said tube, said roll having its outer end rotatably supported on said tube and driven from the free end of said shaft said roll having its inner end rotatably supported on the hollow stud of said casing.

1,576,805. CONTROL OF TRAINS. ARTHUR REGINALD ANGUS, Westminster, London, England. Filed Dec. 22, 1921. Serial No. 524,228. 11 Claims. (Cl. 246—63.)

11. Electrical train-controlling apparatus comprising an electromagnetic device adapted when de-energised to allow its movable part to produce a danger-indicating operation, energising means for energising said electromagnetic device, an electrically operatable line-clear indicator, and means adapted to enable said movable part, when said electromagnetic device is de-energised, to complete a current path including said line-clear indicator and adapted when completed to connect said line-clear indicator in circuit with said energising means so that on the subsequent energisation of said electromagnetic device said line-clear indicator will be operated by current flowing through said path from said energising means, said current path being adapted to be broken after the energisation, and until the next de-energisation, of said electromagnetic device, substantially as described.

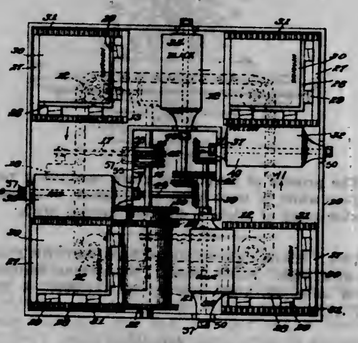


1,576,806. METHOD OF BURNISHING GEARS. BRYANT H. BLOOD, Hartford, Conn., assignor to Pratt & Whitney Company, New York, N. Y., a Corporation of New Jersey. Filed Nov. 6, 1922. Serial No. 599,315. 8 Claims. (Cl. 29—90.)



1. The process of burnishing gears comprising running said gear while in mesh with a burnisher, said gear and burnisher being of slightly different normal pitch.

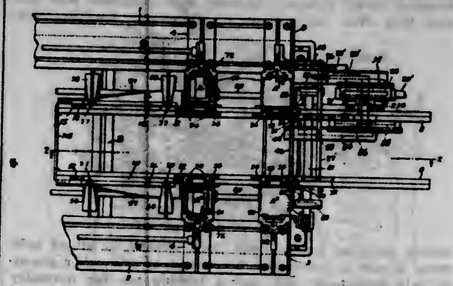
1,576,807. HIGH-PRESSURE STEAM BOILER FOR LOCOMOTIVES. JACOB BUCHLI, Winterthur, Switzerland. Filed June 29, 1925. Serial No. 40,299. 4 Claims. (Cl. 122—235.)



1. In a high-pressure steam boiler for locomotives, a water tube of substantially inverted U-shape for spanning the fire box and having an extension to its shanks bent substantially parallel to and protected by the shanks and a short tubular branch on said tube between the shanks.

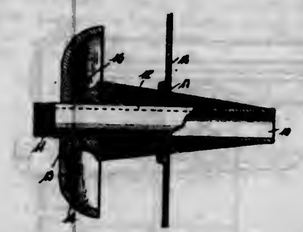
1,576,808. ROAD GRADER. WILLARD G. BUNNELL, Gillette, Wyo. Filed Apr. 8, 1925. Serial No. 21,650. 2 Claims. (Cl. 37—171.)

1. A machine for the purpose set forth comprising divergent side bars having abutting front ends, braces extending between the side bars, means connected with the braces for applying propelling force to the side bars, and blades secured to the outer faces of the side bars and extending the full length thereof, the lower edges of the blades being turned outwardly and sharpened and the front extremities of the blades being secured together in abutting relation in advance of the side bars on a line bisecting the angle defined by the side bars.



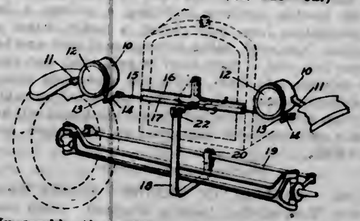
1,576,809. MULTICOLOR PRINTING PRESS. FRANK P. CAMPBELL, Tuxedo, Md. Filed Oct. 31, 1924. Serial No. 747,085. 7 Claims. (Cl. 101—186.)

1. In a multi-color printing press a rectangular track, an impression cylinder, a plurality of type frames moving successively past said cylinder on said track, a plurality of sources of ink differing in color, controlling means for causing ink of one color only to be applied to each type frame respectively, and means for causing the type on each frame to act on the paper on the impression cylinder, substantially as set forth.



1,576,810. APPARATUS FOR MAKING BOXES. ROBERT G. CLARK, Brooklyn, N. Y., assignor to Liberty Automatic Paper Box Machine Corporation, Brooklyn, N. Y., a Corporation of New York. Filed Oct. 10, 1923. Serial No. 667,614. 101 Claims. (Cl. 93—41.)

1. In apparatus for making boxes of the character specified, means to cut a portion from the corners of a blank to arrange the blank with side and end flap portions; means to feed the blank to and deliver the same from the said corner cutting means, means to bend up the opposite side flap portions as the blanks are delivered

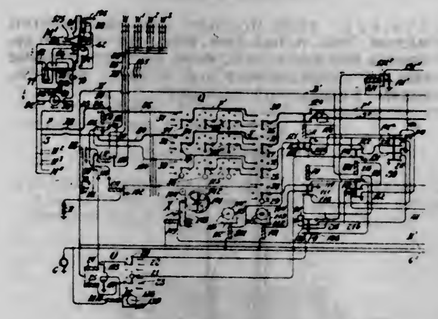


from the corner cutting means, and means to which the blanks are fed from the side flap bending means to bend up the opposite end flap portions of the blank.

1,576,811. COMBINED NOZZLE AND DEFLECTING RING. VENUS H. CLARK, Alliance, Nebr. Filed Nov. 16, 1923. Serial No. 675,187. 4 Claims. (Cl. 226—67.)

1. A combined nozzle and deflecting ring for refilling a supply tank of the watering system of railway equipment, consisting of a pipe exteriorly threaded at one end, a rubber cone mounted on tthe said pipe with its larger end terminating inwardly of the threaded end of the pipe, and a deflecting ring mounted on the pipe in the space between the threaded end thereof and the larger end of the said cone.

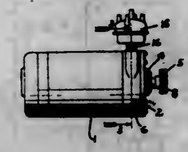
1,576,812. HEADLIGHT DIRECTOR. JOHN V. CUNNIFF, Graham, Calif., assignor of one-half to Martin Kroeger, Los Angeles, Calif. Filed Mar. 10, 1925. Serial No. 14,462. 5 Claims. (Cl. 240—62.)



1. In combination with a vehicle, a transverse link associated with the headlights of the vehicle capable upon lateral movement of directing the light thrown therefrom, a lever mounted upon the steering mechanism of the vehicle, a member pivoted upon said link adapted to engage upon said lever, and means for detachably maintaining said member in engagement with said lever whereby said headlights may be controlled by said steering mechanism.

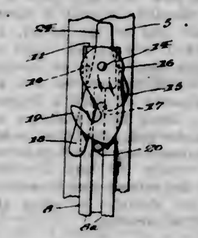
1,576,813. CONCRETE STRUCTURE. DANIEL CHARLES DAVIES and ARTHUR HAROLD THOMAS, Melbourne, Victoria, Australia. Filed Apr. 14, 1924. Serial No. 706,531. 2 Claims. (Cl. 72—1.)

1. In improvements on concrete structures means for holding two or more slabs together, said means consisting in forming ribs on one face of each slab, embedding bars in the mass during the manufacture of the slab, turning the ends of each bar outwardly to enter said rib, forming holes in said bar and said rib and passing bolts or other holding devices therethrough.



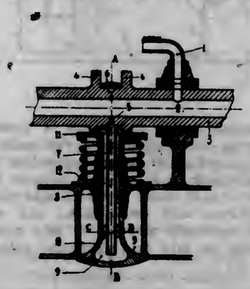
1,576,814. AUTOMATIC TELEPHONE SYSTEM. FRANCIS W. DUNBAR, Chicago, Ill., assignor, by mesne assignments, to Kellogg Switchboard & Supply Company, a Corporation of Illinois. Filed Feb. 18, 1908. Serial No. 416,607. 49 Claims. (Cl. 179—17.)

1. A telephone exchange system comprising a telephone line; a line selecting switch including movable contacts some of which have primary and secondary movements; primary and secondary relays for controlling said primary and secondary movements respectively; primary and secondary off-normal switch contacts actuated upon said primary and secondary movements respectively; an initial energizing circuit for said primary relay including primary off-normal switch contacts; a maintaining circuit for said primary relay including one of said movable contacts; a release magnet; an initial energizing circuit for said secondary relay including primary and secondary off-normal switch-contacts and contacts of said primary relay; a maintaining circuit for said secondary relay including contacts of said secondary relay, contacts of said release magnet and another of said movable contacts, means for establishing a condition such as to cause the interruption of said maintaining circuits at predetermined points in the respective movements of said movable contacts; and means operated upon the energization of said release magnet to restore said switch parts to normal.



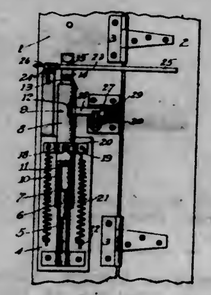
1,576,815. FORD TIMER. ALVIN EDSTROM, Los Angeles, Calif. Filed June 23, 1925. Serial No. 39,039. 9 Claims. (Cl. 123—149.)

1. A gear transmission comprising in combination a casing, a collar secured to the end of the casing, a cap attached thereto, a main shaft centrally positioned in the casing, a driving gear having a socket fitted over the end of the shaft, a bearing on the outside of the



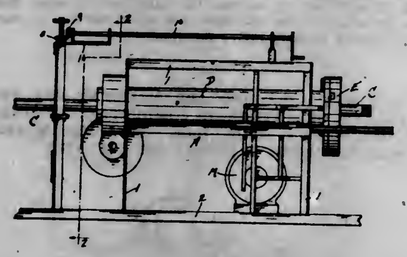
socket in the cap, a shaft extension on the end of the socket and a driven shaft having a gear meshing with the driving gear.

1,576,816. FASTENING DEVICE. ABRAHAM G. FELDMAN, Chicago, Ill. Filed Mar. 31, 1922. Serial No. 548,509. 7 Claims. (Cl. 5—100.)



4. A latch for cribs comprising a bracket, a hook pivoted to said bracket and having a bill for engagement with a movable side of the crib, and a dog pivoted to said bracket and having a notch overhanging the movable side of said crib to receive the same and thereby limit the elevation of the movable side until the dog is manually swung in inoperative position.

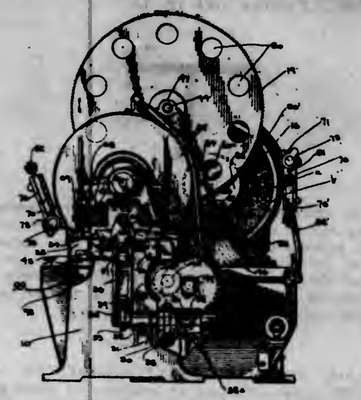
1,576,817. COOLING ARRANGEMENT FOR THE VALVES OF INTERNAL-COMBUSTION ENGINES. GUIDO FORNACA, Turin, Italy. Filed Mar. 5, 1925. Serial No. 13,229. 2 Claims. (Cl. 123—177.)



1. An arrangement for cooling the valves of internal combustion engines comprising a hollow rotary cam shaft, means for supplying a cooling fluid to the interior of the shaft, a valve having a hollow stem operable by the shaft, a tube mounted on the latter communicating with a fluid discharge aperture in the shaft and projecting into hollow valve stem, and guide fins on the tube engaging the inner wall of the valve stem.

1,576,818. BURGLAR ALARM. BRUCE FOTHERINGHAM, Ontario, Calif. Filed July 22, 1925. Serial No. 45,226. 3 Claims. (Cl. 116—89.)

2. A burglar alarm comprising in combination a bracket adapted to be secured to a gate post, a tubular barrel secured thereto adapted to hold a cartridge with its rim on the upper end of the barrel, a hammer bar having a cylindrical bore in its lower end, said bore being slidable over the barrel, an upwardly extending stem connected to the hammer bar and having a notch therein with a squared shoulder, a trigger arm pivoted to the bracket to swing horizontally, a spring to draw the trigger arm towards the post, said trigger arm having its outer end shaped and positioned to engage a gate and to engage the said shoulder whereby on opening the gate the trigger arm is swivelled out of engagement with the shoulder to allow the hammer to drop and explode the cartridge.



1,576,819. CENTERING AND ALIGNING APPARATUS. JOSEPH B. GALBRAITH, Kaysville, Utah. Filed Apr. 18, 1925. Serial No. 24,116. 2 Claims. (Cl. 10—107.)

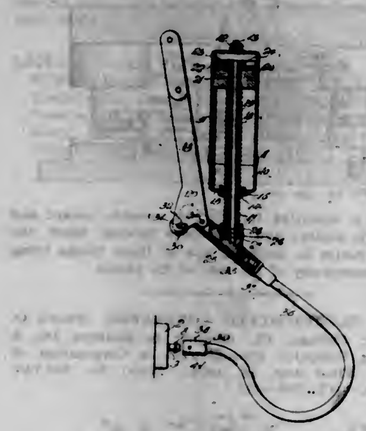
1. A centering device comprising a frame having a perforated cross member; a rack vertically movable in said frame; spaced apart rollers journalled in the lower member of said rack; a screw jack mounted on the upper cross member of said frame by which said rack is moved; means to operate said screw jack; and other spaced apart rollers vertically movable in said rack to engage a piece resting on said first-mentioned rollers.

1,576,820. GRINDING MACHINE. FREDESIC E. GARDNER, Beloit, Wis., assignor to Gardner Machine Company, Beloit, Wis., a Corporation of Illinois. Filed May 27, 1921. Serial No. 472,977. 14 Claims. (Cl. 51—118.)

6. In a machine of the class described, the combination of a pair of opposed annular grinding elements having parallel laterally offset axes and arranged with their grinding faces parallel, a work holder between said elements, two shields, one mounted to close the annulus of each grinding element, and two guide plates, one mounted opposite each of said shields, and the exposed

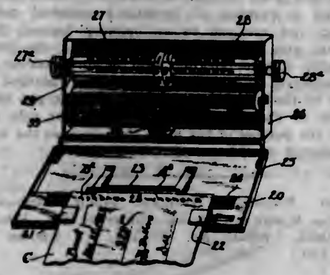
portions of the associated grinding elements, said shields and guards serving to prevent the escape of work from said holder.

1,576,821. TUBE HOLDING AND COMPRESSING MEANS. EARL R. HAMILTON, Pekin, Ind. Original application filed Apr. 2, 1925, Serial No. 20,213. Divided and this application filed Aug. 6, 1925. Serial No. 48,587. 2 Claims. (Cl. 221—60.)



1. A device of the class described comprising a tubular casing, a ram therein, a longitudinal bar in the casing carrying said ram at one of its ends and having its other end bent to form a C-shaped socket, the arms of the socket and said ram having alined openings, a nut held in said socket, and a screw swiveled in said casing and passing slidably through the aforesaid openings and threaded through said nut.

1,576,822. LUBRICATING DEVICE. JOSEPH BENNETT HAYDEN, JOHN MORRIS, and HARRY CLINTON GEORGE, Greensburg, Pa. Filed Sept. 14, 1923. Serial No. 662,674. 2 Claims. (Cl. 221—47.3.)

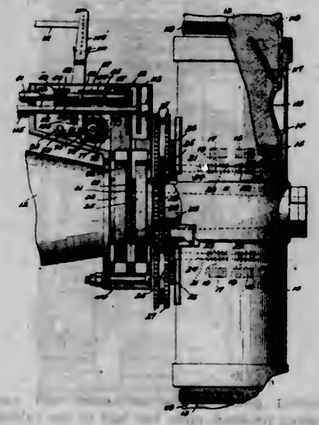


2. A lubricating device comprising a high pressure cylinder having a grease inlet and an outlet, a grease ejecting plunger in said cylinder, a heavy tubular piston rod rigidly connected to said cylinder in communication

with said grease inlet, said tubular piston rod having a piston on its outer end, an elongated low pressure grease cylinder containing said piston and having a threaded connection with said piston rod, and a plunger-operating lever fulcrumed to the high pressure cylinder and oper-

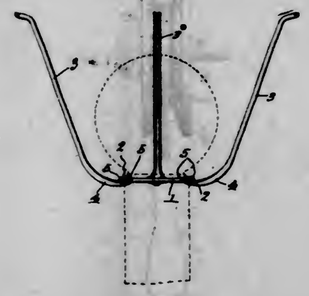
atively connected with said plunger, said lever being adapted to be held in one hand and forced toward the low pressure cylinder, the latter being then adapted to be held in the other hand and turned after each projection and retraction of the plunger to force grease into the high pressure cylinder.

1,576,823. CHECK PROTECTOR. JOHN R. HAYES, Los Angeles, Calif. Filed May 7, 1923, Serial No. 637,222. Renewed Jan. 9, 1926. 10 Claims. (Cl. 101—97.)



1. A check protecting device including an indexing system provided with a plurality of columns of digits, which columns are adapted to be shifted to bring selectable numbers into indexing position to indicate, approximately, the maximum value of a check, and rows of characters coordinate to the indexing characters of said columns for indicating the coordinate index value of the row.

1,576,824. VARIABLE-PITCH PROPELLER. SPENCER HEATH, Elkridge, Md. Filed Aug. 9, 1922. Serial No. 580,734. 48 Claims. (Cl. 244—25.)

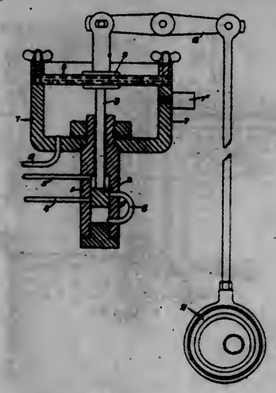


1. The combination with a propeller having a blade rotatable about its own axis to change its pitch, of power operated means for so rotating said blade, two independent gear wheels operatively connected to said blade, means for retarding rotation of one of said gear wheels

relative to the other to cause relative motion between the same and rotation of said blade about its axis, and mechanism operated by the relative motion of said gear

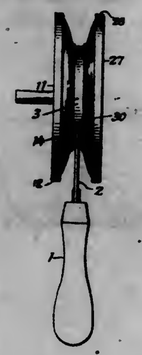
wheels for automatically stopping rotation of said blade after the pitch of the same has reached a predetermined limit.

1,576,825. BRACKET. CLIFFORD M. HICKMAN, Newark, N. J., assignor of one-half to Joseph D. Trethaway, Montclair, N. J. Filed June 19, 1925. Serial No. 38,378. 3 Claims. (Cl. 240—136.)



1. An article of manufacture for attachment to an electric lighting fixture including a ring of insulating material, wings extending from the periphery thereof, and fingers clamped upon the wings for engaging and supporting a shade.

1,576,826. FUEL-DELIVERY PUMP FOR INTERNAL-COMBUSTION ENGINES AND OTHER PURPOSES. CECIL HUGHES, Llandrindod Wells, Wales. Filed Mar. 7, 1923. Serial No. 623,565. 5 Claims. (Cl. 123—139.)

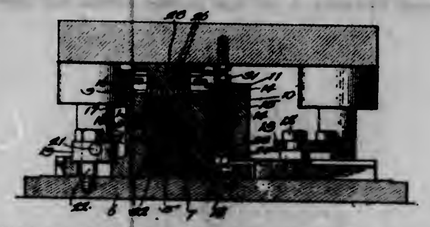


1. A fuel supply means including a cylinder having a fuel inlet, a fuel outlet, a plunger operative in the cylinder to draw fuel into the cylinder through the inlet on a predetermined movement of the piston and to exert pressure on the contained fuel in the opposite movement of the piston, means for establishing communication between that portion of the cylinder communicating with the inlet and that portion of the cylinder communicating

with the outlet, said means being closed against communication with that portion of the cylinder communicating with the outlet until the piston has reached a

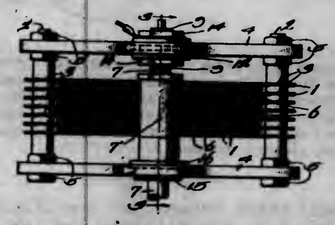
predetermined point in its movement and exerted a corresponding pressure upon the fuel in the cylinder, and means for supplying air to that portion of the cylinder communicating with the outlet.

1,576,827. WATCH-WINDING DEVICE. WILLIAM JOHN JACKSON, Buhl, Idaho. Filed Dec. 31, 1923. Serial No. 683,685. 6 Claims. (Cl. 81—7.5.)



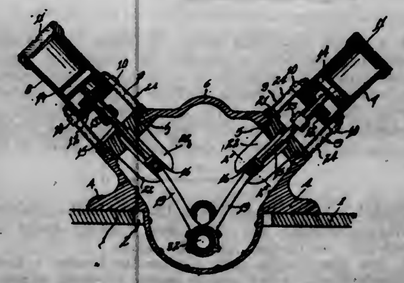
1. In a watch winding device, the combination with revolving elements adapted to engage the crown of a watch stem at each side, elastic facing on the opposing sides of said elements and a gear wheel carrying each element.

1,576,828. DIE MECHANISM. PETER G. JACOBSON, Chicago, Ill. Filed July 23, 1924. Serial No. 727,684. 11 Claims. (Cl. 78—60.)



1. Die mechanism including two sets of die plates with the plates of each set narrowly spaced apart, the plates of one set being in register with the plates of the other; a pin extending transversely of and between the sets of die plates; a mounting for the pin movable toward and from the die plates; and spring means pressing upon said mounting in a direction parallel to the die plates and engageable by an engaging portion provided upon the set of die plates toward which said pin mounting is spring pressed.

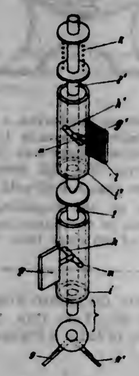
4. Die mechanism including two sets of die plates with the plates of each set narrowly spaced apart, the plates of one set being in register with the plates of the other; a pin extending transversely of and between the sets of



die plates; a mounting for the pin movable toward and from the die plates; and two blocks between which one set of die plates is disposed, one of these blocks being movable transversely of the sets of die plates.

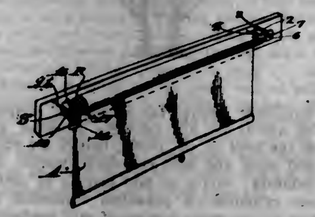
1,576,829. ELECTROSTATIC CONDENSER. FRANK O. JOHNSON, Chicago, Ill., assignor to Reliance Die & Stamping Company, Chicago, Ill., a Corporation of Illinois. Filed Aug. 23, 1924. Serial No. 733,748. 2 Claims. (Cl. 250—41)

1. An electric condenser including the two sides thereof and a metallic post assembled with one condenser side; a metal end plate assembled with the other condenser side; and a bushing of insulating material receiving said post and received in an opening formed through said plate and held by engagement with the plate at the margin of said opening, said bushing having a circular perimeter and said opening being enlarged along one side of the bushing to introduce an air gap between a portion of the bushing and the adjacent side of the opening, the portion of the plate that engages the bushing being reduced in thickness.



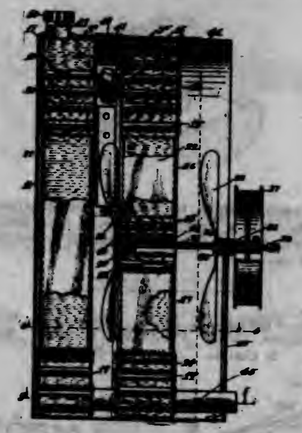
1,576,830. ENGINE. WILLIAM VIRGIL JORDAN and THOMAS MARSHALL SWANK, Louisville, Ky. Filed Nov. 26, 1923. Serial No. 677,101. 2 Claims. (Cl. 121—120.)

1. In an engine, a crank case, a cylinder disposed externally of said crank case, a removable cross head guide having a portion extending into said crank case, a piston



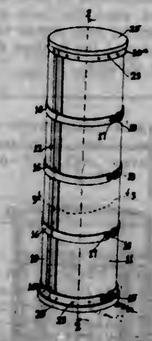
in said cylinder, a piston rod, a cross head secured to said piston rod and arranged to reciprocate on said cross head guide within said crank case, and means for securing said cylinder and said removable cross head guide to said crank case, said securing means also serving a spacing means for spacing said cylinder from said cross head guide.

1,576,831. LATCHING DEVICE FOR WINDOW WINGS, DOORS, AND THE LIKE. HANNS KLEMM, Sindelfingen, Germany, assignor to Daimler-Motoren-Gesellschaft, a Corporation of the Republic of Germany. Filed Sept. 1, 1923. Serial No. 660,472. 6 Claims. (Cl. 292—44.)



1. A latching device for hinged members such as doors, window-wings, and the like, comprising, in combination, a spindle mounted upon the frame of the hinged member, and a pair of members extending radially outward from said spindle in directions at an angle to each other one of said members extending over a face of said hinged member in the closed position of the latter and the other member of said pair coincidentally extending between an edge of said hinged member and a contiguous edge of its casing to press the first named member against said face of the hinged member and thereby fix the latter in said closed position, said pair of members being actuated by hinged member.

1,576,832. SHADE SUPPORT. MADS M. LARSEN, Colton, Calif. Filed July 6, 1923. Serial No. 649,780. 1 Claim. (Cl. 156—24.)

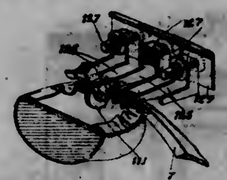


A shade support comprising a flat plate having an open mouth slot extending from its upper edge, pin-receiving beads extending upwardly at opposite sides of the slot, an abutting flange at the rear side of the plate, a screw extending from the rear side of the plate, a flange extending laterally from the front side of the plate and having an open mouth slot from its outer end, and pin-receiving beads at opposite sides of the slot, said flat plate, abutting flange, front flange and beads being formed of a single piece of sheet metal.

1,576,833. AUTOMOBILE RADIATOR. MADS M. LARSEN, Colton, Calif. Filed Aug. 2, 1923. Serial No. 655,227. 4 Claims. (Cl. 257—128.)

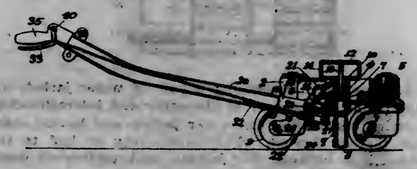
1. A radiator, comprising a pair of water jackets arranged one in the rear of the other and interconnected, a casing surrounding the water jackets and having openings therein through which access may be had to the connections between the jackets, and perforated doors controlling said openings.

1,576,834. LINOLEUM CRATE. MADS M. LARSEN, Colton, Calif. Filed Oct. 20, 1924. Serial No. 744,806. 2 Claims. (Cl. 217—44.)



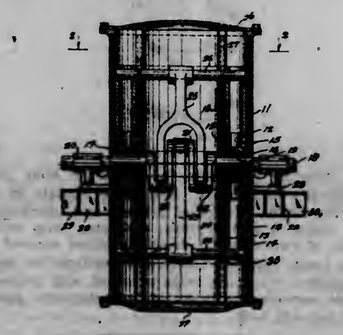
1. A container comprising a cylindrical body formed of a plurality of sections, each being arcuate in cross section, stay strips interposed between and embracing the meeting edges of said sections, each stay strip being in the form of two channel shaped members secured back to back, bands disposed about said sections for holding them together, the bands being provided with projections receivable between the backs of said channels, and end closures for said body.

1,576,835. TRIMMING MACHINE. AUGUSTINE FRANK LITTLEFIELD, Lynn, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Dec. 6, 1919. Serial No. 342,969. 26 Claims. (Cl. 12—83.5.)



21. Mechanism for removing surplus material which projects from the bottom of a lasted shoe comprising cutting means the effective portion of which extends

across the bottom of the shoe so as to engage opposite margins simultaneously and conforms approximately to the transverse convexity of the bottom of the shoe, and

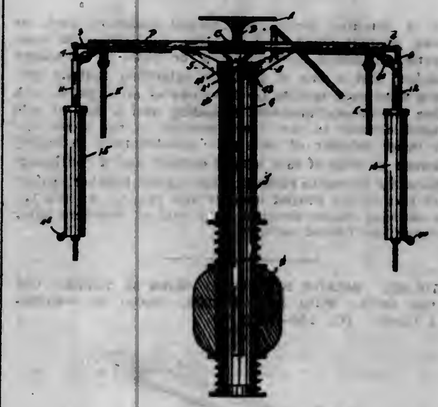


guiding means adapted to facilitate presentation of the shoe to the cutting means in a curved path which corresponds approximately to the longitudinal curvature of the bottom of the shoe.

1,576,836. PORTABLE JACK. THOMAS J. MCCARTHY, Los Angeles, Calif. Filed June 9, 1924. Serial No. 718,801. 5 Claims. (Cl. 254—2.)

1. A jack having a supporting frame, a lifting member mounted thereon and having a rack, a lever pivoted on the frame, a pivot therefor, a holding dog pivoted on the same pivot as the lever, a lifting dog pivoted between the said pivot and the rack, a tension device operating with the lever and connected to both dogs whereby both dogs engage the rack when the lever is operated to elevate the lifting member, and means to release the tension device and disengage the holding dog from the rack to lower the lifting member.

1,576,837. INTERNAL-COMBUSTION ENGINE. JAMES A. MARR, Bridgeport, Conn. Filed Aug. 7, 1925. Serial No. 48,805. 7 Claims. (Cl. 123—51.)



1. An engine comprising spaced inner and outer cylinders, a pair of oppositely movable pistons mounted between said cylinders, a crank shaft located between said pistons provided with cranks located within the inner cylinder and disposed on opposite sides of the shaft, and connecting rods within said inner cylinder leading in opposite directions from said crank and connected to the respective pistons.

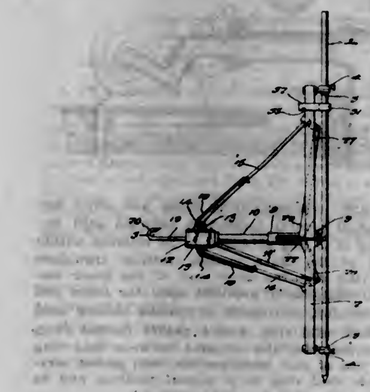
1,576,838. CONCENTRATOR. HOWARD S. MELLOTT, Morenci, Mich. Filed Feb. 4, 1921. Serial No. 442,868. 3 Claims. (Cl. 158—6.)

1. In a heat transference apparatus, a cylindrical chamber having a head, impelling means in the chamber, a jacket for the chamber, a supply way embodying a pipe, and a slot terminus for the pipe spaced from the cylindrical portion of the chamber in said head to preclude back action thereinto by the impelling means and extending in the direction of the impelling means travel to coact for withdrawal of material from the pipe.

1,576,839. AUTOMATIC CONTROL FOR AEROPLANES. ROBERT E. MITTON, Salt Lake City, Utah. Filed July 13, 1925. Serial No. 43,121. 3 Claims. (Cl. 244—29.)

1. An automatic control for aeroplanes comprising a compressed air tank; air cylinders mounted adjacent thereto on the body of the plane; flexible air tubes connecting said tank and said cylinders; pistons operable in said cylinders; valves in said pistons to control the air in said cylinders; a pendulum suspended on said plane; arms on the upper portion of said pendulum; and connecting rods between said pistons and said arms to move said valves when the aeroplane is tilted.

1,576,840. SPRING-ROLLER HOLDER. ROY M. MEYER, Chicago, Ill., assignor to Denoyer-Geppert Co., Chicago, Ill. Filed Sept. 21, 1925. Serial No. 57,710. 5 Claims. (Cl. 40—85.)



1. A spring roller holder comprising an elongated casing longitudinally divided into relatively stationary and

removable sections, said sections having longitudinal edge portions spaced apart to form a slot through which a map or analogous sheet may pass from the roller, means

for mounting the roller on the removable casing section, and releasable means for holding the two casing sections in assembled relation.

1,576,841. ANIMAL TRAP. JAMES O'KELLY, Silverton, Colo. Filed Apr. 28, 1925. Serial No. 26,412. 2 Claims. (Cl. 43—88.)

1. A trap comprising a base member adapted for mounting on a suitable support, a hollow projecting member mounted on the central portion of the base member and extending laterally therefrom, a bait rod slidably mounted in said hollow projecting member having a hook on the outer end thereof and carrying a bolt member at the inner end thereof projecting through slots formed in the hollow projecting member, a pair of cooperating jaws hingedly mounted on the outer end of said projecting member, lock members pivotally mounted at the end portions of the base member, and operating links pivotally connected to said bolt member carried by the base bar and the latch member for operating said latch members to engage and lock the jaws in open and set position in a predetermined position of the base bar.

1,576,842. WIRE STRETCHER. JOHN W. OSBORN, Powersville, Mo. Filed Dec. 2, 1925. Serial No. 72,763. 2 Claims. (Cl. 254—77.)

2. As an article of manufacture, a tool formed from a single blank of material and comprising a body having one end thereof twisted substantially at right angles to the longitudinal axis of the body, said twisted end being arcuately curved to produce a rocking fulcrum, said body provided with a wire gripping hook positioned rearwardly of the said twisted end portion, said hook being struck from one side edge of said body and bent out of the plane thereof and directed in an opposite direction to the

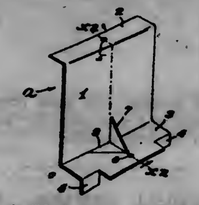
said twisted end portion, said hook extending substantially parallel with the side edge of the body and arranged in spaced relation thereto.

1,576,843. FOOTBALL UNIFORM. DONALD VERNE PARKER, Mitchell, S. Dak. Filed June 10, 1925. Serial No. 36,175. 3 Claims. (Cl. 2—23.)

1. In combination, a pair of trousers, a belt, a sweater and a plurality of pads, said trousers having belt receiving panels on their interior waist portions, said sweater having slits registerable with the space between the panels, and loops formed on the pad for extending through the slits and into the spaces between the panels so that the belt may be inserted through the panels and loops for holding the trousers, sweater, and pads assembled.

1,576,844. RAIL JOINT. RINO PARISI, Rimer, Pa. Filed Apr. 30, 1925. Serial No. 27,106. 6 Claims. (Cl. 238—216.)

2. A rail joint including meeting rail ends, a base plate seating the rail ends and provided with a rail section received between the rail ends mating therewith, and means extending through said rail section to overlap the rail ends bracing said rail ends.

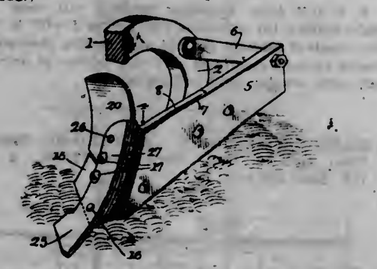


1,576,845. RAIL JOINT. RINO PARISI, Rimer, Pa. Filed Apr. 30, 1925. Serial No. 27,106. 2 Claims. (Cl. 238—226.)

1. A rail joint including meeting rail ends provided with heads having slots therein and also provided with base flanges having openings therein, a base plate seating the rail ends and provided with posts extending through said openings for connecting the rail ends with

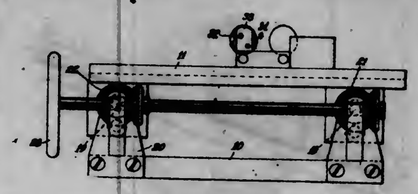
each other, and fish plates freely accommodated in said slots and locking said rail ends against relative transverse movement, said posts being disposed to limit the fish plates against displacement.

1,576,846. CONCRETE-BUILDER'S AGGREGATE SUPPORT. HERBERT POMEROY, Los Angeles, Calif. Filed Aug. 11, 1925. Serial No. 49,555. 12 Claims. (Cl. 25—131.5.)



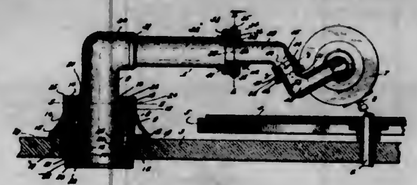
1. A concrete builder's pan support, comprising a beam molding form having beam-sides provided with upright cleats and with brackets adapted to support temporary joists; said brackets and cleats being of less width than the joists for the purpose of allowing the concrete builder's pans, when fastened to the temporary joists, to extend below the temporary joists and to be brought jam against the beam-sides.

1,576,847. CULTIVATOR. WILLIAM S. PRICE, Hershey, Nebr. Filed May 15, 1924. Serial No. 713,631. 2 Claims. (Cl. 97—148.)



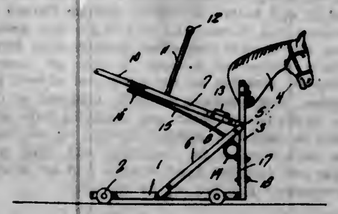
1. An attachment for a cultivator comprising an extension beam having a hollow T-head at each end, a bolt extending longitudinally of each T-head a clamp associated with each T-head and presenting divergent members between which the T-head is received, said divergent members being pivoted on opposite ends of the bolt, each clamp having clamping jaws at its outer end and an adjustable connection between the said clamping jaws.

1,576,848. PLOW. FREDERICK REESE, Eutaw, Ala. Filed May 26, 1925. Serial No. 33,500. 3 Claims. (Cl. 97—113.)



1. A plow beam and standard, a point support attached to and extending forwardly from the lower end of said standard, a plow share and moldboard mounted on said support, and a plow point longitudinally adjustable on said support to provide for lengthening of the point when worn, said point and share being riveted in advance of the supporting member, the rivet being designed to be broken out when the point is to be lengthened.

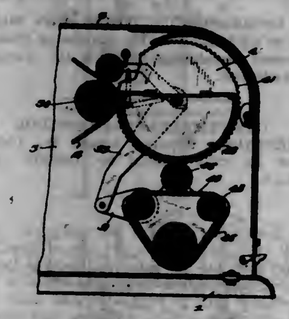
1,576,849. TENON-MILLING MACHINE. FRED SCHLATTERER, New York, N. Y. Filed Aug. 11, 1925. Serial No. 49,618. 3 Claims. (Cl. 144—198).



1. A tenon milling machine comprising a rotating cutter mounted on a fixed axis, a circular swinging table adapted to swing around said cutter, pedestals beneath said table, eccentric bars supported on said pedestals, shafts connecting said table and eccentric bars, and means for rotating said eccentric bars.

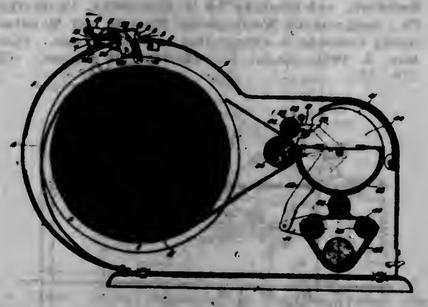
1,576,850. TONE-ARM CONSTRUCTION. CARL SCRABIC, Urbana, Ohio. Filed Mar. 28, 1921. Serial No. 456,046. 1 Claim. (Cl. 274—23.)

In a tone arm, communicating inner and outer sections a compound pivotal connection between said sections consisting of a ring arranged to be received within the outer end of the inner section, vertical trunnions between said ring and the outer end of the inner section, a curved enlargement provided upon the inner end of the outer section, horizontal trunnions uniting said enlargement with said ring, and a gasket formed from a compressible material and situated between said ring and the outer end of said inner section, said gasket serving to maintain said ring in a normal position and to seal the conduit provided by said sections.



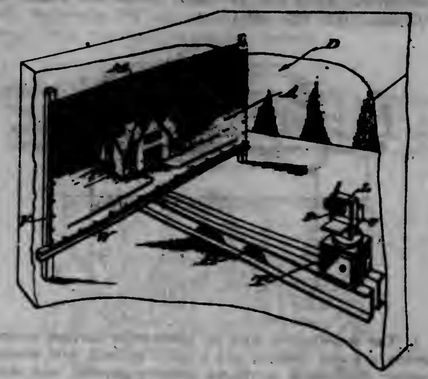
1,576,851. CHILD'S TOY. JOHN E. SEDLACEK, Schuyler, Nebr. Filed Jan. 26, 1925. Serial No. 4,755. 2 Claims. (Cl. 272—55.)

1. A toy of the class described comprising a base, a standard extending upwardly from the forward end thereof, bracing members therefor, a teeter board pivotally supported at its forward end on the upper portion of the standard, the rear end of the teeter board providing a seat portion, a post extending upwardly from the teeter board at the intermediate portion thereof, a handle on the upper end of the post, and means for normally holding the rear end of the teeter board upwardly, said means comprising a coil spring, the ends



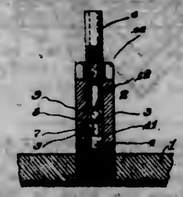
thereof being disposed laterally, one of said laterally extending ends being secured to the under side of the tester board, the other laterally extending end of the coil spring being secured to the lower portion of the standard.

1,576,852. MULTICOLOR-INKING MECHANISM. HIESTER SMEDMA, Reading, Pa. Original application filed Nov. 2, 1923, Serial No. 672,339. Divided and this application filed Apr. 2, 1925. Serial No. 20,083. 2 Claims. (Cl. 101—176.)



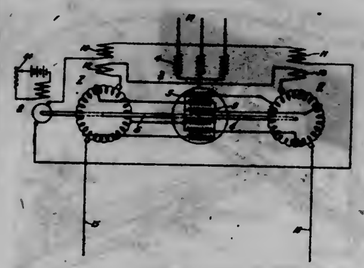
1. In a machine of the character described, a casing, a printing cylinder journaled therein and provided at its ends with gear wheels, an ink fountain located below the cylinder, rollers journaled in the fountain, ribbons trained around said rollers, means for moving the ribbons by stages and operated from the cylinder and an ink distributing roller resting upon the upper runs of the ribbons and provided at its ends with gear wheels which mesh with the teeth of the gear wheels upon the cylinder.

1,576,853. MULTICOLOR WRAPPING-PAPER-PRINTING MACHINE. HIESTER SMEDMA, Reading, Pa., assignor of three-fourths to M. Bernard Hoffman, Reading, Pa. Filed Nov. 2, 1923. Serial No. 672,339. 2 Claims. (Cl. 101—176.)



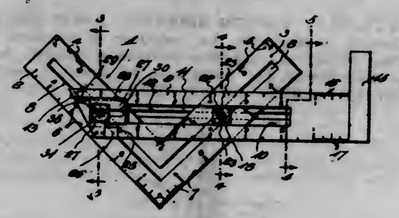
1. In a roll paper printing machine a casing comprising a base member, side panels mounted upon the base member, top sections detachably mounted upon the edges of the side panels and bridging the space between the panels, means mounted upon the side panels for supporting a roll of paper, a printing cylinder and ink fountain and a flat spring mounted upon the inner surface of one of the top sections and adapted to bear at its free end against the roll of paper when the said section is applied to the side panels and serving as a tensioning means for the roll.

1,576,854. METHOD OF MAKING MOTION-PICTURE FILMS. JOHN F. SEITZ, Hollywood, Calif. Filed Dec. 12, 1922. Serial No. 606,499. 3 Claims. (Cl. 88—16.)



1. A method of making motion pictures comprising making a negative of a scene, casting an image therefrom onto a sheet positioned at the desired distance in front of the lens of the camera, cutting away a portion of the sheet corresponding to a portion of the image to make a first mat, then making a first exposure of a scene while the rigidly associated first mat is in unchanged relation to the camera, making a second mat by the same means, but reverse from the first mat, to cover the filmed part of the scene, then making the second exposure with the second mat in its proper position to complete the picture.

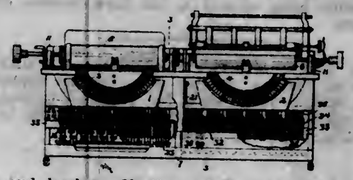
1,576,855. VACUUM REDUCER. JOSEPH BERNARD SEXTON, Madisonville, La., assignor of one-third to Paul Policar and one-third to Oscar P. Goldate, both of Madisonville, La. Filed Sept. 11, 1924. Serial No. 737,172. 1 Claim. (Cl. 251—121.)



A valve comprising a tubular casing of an even diameter throughout its length and having its lower end portion externally threaded and being internally threaded from its upper end to a point in spaced relation to its lower end, a valve seat screwed into said casing and when in an operative position seated at the lower end of the internally threaded portion, said valve seat having an axially disposed bore having its upper end portion flared and said seat having its upper end face provided with radial grooves leading from the flared upper end portion of the bore, a valve ball in the casing above the valve seat and of its own weight normally seated upon the valve seat and covering the flared upper end of the bore, a tube of an even diameter throughout its length externally threaded from its lower end and screwed into said casing above said valve ball for adjustment towards and away from the ball, and a lock nut carried by said tube above the upper end of said casing and adapted to be moved into engagement with the upper end of the casing to lock the tube in a set position with its lower end spaced a predetermined distance from said ball and valve seat.

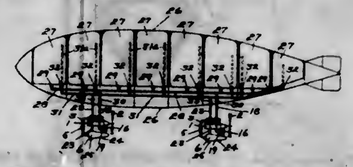
1,576,856. ROTARY-CONVERTER SYSTEM. ERNST B. SHAND, Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Feb. 18, 1925. Serial No. 9,995. 3 Claims. (Cl. 171—123.)

1. The combination with an alternating current motor having a stator member and a rotor member, said stator member carrying a polyphase primary winding and said rotor member carrying a plurality of polyphase secondary windings insulated from each other, of a plurality of rotary converters mechanically connected to said rotor member, connections for energizing one rotary converter from each of said polyphase secondary windings, and connections for connecting the direct-current terminals of said rotary converters in series.



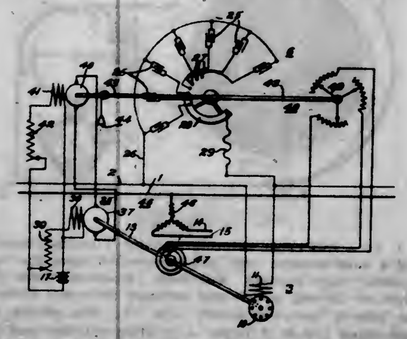
1,576,857. WORK-MARKING TOOL. LUTHER WEBSTER SHIPMAN, Greenville, S. C. Filed Nov. 6, 1924. Serial No. 748,188. 2 Claims. (Cl. 33—92.)

1. A work marking tool comprising a square having two blades at right angles to each other, the outer edge portions of said blades having scales, a bar adapted to extend obliquely from one blade to the other, means slidably connecting the bar and blades one end of said bar terminating in inwardly spaced relation to the outer edge of one blade, and a block slidably mounted on said one end of said bar and having one edge in alinement with one edge thereof, said block being adapted to be extended from said bar end to cross one of the aforesaid scales when setting the bar along the blades of the square.



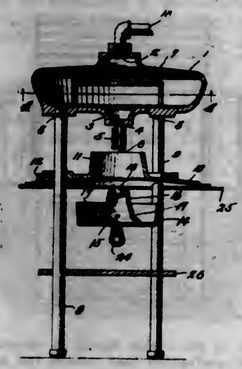
1,576,858. DUAL TYPEWRITING MACHINE. FREDERICK SHOLES, Chicago, Ill., assignor to Morley Multiple Typewriter Sales Corporation, a Corporation of Indiana. Filed Feb. 23, 1922. Serial No. 538,439. 5 Claims. (Cl. 197—5.)

4. In dual typewriting apparatus having master and secondary sets of type-bars and corresponding platens cooperatively associated therewith, a set of key-bars; mechanism having actuated relation with the respective key-bars and corresponding connections with the respective type-bars of the master and secondary sets for actuating the same, the connections with the type-bars of the secondary set being detachable; a tension mechanism depressible by the key-bars; and an adjusting means adapted to collectively disengage the detachable connec-



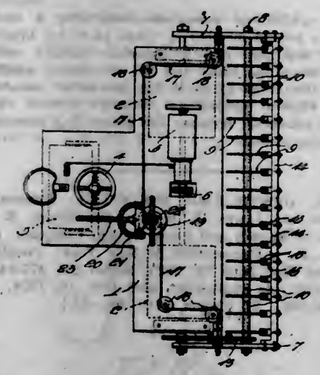
tions and having adjusting relation with said tension mechanism so arranged that the sustaining tension thereof is increased simultaneously with the disengagement of said connections.

1,576,859. GAS-TEMPERATURE-CONTROL SYSTEM FOR AIRSHIPS. WILLIAM SIECK, Jr., Chicago, Ill. Filed Oct. 29, 1924. Serial No. 746,708. 6 Claims. (Cl. 244—3.)



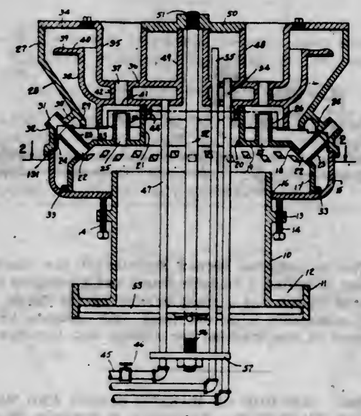
1. A temperature control for gas in air ships including a heat interchanger, a motor for propelling the ship, means for heating the heat interchanger by the exhaust gases from the motor, the said means including a conduit leading from the motor to the heat interchanger, a portion of said conduit being shiftable into communication with the heat interchanger to direct the heated gases therethrough, said portion of the conduit being movable out of communication with the heat interchanger to permit the latter to be cooled by air currents, means for withdrawing gas from the ship and circulating the gas through the heat interchanger, and means for returning the gas to the ship.

1,576,860. RESONANT SHUNT. JOSEPH SLEPIAN, Swissvale, and CHARLES LE G. FORTESCUE, Pittsburgh, Pa., assignors to Westinghouse Electric and Manufacturing Company, a Corporation of Pennsylvania. Filed Mar. 5, 1921. Serial No. 449,945. 26 Claims. (Cl. 179—78.)



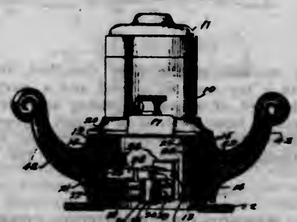
22. The combination with a power conductor and an adjacent intelligence-transmission conductor, of means comprising a capacitance device for preventing inductive interference in the circuit of said intelligence conductor irrespective of the losses caused by said device.

1,576,861. OIL BURNER. LEWIS P. SMITH, Fulton, N. Y. Filed July 7, 1925. Serial No. 42,035. 4 Claims. (Cl. 158—64.)



1. In an oil burner the combination with a generator having an inlet in the top thereof an outlet in the bottom thereof, said outlet being in the form of a small orifice, of a baffle supported within the generator between the inlet and the outlet, a disk supported below the generator and having a central upwardly projecting extension through which a jet of fuel is to be delivered from the outlet of the generator, a pan below the disk for receiving condensed fuel, a spreader supported within the pan, means for supplying fuel to the top of the generator, and means for conducting overflow fuel from the bottom of the pan.

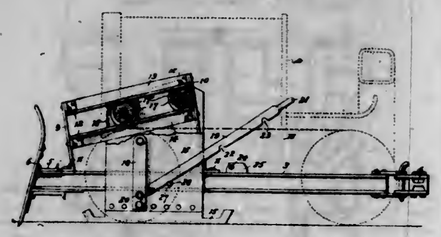
1,576,862. RUNNER CUTTER. FRED W. SNOW, Bryantville, Mass. Filed Jan. 8, 1923. Serial No. 611,867. 1 Claim (Cl. 55—64.)



A runner cutter comprising, a platform, rotary elements supporting the platform, axles extending beyond the ends of the elements and platform, a pair of side members pivoted at their rear ends to said extended portions of the axles and projecting forwardly beyond the platform, a horizontal bar interconnecting the forward ends of said side members, a horizontally disposed rotary shaft having its ends journaled in intermediate portions of the side members, drive connection between one projecting end of the axle and said shaft to rotate the latter in a direction opposite that of said axle, toothed cutters fixed at spaced points on the shaft, and blocks fixed to the rear face of the horizontal bar, said blocks having vertical bifurcations at their rear ends to form abutments extending on opposite sides of and in close proximity to the peripheral portions of the cutters, whereby with forward movement of the runner cutter, the toothed cutters will forwardly lift the runners to the abutments and co-act with the latter to cut the runners.

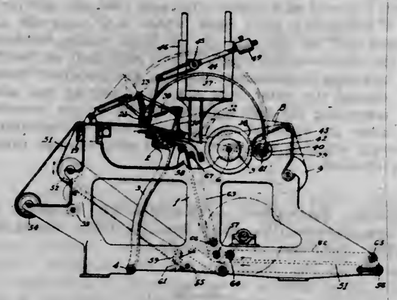
1,576,863. OIL BURNER. PERRY J. SNOWDEN, Kokomo, Ind., assignor to Edward L. Selvage and Harry A. Mathias, both of Indianapolis, Ind. Filed Dec. 23, 1922. Serial No. 608,647. 4 Claims. (Cl. 158—53.)

1. In a wickless oil burner, the combination of an annular liquid fuel supply reservoir, an annular vaporizing chamber enclosing the same and including an outwardly directed wall surrounding said reservoir and forming a vaporizing plate upon which said reservoir discharges fuel, air operated ejector flame nozzles discharging the vaporized fuel received from said plate outwardly and upwardly therebeneath whereby the resultant flames will engage the outer wall plate for heating the same and vaporizing the fuel supplied thereto by the reservoir and other air operated ejector flame nozzles discharging upwardly adjacent the inner wall of said annular vaporizing chamber.



1,576,864. RADIATOR ATTACHMENT. ALFRED L. SOHM, Chicago, Ill. Filed Jan. 20, 1925. Serial No. 3,701. 6 Claims. (Cl. 220—24.)

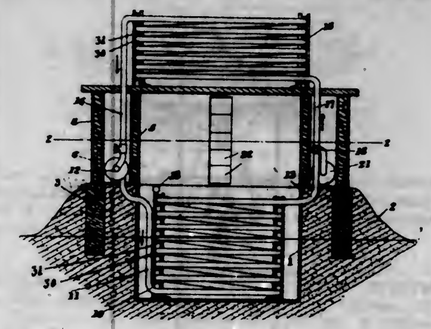
1. A device of the character described comprising a member having a portion adapted to be arranged adjacent the filling spout of an automobile radiator, clamping means carried by said portion and movable in one direction to engage the filling spout, and actuating means movable in one direction for moving said clamping means



to engaging position, said last named means having a portion adapted to engage said clamping means to positively prevent movement of said actuating means in the opposite direction.

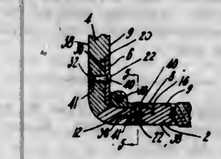
1,576,865. SCRAPER ELEVATING AND LOWERING MECHANISM. RALEIGH H. STALEY, Springfield, Ill., assignor to The Baker Manufacturing Company, Springfield, Ill., a Corporation of Illinois. Filed Dec. 3, 1924. Serial No. 753,718. 10 Claims. (Cl. 37—153.)

1. The combination with a machine of the character described including a movable frame and a scraping blade connected thereto, of a track carried by the frame, and means engageable with the track and operable by the movement of the machine for raising and lowering the blade.



1,576,866. METHOD OF MAKING CLOTH AND MECHANISM THEREFOR. FREDERICK B. STEARNS, Worcester, Mass. Filed May 6, 1924. Serial No. 711,508. 19 Claims. (Cl. 139—1.)

1. In a machine of the class described, the combination with a lay carrying a reed and a warp passing through the reed, of means comprising an endless apron for conveying a loose material to a point adjacent to the warp, and means for drawing the fibres of said loose material through the warp in advance of the laying of the weft.

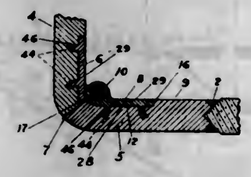


1,576,867. METHOD OF COLLECTING, CONSERVING, AND STORING NATURAL COLD. JOHN C. SWAN, Marietta, Ohio. Filed May 16, 1925. Serial No. 30,682. 5 Claims. (Cl. 62—172.)

1. The method of collecting, conserving and storing natural cold, which consists in cooling an enclosed body of liquid having its freezing point materially below the freezing point of water by exposing it to the atmosphere when the atmospheric temperature is below 32 degrees F., circulating the liquid so cooled through coils arranged within a tank insulated from atmospheric and radiant heat, and supplying the tank with liquid to be cooled

by the action of the cooled liquid so circulated, to form a reservoir of abstracted heat within the tank having a temperature below the freezing point of water.

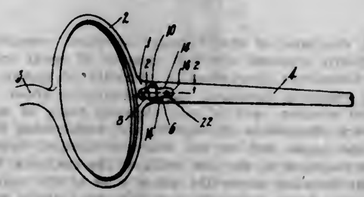
1,576,868. OPHTHALMIC MOUNTING. FREDERICK A. STEVENS and JAMES W. WELSH, Providence, R. I., assignors, by mesne assignments, to Bausch and Lomb Optical Company, Rochester, N. Y., a Corporation of New York. Filed June 13, 1921. Serial No. 477,146. 15 Claims. (Cl. 88—53.)



1. An ophthalmic mounting comprising a non-metal member, a second member, a hinge plate for hinging the members together, and a securing element extending through the hinge plate and the non-metal member for securing the hinge plate to the non-metal member, the securing element having an irregular portion engaging with the non-metal member for preventing movement of the securing element.

1,576,869. OPHTHALMIC MOUNTING. FREDERICK A. STEVENS and JAMES W. WELSH, Providence, R. I., assignors to Bausch and Lomb Optical Company, Rochester, N. Y., a Corporation of New York. Original application filed June 13, 1921, Serial No. 477,146. Divided and this application filed Oct. 16, 1924. Serial No. 743,956. 27 Claims. (Cl. 88—53.)

1. In a knuckle hinge, a pair of cooperating one-piece hinge members, one of the members comprising a base portion having at one side integral laterally extending knuckles and the other member comprising a base portion having at one side a knuckle disposed between the laterally extending knuckles, each member being arranged with attachment means at the side of the base opposite to the said one side and of less cross sectional dimension than the base for imbedment in the material of its support, and the knuckles being perforated for the engagement of a pintle.

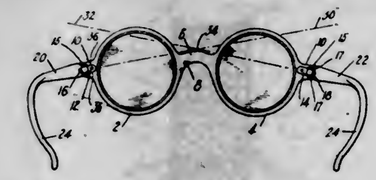


1,576,870. OPHTHALMIC MOUNTING. FREDERICK A. STEVENS and JAMES W. WELSH, Providence, R. I., assignors to Bausch and Lomb Optical Company, Rochester, N. Y., a Corporation of New York. Filed May 21, 1925. Serial No. 31,751. 8 Claims. (Cl. 88—53.)

1. The combination, in an ophthalmic mounting, with a non-metal lens frame formed at one side with an extension, and a temple, of a hinged connection between the temple and the extension embodying a member having ears nearer one end thereof than the other, and anchoring projections at opposite ends of said member, one of said projections being nearer the ears than the other.

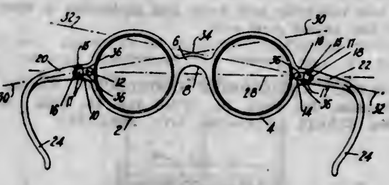
6. A mounting comprising a member constituted of plastic material having a substantially flat portion, a metal hinge member having a base portion provided with a substantially flat side held in contact with the flat portion, spurs extending from the flat side biting into and embedded within the material for securing the hinge member to the plastic material, the spurs extending obliquely outward from the base portion, and a hinge knuckle provided upon the opposite side of the base portion.

1,576,871. OPHTHALMIC MOUNTING. FREDERICK A. STEVENS, Providence, R. I., assignor, by mesne assignments, to Bausch and Lomb Optical Company, Rochester, N. Y., a Corporation of New York. Filed May 15, 1922, Serial No. 560,957. Renewed July 10, 1925. 10 Claims. (Cl. 88—53.)



1. A substantially flat hinge plate having a relatively non-pliable portion and a relatively pliable portion, to facilitate adjustment of the hinge plate at the relatively pliable portion

---

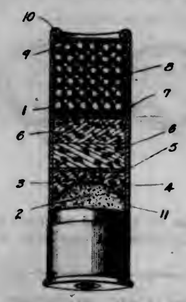


1,576,872. OPHTHALMIC MOUNTING. ALBERT A. JEANBERT, Watertown, Mass., assignor to Bausch & Lomb Optical Company, Rochester, N. Y., a Corporation of New York. Filed Feb. 25, 1924. Serial No. 694,984. 8 Claims. (Cl. 88—53.)

1. An ophthalmic mounting comprising a lens-holding rim constituted of non-metallic material having an integral end piece, a hinge plate secured to the end piece having a pivot ear that is obliquely disposed to the line joining the ear and the center of the rim, a pivot pin in the ear, and a temple pivoted about the pivot pin,

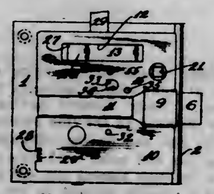
whereby the temple as adapted to pivot about the pivot pin in a plane positioned at one side of the center of the rim.

1,576,873. OPHTHALMIC MOUNTING. ALBERT A. JEANBERT, Providence, R. I., assignor to Bausch & Lomb Optical Company, Rochester, N. Y., a Corporation of New York. Filed Mar. 11, 1924. Serial No. 698,384. 4 Claims. (Cl. 88—53.)



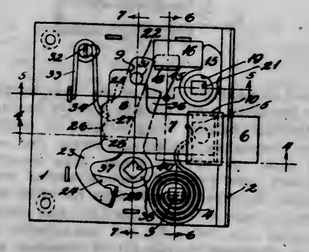
1. An ophthalmic mounting comprising a lens-holding rim constituted of non-metallic material having an integral end piece, a hinge member having a pivot ear that is obliquely disposed to the line joining the ear and the center of the rim and having substantially parallel walls secured to the end piece with the walls substantially parallel to the line joining the ear and the center of the rim, and a temple pivoted to the ear, whereby the temple is adapted to pivot about the ear in a plane positioned at one side of the center of the rim.

1,576,874. METHOD OF MAKING CONNECTIONS BETWEEN METAL AND NONMETALLIC MEMBERS. FREDERICK A. STEVENS, Providence, R. I., assignor, by mesne assignments, to Bausch and Lomb Optical Company, Rochester, N. Y., a Corporation of New York. Filed July 8, 1922. Serial No. 573,750. 1 Claim. (Cl. 18—59.)



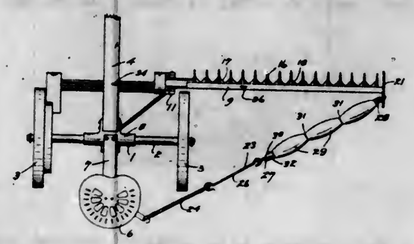
A method of making articles of the class described that comprises providing a non-metallic member having a bore, the non-metallic member being adapted to retain a normal shape, expanding the bore, whereby the member is distorted from the normal shape, then inserting into the expanded bore a metal member having projections and of cross dimension greater than the cross dimension of the original bore and less than the cross dimension of the expanded bore, whereby the non-metallic material will not be displaced by the act of inserting the metal member into the bore, and finally restoring the member to its normal shape, whereby the non-metallic material adjacent to the projections is restored to substantially its normal shape.

1,576,875. SHOTGUN SHELL. JOSEPH H. STURGESS, Kansas City, Mo. Filed Sept. 15, 1924. Serial No. 737,753. 1 Claim. (Cl. 102—15.)



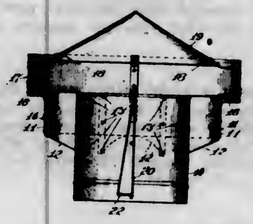
A shot gun shell having a cap and a powder charge, a wad in front of the powder charge having a recess into which some of the powder is received, a stiff card wad in front of the expansion wad, additional relatively soft wads in front of the card wad, a stiff card wad in front of said relatively soft wads, and projectiles in front of the last named card wad.

1,576,876. AUTOMOBILE DOORLOCK. BAYARD E. TAYLOR, Oak Park, Ill. Filed Jan. 15, 1923. Serial No. 612,613. 7 Claims. (Cl. 292—173.)



1. In a door lock the combination with a roll back, of a sliding member adapted to be actuated thereby, a locking member for said roll back, and a handle adapted to be operated in one direction to move the locking member into locking engagement with said roll back and further adapted to be operated in an opposite direction to cause the slidable member to retract the locking member to release the roll back.

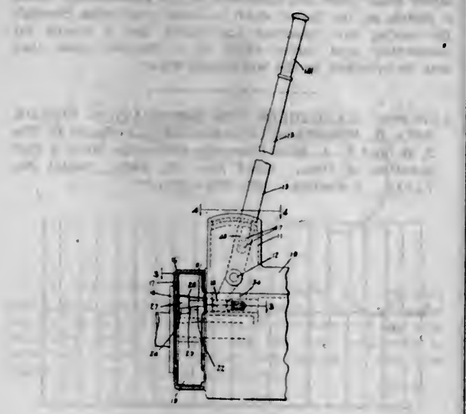
1,576,877. VEHICLE DOOR LATCH. BAYARD E. TAYLOR, Oak Park, Ill. Filed Feb. 28, 1923. Serial No. 621,701. 14 Claims. (Cl. 292—164.)



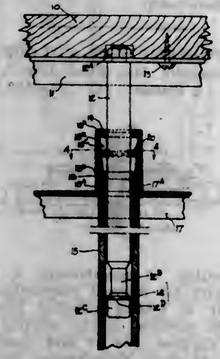
1. An automobile door lock comprising a latch bolt, an outer handle mechanism, a shiftable latch bolt retracting member engaged with said latch bolt and coacting with said outer handle mechanism, and an inner handle mechanism adapted to be operated in one direction to cause retraction of the latch bolt and further adapted to be operated in an opposite direction to cause shifting of the retracting member out of engagement with the latch bolt to render operation of the outer handle mechanism ineffective in retracting the latch bolt.

1,576,878. MOWING MACHINE. JOHN G. THYNNE, Tulameen, British Columbia, Canada. Filed Dec. 1, 1924. Serial No. 753,303. 5 Claims. (Cl. 56—320.)

1. In combination with a mowing machine having a cutting device extending laterally therefrom for cutting a swath, means for throwing the outer edge portion of the swath inwardly comprising a connection between the end of the cutting device and a rearward point of the main portion of the mowing machine and rollers mounted thereon near the end of the cutting device.



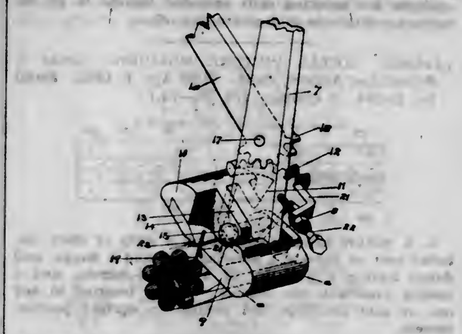
1,576,879. VENTILATOR. LIONEL VALLAS, Chicago, Ill. Filed June 21, 1923. Serial No. 646,738. 2 Claims. (Cl. 98—4.)



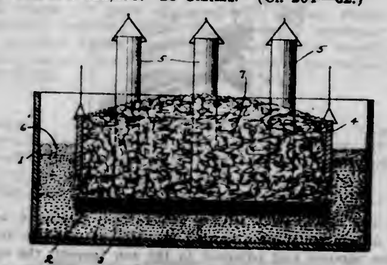
1. A ventilator of the character described, comprising a vertically disposed eduction member of equal transverse dimensions throughout, a plurality of siphon inducing channels arranged circumferentially about the eduction member, each of said channels being of equal transverse dimensions throughout and terminating flush with the upper end of the eduction member, bracket members secured to the side walls of the channels, bent laterally outward across the upper ends of the channel side walls, thence upwardly and then inwardly, a hood member secured to the upper inner ends of the bracket members in spaced relation with the upper ends of the eduction member and said channels, a band secured to the upwardly bent portion of the brackets and arranged to extend beyond the tops of the siphon inducing channels and the lower perimeter of the hood member and in spaced relation therewith.

1,576,880. BRAKE CONSTRUCTION. CORNELIUS W. VAN RANST, Indianapolis, Ind. Filed Apr. 15, 1922. Serial No. 553,285. 1 Claim. (Cl. 188—78.)

In a brake construction, the combination with an expansible brake shoe, a wedge construction for expanding said shoe, a lever for moving said wedge into expanding and releasing position, and a pair of springs rectangularly arranged with respect to said lever for preventing rattling thereof.



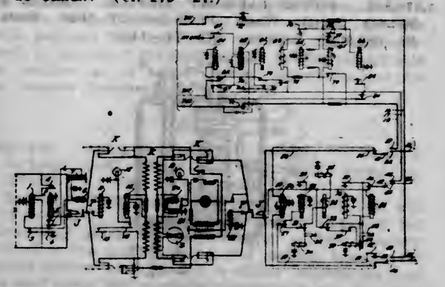
1,576,881. AUTOMATICALLY-ADJUSTABLE STOOL. CHARLES VITEK, Omaha, Nebr. Filed Mar. 5, 1924. Serial No. 697,055. 3 Claims. (Cl. 155—94.)



1. In an adjustable stool having a seat and a support cylindrical in cross-section for said seat, a retainer comprising a tubular casing having a chamber whose interior walls converge toward the bottom thereof, said support being slidably mounted in said casing, and a plurality of free rolling bearings in said chamber engaging said walls and adapted to freely move about and longitudinally of said support and wedge between said support and walls of the chamber to frictionally retain said support and seat, said retainer being arranged to release said support by inverting the stool to permit said bearings to drop within said casings.

1,576,882. CUTTER. JOHN VOLMAER, Portland, Oreg. Filed June 19, 1924. Serial No. 721,110. 1 Claim. (Cl. 30—17.)

In a cutter: a pair of jaws; coacting knives upon said jaws, one being grooved to form a cutting edge and an anvil thereupon, and to receive the other within said groove; an arm and a lug upon one of said jaws; a handle and a lug upon the other of said jaws adapted to coact with said arm and said former lug to form pivot supporting means; and a pivot mounted within said means and parallel to said knives and said groove.

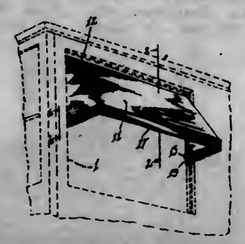


1,576,883. PROCESS OF MAKING GRAPHITE. VICTOR M. WEAVER, Harrisburg, Pa. Filed Mar. 2, 1923. Serial No. 622,298. 23 Claims. (Cl. 204—62.)

1. The process of making graphite which consists in heating lime and carbonaceous material in a suitable furnace, whereby a fluid carbide is formed, and continuing the heating until the carbonaceous material has been transformed into graphite and the calcium volatilized.

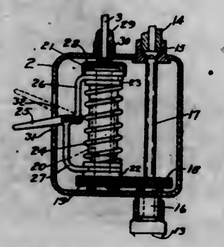
1,576,884. TELEPHONE SYSTEM. JOHN WICKS, Oak Park, Ill., assignor, by mesne assignments, to Automatic Electric Inc., Chicago, Ill., a Corporation of Delaware. Filed Sept. 7, 1923. Serial No. 661,359. 15 Claims. (Cl. 179—27.)

1. In a telephone system, a centralized office, a plurality of branch offices, subscribers' lines, means including automatic switches for completing connections between



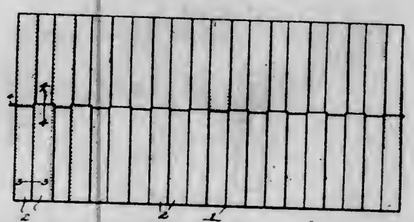
said lines, contacts in said switches not used for extending connections between said lines, and means comprising an automatic hunting switch associated with said contacts for trunking calls extended thereto to an operator's position in said centralized office.

1,576,885. METAL PICTURE MOLDING. LOUIS J. WILDE, Los Angeles, Calif. Filed Apr. 1, 1925. Serial No. 19,844. 7 Claims. (Cl. 20—74.)



1. A picture molding comprising a strip of sheet material bent to provide a securing part and a flange, said flange having a plurality of apertures therein, and a readily removable pin capable of being inserted in any one of said apertures and assume an upright position therein.

1,576,886. AUTOMOBILE AWNING. LOUIS HENRY WILLIAMS, St. Joseph, Mo., assignor to Williams Auto Awning Co., St. Joseph, Mo., a Corporation of Missouri. Filed May 15, 1925. Serial No. 30,596. 2 Claims. (Cl. 296—95.

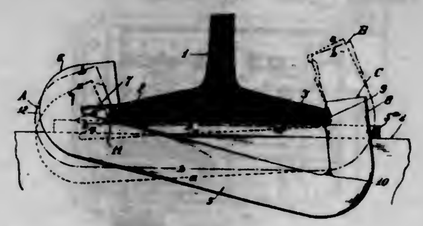


1. The combination with a vehicle body having a window of eye members arranged in pairs at opposite sides of the window and adjacent to the top thereof, the eyes in each pair having their axes aligned and vertical, a substantially rigid frame having portions bent laterally and extending substantially vertically when the frame is in an operative position, said upwardly extending portions being arranged for projection through the aligned eye members and fashioned to interlock with one of the eye members when the frame is in its operative position, an awning covering for the frame, and means for securing portions of the covering to the body, whereby the frame is held against unintentional movement relative to the body.

1,576,887. POWER-TAKE-OFF DEVICE. LESLIE A. WILSON, Seattle, Wash. Filed Dec. 27, 1923. Serial No. 682,900. 1 Claim. (Cl. 74—14.)

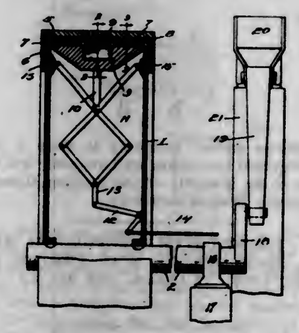
In power take off for motor vehicle windshield wipers, a casing that may be inserted between the speedometer and the end of the speedometer cable, an extension with suitable sockets at both ends that may be placed between the speedometer and the cable, another shaft that may be placed in the casing, a means for rotating the latter shaft from the extension of the speedometer cable, a clutch on the latter shaft, a lever projecting through the casing for operating the clutch and a means for connecting said latter shaft to a flexible cable that may be attached to the windshield wiper.

1,576,888. TARPAULIN FOR RECREATION FIELDS. JOHN H. WOODWARD, Columbus, Ohio, assignor to The J. H. and F. A. Sells Company, Columbus, Ohio, a Corporation of Ohio. Filed Nov. 25, 1925. Serial No. 71,344. 5 Claims. (Cl. 278—27.)



1. A tarpaulin covering for athletic fields, comprising a frame consisting of central units extending longitudinally through approximately the center of the field, and a plurality of spaced transversely extending units arranged on said field and disposed at right angles substantially to the center units, and a plurality of tarpaulin sections having the meeting edges thereof disposed on said frame sections, said edges being arranged in overlapping relationship.

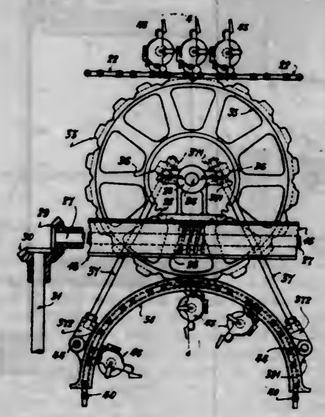
1,576,889. AUTOMATIC FUEL CUT-OUT. CHARLES A. WULF, Indianapolis, Ind. Filed July 2, 1921. Serial No. 482,125. 2 Claims. (Cl. 137—153.)



1. As an article of manufacture, a lubricant controlled fuel valve for internal combustion engines comprising a pair of mating chamber forming members having concave recesses on the meeting faces thereof to form the chamber, one of said members having a fuel passage extending therethrough provided with a valve seat, a valve socket extending transversely of said fuel passage, a valve mounted in said socket and a coil spring for maintaining said valve normally seated, a flexible diaphragm clamped between the meeting faces of said member, wear plates secured on the opposite faces of said diaphragm, the fuel passage member being provided with a recess merging into the concave recess on the face of the member and into which a stem of the valve projects, one of the wearing plates on said diaphragm being adapted to project into said recess and engage said stem when the diaphragm is flexed and the other wear plate being of greater diameter than said recess, the chamber on the opposite side of said diaphragm having a port extending thereinto, and a set screw arranged at right angles to the diaphragm and adapted to be moved into engagement with the wear plate on the diaphragm, said set screw being provided with a head normally seating in a socket in the face of the chamber member and said set screw and valve stem being disconnected from the diaphragm.

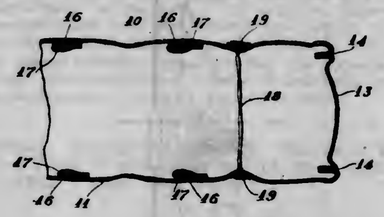
1,576,890. RAIL ANCHOR. CHARLES F. YARDLEY, Larchmont, N. Y. Filed Mar. 23, 1925. Serial No. 17,577. 9 Claims. (Cl. 238—330.)

1. A rail anchor formed of a single bar of spring metal, with one end bent back to form a notch for engaging the upper and lower edges of one flange of the rail-base with spring pressure, and the other end bent to form an upwardly extending arm having a rail base engaging recess near its upper end.



1,576,891. PULLEY. HOMER ALLEN, Slick, Okla. Filed Apr. 15, 1925. Serial No. 23,822. 1 Claim. (Cl. 192—46.)

A pulley of the class described including a drum of hollow construction and having its peripheral band provided with a central annular channel, the bottom of which is provided with ratchet teeth extending about the entire circumference, a rim movable about the periphery of the drum and of a width slightly greater than the peripheral band of said drum, the inner surface of the rim being spaced from the outer surface of the band, roller bearings interposed between said surfaces, a plurality of spring pressed pawls mounted interiorly of the rim for cooperation with the ratchet teeth, and inwardly extending side flanges provided on the edges of the rim for holding said rim in place on said drum.

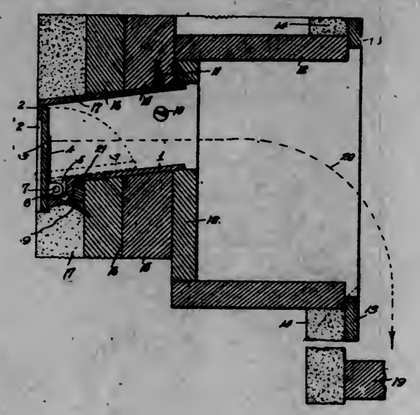


1,576,892. CHAIN-CONTROLLING MECHANISM FOR TUFTED-PILE-FABRIC LOOMS. FREDERICK WILLIAM AUSTIN, Oldham, England. Filed Apr. 3, 1925. Serial No. 20,445. 5 Claims. (Cl. 139—9.)

1. In a chain controlling mechanism for a tufted pile fabric loom, endless chains in parallel circuits, each chain provided with guide-engaging devices projecting from its opposite sides, chain-guides with opposed curved guide-channels in spaced opposed faces presenting by the inner curved walls of the guide-channels runways for the projecting engaging devices of the chains and presenting exteriorly of the chain circuits open channels between the opposed faces and also presenting spaces interiorly of the chain circuits, sprocket wheels within the chain circuits projecting into said spaces and engaging

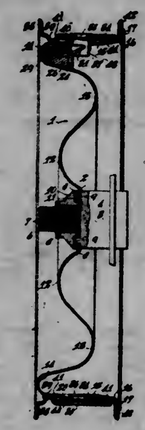
said chains at parts engaging said guides, means of connection ensuring equal circumferential movement of the sprocket wheels engaging different chains, means for supporting said sprocket wheels and means for supporting said guides.

1,576,893. NONSTRETCHABLE MATTRESS. JOSEPH AVRIL, Los Angeles, Calif., assignor of one-half to Pacific States Bedding & Furniture Co., Los Angeles, Calif., a Corporation of California. Filed Jan. 15, 1925. Serial No. 2,529. 6 Claims. (Cl. 5—345.)



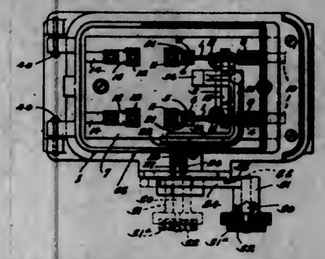
1. In a mattress, means for preventing stretching of the mattress, said means comprising non-stretchable tie members secured adjacent each end to one of the side walls adjacent the top of the mattress, and means secured to the top of the mattress and passing around said tie members so as to be slidable thereon as and for the purpose described.

1,576,894. MAIL RECEIVER. THOMAS N. BADGER, Berkeley, Calif. Filed June 30, 1924. Serial No. 723,409. 1 Claim. (Cl. 232—19.)



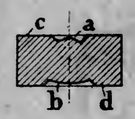
A mail receiver comprising connected side, top and bottom sections, said sections forming an elongated box rectangular shaped in cross section, a door hingedly secured to the bottom section and movable towards the bottom section when opened, a spring co-operating with the door hinge and normally maintaining the door in a vertical position, and a frame secured on one end of the box, said frame forming a sounding member and a stop to prevent movement of the door beyond a vertical position

in one direction; said elongated box having a step down at the outer end of the lower side forming a recess to be used in placing the operating mechanism of the door, and



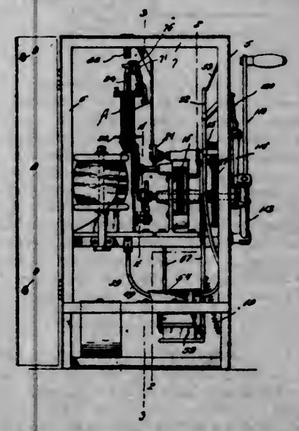
having means whereby the door, springs and axles may be assembled in place or disassembled at will, leaving the fixed elongated body of the box undisturbed.

1,576,895. VEHICLE WHEEL. WILLIAM F. BETTRELL, Washington, D. C. Filed June 24, 1924. Serial No. 722,114. 3 Claims. (Cl. 301—11.)



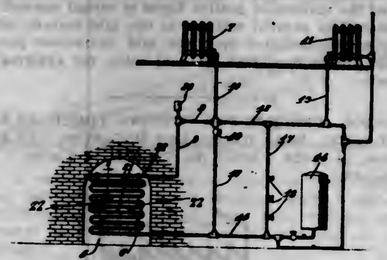
1. In a wheel of the character described, a felly and a tire carrying rim circumferentially movable thereupon, holding lugs carried by the felly and the tire carrying rim and adapted when the same are moved circumferentially one upon the other to co-engage to hold them together or to release them from such hold according to the direction of such movement, a securing lug carried by the tire carrying rim, and a securing screw carried by and positioned substantially parallel to the axis of the felly and adapted to be brought into engagement with the securing lug to secure the said felly and the tire carrying rim to the held-together position, the said screw having a cam head shaped to force the securing lug circumferentially.

1,576,896. QUICK-BREAK SWITCH AND OPERATING MECHANISM. CARL H. BISSELL, Syracuse, N. Y., assignor to Crouse-Hinds Co., Syracuse, N. Y., a Corporation of New York. Filed Jan. 29, 1924. Serial No. 689,370. 7 Claims. (Cl. 200—50.)



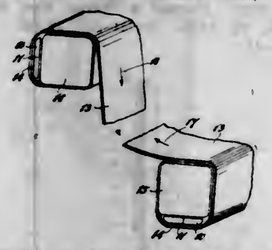
1. In a switch, the combination of a casing, a switch comprising a movable switch arm in the casing and means for actuating the switch arm comprising a shaft mounted in the casing, a lever mounted on the shaft having a crank handle thereon, a spring-pressed locking bolt carried by the casing and the lever having a socket for receiving the bolt and means mounted on the handle and operable to press the bolt out of the socket.

1,576,897. MIRROR OF REFLECTOR WATER-LEVEL GAUGES. RAOUL BOIZARD, Paris, France. Filed June 16, 1924. Serial No. 720,404. 5 Claims. (Cl. 73—54.)



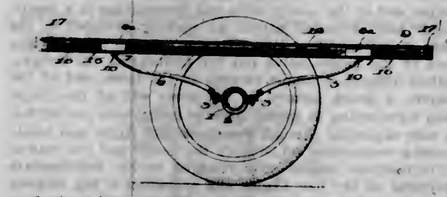
2. A reflector mirror, according to claim 1, in which both the ridge and the convex wall are sunk into the glass body so as to lie inwardly of the limiting planes formed by the opposite faces of said body.

1,576,898. FLOWER-STEM-REENFORCING MACHINE. ELMO L. BROWN, Asheville, N. C. Filed Feb. 13, 1925. Serial No. 8,919. 21 Claims. (Cl. 41—3.)



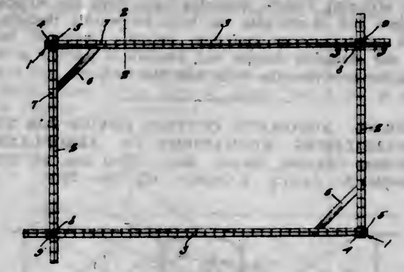
1. In a machine of the class described, a holder for a stem, means for delivering to and supporting in said holder a stick, means for wrapping wire around the stick and stem in the holder, and means for severing the wire when a predetermined amount thereof has been wrapped around said stick and stem in the holder.

1,576,899. HEAT DEFLECTOR. JOHN B. CLANTON, Charlotte, N. C. Filed Jan. 15, 1923. Serial No. 612,602. 2 Claims. (Cl. 126—132.)



2. A heating device for use in connection with horizontally disposed heating coils comprising a body portion in the form of a plate, hook members including vertical arms secured to the body portion and adapted to support the body portion at an oblique angle with respect to the arms, said hook members adapted to be positioned over a coil, the arms adapted to extend downwardly to engage the adjacent lower pipe of the coils to hold the body portion in its active position.

1,576,900. SEATING SURFACE. VINCENT COLLIER, Worcester Park, England. Filed Dec. 14, 1922. Serial No. 606,954. 1 Claim. (Cl. 155—119.)

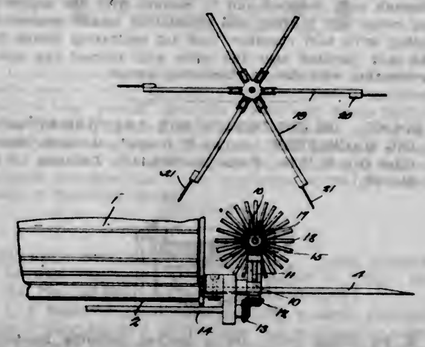


In an article of furniture such as a chair a supporting bar having a flat exterior side, and a seat of fabric arranged with one end wrapped entirely around all sides of said bar in a lapping coil and provided at the end with a stiffening bar bearing against said flat side of the supporting bar and between the same and that portion of said coil which is opposite said flat exterior side of the bar so that weight imposed on said seat fabric tightens the same around said supporting bar, the said stiffening bar preventing casual detachment of said fabric from said supporting bar.

1,576,901. SPRING SUSPENSION FOR VEHICLES. ALFRED MARSDEN COWEN, New Orleans, La. Filed Nov. 11, 1924. Serial No. 749,255. 10 Claims. (Cl. 267—20.)

1. A spring suspension for vehicles comprising a guide, a pair of carriages slidably mounted in said guide, a coil spring connecting said carriages, a pair of resilient arms having an end pivotally connected to a fixed point of the vehicle, the other end of each arm being connected to a movable carriage.

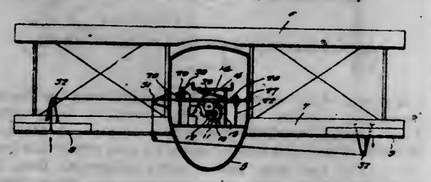
1,576,902. CURTAIN FRAME. CHARLES H. DE FREHN, Johnstown, Pa. Filed July 3, 1922. Serial No. 572,444. 1 Claim. (Cl. 45—24.)



A device of the class described comprising a bar having transverse grooves and provided with a longitudinal groove intersecting the transverse grooves, a plurality of hooks each comprising a body, an arm projecting from one end of the body, and a prong projecting from the other end of the body at an angle to the plane defined by the arm and the body, the arms of the hooks being mounted to rock in the longitudinal groove, and the transverse grooves being adapted to receive the bodies of the hooks, and separate means carried by the bar and overhanging the arm of each hook to hold the arm for rocking movement in the longitudinal groove.

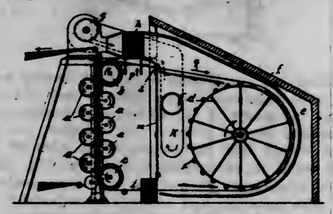
1,576,903. MUSICAL TOY. HENRY F. FONTANELLA, New York, N. Y. Filed May 18, 1925. Serial No. 31,192. 1 Claim. (Cl. 46—46.)

A musical toy comprising a cylinder having an opening centrally disposed in one side thereof and adapted to receive the mouth of the player, cap members movable longitudinally on the ends of the cylinder, diaphragms arranged within said cap members and adapted to contact the ends of the cylinder, and inwardly extending cup shaped elements formed on the cap members and formed with openings and adapted to adjustably engage the diaphragms to hold the same under tension.



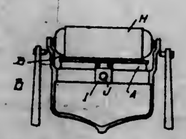
1,576,904. COTTON HARVESTER. WILLIAM J. FRANCIS, Texico, N. Mex. Filed May 15, 1924. Serial No. 713,542. 1 Claim. (Cl. 56—34.)

A cotton harvesting attachment for headers and the like including a series of plant gathering tines, a shaft journaled thereabove, fingers radiating from the shaft for stripping bolls from the plants engaged by the tines,



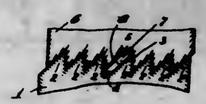
a reel mounted for rotating about an axis above the shaft, and fingers projecting from the reel for engaging plants gathered by the tines, directing the plants against the stripping fingers, removing bolls from the stripping fingers and discharging the bolls rearwardly therefrom, and a transverse conveyer movably mounted back of the stripping fingers and beneath a portion of the reel for receiving the bolls from the reel.

1,576,905. AUTOMATIC CONTROL DEVICE FOR THE STABILIZING MECHANISMS OF AEROPLANES. PIERRE GENETER, Detroit, Mich. Filed Aug. 19, 1925. Serial No. 51,172. 3 Claims. (Cl. 244—29.)



1. An operating device for the stabilizers of an aeroplane including in combination a standard, a frame pivoted in the standard, rollers journaled on the frame, a rack bar movable between the rollers, a rotating gear, means associated with the rack bar normally holding it out of mesh with said gear, and means for moving the rack bar into engagement with said gear.

1,576,906. TWINE POLISHING AND DRYING MACHINE. PAUL GREVE, Lindau, Harz, Germany. Filed Apr. 22, 1924. Serial No. 708,194. 7 Claims. (Cl. 28—62.)



1. In a device of the character described in combination, a substantially closed drying chamber, an unheated supporting closed roller in said chamber, a plurality of polishing rollers outside of the chamber, means to pass a plurality of threads over and between said rollers and through said chamber and in contact with the supporting roller, air heating and circulating means communicating with said chamber, and air aspirating means in the said chamber near the outer wall thereof and communicating with the air circulating means.

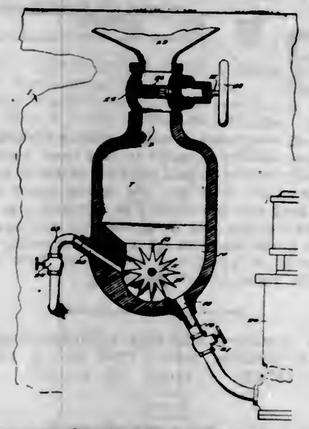
1,576,907. OILING DEVICE FOR LEATHER-FINISHING MACHINERY. ALLEN P. GROVER, Medford, Mass. Filed Oct. 3, 1923. Serial No. 666,411. 2 Claims. (Cl. 91—38.)

2. An oiling device for a leather finishing machine including a hide carrying roller over which the hide is adapted to pass in the operation of the machine, an oil reservoir poistioned beneath the said roller and extending longitudinally thereof, a bracket having one end attached to the said machine and its other end supporting the said reservoir, a flat spring disposed longitudinally of the said reservoir with one end fixed to the bottom thereof and the unfastened portion flexed to extend upwardly in substantially parallel relation to the said bottom, and a strip of felt mounted upon the said unfastened portion of the spring to engage the said roller for applying oil thereto.

1,576,908. PROCESS FOR CUTTING TEETH ON SAW BLADES. ADOLF HARTIG, East McKeesport, Pa. Filed June 24, 1924. Serial No. 721,974. 4 Claims. (Cl. 76—29.)

1. The process of cutting triangular teeth on a saw-blade in a single pass through a unitary punch and die which consists in providing on said punch and die two groups of large teeth having twice the size of the teeth required on said blade and adapted to produce between the groups of teeth in the blade a larger tooth having the shape of a trapezium, and subsequently dividing the teeth in said blade into smaller teeth by means of said unitary punch.

1,576,909. PEN. KESTER M. HEARN, Fort Worth, Tex. Filed May 22, 1925. Serial No. 32,142. 2 Claims. (Cl. 120—43.)

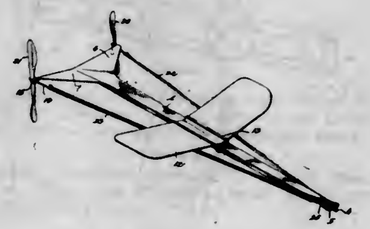


1. A pen of the character described comprising a barrel having a clamp arranged at an appropriate point thereon and including a vertically disposed guide sleeve upon one side thereof, a needle valve rod received within the guide sleeve, a spring having its opposite ends secured to the needle valve rod and guide sleeve respectively, the upper end of the needle valve rod terminating in a needle point and extending within an opening provided in the top of the barrel, a knurled knob secured to the lower end of the needle valve rod for facilitating the reciprocation thereof, a nipple secured to the lower end of the barrel, a shank secured to the lower end of the nipple and terminating in spaced parallel companion pen blades, a tube extending through the shank and nipple and establishing communication between the barrel and pen blades, a rectangular shaped yoke received on the intermediate portions of the pen blades and including a lug member upon one side which is received within an opening provided in one of the blades while a set screw extends through the other and engaging the outer side of the companion pen blades whereby a relative adjustment of the lower ends of the pen blades is facilitated in the drawing of broad and fine lines.

1,576,910. LOADER CONVEYER. WILLIAM WALTER HUDSON, Salt Lake City, Utah. Filed Feb. 18, 1925. Serial No. 10,100. 6 Claims. (Cl. 198—89.)

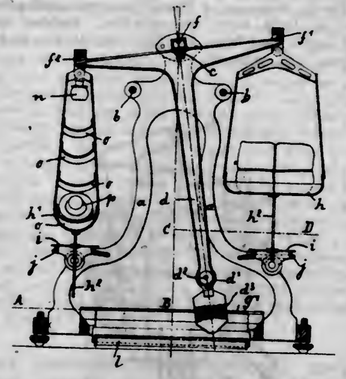
1. A conveyer comprising a lower conveyer unit, a truck supporting the lower conveyer unit, a carriage movable along the lower conveyer unit, and an upper conveyer unit swivelly attached at one end to said carriage.

1,576,911. CHEMICAL FEEDER. JOHN L. HUGHES, Tulsa, Okla., assignor of one-half to Aaron L. Fischer, Bradford, Pa. Filed Feb. 24, 1925. Serial No. 11,241. 1 Claim. (Cl. 210—29.)



An apparatus for the purpose set forth comprising a mixing chamber having an inlet through its upper end, an agitator drum rotatably mounted in and extending across the lower end of the mixing chamber, an outlet in the bottom of the mixing chamber at one side of the vertical axis of the agitator drum, means for connecting said outlet with a feed water mechanism, a downwardly inclined inlet in one wall of the mixing chamber at the opposite side of the vertical axis of the agitator drum, and means for connecting said inlet with a steam boiler whereby hot water from the boiler may impinge upon and operate the agitator.

1,576,912. LIQUID PITCHER. HENRY NEWTON JAMES, Miami, Fla. Filed July 31, 1925. Serial No. 47,345. 2 Claims. (Cl. 65—31.)

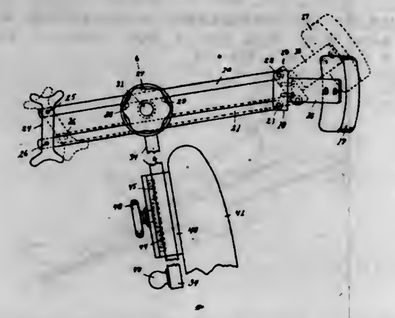


1. In a device of the kind described, an outer container, an inner well spaced from the side wall of the container, a cover having a boss screwed to the well top and a rim fitting closely against the top of the side wall of the container, a spout at one side of the container, a handle at the opposite side of the container, said cover having a vent opening between the boss and its rim, and removable plugs fitting said spout and vent opening.

1,576,913. TOY AEROPLANE. CLAIRE S. JONES, Wyandotte, Mich. Filed July 31, 1925. Serial No. 47,212. 3 Claims. (Cl. 244—14.)

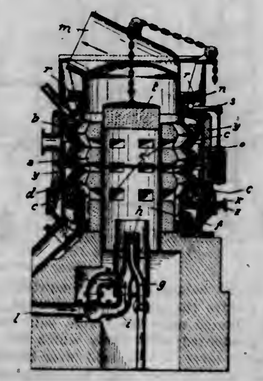
1. A toy aeroplane comprising an elongated trough shaped body provided with integral laterally extending fins at its rear end, propellers mounted at the extremities of said fins, a transverse airfoil secured intermediate of the length of said elongated body, and means for effecting the rotation of said propellers.

1,576,914. BALANCE. PIERRE CONSTANT JOUAN, Paris, France. Filed Feb. 2, 1924. Serial No. 690,157. 6 Claims. (Cl. 265—54.)



1. An improved balance, which comprises a frame, a scale pan to receive the object to be weighed, a weighted balance lever pivoted upon the frame, said frame having a rectilineal graduated scale along which the end of the weighted balance lever travels, said lever having a nonius at its free end, and another scale pan adapted to receive weights corresponding to the maximum of the graduated scale or multiples thereof.

1,576,915. HEADREST APPARATUS. FRANK KOENIGKRAMER, Cincinnati, Ohio. Filed Mar. 3, 1923. Serial No. 622,654. 5 Claims. (Cl. 155—177.)



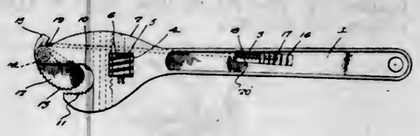
1. A head-rest apparatus comprising a shank provided with a clamping bolt at its upper end, a clamping member pivotally mounted upon said clamping bolt and adapted to be releasably clamped thereon to said shank, a pair of substantially parallel bars spaced apart and located respectively upon opposite sides of said clamping bolt and in sliding engagement with the face of said clamping

member, one of said bars being adjustable endwise in guides carried by said clamping member, an actuating lever pivotally attached to both of said

bars at their opposite end, and means serving to clamp both of said bars to said clamping member and at the same operation to clamp said clamping member to said shank.

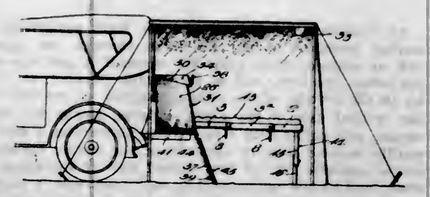
1,576,916. OVEN FOR THE DISTILLATION OF SOLID MATERIAL. OSKAR LASCHE, deceased, late of Berlin-Charlottenburg, Germany, by Fritz Lasche, executor, Dresden, Germany, and Carl Geissen, Berlin-Schoneburg, Germany, assignors to Kohlenveredlung G. m. b. H., Berlin, Germany, a Firm. Original application filed Nov. 15, 1923, Serial No. 675,022. Divided and this application filed Mar. 6, 1925. Serial No. 13,666. 5 Claims. (Cl. 202—9.)

1. Oven for the distillation of solid material, comprising a cylindrical shell, a thick-walled apertured hollow body of refractory material within, but spaced from said shell and heating gas supplying means arranged axially of said hollow body.



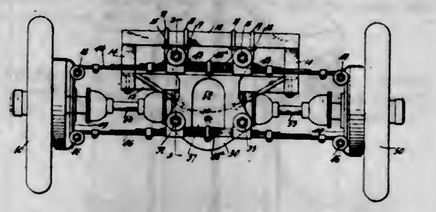
1,576,917. FASTENER BAR. HAROLD A. LEE, Suva, Fiji. Filed Oct. 29, 1923. Serial No. 671,527. 1 Claim. (Cl. 24—106.)

A button or stud fastener formed from a strand of spring wire to include a straight substantially elongated body portion which has one of its ends rounded and brought to contact; with the body and terminates in an



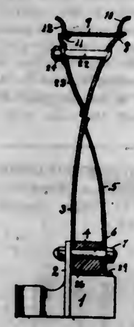
outwardly directed U-shaped portion whose outer arm is beveled to provide a pointed end which is in frictional engagement with the body.

1,576,918. WRENCH. ANDREW EMANUEL LIDELL, Farmington, Mich. Filed Apr. 17, 1924, Serial No. 707,173. Renewed July 22, 1925. 1 Claim. (Cl. 81—180.)



A wrench comprising a body including a shank and a head, a jaw slidably mounted in said head, a cam member pivotally secured in said head for swinging movement toward and away from the jaw, spring means engaging with the head and cam member to normally urge the latter toward the jaw, and a rod mounted for longitudinal movement in the head and shank and engageable with the cam member to swing the same away from the jaw against the resistance of the spring.

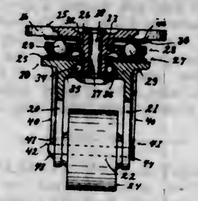
1,576,919. FOLDING BED FOR AUTOMOBILES. CLEVE LOWERY, Orchards, Wash. Filed Nov. 4, 1924. Serial No. 747,755. 4 Claims. (Cl. 5—119.)



1. In a bed construction of the character described, the combination of a cabinet having fixed bottom, front and side walls and open at the top and rear, means for closing the open top and rear of the cabinet, a substantially U-shaped fixed bed frame section secured to the cabinet and resting on the bottom of the cabinet and extending around the front and side walls thereof, foldable bed frame sections consisting of a foot section and a pair of intermediate sections hinged to each other and to the sides of said fixed bed frame section so as to be folded in substantially parallel relation, and whereby one of the intermediate sections is adapted to be disposed in an upright position and supported by the fixed bed frame section and the other intermediate bed frame section and the foot section are adapted to assume an inclined position and rest upon the floor of the cabinet, and a flexible bed bottom joined at its end to the fixed bed frame section and foot section and adapted to loop about the folded bed frame sections when folded and disposed in the cabinet.

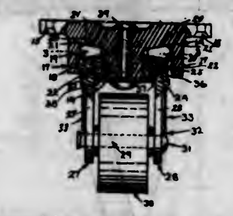
1,576,920. SPRING MOUNTING. OSCAR FREDERICK LUNDELIUS, Los Angeles, Calif., assignor, by direct and mesne assignments, to Lundelius & Eccleston Motors Corporation, Las Vegas, Nev., a Corporation of Delaware. Filed Dec. 3, 1923. Serial No. 678,153. 8 Claims. (Cl. 267—52.)

1. A mounting for connecting springs to a spring supported structure, embodying a suspension member mounted on the structure, studs extending from opposite sides of the member, and spring hangers mounted on the studs at opposite sides of the member.



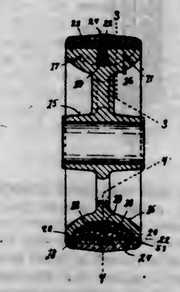
1,576,921. REENFORCED DISK WHEEL. FRANK L. MAIN, Birmingham, Mich., assignor to Hayes Wheel Company, Jackson, Mich., a Corporation of Michigan. Filed July 9, 1923. Serial No. 650,280. 6 Claims. (Cl. 301—63.)

2. In a vehicle wheel, the combination of a hub and a demountable rim, a dished disk mounted on the hub outside of the medial plane of the wheel and curving back to cross said plane and press against the rear edge of said rim, bolts mounted in the outer portion of the disk, a clamping ring mounted on the bolts and having its inner edge pressing against the disk and its outer edge pressing against the front edge of said rim, and a reenforcing disk mounted on the hub and having its outer edge slidably pressing against the main disk, means to space said disks at the hub, and means to rigidly secure the disks to the hub.



1,576,922. CASTER. EDWARD T. MALLOY, Hamilton, Ohio. Filed Mar. 18, 1922. Serial No. 544,910. 1 Claim. (Cl. 16—21.)

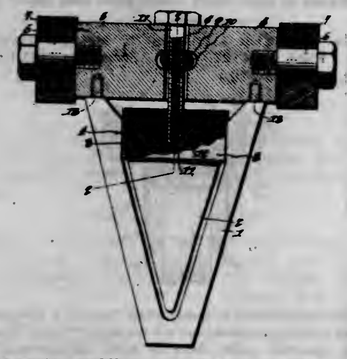
A caster comprising a caster plate, having a downwardly directed tubular projection, a caster frame provided with a caster wheel, a king-bolt member passing through said tubular projection and interposed between the caster plate and caster frame, a separable annular ball spacer interposed between said caster plate and caster frame and held concentrically in position by the downwardly directed tubular projection of said caster plate, said ball spacer being provided with a plurality of conical ball recesses of less diameter at their narrow ends than the diameter of the spacer balls and with raised rims at the wider ends of said ball recesses, end thrust balls located in said spacer ball recesses, a ball radial thrust bearing encircling said king bolt member



at its lower end and radial thrust balls located in said radial thrust bearing to take both the end thrust and radial thrust of said caster frame upon said caster plate.

1,576,923. CASTER. EDWARD T. MALLOY, Hamilton, Ohio. Filed June 27, 1922. Serial No. 571,135. 1 Claim. (Cl. 16—20.)

A caster comprising a caster plate having a downwardly projecting king-bolt member, an outwardly and upwardly inclined annular roller bearing face substantially concentric with said king-bolt member, and a downwardly projecting annular bearing flange outside of said inclined bearing face, a caster frame having a recess to receive said king-bolt member and an annular outwardly and downwardly inclined roller bearing face opposite the roller bearing face of said caster plate, said caster frame being provided with a caster wheel and with a radial thrust ball raceway opposite the lower end of said king-bolt member, a series of end thrust conical rollers having outwardly curved outer ends interposed between said inclined roller bearing faces with their outer ends in position to engage the inner face of said annular flange, a series of radial thrust balls located in said ball raceway and means carried at the lower end of said king-bolt member to retain said balls in position in said ball raceway and to relatively hold said caster plate and caster frame in spaced relation.

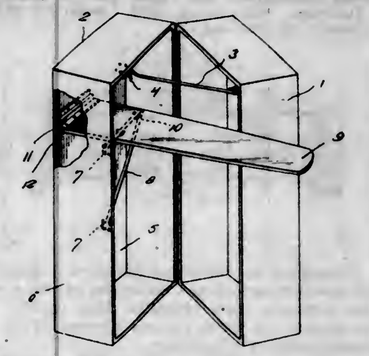


1,576,924. RESILIENTLY-TIRED WHEEL. EDWARD T. MALLOY, Hamilton, Ohio. Filed July 25, 1923. Serial No. 653,731. 1 Claim. (Cl. 152—1.)

A resiliently tired wheel comprising a wheel having a rim of substantially rigid material provided with unbroken peripheral side walls and with dove-tail projec-

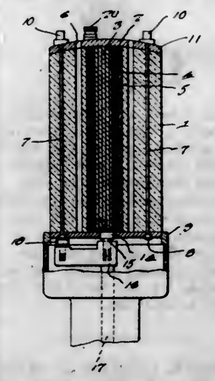
tions leading therefrom toward the center of said rim and a circumferential dove-tail groove intermediate of the inner ends of said dove-tail projections, a tire of the full width of said rim having a tire section of substantially rigid material filling said circumferential groove and the lateral dove-tail spaces leading therefrom between the dove-tail projections of the rim and in contact with the unbroken peripheral faces of the rim at the sides of the rim, and a tire tread section of resilient material formed integral with said rigid tire section.

1,576,925. PASTRY-MAKING APPARATUS. WALTER MCLAREN, Dayton, Ohio, assignor, by mesne assignments, to The McLaren Products Company, a Corporation of Ohio. Filed Mar. 17, 1920. Serial No. 366,489. 3 Claims. (Cl. 107—58.)



1. In pastry molding apparatus, a core bar, a core, means for mounting the core on the bar and including provisions for laterally moving the core while holding it rigidly against longitudinal or axial movement when in use, said means including means whereby the core may be longitudinally adjusted during use a greater or lesser distance from the core bar.

1,576,926. CYLINDER PROTECTOR. ALBERT B. MUELLER, Runge, Tex. Original application filed July 5, 1923, Serial No. 649,556. Divided and this application filed June 26, 1925. Serial No. 39,775. 2 Claims. (Cl. 103—202.)



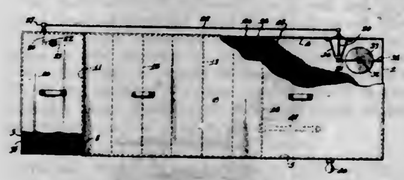
1. A protector for well equipment comprising an outside protector tube, the ends of which are provided with reducers, a perforated strainer member arranged within the outside protector tube and having threaded connection with one of said reducers, a gland having connection with said tube and adapted for the reception of the sucker rod, and a nipple connected to one of said reducers and adapted for connecting the outside protector tube to the upper portion of a working barrel.

1,576,927. COMBINATION TRUNK AND IRONING BOARD. WILLIAM NELSON, New York, N. Y. Filed July 22, 1925. Serial No. 45,336. 8 Claims. (Cl. 190—13.)

1. In combination with a cabinet open at its front, a horizontally swinging bracket supported on the inner face of one of the side walls of the cabinet adjacent the forward edge thereof, an ironing board fulcrumed adjacent its inner end on the horizontal portion of the bracket and adapted to swing in a vertical plane, and cooperating means associated with the inner end of the board and the rear wall of the cabinet for maintaining the board in a horizontal operative position, said bracket being adapted to swing rearwardly and inwardly toward the aforementioned side wall of the cabinet, when the aforementioned cooperating means is disengaged to permit the ironing board to be disposed in a vertical inoperative position adjacent the side wall of the cabinet.

1,576,928. COMBINED DISTRIBUTOR HEAD AND IGNITION COILS. WILLIAM MERRILL OLSON, Oak City, Utah. Filed Sept. 17, 1924. Serial No. 738,193. 1 Claim. (Cl. 123—148.)

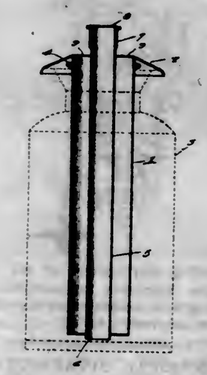
A distributor head comprising a cylindrical body having an axial bore and a plurality of passages arranged in circumferential relation around said bore formed therein, an induction coil mounted in the bore, an attaching cap fitted to one end of the body to form a cover and formed for attachment to a distributor section, an end plate mounted on the other end of the body and having openings registering with the circumferentially arranged passages, and a plurality of rods headed at one end and extended through the cap, body and end plate in spaced parallel circumferential relation, having terminals secured thereto to hold the cap, body and end plate,



in rigid assembled relation, the heads on the rods forming contacts for cooperation with the distributor, said terminals being formed to receive electrical connection to interpose said rods in the ignition circuit in a predetermined manner, and said body being provided with terminals having electrical connection with predetermined portions of said induction coil, whereby the same may be interposed in the ignition circuit.

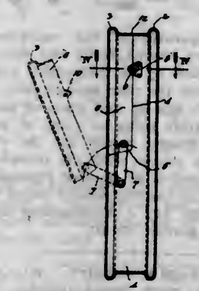
1,576,929. IRONING-BOARD ATTACHMENT. CARRIE ADDELAIDE PARKINSON, Fox Lake, Wis. Filed July 23, 1924. Serial No. 727,736. 4 Claims. (Cl. 68—10.)

1. In a device of the character described, the combination with an ironing board, plates secured at opposite ends to the ironing board, a pair of segmental gears in mesh with each other and mounted for rotation on each plate, arms extending from said gears, and a rod pivotally connected with a pair of the arms at each side of the ironing board.



1,576,930. OIL-FILTERING APPARATUS. LEO M. PERRY, St. Helen, Mich. Filed Dec. 19, 1923. Serial No. 681,487. 1 Claim. (Cl. 210—43.)

An oil filtering apparatus comprising a tank having an inlet at one end and an outlet at its opposite end, partitions in said tank forming a storage compartment and a plurality of filtering compartments, the storage compartment being approximately half the length of said tank and extending under three of the filtering compartments, all of said filtering compartments being progressively stepped in depth with the lower ends of said filtering compartments communicating with one another and two of the filtering compartments above the storage compartment provided with inclined bottom walls, and filtering means in said filtering compartments with the filtering means in the progressively stepped compartments in proximity to the inclined bottom walls thereof.

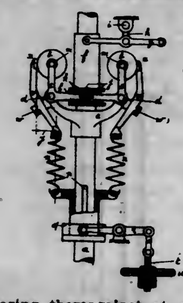


1,576,931. MILK COOLER. NICKOLAS A. REISCH, Le Mars, Iowa. Filed Apr. 30, 1925. Serial No. 27,101. 1 Claim. (Cl. 31—4.)

In a milk cooler of the class described, a cylindrical receptacle closed at its bottom and provided at its top with a marginal outstanding flange shaped to form a cover for the open top of a milk can, said flange being formed with screened openings, an open ended hollow tube disposed concentrically within said receptacle and having its lower end extending through the bottom of the receptacle and terminating a distance therebelow and having its upper end extending above the upper end of the receptacle, and provided with a screened closure,

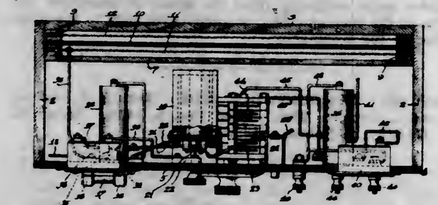
spider arms radiating from the upper intermediate portion of the tube and fixed at their outer ends to the upper edge of the receptacle.

1,576,932. DEMOUNTABLE RIM. HAROLD S. ROCHOWIAK, Detroit, Mich. Filed Dec. 5, 1923. Serial No. 678,615. 2 Claims. (Cl. 301—35.)



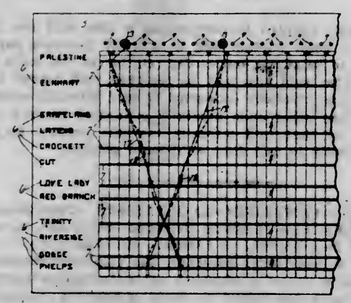
1. A rim adapted for supporting a tire, said rim comprising a main portion and a laterally movable portion adapted to be swung outwardly relative to the main portion so that said tire may be removed, and curved links having ends pivotally connected to said laterally movable portion and other ends pivotally connected to said main portion, so that said laterally movable portion may be swung bodily to and from said main portion.

1,576,933. CENTRIFUGAL GOVERNOR. JEAN ROMEYN, St. Gilles, near Brussels, Belgium. Filed Jan. 9, 1923. Serial No. 611,661. 3 Claims. (Cl. 264—15.)



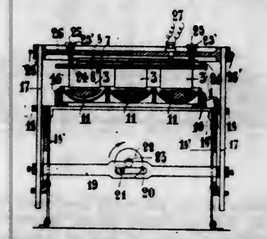
1. In a centrifugal governor, the combination, with a rotatable shaft, of a plurality of centrifugal weights; a carrier lever individual to each weight; a controlling sleeve movable along the shaft and connected with the levers; a set of helical springs, one for each weight, disposed approximately parallel with said shaft; a member

freely adjustable on said shaft while the latter is rotating and with which one end of each spring is connected; and a set of bell-crank levers, one for each



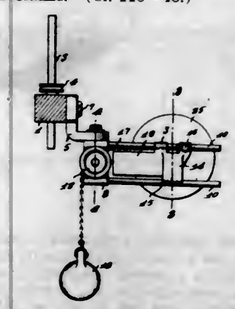
weight and bearing thereagainst at one end, each bell-crank lever being fulcrumed intermediate its ends on a knife-edge bearing and connected at its other end to the other end of the associated spring.

1,576,934. ELECTRICAL APPARATUS FOR TREATING DISEASES. WILLIAM RUNNING, Detroit, Mich. Filed Mar. 5, 1923. Serial No. 622,803. 1 Claim. (Cl. 174—177.)



An electrical apparatus of the character described, comprising a cabinet having front and rear walls with the front wall formed by an instrument board, a plate of insulation adjacent the rear wall of said cabinet, condenser grids at each side of said plate of insulation, one of said condenser grids being in a leg of an oscillatory current circuit, a ground circuit for the other grid, a transformer in each circuit with the transformer of the ground circuit adapted to be shunted through a grounded body, an ammeter on the instrument board in the oscillatory current circuit, and a milliammeter on the instrument board in the ground circuit.

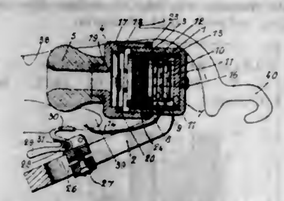
1,576,935. TIME-TABLE CHART. WILLIAM C. SANDERS, Santa Ana, Calif. Filed Jan. 31, 1925. Serial No. 6,030. 1 Claim. (Cl. 116—130.)



In a device of the character described, a board having a chart formed thereon, said chart designating points upon a railroad and hours of the day, a plurality of spaced strips having teeth formed therein and mounted on said chart bearing board, a cord adapted to pass through the teeth of said strip in such a manner as to extend across said chart and to be held parallel with said board, means for tensioning said cord, said tensioning means comprising a shell adapted to be inserted in said board, a hub rotatable in said shell and having said cord connected thereto, and an indicia bearing plate supported on said shell.

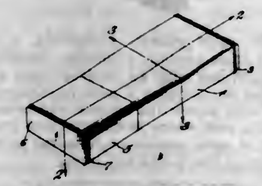
1,576,936. CONFECTIONERY MACHINERY. EMILE LOUIS ALFRED SAVY, Courbevoie, France. Filed Feb. 27, 1925. Serial No. 12,091. 9 Claims. (Cl. 107—1.)

1. A confectionery machine, comprising a support for a series of moulds having cavities for the individual confections adapted to receive a coating layer; and a vertically-movable presser unit for forcing fillings into the coating layers, embodying a plate provided with depending presser fingers disposed in register with said cavities to enter the same during the descent of the unit, and means for heating said plate and fingers.



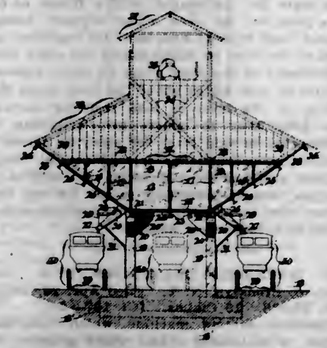
1,576,937. SPINDLE DEVICE. WALTER LEE SMITH, Gastonia, N. C. Filed July 7, 1924. Serial No. 724,639. 2 Claims. (Cl. 118—48.)

1. A device of the class described including an attaching bracket mounted for lateral adjustment, a hanger connected thereto, a clamping plate connected to the hanger, guide rods clamped at one end between the hanger and plate, a carriage mounted to slide between and along the guide rods, an arm at one side of and carried by the carriage, there being recesses within the inner side of the arm and one side of the carriage, bearing blocks removably seated within the recesses, a shaft journaled within the blocks, a belt engaging pulley rotatable with the shaft and between the carriage and its arm, a pulley upon the hanger, a weight, and a flexible connection between the weight and carriage, said connection being mounted on the pulley of the hanger for holding the carriage normally drawn toward the hanger.



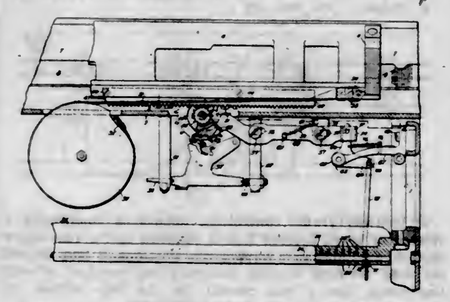
1,576,938. TELEPHONE RECEIVER. LUCIEN ALEXANDRE LOUIS STRUXIANO, Paris, France. Filed Feb. 2, 1924. Serial No. 690,150. 3 Claims. (Cl. 179—107.)

1. A telephone receiver adapted to be carried by the ear and comprising in combination a casing, a nipple secured to the front end of said casing and adapted to be inserted into the ear conduit, an electromagnetic device in said casing for regenerating sounds, a flexible electric conductor and a permanent magnet, both operatively connected to said electromagnetic device, the mag-



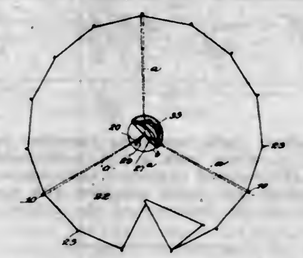
net being supported at its rear end by the rear end of the casing and the axis of the magnet together with the axis of the nipple being contained in a substantially horizontal plane.

1,576,939. NONHEAT CONDUCTING RECEPTACLE. GEORGE J. WALZ, Oak Park, Ill. Filed May 3, 1924. Serial No. 710,939. 1 Claim. (Cl. 109—2.)



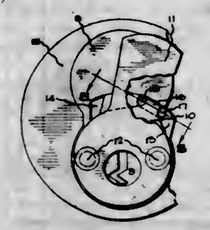
A receptacle of the character described including an outer body casing, a cover shutting the open end of the body, the closed end of said body having recesses in its walls upon the interior thereof, a separable layer of fireproof material lying adjacent the closed end, a corrugated layer of material lying on the fireproof layer and a second layer overlying the corrugated layer with its edges in said recesses to retain said layers in position and a plurality of layers of fireproof material arranged within the body, of the same general shape as the body and of a length equal to the combined length of the body and cover.

1,576,940. POCKET OR STORAGE BIN. ARTHUR WARNER, Philadelphia, Pa., assignor to Specialty Engineering Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Mar. 2, 1923. Serial No. 622,257. 7 Claims. (Cl. 189—3.)



1. A storage pocket for coal or granular material comprising spaced cantilever bulkheads affording declined ends, girts secured to the declined ends and connecting said cantilever bulkheads to effect their rigid connection in parallel relation, flooring traversing the girts, and means for supporting the pocket.

1,576,941. TYPEWRITING MACHINE. EDWIN E. BARNEY, New Rochelle, N. Y., assignor to Remington Typewriter Company, Ilion, N. Y., a Corporation of New York. Filed May 3, 1922. Serial No. 558,185. 8 Claims. (Cl. 197—91.)



1. In back spacing mechanism for typewriting machines, the combination of a toothed wheel connected to the carriage, and a one-piece key operated slide, comprising a device co-operative with said wheel to back space the carriage, and a second device to arrest said wheel at the end of said back spacing movement, the said slide and the said first and second devices being all rigid.

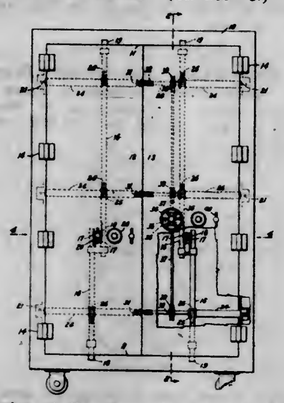
1,576,942. TENT. LUCIAN H. BEEBE, New London, Conn. Filed Apr. 10, 1924. Serial No. 705,518. 9 Claims. (Cl. 135—14.)

1. A tent of frustro-conical shape, there being a circular opening at the top of the tent, a folding hemispherical hood enclosing the top of the tent, and means for rotating the hood.

1,576,943. STOP MEANS FOR LOCKS. FRANK ELLISON BEST, Seattle, Wash., assignor to Frank E. Best, Inc., Seattle, Wash., a Corporation of Washington. Filed July 2, 1924. Serial No. 723,790. 5 Claims. (Cl. 70—46.)

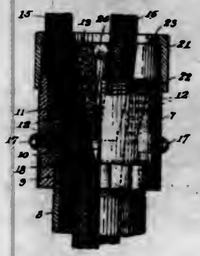
1. In a lock, a lock core, a swingingly mounted stop pin protruding from the inner end of said lock core, a rotatable key plug and means on said key plug engageable with said stop pin to limit the rotary movement of said key plug to one complete revolution.

1,576,944. RAILWAY-TRAFFIC-CONTROLLING APPARATUS. HERMAN G. BLOSSER, Swissvale, Pa., assignor to The Union Switch & Signal Company, Swissvale, Pa., a Corporation of Pennsylvania. Filed Jan. 8, 1924, Serial No. 684,961. Renewed Jan. 23, 1926. 6 Claims. (Cl. 246—37.)



1. Railway traffic controlling apparatus comprising a stretch of track divided into a forward and a rear track section, an impedance having two portions, a loop circuit for said forward section including one portion of said impedance, and a loop circuit for the rear section including the other portion of the impedance.

1,576,945. RAILWAY-TRAFFIC-CONTROLLING APPARATUS. HERMAN G. BLOSSER, Swissvale, Pa., assignor to The Union Switch & Signal Company, Swissvale, Pa., a Corporation of Pennsylvania. Filed Jan. 8, 1924, Serial No. 684,962. Renewed Jan. 23, 1926. 20 Claims. (Cl. 246—37.)

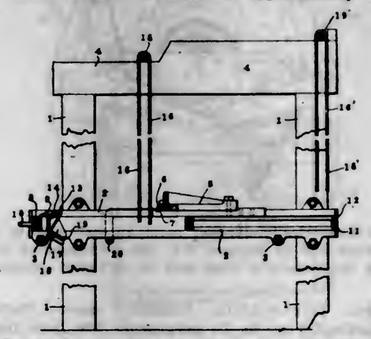


1. A railway traffic controlling apparatus comprising a stretch of railway track, a loop circuit including the two rails of the stretch in multiple and a source of alternating current, and means associated with said circuit responsive to the frequency of the current supplied thereto.

1,576,946. CLOSURE CONSTRUCTION. LLOYD E. BURHANS, Yonkers, N. Y. Filed Feb. 14, 1924. Serial No. 692,741. 10 Claims. (Cl. 109—3.)

1. A device of the character described, including in combination, a receptacle provided with an opening, a closure for said opening, said closure including a plurality of panels and means carried by said closure and adapted to press the adjacent surfaces of said panels into contact with each other and further adapted to press adjacent surfaces of said closure and receptacle into intimate contact whereby to reduce the size of the joints existing between said elements.

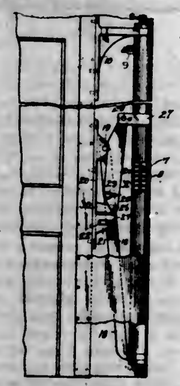
1,576,947. CABLE SUPPORT. MICHAEL J. CAPIERO, Brooklyn, N. Y. Filed Apr. 15, 1925. Serial No. 23,287. 8 Claims. (Cl. 247—6.)



6. A vertical cable support comprising a shell for mounting on a cable conduit, a tubular insulating lining in said shell provided with an inclined cable supporting surface, a wedge for clamping a cable in engagement with said inclined cable supporting surface and means on the shell for forcing said wedge down into firm gripping engagement with a cable dependent from the inclined supporting surface of the insulating lining.

1,576,948. SCALE. HUGH M. CAMERON, Newark, N. J., assignor to John Chatillon & Sons, New York, N. Y., a Corporation of New York. Filed Aug. 18, 1921. Serial No. 493,288. 12 Claims. (Cl. 265—68.)

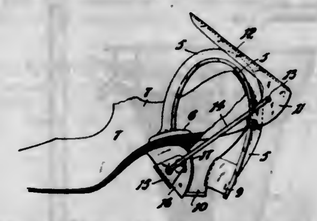
1. In a scale the combination with a frame, of a lever thereon, a pivot for the lever, a load support, means connecting said load support and lever for applying actuating forces to the lever in substantially the same direction during movement of the lever about its pivot whereby the moment arm of said forces about the lever pivot changes with tilting of the lever, a load resisting means connected to said lever to oppose said actuating forces, means connected to said lever for applying forces thereto substantially proportional to changes in length of said moment arm and in a direction to compensate for such changes, weight indicating means for the load on said support, and an actuating mechanism connecting said lever with said indicating means.



1,576,949. MACARONI-CUTTING MACHINE. GAETANO CARBONARO, Brooklyn, N. Y. Filed Apr. 28, 1925. Serial No. 25,398. 10 Claims. (Cl. 107—21.)

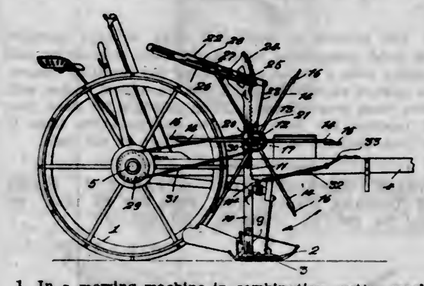
1. A macaroni-cutting machine which comprises, in combination, a stationary frame which presents adjustably a blade having a horizontal lower face which is cutaway a short distance behind its cutting-edge while its upper face is bevelled off at an angle of approximately eighty degrees to said lower face, a second frame rectilinearly reciprocable in said stationary frame, a complementary blade supported on said movable frame and having its upper face bevelled off into parallelism with the lower face of said stationary blade and located to pass immediately beneath it, the lower face of said movable blade being at an angle of approximately fifteen

degrees to its bevelled upper face, a guard-plate mounted reciprocably on said movable frame in front of the last-named blade and having at each end a forwardly-extended ear presenting an open-ended diagonal slot, and two studs mounted on said stationary frame and coacting with said slots to lower and raise said guard-plate.



1,576,950. SAFETY SHOE-TRIPPING MECHANISM FOR DOORS. ROSCOE CONKLIN, Rahway, N. J., assignor to National Pneumatic Company, New York, N. Y., a Corporation of West Virginia. Filed Apr. 11, 1921. Serial No. 460,415. 8 Claims. (Cl. 200—54.)

1. In a safety shoe contact device for power operated doors the combination with a suspended coil spring and a wire located longitudinally therein and constituting circuit terminals, means for maintaining said circuit terminals under longitudinal tension, a mounting for one end of said terminals, including a rock lever associated with a strap, said strap embracing said coil terminal, and loose motion connections intermediate said lever and strap member.

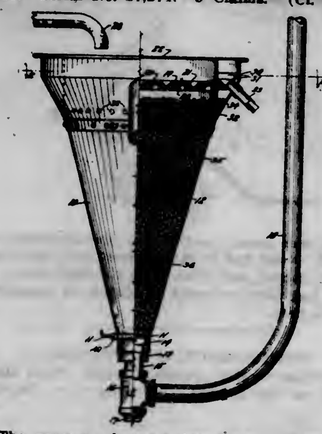


1,576,951. CLAMPING APPLIANCE FOR USE IN THE MANUFACTURE OF SHOES. DAVID ROBERT COOPER, Ultimo, near Sydney, New South Wales, Australia. Filed Mar. 14, 1925. Serial No. 15,473. 3 Claims. (Cl. 12—125.)

1. In a shoe clamping appliance for the purpose specified, a member arranged with a part to engage inside of and arranged to press upon the waist portion of the shoe and another part to be positioned adjacent to the outer side of the shoe heel, a pad attached to said latter part adapted to bear against the rear surface of the shoe heel, a second pad arranged to bear against the heel

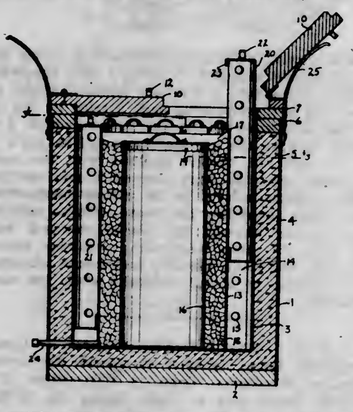
breast and shoe waist, and means for adjustably connecting said second pad to said member and operative to position the second pad relative to the heel breast and shoe waist and simultaneously exert inward pressure on both of said pads.

1,576,952. MOWING-MACHINE ATTACHMENT. SIDNEY CRAWFORD, Cowley, Alberta, Canada. Filed Mar. 3, 1922. Serial No. 540,834. 2 Claims. (Cl. 56—224.)



1. In a mowing machine in combination, cutter mechanism, an upright standard carrying a rack supported by the cutter mechanism, a pivotally jointed upright standard carrying a corresponding rack carried by the cutter mechanism and spaced from the first standard, a shaft extending between the two standards and having a tooth pinion at each end thereof meshing with the racks, a loose sleeve revoluble upon the shaft and carrying a plurality of arms parallel to the cutting mechanism, revolving means connecting the sleeve with an axle of the machine, means whereby the jointed standard may be moved upon its pivot maintaining revoluble movement between the shaft and the axle and means whereby the sleeve arms may be moved vertically while the machine is in motion.

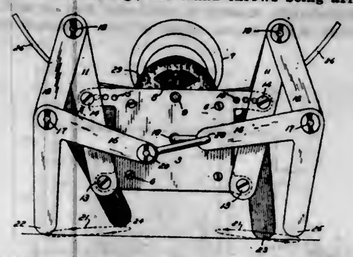
1,576,953. VANITY CASE. FRANCIS R. DONAHUE, Waterbury, Conn., assignor to Scovill Manufacturing Company, Waterbury, Conn., a Corporation of Connecticut. Filed May 9, 1925. Serial No. 29,008. 3 Claims. (Cl. 132—83.)



1. In a vanity box, the combination of a body and a cover, a fitment in the body having a distributing opening, a plate closing the opening, a spring bearing at one end against the plate and tending to press the plate into engagement with the fitment, and means integral with the fitment for associating the spring therewith, whereby the fitment, the plate and the spring may be removed from and replaced in the box as a unit.

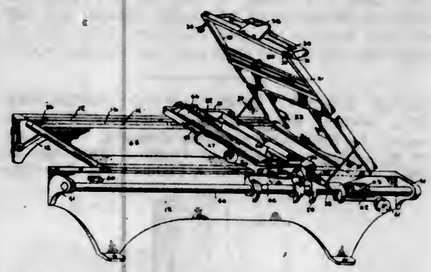
1,576,954. PROCESS AND APPARATUS FOR RECOVERING PRECIOUS METALS FROM SANDS. DAVID H. DONEGAN, Placerville, Colo. Filed Mar. 21, 1925. Serial No. 17,274. 9 Claims. (Cl. 209—210.)

1. The process of separating flaky metallic particles from sand, comprising mixing the sand, containing said particles with a liquid and passing the resulting suspension upward through a bed of small spherical bodies, said bodies being proportioned to form passages for fluid, that will position the flaky particles and maintain them in positions minimizing the tractive effect of the fluid.



1,576,955. REFRIGERATING APPARATUS. JOSEPH W. DUBRAKS, Houston, Tex. Filed Dec. 26, 1924. Serial No. 758,126. 4 Claims. (Cl. 220—9.)

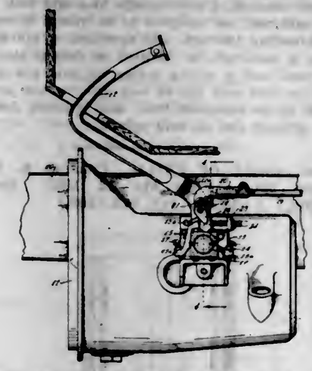
1. A refrigerating device comprising an outer tub, a cover thereon, a container in said tub, heat insulating material between said tub and container, an annular ice chamber spaced within said container, radial compartments between said ice chamber and said container, and a storage compartment surrounded by said ice chamber.



1,576,956. QUADRUPED-WALKING MECHANISM. EARL DUNSHEE, Los Angeles, Calif. Filed May 3, 1924. Serial No. 710,907. 1 Claim. (Cl. 46—40.)

Quadruped walking mechanism comprising; a frame; a link pivotally suspended from each corner of the frame; a bell-crank lever pivotally suspended at its apex from the free end of each link; a four-throw crank shaft; and a power source adapted to rotate said shaft; one of the arms of each of said levers being separately engaged by a crank of said shaft, and the other arm being adapted to act as a walking leg; the crank throws being arranged

in non-diametrically opposed pairs at each side of the mechanism and so disposed that the corresponding lever legs on the respective sides may be oscillated oppositely.

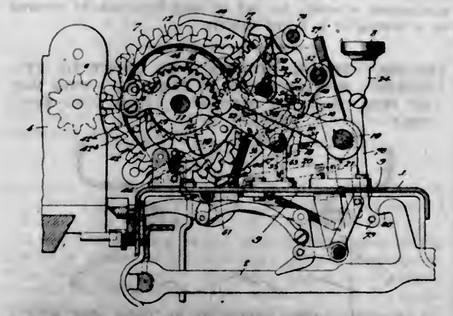


1,576,957. DUPLICATOR. FREDERICK FRANCIS FECHER, Rockville Center, N. Y., assignor to The Beck Duplicator Company, a Corporation of New York. Filed Aug. 8, 1925. Serial No. 48,990. 12 Claims. (Cl. 101—133.)

1. In a duplicator, the combination with a supporting frame or base, a bed, and an adhesive duplicating surface upon said bed adapted to receive a sheet of paper and to cause same to adhere thereto when a portion of said sheet of paper is brought into contact with the same; of a paper-supporting member adapted to support a plurality of sheets of paper or the like movably mounted over said adhesive duplicating surface and provided with an opening in the bottom adapted to permit a portion of a sheet of paper held upon said paper-supporting member to be depressed so as to come in contact with said adhesive duplicating surface, a frame slidably mounted on said duplicator, a roller rotatably mounted in said frame adapted to depress a sheet of paper upon said adhesive duplicating surface, a second frame slidably mounted on said duplicator, a roller rotatably mounted in said second frame adapted to hold a portion of said sheet of paper away from said adhesive duplicating surface, said frames being adapted to be widely separated from each other when said paper-supporting member is swung down toward said adhesive duplicating surface, but to be approximated and coupled together when the paper-supporting member is raised, whereby a portion of the sheet of paper is held between the rollers of said frames, which are then adapted to strip said paper from said adhesive duplicating surface.

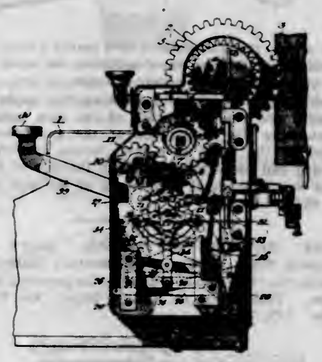
1,576,958. BRAKE-OPERATING LINKAGE. FERDINAND E. FICK, South Euclid, Ohio, assignor to The White Company, Cleveland, Ohio, a Corporation of Ohio. Filed Feb. 27, 1925. Serial No. 12,029. 2 Claims. (Cl. 74—110.)

1. The combination with a brake, a pedal device therefor, a lever pivoted intermediate its ends and carried by said pedal, connections at one end of the lever to the braking mechanism, a tripper plate having a contact face adapted to engage the free end of said lever, and adjust-



able means for rocking said tripper plate to vary the position of said contact face relative to the lever free end, and locking means for said adjustable means.

1,576,959. REVERSIBLE CUFF. EDWIN BAYARD FISHER, Burstall, Saskatchewan, Canada. Filed May 27, 1925. Serial No. 33,299. 3 Claims. (Cl. 2—123.)

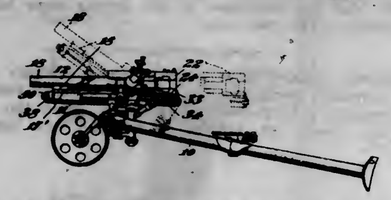


1. A soft cuff consisting of a piece of material folded upon itself with its meeting longitudinal extremities attached to a shirt sleeve, a part of the lateral edges of the doubled material being stitched together adjacent the shirt sleeve, the remaining lateral edges of the doubled material being free, a button hole in the fold of said doubled material, a fold in each thickness of material between said buttonhole and the lower end of the lateral edge stitching, and a button hole in each thickness of material between said fold and said stitching.

1,576,960. ACTUATING MECHANISM. HARRY ARTHUR FOOTHORAP, Harrisburg, Pa., assignor to Elliott-Fisher Company, a Corporation of Delaware. Filed May 2, 1921. Serial No. 466,340. 19 Claims. (Cl. 235—59.)

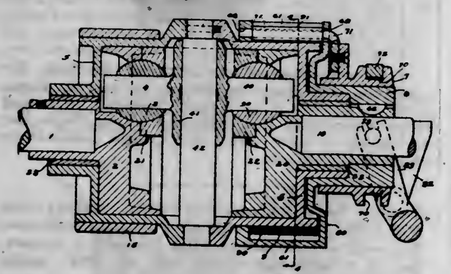
1. In an actuating mechanism, the combination with a master wheel, of a series of actuator levers having aligned fulcrums, and aligned series of driving arms, a single operating connection between the series of driving arms and the master wheel, and a connection between the actuator levers and the driving arms, said connection permitting the operation of the driving arms by any lever, and the movement of the driving arms independently of the other levers.

1,576,961. CROSS-FOOTING REGISTER. HARRY A. FOOTHORAP, Harrisburg, Pa., assignor to Elliott-Fisher Company, a Corporation of Delaware. Filed May 3, 1924. Serial No. 710,803. 11 Claims. (Cl. 235—137.)



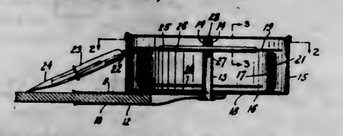
1. In a mechanism of the character described, the combination with carrying devices, of bearing blocks located at opposite sides thereof, operating levers and detents fulcrumed in their respective bearing blocks and each guided by both blocks, and springs connected to said levers and detents.

1,576,962. OBTURATOR-OPERATING MECHANISM FOR GUNS. CLARENCE HERVY FROELICH, Bethlehem, Pa., assignor to Bethlehem Steel Company, a Corporation of Pennsylvania. Filed Feb. 13, 1924. Serial No. 692,492. 27 Claims. (Cl. 89—24.)



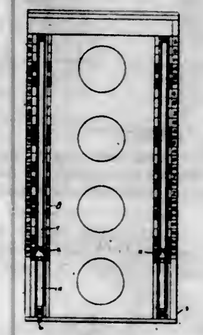
1. In a gun, a breech block including contacting wedge elements, an obturator carried by one of the elements, a lever pivoted to the other of said elements, and a movable fulcrum connection between the lever and the first of said elements.

1,576,963. GUN. CLARENCE HENRY FROHLICH, Bethlehem, and EARL J. MILLER, Warren, Pa., assignors to Bethlehem Steel Company. Filed Mar. 15, 1924. Serial No. 699,434. 19 Claims. (Cl. 89—43.)



1. In a gun, the combination of a cradle having a lower longitudinally extending outer cylinder, an inner cylinder fitting the bore of the outer cylinder, a gun tube, an interlocking guide connection between the upper side of the cradle and the lower side of the gun tube, means for connecting the breech end of the gun tube to the rear end of the inner tube, and means carried by the outer tube and cooperating with the interior of the inner tube for resisting recoil movements of the gun tube and of the inner tube.

1,576,964. REVERSE MECHANISM. RALPH GERBER, Raymond, Wash., assignor to American Manufacturing & Sales Co., Raymond, Wash., a Corporation of Washington. Filed Feb. 18, 1925. Serial No. 9,977. 1 Claim. (Cl. 74—14.)



In a device of the character described, the combination with the two aligned shafts, a casing adapted to turn with the shafts or to be held stationary, the casing having two braking surfaces, a fixedly secured brake cooperating with one of said braking surfaces, a member rotative with one shaft and carrying a brake band cooperative with the other braking surface, a sleeve rotative with the same shaft but movable lengthwise thereof, a bar carried by said sleeve and supporting one end of the rotative brake band, a bar supporting one end of the other brake band, both of said bars having cam inclines by the action of which in the reciprocation of the bars the brakes are controlled, and a controlling lever connected with the sleeve and one of the bars.

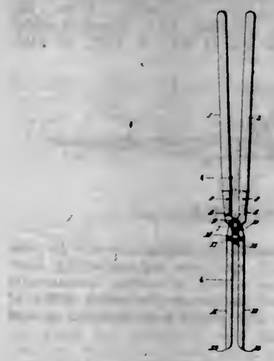
1,576,965. PENCIL SUPPORT. FRANK GIBBS, New York, N. Y. Filed Dec. 10, 1925. Serial No. 74,550. 2 Claims. (Cl. 242—98.)

1. The combination with a base, of a hollow spindle fixed to said base provided in diametrically opposite portions of its free end with longitudinal slots, a housing rotatably mounted upon said spindle having an aperture, a reel within said housing rotatably mounted on said spindle having in one of its heads radial grooves, a spring coil connecting said spindle and said reel, a string fixed to said reel and adapted to be wound thereon, said string extending through said aperture, a pin seated in the slots in said spindle adapted to engage the grooves in said reel, and a spring acting on said pin having a tendency to seat said pin in said grooves but permitting the same to be unseated from said grooves during the rotation of said reel on said spindle.

1,576,966. GAME OF SKILL. CHARLES K. GLINGER, Agawam, Mass. Filed Apr. 12, 1922. Serial No. 551,780½. 3 Claims. (Cl. 273—108.)

1. A game of skill comprising a board having a track, a projectile slidable on the track, means of imparting a reverse motion to the projectile, a series of contacts arranged along the path of the projectile, a series of signal elements, and circuits connecting the elements to the contacts controlled by said projectile.

1,576,967. TOWLINE BUMPER. SAMUEL CHARLES GOULD, Bridgeport, Conn. Filed Jan. 4, 1926. Serial No. 79,156. 11 Claims. (Cl. 293—55.)



1. A device of the character described, comprising a plurality of tubes detachably secured end to end, means for removably supporting said tubes from a vehicle, and mechanism whereby an end of each tube can be secured to a towing or a towed vehicle.

1,576,968. SHADE HOLDER FOR LIGHTING FIXTURES. EDWIN F. GUTH, St. Louis, Mo. Filed Mar. 17, 1923. Serial No. 625,780. 2 Claims. (Cl. 240—128.)

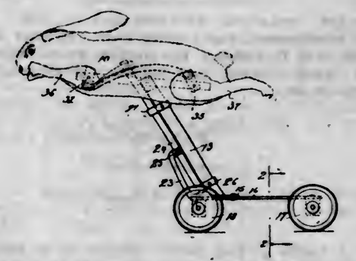
1. A shade holder comprising an outer ring with a plurality of orifices therein and an inwardly projecting flange formed at its base, an inner ring to fit within the outer ring and rest upon the flange thereof to receive the neck of a shade, and screw threaded orifices in said inner ring to register with the orifices in the outer ring, set screws to pass through the orifices in the outer ring, engage the screw threads in the orifices in the inner ring and the neck of the shade.

1,576,969. DANDELION DIGGER. CHARLES M. HACKENBERGER, Denver, Colo. Filed Oct. 9, 1925. Serial No. 61,542. 6 Claims. (Cl. 55—68.)

In an implement of the character described, a pair of tongs, the working ends of which are semi-tubular in cross section and pointed, a pivoted element which in one position defines a space between said working ends when the handles are moved toward each other and which in another position permits the extremities of said working ends to engage.

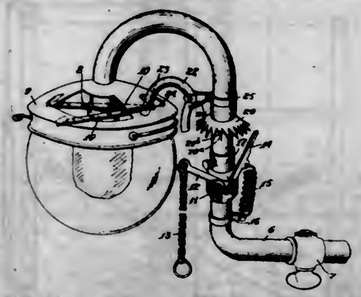
1,576,970. METHOD OF AND SYSTEM FOR REGENERATING SULPHUROUS ACID AND WASTE HEAT FROM SULPHITE CELLULOSE BOILERS. CARL HANGLEITER, Mannheim-Waldhof, and ADOLF SCHNEIDER, Kehlheim-on-the-Danube, Germany, assignors to Zellstoffabrik Waldhof, Mannheim-Waldhof, Germany, a Corporation of Germany. Filed Apr. 3, 1922. Serial No. 549,112. 8 Claims. (Cl. 92—2.)

1. In a process for regenerating sulphur dioxide and waste heat from sulphite cellulose boilers, introducing the gas and vapor coming out of the boiler and while still hot at a point in close proximity to the boiler into streaming cold fresh lye.



1,576,971. GLOVE. WILLIAM H. HEATON, Oakland, Calif. Filed Apr. 17, 1924. Serial No. 707,098. 1 Claim. (Cl. 2—168.)

A glove or covering of the type in which each of the fingers is formed of a single front portion covering the front and two sides of the finger and a back portion covering the back of the finger whereby all of the seams longitudinally of the fingers are thrown to the back of the hand, said portions being made of textile fabric provided with a fleecy surface on one side, the fleecy surface comprising the inside throughout said glove, the said front portion of each of said fingers having been treated with a rubber solution and vulcanised so as to



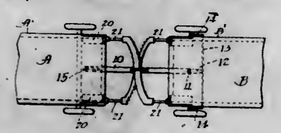
fill the pores of the outside of the fabric in said part but not to penetrate said fleecy surface and the back portion of said fingers being untreated and stitched to said treated front part.

1,576,972. MECHANICAL MOVEMENT DEVICE. MONNOSUKE HIGUCHI, College Point, N. Y. Filed Aug. 26, 1922. Serial No. 584,487. 4 Claims. (Cl. 46—45.)

1. In a mechanical movement device for inanimate objects simulating animate objects the combination of a carriage supported on wheels, a standard rigidly secured on said carriage, at an angle thereto, a frame pivotally mounted on said standard, limb-carrying pins spaced apart in said frame and yokes on said pins, a link connecting said yokes and means for oscillating said frame and said yokes operated by said wheels.

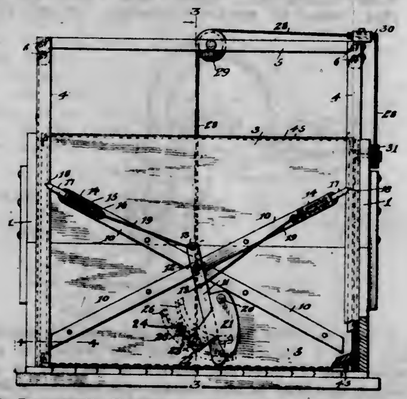
1,576,973. AUTOMATIC GAS-SHUT-OFF MECHANISM. LOUIS HILL, Akron, Ohio. Filed Jan. 16, 1924. Serial No. 686,476. 5 Claims. (Cl. 67—116.)

1. In a device of the character described the combination, with a gas burner, a gas pipe leading to said burner, and a valve for controlling the flow of gas through said pipe to said burner, of a bell crank lever connected with said valve, a spring connected with said bell crank lever for shifting the same in a direction to close said valve, means controllable by hand for



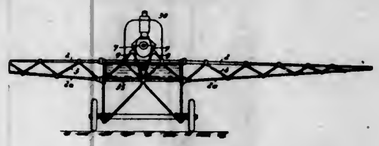
shifting said bell crank lever in a direction to open said valve, a supporting disk mounted upon said gas pipe, a wheel encircling said gas pipe and resting upon said supporting disk, said wheel being provided with teeth extending partially into the path of travel of said bell crank lever, an interference arm journaled adjacent said wheel and movable into engagement with the teeth thereof to lock said wheel and thus hold said valve open, and a thermostatic element mounted adjacent said burner and connected with said interference arm to shift said interference arm into and out of engagement with said toothed wheel, thus locking and releasing said toothed wheel.

1,576,974. ELECTRIC STORAGE BATTERY. OTTO E. HUEBNER, Flushing, N. Y. Filed May 16, 1923. Serial No. 639,408. 3 Claims. (Cl. 136—143.)



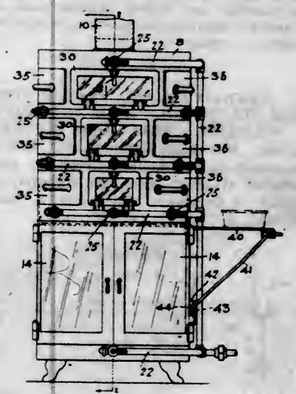
1. A separator for storage batteries comprising a sheet of material, having apertures pierced therethrough by high tension electrical discharges.

1,576,975. TRAILER BUMPER AND GUIDE. DAVID K. HUTCHINSON, Los Angeles, Calif., assignor of one-half to R. C. Liebman, Los Angeles, Calif. Filed Dec. 26, 1922. Serial No. 608,918. 9 Claims. (Cl. 280—33.55.)



1. A trailer guiding device, adapted to be applied to a towing and trailing vehicle, connected by a draw bar, said device embodying a pair of curved gear racks one mounted on the towing vehicle and the other mounted on the trailer and intermeshing with each other, the draw bar being pivotally connected to both the towing and trailing vehicles substantially at the centers of the gear racks.

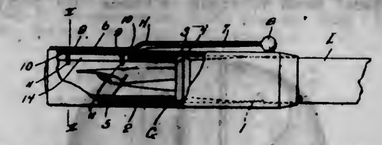
1,576,976. END GATE. ELMER T. JACKSON and ALBERT E. JACKSON, Fullerton, Nebr. Filed Apr. 3, 1925. Serial No. 20,459. 5 Claims. (Cl. 296—52.)



1. In a vertically reciprocating wagon end gate of the character set forth, a gate body, operating means therefor, a pair of obliquely crossed brace elements upon the outer face of the gate, an upwardly inclined latch member carried upon the upper end of each element and engaging a stationary retaining member, a pivoted element at the point of intersection of said crossed elements, link connections between said latches and said pivoted element, and a cam member connected to and operable by said operating means, acting upon said pivoted element when the operating means is actuated, to release said latch members.

1,576,977. FLYING MACHINE. HUGO JUNKERS, Dessau, Germany. Filed June 28, 1920. Serial No. 392,587. 11 Claims. (Cl. 244—14.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

1. In a flying machine of the monoplane type in combination, a substantially unbroken self-supporting bearing plane of streamline section extending substantially in a straight horizontal line across the entire width of the craft and a motor and pilot's seat mounted on and above said bearing plane.

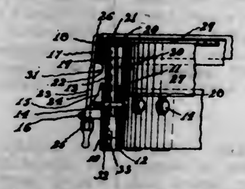


1,576,978. STOVE. BERT A. KINSEY, Glenshaw, Pa. Filed Mar. 20, 1925. Serial No. 16,974. 5 Claims. (Cl. 126—39.)

1. A stove comprising a casing, a diametrally disposed partition in said casing, openings provided in the casing wall of the front of said partition, for the reception of cooking vessels, a plurality of vertically aligned burners in the space between said partition and said wall, vent openings in said partition, and a flue opening at the rear of said casing with which said vents communicate.

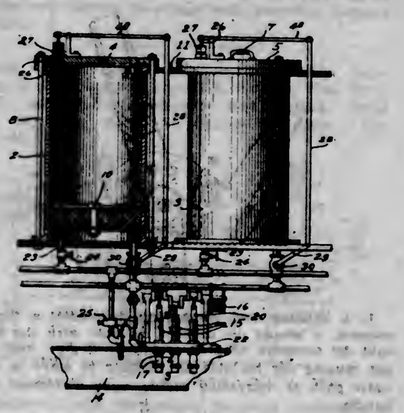
1,576,979. FOUNTAIN-PEN CLIP. ISRAEL KRUTT, New York, N. Y., assignor to William A. Rappeport, New York, N. Y. Filed July 10, 1924. Serial No. 725,123. 6 Claims. (Cl. 24—11.)

1. In a pen clip structure, the combination with a pen cap or the like, of a clip member having a body portion arranged to lie flat against the outer surface of said cap having an attaching portion projecting therefrom into the interior of the cap through an aperture provided in the wall of the cap, said attaching portion being shaped to provide a tapered groove dove-tailed in cross section,



and a locking member within the cap having a tapered tongue also dove-tailed in cross section adapted to wedge into said groove for holding the clip in position.

1,576,980. SELF-FILLER MECHANISM FOR FOUNTAIN PENS. ISRAEL KRUTT, New York, N. Y., assignor to William A. Rappeport, New York, N. Y. Filed July 10, 1924. Serial No. 725,124. 4 Claims. (Cl. 120—46.)

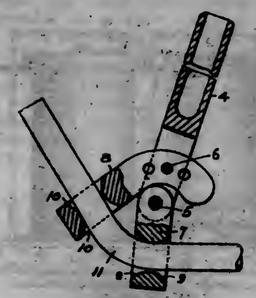


1. In a fountain pen, comprising the usual barrel and having a collapsible elongated ink capsule therein, a follow plate for collapsing said ink capsule, a pair of links by which the follow plate is mounted to move in parallel planes during the collapsing of the ink capsule, an operating member slidably mounted in the end of the barrel having a head externally of the barrel, a link connecting said operating member with said follow plate whereby withdrawal of the operating member will move the follow plate to capsule collapsing position, the end portion of the barrel having an inturned annular flange thereon constituting a shoulder facing inwardly of the barrel, the operating member having an annular shoulder thereon facing outwardly of the barrel and in opposition to the first shoulder, and a compression spring encircling the operating member interposed between said two shoulders and serving thereby to normally hold the operating member yieldingly in its innermost position and to hold the follow plate close against the wall of the barrel and therefore out of capsule collapsing position.

1,576,981. TUBE RESONATOR FOR BANJOS. WILLIAM L. LANGE, New York, N. Y. Filed Oct. 28, 1921. Serial No. 511,005. 23 Claims. (Cl. 84—269.)

1. In a banjo, a frame having a series of spaced apertures therethrough around the frame extending in the line of depth of the frame and communicating at one of their ends with the atmosphere, tubular members having portions supported in said apertures at the ends thereof opposite to the first mentioned ends and having portions extending beyond the frame towards the front of the banjo, a vibratory annular member supported on the ends of said extending portions and permitting passage of sound from the interior of the banjo into the tubular members and thence by way of said apertures to the atmosphere, and means for retaining said annular member on the ends of the extending portions of the tubular members.

1,576,982. LUBRICANT-DISPENSING APPARATUS. CARL MASS, Newark, N. J. Filed Feb. 20, 1924. Serial No. 694,147. 6 Claims. (Cl. 221—67.)



1. A lubricant dispensing apparatus comprising a tank, a piston operable therein, a source of fluid supply, a pump connected therewith and having connection with tank, means connecting said tank with said source of fluid supply, and piston operated means for automatically cutting off the fluid from said pump when said piston is moved a predetermined degree.

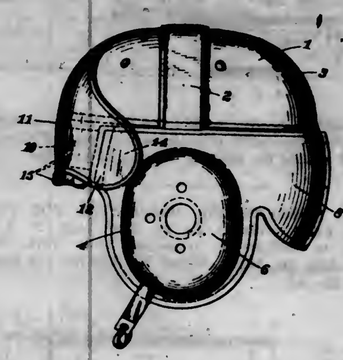
1,576,983. ELECTRIC FLASH LIGHT. JOSEPH MARRO, Brooklyn, N. Y. Filed Oct. 10, 1923. Serial No. 669,518. 1 Claim. (Cl. 240—10.5.)

A portable lamp comprising a cylindrical casing, a spring motor therein, a hollow crown gear driven by said motor, a pair of parallel pinion rods one of which is in cooperative engagement with said hollow crown gear while the second of which is in meshing engagement with a spur gear fixed to said first rod, a second crown gear fixed for rotatable movement with one of said pinion rods, a governor carried by the latter, a pinion in meshing engagement with the said second crown gear, a hollow magnet fixed for rotatable movement with said pinion and an armature suspended within the hollow rotatable magnet, an incandescent lamp, electric connections between the lamp and the armature, and exterior means to supply energy to the spring motor.

1,576,984. TOOL FOR BENDING PIPE, BARS, AND THE LIKE. ANDREW MCLAIN, Carnegie, Pa. Filed Dec. 5, 1924. Serial No. 754,145. 6 Claims. (Cl. 153—45.)

1. A bending tool comprising a handle, a fixed die member, a second die member movable with the handle, said die members adapted to engage a pipe, and means for causing the movable die member to move in an arcuate path of decreasing radius, upon movement of the handle.

1,576,985. STAIN-REMOVING COMPOUND. ALBERT E. MOORE, Seattle, Wash. Filed July 16, 1925. Serial No. 44,114. 2 Claims. (Cl. 87—5.)

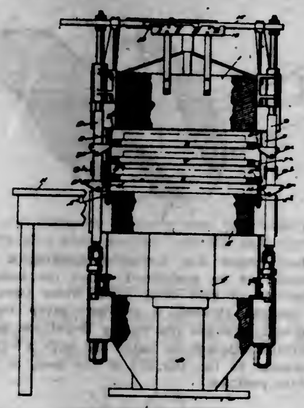


1. A compound for the purpose specified, comprising the following ingredients in substantially the proportions, as follows:—Powdered titric acid, 40–50%; powdered pumice stone, 40–50%; powdered cuttle-fish bone 5–15%.

1,576,986. CHAIN HOIST. PETER MULLEN, Philadelphia, Pa., assignor to The Harrington Company, a Corporation of Pennsylvania. Filed Feb. 11, 1925. Serial No. 8,345. 2 Claims. (Cl. 254—169.)

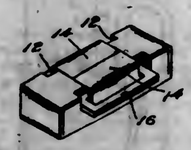
1. In a chain hoist embodying a load chain, means for securing and supporting the dead end of said chain comprising a post projecting from one of the component parts of the hoist, said post having a head extending laterally and overhanging the post in one direction and of a size and contour to enable the end link of the chain to be passed thereover when turned substantially at right angles to the axis of the main portion of the chain and to overhang a portion of the link and retain the same in position on the post when the link is turned to normal position parallel with said axis the surface of the part from which the post projects being disposed to occupy an angular position with respect to the body of the chain to receive and afford support to the face of said end link when disposed on the post.

1,576,987. HEADGEAR. ROBERT T. MULLINS, Brooklyn, N. Y., assignor to A. G. Spalding & Bros., New York, N. Y., a Corporation of New Jersey. Filed Apr. 8, 1925. Serial No. 21,643. 2 Claims. (Cl. 2—8.)



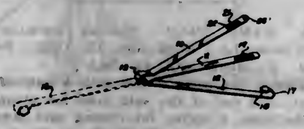
1. In combination in a football helmet, a crown shell reinforced by exterior stripe crossing each other from side to side and front to back, and stitched thereto, the exterior strip at the front extending below the front of the shell to overlie the forehead and having its lower portion widened out to provide temple protecting wings, side members connected to said crown shell and provided with ear protecting portions and forwardly extending wings overlying the temples, said first mentioned wings overlapping the last mentioned wings and being slidable thereon, and elastic means connecting the forward edges of said last mentioned wings.

1,576,988. MAGAZINE PENCIL. ROMOLO NARDI, Camden, N. J. Filed Dec. 9, 1924. Serial No. 754,736. 5 Claims. (Cl. 120—14.)



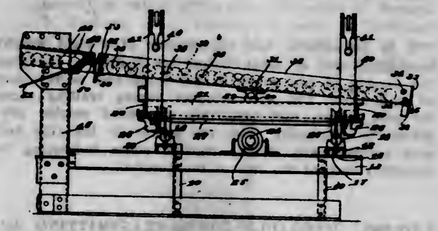
1. A magazine pencil including telescoping casing members, a plurality of magazines carried by one of said casing members and slidable relative thereto, an ejector carried by the other casing member, means associated with each magazine for coaction with the ejector, and means within each magazine associated with the first named means whereby rotation of the ejector will propel a lead from a magazine.

1,576,989. PLATEN PRESS. ALBERT PASQUALI and FRANK W. POLAND, Watertown, Mass., assignors to Hood Rubber Company, Watertown, Mass., a Corporation of Massachusetts. Filed Jan. 31, 1924. Serial No. 689,720. 7 Claims. (Cl. 18—17.)



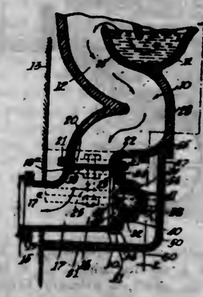
1. The combination in a press of the character described, of superposed vertically movable pressing members, a ram for operating said pressing members, and means for causing any one of said pressing members to come to rest at one and the same determined elevation on complete retraction of the ram.

1,576,990. CHAIN. HARRY PAYTON, Providence, R. I. Filed Feb. 12, 1925. Serial No. 8,696. 4 Claims. (Cl. 59—80.)



1. A chain structure comprising a series of sheet metal box-shaped links, each having side and end walls, said walls having extending portions, a bottom wall formed by folding all of said wall extensions inwardly, said walls being of a length to meet and form a bottom wall, the end and bottom walls of adjacent links being provided with notches, and a loop link engaged by said walls of adjacent links and extending through said notches to pivotally connect said box links together.

1,576,991. CURLER FOR BOBBED HAIR. FRANK O'NEAL, Philadelphia, Pa., assignor, by mesne assignments, to West Electric Hair Curler Corporation, Philadelphia, Pa., a Corporation of Delaware. Filed May 3, 1924. Serial No. 710,764. 2 Claims. (Cl. 132—41.)

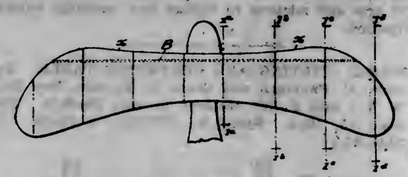


1. A hair curler in three parts, two of which are permanently secured together and one of which is loosely hinged thereto and means for securing the parts in operative relation, said means comprising a hook in one said arm, a smoothly rounded projection in another said arm and a tongue within the plane of the third said arm and adapted to engage said smoothly rounded projection.

1,576,992. TILTING AND CENTERING TABLE. RAYMOND C. PENFIELD and CLAUD E. FULLER, New York, N. Y.; said Fuller assignor to said Penfield. Filed Sept. 15, 1924. Serial No. 737,750. 1 Claim. (Cl. 214—41.)

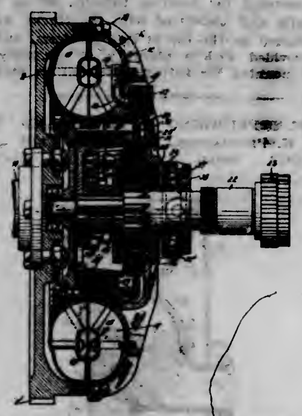
An improved table for hacking machines comprising a base, a track mounted thereon, a frame, a plurality of shafts mounted for rotation therein, wheels secured to said shafts and associated with the tracks, alined bearings mounted on the top of said platform, and a framework provided with a plurality of parallelly arranged troughs mounted for tilting movement on said bearings.

1,576,993. PLUMBING FITTING AND FIXTURE. JOHN K. PENNINGTON, Los Angeles, Calif. Filed Jan. 10, 1922. Serial No. 528,193. 5 Claims. (Cl. 137—70.)



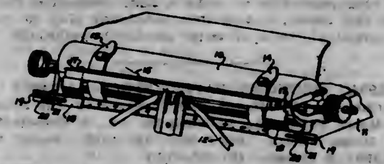
1. In a clean-out connection for a plumbing fixture, the combination of a body portion in the form of a T-connection, means for securing the side inlet of said connection to the discharge pipe of the urinal, means for securing one end of said body portion to a discharge pipe, and a removable member in the opposite end of said portion for gaining access thereinto, said removable member comprising a plug, a secondary plug carried by said plug removable to make a hose connection therewith, and means in said first mentioned plug to split and spread a stream of water passing therethrough.

1,576,994. DEINKING PAPER STOCK. JOSEPH E. PLUMSTEAD, Wilmington, Del., assignor to The Jessup & Moore Paper Co., Philadelphia, Pa., a Corporation of Massachusetts. Filed Nov. 16, 1925. Serial No. 69,499. 5 Claims. (Cl. 92—13.)



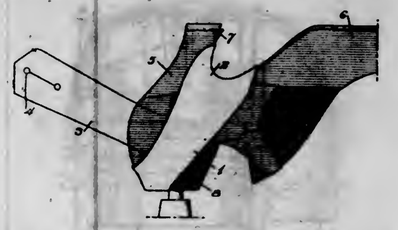
4. A method of de-inking paper stock, which consists in macerating the same, agitating the macerated stock with an alkali, introducing chlorine to said mixture, and cooking the resultant mixture.

1,576,995. AEROFOIL. CHARLES O. PROWSE, New York, N. Y. Filed June 22, 1921. Serial No. 479,688. 5 Claims. (Cl. 244—2.)



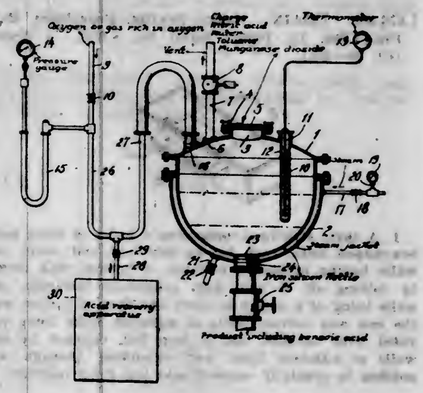
3. In an aerofoil, the combination of a rigid weight sustaining arm or beam, means for positively changing the camber of the wings to the front and to the rear of said beam, and automatically flexing trailing edges for said wings, said positively controlled camber progressively decreasing from the center to the tips and said automatically flexing trailing edges increasing in flexibility toward the tips of the aerofoil.

1,576,996. HYDRAULIC-POWER-TRANSMITTING APPARATUS. CARLTON R. RADCLIFFE, New York, N. Y. Filed Aug. 3, 1920. Serial No. 400,984. 19 Claims. (Cl. 60—54.)



4. In a hydraulic power transmitting apparatus, the combination with a driving shaft, of a casing rotating therewith, a driven shaft, a primary turbine wheel disposed within and fixed to said casing, a secondary turbine wheel within said casing, and means also disposed within said casing for connecting or disconnecting, at will, said secondary turbine wheel and said driven shaft.

1,576,997. TYPEWRITER ATTACHMENT. MARIO G. E. ESENNA, Brooklyn, N. Y. Filed Feb. 19, 1924. Serial No. 693,757. 5 Claims. (Cl. 197—126.)

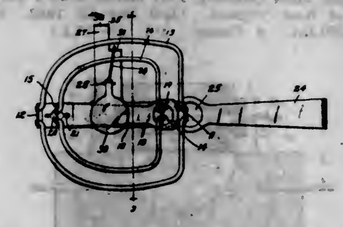


1. The combination with a platen, of a movable carriage therefor, and means attached to said carriage below the platen for separately supporting a plurality of ribbons in a manner to be independently removable.

1,576,998. WOOD-HEEL-BREAST-FLAP LAYER. ATTILIO SEBASTIANI, Portsmouth, Ohio, assignor to The Selby Shoe Company, Portsmouth, Ohio. Filed Apr. 17, 1924. Serial No. 707,056. 2 Claims. (Cl. 12—125.)

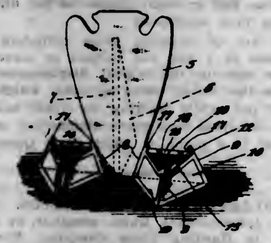
1. A heel breast flap holder comprising a resilient band adapted to be positioned about the breast of a heel, a portion of said band being wider than the remaining portion thereof, a resilient strap formed on said band and extended rearwardly therefrom, said strap being provided adjacent its outer end with a button hole for attachment to the top lift of the heel, to hold the said band in position.

1,576,999. METHOD OF OXIDIZING AROMATIC SIDE-CHAIN COMPOUNDS. PAUL SEIDEL, Jersey City, N. J., assignor, by mesne assignments, to Seydel Chemical Company, New York, N. Y., a Corporation of West Virginia. Filed July 16, 1921. Serial No. 485,342. 27 Claims. (Cl. 260—108.)



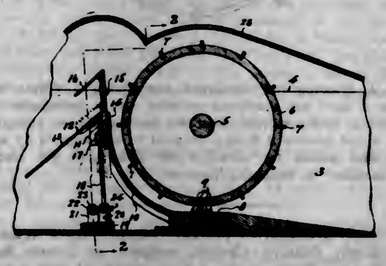
16. The method of oxidizing toluene to benzoic acid which comprises subjecting the toluene to the action of nitric acid of a concentration of about forty per cent under a pressure of from 40 to 80 pounds per square inch in the presence of an oxide of manganese, substantially as described.

1,577,000. GAME TRAP. WALTER RICHARD SMITH, New Orleans, La. Filed Apr. 12, 1923. Serial No. 631,599. 8 Claims. (Cl. 43—88.)



3. In a trap, the combination with a pair of jaws, a support at each end of the said jaws for pivotally supporting the same, a spring for closing said jaws, a bait pan having connection with the base, means movable into and out of operative position with the bait pan for setting the jaws, one of said supports being reduced adjacent its lower end to form a neck portion and said

spring having an opening whereby to permit slidable movement of said spring downwardly over the respective support below the pivotal point of the jaws with said

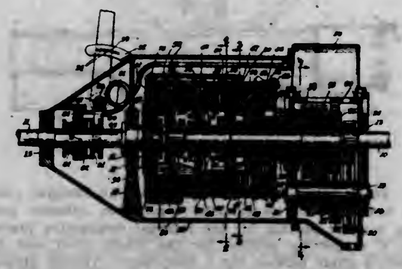


support and shiftable laterally into interlocking engagement with said neck portion, whereby said spring is removably held in place.

1,577,001. DISPLAY DEVICE. ADOLPH G. SNIDER, Brooklyn, N. Y. Filed July 14, 1924. Serial No. 725,779. 6 Claims. (Cl. 211—24.)

1. A display device formed from a single sheet of material and comprising a main display panel and lateral extension integral with each side of said panel and each consisting of a plurality of relatively foldable sections movable with respect to each other and with relation to said panel from a folded position in the plane of the main panel into spaced open relation to each other with a number of the sections on each side projecting in front of the main panel to provide a many sided supporting structure, said sections adapted to receive and support an article to be displayed upon the upper edges thereof.

1,577,002. PULP BEATING OR BREAKING MACHINE. WILMER C. STALEY, Tippecanoe City, Ohio. Filed Nov. 20, 1924. Serial No. 750,988. 3 Claims. (Cl. 92—22.)



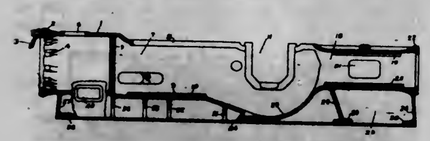
1. In a pulp beater or breaker, the combination with the beater roll of a stationary apron frame forwardly spaced from and substantially concentric to said roll, a transverse bridge-plate adjacent to the upper end of said apron frame and spaced therefrom to provide an intermediate substantially vertical slideway, a fixed downwardly and forwardly inclined backfall plate supported by said bridge-plate, an adjustable backfall member movable in said slideway, said backfall member having at its upper free margin a downwardly and forwardly inclined backfall flange, and means for raising and lowering said backfall member to adjust the height of the same.

1,577,003. METHOD AND MEANS FOR SOCKETING COMPOSITE WIRE STRANDS. CHARLES C. SUNDERLAND, Trenton, N. J., assignor to John A. Roebling's Sons Company, Trenton, N. J., a Corporation of New Jersey. Filed Feb. 14, 1924. Serial No. 692,629. 6 Claims. (Cl. 24—123.)

2. The method of socketing a composite strand having wires of different strength and elastic limit, which consists in socketing the weaker wires in a socket basket with a filling metal of low melting point to avoid amalgamation and permit slip of the wires under tension, socketing the stronger wires in a separate basket free to move in the socket and arranged at the larger end of the weaker wire basket, and filling said stronger wire basket with filling metal of higher melting point for securing amalgamation and utilizing the full strength of the wires.

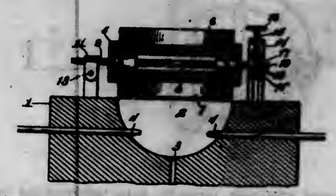
1,577,004. CLUTCH MECHANISM. EUGENE T. TURNBY, Holmes, N. Y., assignor to George L. Hatheway, Charles L. Gosell, jr., and George C. Knott, all of Brooklyn, N. Y. Filed Dec. 23, 1922. Serial No. 608,662. 8 Claims. (Cl. 192—87.)

1. In combination, concentrically disposed driving members rotating at different speeds, concentrically arranged driven members disposed in opposition to the driving members and selectively operable fluid pressure



clutches between adjacent pairs of driving and driven members, there being two driven members for each speed, disposed at opposite sides of a driving member and each driven member having cavities in the opposite faces of the same with elements of the fluid pressure clutches seated therein.

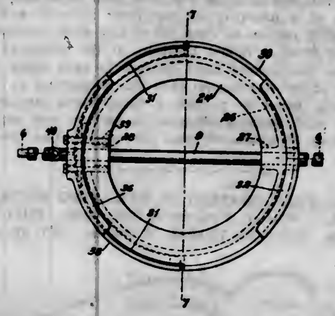
1,577,005. BRAKE STRUCTURE. HERBERT A. WALKER, Fullerton, Calif., assignor to Frederick W. Smith, Whittier, Calif. Filed Dec. 22, 1922. Serial No. 608,485. 4 Claims. (Cl. 188—76.)



1. In a brake apparatus, a drum having a plane side plate for attachment to a given part and being marginally bent to form a lateral, circular flange of V-section presenting a re-entrant groove surface and a salient surface, each of said surfaces being continuous and smooth for application of braking elements; the flange forming an interior corner groove at the juncture of the flange and plate for the reception of the inner corner of a brake element to obtain a close up arrangement of the elements and the plate.

1,577,006. BED CASTING FOR GAS ENGINES. ELMER A. WATTS, Springfield, Ohio, assignor to The Miller Improved Gas Engine Company, Springfield, Ohio, a Corporation of Ohio. Filed Nov. 19, 1924. Serial No. 750,943. 8 Claims. (Cl. 123—195.)

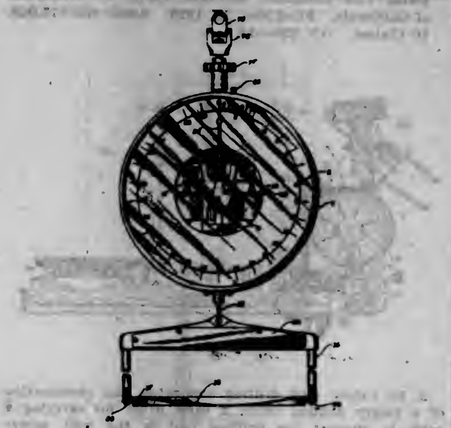
1. In an internal combustion engine, an integral casting consisting of an internal combustion cylinder portion, a guide portion for the internal combustion piston rod, a supporting portion for the crank shaft and fly wheel, a guide portion for a compressor cylinder piston, means on said internal combustion cylinder portion for supporting a cylinder liner in spaced relation thereto, a plurality of transverse ribs, said walls and end walls integrally connecting, bracing and supporting said several portions of the casting.



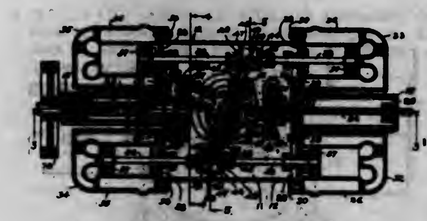
1,577,007. METHOD OF AND MEANS FOR DRAWING GLASS CYLINDERS. WILLIAM WESTBURY, Independence, Kans., assignor, by mesne assignments, to Harding Glass Company, Fort Smith, Ark., a Corporation of West Virginia. Filed May 12, 1922. Serial No. 560,434. 4 Claims. (Cl. 49—17.1.)

1. In a glass drawing apparatus, a glass drawing pot, a rotary support for the pot extending on a line diametrically of the pot in one direction and on which the pot is adapted to be tilted in a direction at right angles to such diametrical line, said support being fulcrumed at one end, and means operative upon the opposite end of the support for swinging said support on its fulcrum and tilting the pot in a plane coinciding with the said diametrical line and at right angles to the direction of tilting motion first mentioned.

4. In the art of drawing glass cylinders from a charge of glass in a pot, the method of correcting defective draws due to the lateral displacement of the cylinder from the normal drawing zone, which consists in tilting the pot, while drawing, on either one or both of two axes one lying in a plane diametrical of the pot and the other in a plane at right angle thereto.



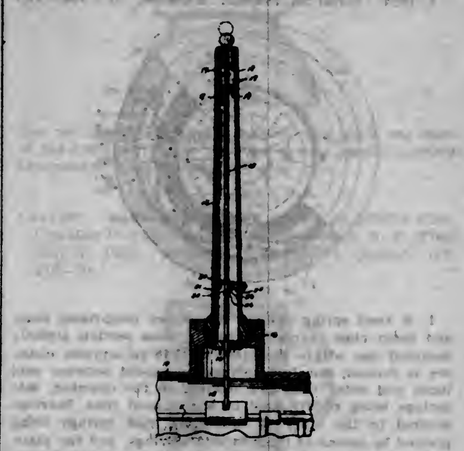
1,577,008. GLASS-DRAWING APPARATUS. WILLIAM WESTBURY, Independence, Kans., assignor, by mesne assignments, to Harding Glass Company, Fort Smith, Ark., a Corporation of West Virginia. Filed May 12, 1922, Serial No. 560,485. Renewed Jan. 21, 1926. 6 Claims. (Cl. 49—53.)



1. A drawing pot structure comprising a frame carrying a fixed pot clamping member and a removable pot clamping member, said members having flange engaging lips, a pot having a flange adapted to be engaged by said lips, and means for securing the removable pot clamping member in clamping position.

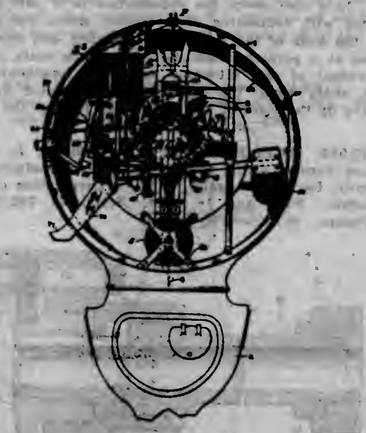
1,577,009. WEIGHING SCALE. LEWIS CALVIN WETZEL, Windsor, Ontario, Canada, assignor to Toledo Scale Company, Toledo, Ohio, a Corporation of New Jersey. Filed Sept. 25, 1922. Serial No. 590,231. 24 Claims. (Cl. 265—62.)

1. A load-counterbalancing pendulum for weighing scales comprising, in combination, a pendulum stem and a single unitary load-counterbalancing pendulum weight, the center of mass of said pendulum weight lying without the axis of said stem, said pendulum weight being so constructed that said center of mass may be swung about said axis.



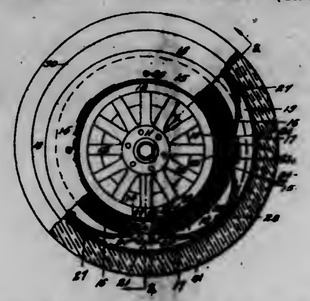
1,577,010. ENGINE. ALFRED H. WHATLEY, Providence, R. I., assignor to New England Motor Company, Incorporated, a Corporation of Rhode Island. Filed Oct. 26, 1925. Serial No. 64,834. 5 Claims. (Cl. 74—14.)

1. In an engine of the type set forth, aligned shafts, opposed cylinders, pistons in the cylinders, piston rods on the pistons, crossheads connecting the piston rods provided with transverse bores, blocks slidably mounted in the bores, crank disks on the shafts provided with transverse bores, blocks slidably mounted in the bores, aligned tubular posts between the disks, a frame, radial arms upon the frame pivotally attached to all the blocks, a diametrical bearing fast in the frame, a sleeve loose on the bearing, and trunnions on the sleeve journaled in the posts.



1,577,011. TRANSMISSION SHIFTING LEVER. WALKER CARTER, Baltimore, Md. Filed Apr. 22, 1924, Serial No. 708,265. Renewed Sept. 17, 1925. 1 Claim. (Cl. 70—128.)

In a transmission shifting lever and in combination, an outer lever section mounted for oscillation upon the transmission casing, a second section longitudinally shiftable through the first named section between certain limits and when at one limit of its movement engageable in the sockets of the shifting lugs of the transmission, and means mounted within the first named section and operatively engaging the second named section permitting elevation of the second named section but preventing return movement thereof after such elevation, comprising a hinged leaf carried by the first named section and

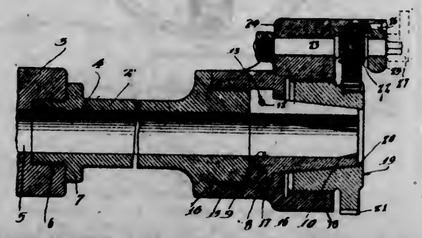


normally maintained in horizontal position therein, the second section being provided with an enlargement forming a downwardly facing shoulder, said leaf swinging upwardly to permit passage of said enlargement.

1,577,012. AUTOMATIC PRINTING SCALE. SAMUEL G. CRANE, Toledo, Ohio, assignor to Toledo Scale Company, Toledo, Ohio, a Corporation of New Jersey. Filed Nov. 21, 1919. Serial No. 339,685. 26 Claims. (Cl. 265—9.)

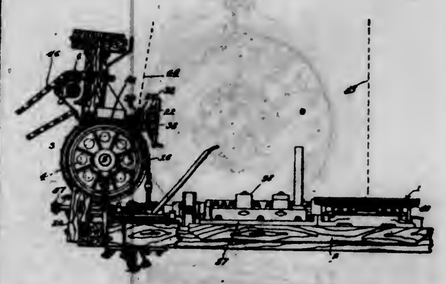
1. In a printing scale, in combination, weighing mechanism, a positioning member for determining the position of type carrying means, spaced stop members, connections between said stop members and said weighing mechanism to move said stop members into the path of said positioning member, and means controlled by said weighing mechanism for moving said positioning member into engagement with one of said stop members.

1,577,013. STEEL-SPRING CUSHION-TIRE DEVICE. DENNIS DONNELLY, Gilmore City, Iowa, assignor of one-fourth to John S. McBride and one-fourth to Edward A. Law, both of Fort Dodge, Iowa. Filed Oct. 1, 1924. Serial No. 741,042. 3 Claims. (Cl. 152—37.)



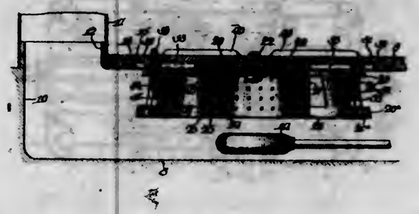
1. A steel spring cushion tire device comprising inner and outer rims channel shaped in cross section, slidably mounted one within the other so that an annular chamber is formed, flat leaf springs interposed between said inner and outer rims and received in the chamber, said springs being rigidly fixed to one of said rims, bearings secured to the other of said rims, said springs being pivoted by means of links to said bearings, and the plate, forming one side of said other of said rims being detachably secured to said bearings.

1,577,014. TIRE CHAIN. FREDERICK TAYLOR GAUSS, Wilmington, Del. Filed May 26, 1923. Serial No. 641,574. 4 Claims. (Cl. 152—14.)



1. In a tire chain, the combination of a pair of side chains with connecting cross chains, means for attaching the ends of the side chains together, and means located at a point between the ends of the chain and independent of said attaching means for lengthening one side chain while the chain is being applied and for taking up the slack of the chain after it is on the wheel.

1,577,015. FUEL-FORMING DIE. HERBERT L. GLAZE, Los Angeles, Calif., assignor to United Products Company, Inc., Los Angeles, Calif., a Corporation of California. Filed Aug. 18, 1924. Serial No. 732,739. 4 Claims. (Cl. 25—17.)



1. A fuel forming die comprising means providing a fuel forming bore, and segmental choke members operative to restrict the discharge from the bore, the segmental members having tapered outer surfaces, means engaging the outer surfaces shiftable relative thereto to expand or contract the segmental members and expandible means mounted with the segmental members for holding the said members together.

1,577,016. HIGH-SPEED ROTARY AND DRAW WORKS. ERWIN W. GOSSER, Los Angeles, and WILLIAM C. MCDUFFIE, Hollywood, Calif., assignors to Union Tool Company, Torrance, Calif., a Corporation of California. Filed Nov. 19, 1923. Serial No. 675,529. 10 Claims. (Cl. 255—19.)

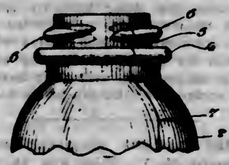
1. In rotary well drilling apparatus, the combination of a rotary drilling table, a cable drum for carrying a cable to support the drilling tool in the well, power actuated means for driving the drum, means for disconnecting the power-drive to the drum at will, two-speed hand actuated mechanism, and means for connecting the same at will to the drum for rotating the drum by hand at either speed.

1,577,017. GASEOUS-FUEL STOVE. FRED GRUB, Chicago, Ill. Filed Sept. 15, 1924. Serial No. 737,686. 4 Claims. (Cl. 126—214.)

1. The combination with a stove having a combustion chamber provided with a top wall having an opening therein, an outlet stack for the products of combustion, and a burner for gaseous fuel disposed in said chamber and under said opening, of a cover for the opening in the top wall of the stove consisting of a substantially flat top member having an outwardly extending rim adapted to set upon the margin of the top wall adjacent the opening to support the cover, said top member being provided with openings to permit the products of combustion to pass therethrough directly to a vessel disposed over the cover, and a depending member disposed inwardly of the rim and within the combustion chamber for directing the said products of combustion to said top member, said depending member having openings therein for permitting the said products to pass under the top wall of the stove laterally to the stack, and means for conjointly closing the openings in the top member and for opening the openings in the depending member so the products will pass directly to the stack and be prevented from passing through the top member, and for opening the openings in the top member and closing the openings in the depending member so the products will pass directly through the top member of the cover to the said vessel.

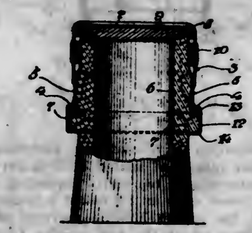
1,577,018. WEIGHING MECHANISM. CLARENCE H. HARPOOL, Toledo, Ohio, assignor to Toledo Scale Company, Toledo, Ohio, a Corporation of New Jersey. Filed Dec. 10, 1919. Serial No. 343,854. 5 Claims. (Cl. 265—49.)

1. In weighing mechanism, in combination, a ceiling bracket, a lever fulcrumed thereon, a commodity-receiver connected to one end of said lever, a floor connection, a lever fulcrumed thereto, a connection between said levers, a weighing scale, and a connection between the second said lever and said scale.



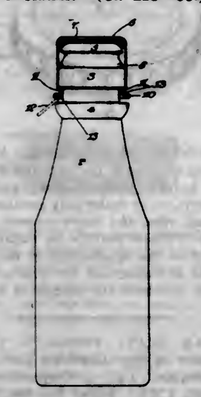
1,577,019. ANGULAR SIDE OR DECAGON CAP. CHARLES HAMMER, Hollis Court Boulevard, N. Y. Filed July 7, 1923. Serial No. 650,113. 13 Claims. (Cl. 215—44.)

1. A combined lug and friction holding container cap of metal comprising a top and a shallow depending polygonally formed flange or skirt having a rolled, curled or beaded lower edge provided with inwardly extending locking lugs formed therefrom adapted to engage under inclined container projections, such polygonal formation being so proportioned as to frictionally engage the outer faces of said inclined container projections and prevent the premature backward rotation of the cap.



1,577,020. TWO-THREAD GLASS CONTAINER. CHARLES HAMMER, Hollis Court Boulevard, N. Y. Filed July 7, 1923. Serial No. 650,114. 5 Claims. (Cl. 215—1.)

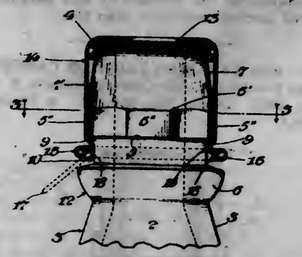
1. A seamed glass container having a shoulder and provided with a thread crossing the seam of the container, the lower end of the thread at its underside from the seam running parallel with the shoulder and at the opposite side of the seam having an angle of helix such



that the thread will have a shallow, easy pitch, the seam of the container at the juncture of said parallel portion and pitched portion forming a stop face.

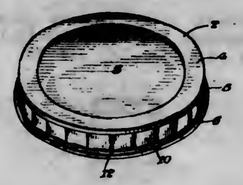
1,577,021. BAND-SEALING FRICTION CATCHUP CAP. CHARLES HAMMER, Hollis Court Boulevard, N. Y. Filed July 7, 1923. Serial No. 650,116. 6 Claims. (Cl. 215—38.)

1. A reusable double side seal catchup cap adapted for use with a shouldered catchup container and comprising a top having a long depending flange or skirt, said cap having a pair of sealing bands for initially securing and sealing the cap on to a catchup bottle, said sealing bands comprising an annular preformed friction band in the skirt of the cap and smaller than the normal diameter of the skirt, and an annular detachable band applied to the skirt of the cap and to the shoulder of the container, said preformed annular band also securing and sealing the contents of the container on the removal of said detachable band and the subsequent snapping on of the cap.



1,577,022. METAL CAP. CHARLES HAMMER, Hollis Court Boulevard, N. Y. Filed Jan. 17, 1924. Serial No. 686,708. 4 Claims. (Cl. 215—38.)

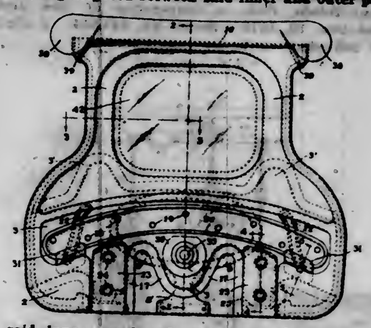
1. A pry-off and reusable metal cap comprising a top and a long depending skirt forming a catsup cap, said skirt having in proximity to its lower edge two inwardly projecting walls forming a holding portion formed in the



cap while the cap is on the container and functioning under the shoulder of the container as the sole holding element of the cap, the lower inwardly projecting wall terminating at its lower edge in a curled or reinforced portion spaced from said holding portion whereby a coin may be inserted for prying off the cap and thereafter the cap readily snapped on, said skirt having a smooth and unbroken surface from its top to its holding portion.

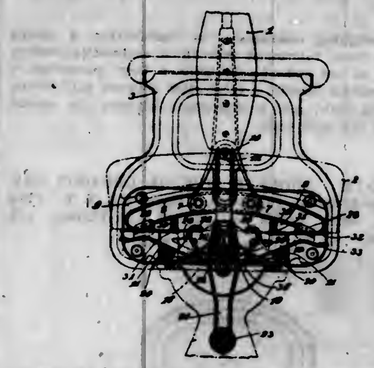
1,577,023. METAL CAP. CHARLES HAMMER, Hollis Court Boulevard, N. Y. Filed Feb. 16, 1924. Serial No. 693,174. 11 Claims. (Cl. 215—38.)

1. The combination of a container provided with an annular shoulder formed of spaced holding portions, and a metal cap comprising a top and a depending skirt having above its lower edge an inpressed annular bead cooperating with the spaced holding portions of the container, the prying off of the cap serving to deform or iron out those portions of the bead cooperating with the spaced holding portions of the container leaving the undeformed portions of the cap bead in position to subsequently register with the spaced holding portions of the container whereby the cap may be either snapped or rotated on to the container.



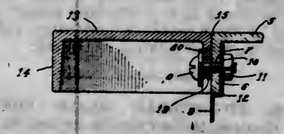
1,577,024. FRICTION TUMBLER CAP. CHARLES HAMMER, Hollis Court Boulevard, N. Y., assignor to American Metal Cap Company, Brooklyn, N. Y., a Corporation of New York. Filed Oct. 1, 1924. Serial No. 740,892. 7 Claims. (Cl. 215—38.)

1. A metal friction cap comprising a top and a depending skirt having exteriorly therearound a series of widely spaced apart narrow vertical ribs exteriorly connected by concaved surfaces of materially greater circumferential width than said ribs, the inner convex face of each of which forms a friction surface to engage the glass container, whereby on the application of the cap each of the convex faces is flattened out to form a friction surface of substantially one-half the length of such convex face.



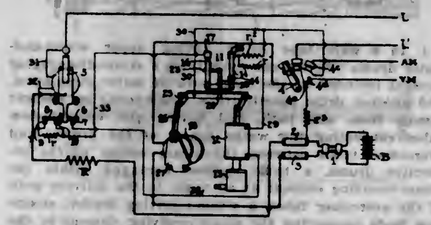
1,577,025. CAR SEAT. CONRAD T. HANSEN, Detroit, Mich., assignor to The American Motor Body Corporation, Philadelphia, Pa., a Corporation of Delaware. Filed Jan. 17, 1924. Serial No. 686,723. 10 Claims. (Cl. 155—195.)

1. In seat end construction of the character described, in combination, a metallic spider having offset attachment portions for connecting rails, a metallic outer panel covering said offset portions on the outside, and a metallic inner panel cut away at said attachment portions, said spider being disposed between said inner and outer panels,



and said inner panel and said outer panel and spider being all secured together rigidly, substantially as described.

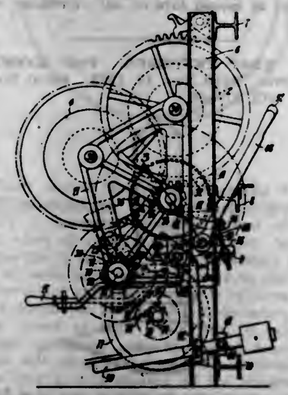
1,577,026. CAR SEAT. CONRAD T. HANSEN, Detroit, Mich., assignor to The American Motor Body Corporation, Philadelphia, Pa., a Corporation of Delaware. Filed Feb. 19, 1924. Serial No. 693,743. 7 Claims. (Cl. 155—101.)



1. In car seat construction, the combination with a pair of spaced connecting rails, end supports for the connecting rails, each connecting rail having secured thereto intermediate said supports a pair of spaced foot rest hangers, truss members extending between and secured rigidly to corresponding front and rear hangers, and each pair of hangers having a foot rail rigidly secured thereto.

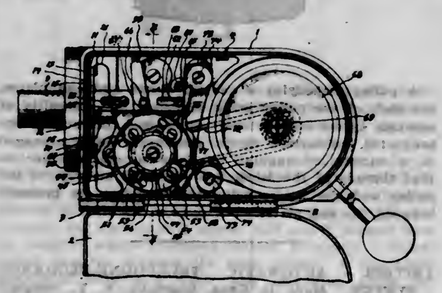
1,577,027. END-SHELF SUPPORT. STANLEY H. HOBSON, Rockford, Ill., assignor to Geo. D. Roper Corporation, Rockford, Ill., a Corporation of Illinois. Filed Apr. 16, 1925. Serial No. 23,480. 2 Claims. (Cl. 126—332.)

1. In a stove, the combination with a top and an adjacent shelf to be arranged in flush, contiguous relation therewith, of a plurality of bolts passing through openings in the side of the top toward said shelf and arranged to provide projections for reception in open ended slots provided in the side of said shelf for supporting and fastening said shelf to said top in the aforesaid relation therewith and enabling tightening of the juncture between the shelf and top, said bolts being arranged to be inserted flush with the side of the top and to be tightened so as not to project from the side of the top when said shelf is not to be mounted thereon.



1,577,028. BATTERY-CHARGING APPARATUS. ALBERT J. HOUTON, White Plains, N. Y., assignor to The Cutler-Hammer Mfg. Co., Milwaukee, Wis., a Corporation of Wisconsin. Filed Jan. 17, 1920, Serial No. 352,181. Renewed Aug. 3, 1925. 9 Claims. (Cl. 171—314.)

1. In combination a storage battery, a charging circuit therefor, a device for coupling the terminals thereof, means for normally interrupting said circuit and for completing said circuit automatically upon coupling of said battery thereto, said means including an electro-responsive device having an operating winding to be subjected by said coupling device to current from said battery to individually effect response thereof, means for delaying operation of said electro-responsive device, and means for de-energising said winding upon response of said device.



4. In combination, a storage battery, a charging circuit therefor, a device for coupling the terminals thereof and electro-responsive means normally interrupting said charging circuit and responsive to complete said circuit upon coupling of the battery thereto, said means having a plurality of windings, certain of said windings being subjected by said coupling device to current from said battery and being disconnected from said battery by response of said means and other of said windings being subjected to current from said charging circuit to maintain said means effective to complete said charging circuit.

1,577,029. HOISTING MECHANISM. JOHN T. HORTON, Brooklyn, N. Y. Filed Nov. 2, 1923. Serial No. 672,328. 2 Claims. (Cl. 254—185.)

1. In a hoisting mechanism the combination of a control-shaft, opposite pinions mounted for free rotation on said shaft, an infacing friction member carried by each pinion, opposite friction members slidably mounted on said shaft for engagement with said pinion friction members respectively, said slidable friction members being constrained for rotation with said shaft, a fixed double faced cam about said shaft between said slidable friction members, a cam mounted for oscillation on said shaft and for engagement with said fixed cam between each of said slidable friction members and said fixed cam, a rock shaft having a lever fixed thereto, means operably connecting said rock shaft and one of said oscillatable cams, a tubular rock shaft about said rock shaft and having a lever fixed thereto, means operably connecting said tubular rock shaft with the other oscillatable cam, said levers being operable simultaneously or independently at will, a motor mounted on said mechanism, and means for rotating said control-shaft at either of a plurality of speeds from said motor.

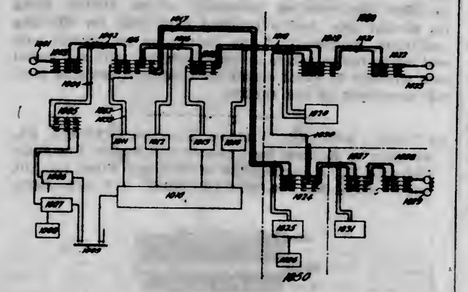
1,577,030. INTERMITTENT FEED MECHANISM. ALBERT S. HOWELL, Chicago, Ill., assignor to Bell & Howell Company, Chicago, Ill., a Corporation of Illinois. Filed July 1, 1922. Serial No. 572,169. 14 Claims. (Cl. 88—18.4.)

1. An intermittent film feeding mechanism including a film feeding shuttle mounted for pivotal movement and for movement along its pivotal axis and provided with spaced opposing surfaces extending transversely of its pivotal axis, a radial cam engaged between said surfaces to effect reciprocating movement of the shuttle along its pivotal axis, and a rotating axial cam for effecting oscillating movement of the shuttle on its pivotal axis and connected to rotate in timed relation with the radial cam whereby to effect closed path intermittent film feeding movement of the shuttle.

1,577,031. RELAY. WILLIAM KAISLING, Chicago, Ill., assignor to Kellogg Switchboard and Supply Company, Chicago, Ill., a Corporation of Illinois. Filed Jan. 10, 1920. Serial No. 350,590. 13 Claims. (Cl. 175—345.)

1. A relay structure of the class described, including a heel iron having integrally formed lugs at its one end, an armature provided with orifices through which said lugs protrude and means secured to the other end of said heel iron and adapted to cooperate with the armature to retain the said armature in its pivoted position.

7. In a relay, the combination with a magnet and a core, of an armature having two arms at an angle to each other, a heel iron provided with a pair of lugs at its forward end, a pair of orifices in said armature intermediate of its ends adapted to receive said lugs, a latch secured to said heel iron provided with an orifice, an angular extension integrally formed upon the arm of the armature which extends parallel with the said

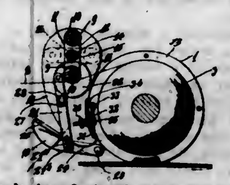


heel iron, the said extension entering the orifice in the said latch when the armature is fulcrumed to the forward end of the said heel iron to maintain the said armature in operative relation with the core of said magnet.

1,577,032. PULLEY. FRANK J. KARG and LEO HERMAN, Tallmadge, Ohio, assignors to The Herman Machine and Tool Company, Akron, Ohio, a Corporation of Ohio. Filed Jan. 28, 1924. Serial No. 689,122. 1 Claim. (Cl. 64—17.)

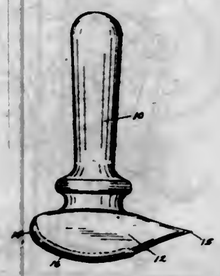
A pulley embodying a central sleeve and end plates, the body of the pulley being composed of a plurality of separate layers of previously vulcanized, thoroughly impregnated, rubberized fabric, the layers being arranged in a variety of angular relations to one another so that threads of the fabric are presented endwise of the pulley and the layers being held together by pressure between the end plates.

1,577,033. AUTOMATIC TELEPHONE-EXCHANGE SYSTEM. MARK B. KNAN, Rosebank, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Apr. 23, 1924. Serial No. 708,358. 20 Claims. (Cl. 179—18.)



1. In a telephone exchange system, calling lines, called lines, selective switches for extending a calling line to one of said called lines, a mechanism accessible in common to a plurality of selective switches for controlling the operation thereof, means in said mechanism for recording the designation of a called line, means operable in accordance with said recorded designation for causing said selective switches to operate to extend the calling line, means for nullifying a portion of said recorded designation and for causing one of said switches to extend said calling line towards said called line independently of the designation of said called line, and means for completing the extension of said calling line to said called line in accordance with said recorded designation.

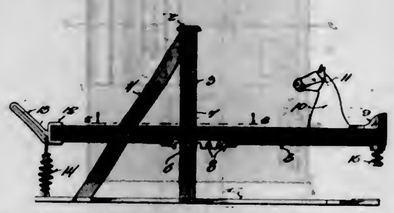
1,577,034. STEAM BOILER. EDGAR KIDWELL, Milwaukee, Wis., assignor to Kidwell Boiler Company, Milwaukee, Wis., a Corporation of Wisconsin. Filed Dec. 4, 1923. Serial No. 678,409. 2 Claims. (Cl. 122—302.)



1. In a water-tube boiler having upper steam-and-water drums whereof one constitutes a steam-disengaging element included in the main path of water circulation, and another drum constitutes a steam-receiving element remote from said path, and having also opposite-flow tubes connecting the water spaces of the drums, and overcomer tubes between the steam spaces of the respective drums, a baffle member arranged within the steam-receiving element at an angle to the delivery path of the overcomer tubes, a steam-receiving header, steam-flow leads connecting the steam-receiving element to the header, said leads extending directly below and longitudinally of the over-comer tubes to constitute a superheater, and a blow-off pipe for the bottom of the steam-receiving element.

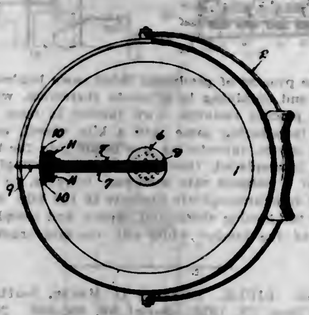
1,577,035. LINE-LAYING DEVICE FOR FISHING REELS. EMIL A. KLEIN, Los Angeles, Calif. Filed Aug. 3, 1925. Serial No. 47,657. 10 Claims. (Cl. 242—84.4.)

1. In a line laying device for a fishing reel, the combination of a drum with means for rotating the same, a movable frame supported adjacent the drum, a free running roller with a helical guide groove thereon to receive the line mounted on the frame and operating to guide the line along the drum as the coils of the line pass on to the same, said movable frame enabling the roller to be moved into or out of contact with the line.



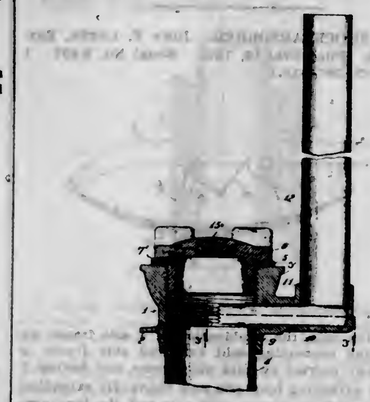
1,577,036. MEAT TENDERER. FRED KNEIFEL, Barberton, Ohio. Filed Nov. 18, 1925. Serial No. 69,758. 1 Claim. (Cl. 17—30.)

A device for use in tendering meats, an integral cast metal body having a handle and a head at one end of the handle and at right angles thereto, the handle being



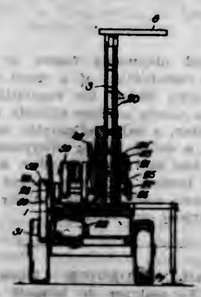
located approximately centrally of the head, the head being substantially oval in cross-section with one end rounded and the other provided with a blade, and a plurality of sharpened corrugations formed over the face and the rounded end of the head.

1,577,037. AMUSEMENT APPARATUS. CHARLES KOCHER, Kenosha, Wis. Filed Oct. 31, 1924. Serial No. 747,028. 1 Claim. (Cl. 272—55.)



A device of the character described, comprising, a base, a standard carried by said base, a fulcrum carried by the standard, a beam mounted on said fulcrum and provided with an occupant seat at one end, an upright secured on the beam in front of said seat and provided with handles, an upwardly inclined loop carried by the opposite end of said beam, a counter-balance spring having one end anchored to said base and the other end slidably secured within said loop, and means for cushioning the free end of said beam.

1,577,038. PORTABLE SHOWER APPARATUS. MARTIN KVITLE, Cambridge, Wis. Filed Oct. 9, 1925. Serial No. 61,513. 1 Claim. (Cl. 4—151.)



A portable shower apparatus comprising a container of bucket-like formation having a bottom provided with a plurality of apertures, a spring formed of a pair of duplicate wires of resilient material each having right angle arms and a coiled portion intermediate such arms, one pair of arms being rigidly secured to the inner side of said container and the other pair of arms extending outwardly across the bottom of said container and being integrally joined at their outer ends, a valve secured to said last mentioned arms and urged downwardly by said arms into closing position with reference to said apertures, and a cord secured to the integrally joined portion of said last mentioned arms and extending upwardly and over the side of the container.

1,577,039. FLOOR DRAIN. FRED LAVIN, Chicago, Ill. Filed Aug. 26, 1924. Serial No. 733,905. 1 Claim. (Cl. 137—78.)

A floor drain comprising a vertically disposed internally threaded sleeve open at each end provided between its ends and at its upper end with external annular flanges, adapted to be embodied in the concrete of a floor and with the upper face of the upper flange substantially flush with the floor surface, said sleeve adapted for threaded connection with the mouth portion of a trap to thereby provide an internal annular shoulder within and between the ends of said sleeve, said sleeve formed with an integral lateral extension thereby providing a lateral outlet therefor between the ends thereof, a stand-pipe associated with said outlet and extending above the maximum probable flood level of back-flow water, an element having an externally threaded lower portion and an annular flange above said threaded portion and spaced from said threads by a plane peripheral portion, said element adapted for removable association with the upper portion of said sleeve for preventing backflow of water through said sleeve in time of flood, and a flexible gasket surrounding said plane peripheral portion and disposed between the lower face of said last-named flange and the top face of the upper flange of said sleeve for providing a water-tight joint.

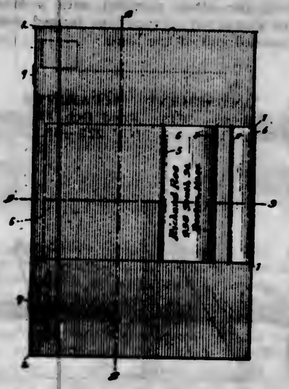
1,577,040. PORTABLE HOIST. FRANS OSCAR LARSON, Chicago, Ill. Filed Dec. 10, 1923. Serial No. 679,531. 8 Claims. (Cl. 187—9.)

5. In a hoist of the class described, in combination, a supporting base, drums upon said base, an extensible column comprising a plurality of links forming chain-like

members arranged in parallel relation, teeth formed on the same side of said links, and a single gear engaging said teeth for driving said chain-like members.

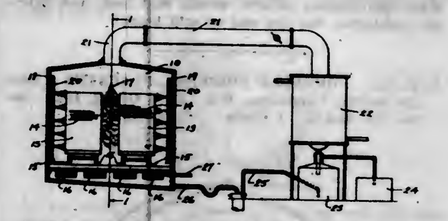
1,577,041. SHOCK ABSORBER. JOHN F. LUETH, Roxbury, Wis. Filed Feb. 16, 1925. Serial No. 9,497. 1 Claim. (Cl. 267—10.)

In an automobile, the combination of a side frame, an axle, a spring connecting said axle and side frame, a lever pivotally carried by said side frame and having a downwardly extending long arm and outwardly extending short arm, a link connecting said axle and the long arm of said lever, and a friction device carried by the side frame and connected with the short arm of said lever, said friction device resisting motion of the short arm in one direction only.



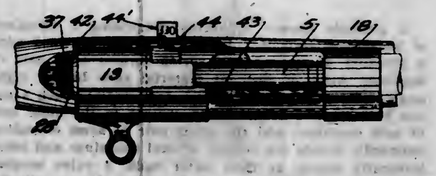
1,577,042. LIQUID-DISPENSING FAUCET. BERNARD LUTSKY and SIMON KREISBERG, Brooklyn, N. Y. Filed Sept. 24, 1925. Serial No. 58,300. 3 Claims. (Cl. 251—116.)

2. In a liquid dispensing faucet of the character designated, the combination of a spout member formed with a valve seat, means for regulating the flow of liquid thereto, a nozzle member slidably mounted within said spout member, a valve adjustably mounted on said nozzle member, a coiled spring interposed between said nozzle member and said spout member, and a manipulative rock lever formed with cam means, engaging with said slidable nozzle member, substantially in the manner and for the purpose set forth.



1,577,043. MAILING DEVICE. HENRY B. MACKEY, Newark, N. J., assignor to himself and Joseph A. Evans, New York, N. Y. Filed Feb. 12, 1924. Serial No. 692,281. 4 Claims. (Cl. 229—92.8.)

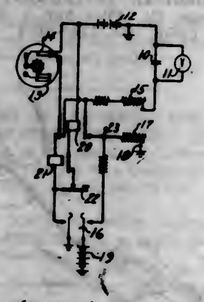
1. A mailing device comprising a foldable body portion having at one end a projecting tongue, and at the other end slits for the passage of said tongue to provide multiple holding means for the tongue when the latter is



engaged in said slits, the lowermost slit with the return tongue portion serving to lock and hold the free margins of the body portions reliably in place.

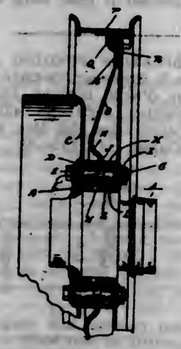
1,577,044. PROCESS OF PRESERVING RESINOUS LUMBER AND PRODUCING BY-PRODUCTS THEREFROM. WILLIAM H. MASON, Laurel, Miss. Filed Dec. 17, 1920. Serial No. 431,475. 4 Claims. (Cl. 34—24.)

1. The process of producing dried sawn lumber of good quality and obtaining by-products therefrom, which consists in placing resinous sawn lumber in open order on trucks, introducing same into a kiln closed, except for a vapor outlet, introducing live steam into the kiln until the air is displaced, then continuing the supply of live steam at a reduced rate sufficient, however, to maintain a slight superatmospheric pressure in the kiln, while condensing the issuing steam and vapors, and completing the drying of the lumber while still on said trucks.



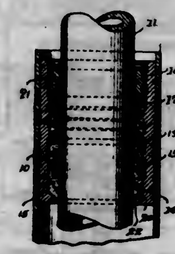
1,577,045. RIFLE. CHARLES D. MEYER, Seattle, Wash. Filed Sept. 29, 1923. Serial No. 665,669. 26 Claims. (Cl. 42—16.)

1. In a rifle action, an operating slide provided with lug elements, and a bolt of the Mauser type with its rear portion formed to serve as an extracting cam and also as a stop for the lugs of the operating slide.



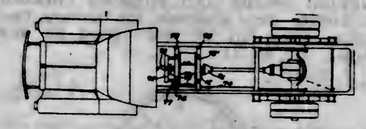
8. In a rifle action of the rectilinear type, a breech bolt, a bolt sleeve provided with a stop block thereon, a cocking piece, and an operating slide having in its rear end an opening for said bolt sleeve, a slot for said stop block and a way for the cocking piece.

1,577,046. TESTING SYSTEM. OLIVER R. MILLER, Brooklyn, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Mar. 22, 1924. Serial No. 701,004. 18 Claims. (Cl. 175—183.)



1. The method of measuring percentage of break to make in a circuit interrupting device consisting in establishing a certain potential in a circuit, disconnecting the means for establishing said potential, setting the interrupting device in operation, connecting it to the circuit in which the potential is established, and observing the change in said potential.

1,577,047. VEHICLE WHEEL. ALDEN L. PUTNAM, Detroit, Mich., assignor, by mesne assignments, of one-half to Motor Wheel Corporation, Lansing, Mich., a Corporation of Michigan, and one-half to The Midland Steel Products Company, Cleveland, Ohio, a Corporation of Ohio. Filed Mar. 24, 1919. Serial No. 284,715. 7 Claims. (Cl. 301—63.)

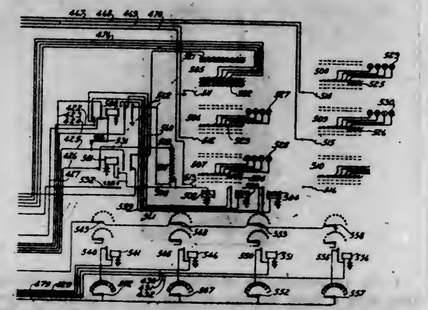


3. In a vehicle wheel, the combination with a hub having a cylindrical portion and an outwardly extending portion adjacent to the central plane of the wheel, a rim, and a disk extending between said hub and rim having a central portion seated on the outwardly extending portion of the hub, a dished portion extending from said central portion to one side of the central plane, and an oppositely dished portion extending from first mentioned dished portion crossing the central plane and secured to the rim on the opposite side thereof.

1,577,048. STEERING-COLUMN STRUCTURE. STANLEY R. THOMAS, Cleveland, Ohio, assignor to Jordan Motor Car Company, Inc., Cleveland, Ohio, a Corporation of Delaware. Filed Apr. 23, 1925. Serial No. 25,229. 8 Claims. (Cl. 74—89.)

1. In an automobile steering apparatus the combination with a fixed tubular column and a rotatable steering post extending through said column, of a bushing for said post mounted in said column, comprising a tubular housing engaging the interior wall of said column, an annular packing carried by said housing, and means carried by said housing for compressing said packing tightly against said post, the lateral movement of said post in said housing and column being resisted by said compressed packing to prevent rattling.

1,577,049. FLUID BRAKE. NILS THUNELL, Los Angeles, Calif. Filed Feb. 24, 1925. Serial No. 11,139. 12 Claims. (Cl. 188—90.)

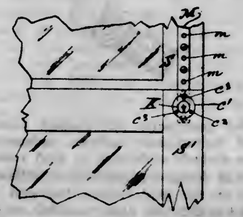


1. A hydraulic brake comprising: parti-cylindrical fluid chambers disposed laterally with reference to a shaft whose rotation is to be controlled; rotors therein, driven from said shaft and cooperating with a transverse plate in defining fluid spaces; a notched drum rotated by said shaft and also cooperating with said rotors; vanes movable longitudinally of said rotors; and means for shifting said vanes longitudinally of said rotors.

1,577,050. PNEUMATIC-TIRE FABRIC. DANIEL MICHEL WEIGEL, London, England, assignor, by mesne assignments, to American Wire Cord Tire Company, Wilmington, Del., a Corporation of Delaware. Filed Apr. 23, 1920. Serial No. 376,104. 1 Claim. (Cl. 154—53.)

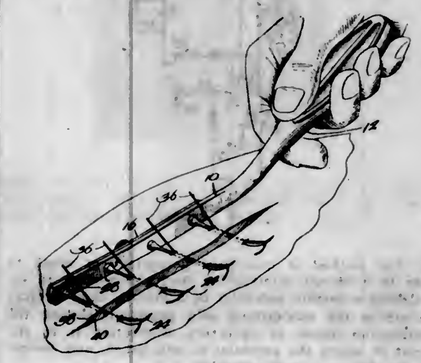
A fabric for pneumatic tire casings consisting solely of sheets of vulcanizable rubber, independent flexible metallic wire strands embedded in said rubber and each complete strand being separated from adjacent complete wire strands by the said rubber, the said wire strands being disposed sufficiently close together to so divide the rubber that the latter in conjunction with the said wire strands can together of themselves resist air pressure after the fabric sheet is formed into a casing.

1,577,051. TELEPHONE SYSTEM. WALTER P. ALBERT, East Orange, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Oct. 29, 1920. Serial No. 420,418. 14 Claims. (Cl. 179—18.)



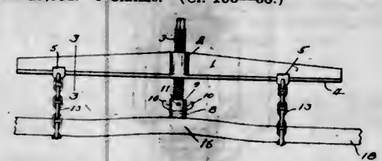
1. In a telephone system, a telephone line, an automatic switch having a plurality of line extending positions for extending said line, a selective switch having a plurality of differing directed movements, means for transmitting successive series of impulses over said line to said selective switch, means responsive to said impulses for operating said selective switch, and means operated in accordance with the position taken by the selective switch for directively controlling the positioning of said automatic switch.

1,577,052. METHOD AND APPARATUS FOR COMMINUTING SOLIDS AND FORMING COLLOIDAL SOLUTIONS. OTTO AUSPITZER, Neu Oderberg, Czechoslovakia. Filed July 23, 1925. Serial No. 45,606. 6 Claims. (Cl. 83—11.)



1. The herein described method of comminuting solids and forming colloidal solutions, which consists in causing a stream of a mixture of solids and liquid to flow in a substantially straight constrictedly confined course through and at one side only of the path of movement of a disintegrator whereby said stream will be acted upon without being carried along with the disintegrator.

1,577,053. WINDOW-SASH-SECURING MEANS. ISAAC BEIN, New York, N. Y. Filed Apr. 14, 1924. Serial No. 706,368. 2 Claims. (Cl. 70—14.)

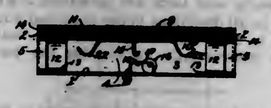


1. Window sash securing means of the character designated, comprising a casing formed with an inner abutment and with a longitudinal slot, a bolt slide mounted in said casing and formed with an integral bolt at one extremity, and an integral spindle stud at its other extremity, a coil spring interposed between said bolt slide and the inner end of the casing, a rotatable manipulative knob mounted on said spindle stud, and formed with a key slot, a screw stud on the bolt slide extending through said longitudinal slot in the casing, and a spring latch mounted on said bolt slide for engagement with said abutment on the casing, substantially in the manner and for the purpose set forth.

1,577,054. SURGICAL INSTRUMENT. BORIS BERKMANN, Chicago, Ill. Filed Nov. 3, 1924. Serial No. 747,466. 1 Claim. (Cl. 128—340.)

A surgical instrument of the class described having a needle having a shoulder near the end, a head at the end, and a slot between the shoulder and the head, a locking bar having an aperture for receiving the head portion of the needle beyond the shoulder, the shoulder being adapted to abut the front of the holder bar, and a locking bar slidably mounted upon the back of the holder bar and having a T slot, one portion of which is large enough to pass the head of the needle, and the other part of which is narrowed for engaging the head of the needle to prevent it from being withdrawn from the holder bar.

1,577,055. COMBINATION PUSHING AND PULLING JACK. GEORGE Z. BERTSCHY, Oakland, Calif., assignor to Jesse Weldon O'Neill, Oakland, Calif. Reflled for abandoned application Serial No. 428,468, filed Dec. 6, 1920. This application filed Mar. 30, 1925. Serial No. 19,534. 4 Claims. (Cl. 153—38.)

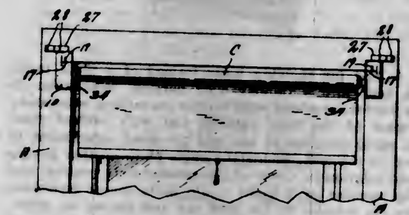


1. A pulling and pushing jack comprising a beam, holding blocks mounted on said beam, a screw extending therethrough, a swiveled head on the screw, a loose tiltable collar seated on the back of the head and laterally extending means on said collar for the attachment of pulling devices.

1,577,056. ENGINEER'S AND DRAFTSMAN'S LOOSE-LEAF SKETCH AND PRINT CASE. CARL BJORK, Wilmington, Calif. Filed Dec. 28, 1921. Serial No. 525,866. 11 Claims. (Cl. 45—131.)

11. A case having an open top, side walls, and an end wall; ledges secured to said end and side walls;

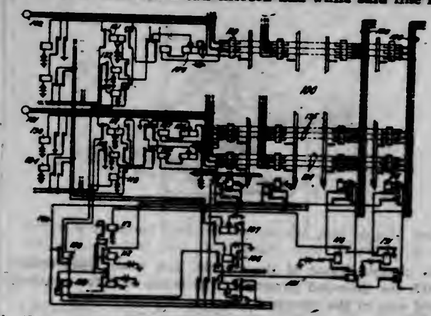
a follower in said case; resilient means adapted to hold said follower against said ledges; a cover adapted to close said open top; and means to hold said follower away



from said ledges comprising a catch and a movable latch adapted to be moved by gravity to and from the path of said catch for the purpose set forth.

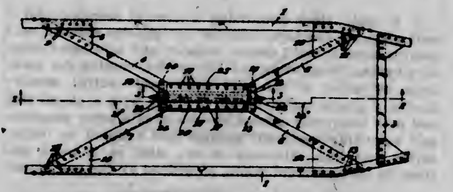
1,577,057. METHOD OF AND MEANS FOR STABILIZING LIQUID HYDROCYANIC ACID. GUY H. BUCHANAN, Westfield, N. J., assignor to American Cyanamid Company, New York, N. Y., a Corporation of Maine. Filed Sept. 16, 1925. Serial No. 56,745. 12 Claims. (Cl. 23—250.)

1. A method of stabilizing liquid hydrocyanic acid which comprises adding thereto a small amount of a halogen compound thereof.



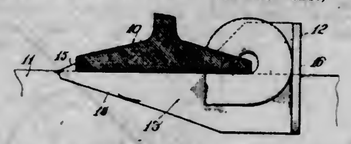
1,577,058. CURTAIN-SUPPORTING DEVICE. EVERETT A. BURNS, Chicago, Ill. Filed Jan. 6, 1925. Serial No. 863. 4 Claims. (Cl. 156—24.)

1. A curtain support of the character described comprising two like coacting supporting members, each having means whereby it may be detachably engaged with the facing of a window casing at opposite sides of the window opening, each of said members being hollow, a transversely extending rod mounted within each of said members and the face of each member being transversely slotted and the slot being toothed, a bracket pivotally mounted on each rod and extending through said slot and having slight vertical movement therein and when lowered engageable with the toothed edge of the slot to hold the bracket in adjusted position, and a spring surrounding the rod and engaging on one side of the bracket to urge the bracket in one direction.



1,577,059. TELEPHONE-EXCHANGE SYSTEM. EDGAR H. CLARK, Richmond Hill, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Feb. 7, 1924. Serial No. 691,186. 10 Claims. (Cl. 179—18.)

1. In a telephone system, a plurality of lines, an automatic switch for extending said lines, means responsive to the initiation of a call on any one of said lines for preparing said automatic switch for operation, means effective upon the extension of said calling line for maintaining said automatic switch in operated condition, means for seizing said calling line as a called line, and means effective when said line has been so seized subsequent to initiation to a call thereon and while said line is

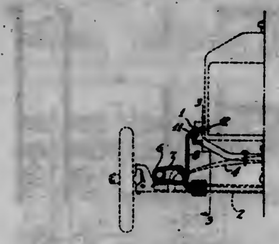


in the process of being extended by said automatic switch for precluding further functioning of said automatic switch in the extending of said line.

1,577,060. CHASSIS-FRAME CONSTRUCTION. RODNEY D. DAY, Haverford, Pa., assignor to The American Motor Body Corporation, Philadelphia, Pa., a Corporation of Delaware. Filed May 10, 1924. Serial No. 712,186. 6 Claims. (Cl. 280—106.)

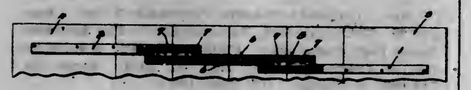
1. The combination with a chassis frame stiffener, comprising a plurality of members including stiffening arms arranged in diagonal fashion, a bracket extending between and secured to two of said members, and a propeller shaft bearing carried on said bracket.

1,577,061. RAIL ANCHOR. WILLIAM H. DE BUSK, Chicago, Ill., assignor to The P & M Company, Chicago, Ill., a Corporation of Illinois. Filed June 16, 1925. Serial No. 37,943. 21 Claims. (Cl. 238—329.)



17. A rail anchor comprising a clip adapted to be driven into gripping engagement with the flange of a rail from one side of the rail, and means for holding the clip in operative position on the flange comprising a separately formed plate interposed in vertical position between the clip and the cross tie.

1,577,062. COMBINED SHOCK ABSORBER AND SNUBBER. THOMAS DIXON, West New York, N. J. Filed Apr. 29, 1925. Serial No. 26,599. 1 Claim. (Cl. 267—26.)

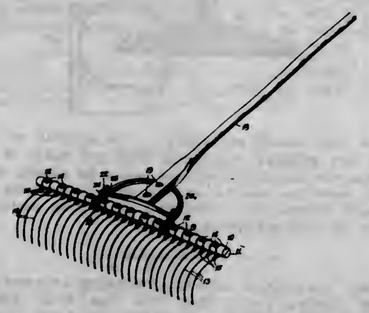


A shock absorber and snubber embodying a coil spring having a series of coaxial helical convolutions, which terminate in a pair of integral attaching arms, a bracket

carried by one of said arms and adapted to be secured to the axle of a vehicle, the other attaching arm having a threaded end adapted to pass through an aperture in

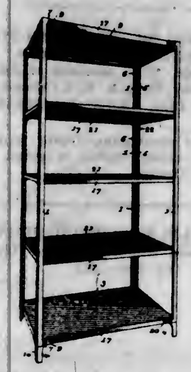
the chassis frame of the vehicle, and a nut cooperating with the threaded portion of the latter arm for securing said arm to the chassis frame.

1,577,063. TABLE SLIDE. HERBERT H. DREW, Watertown, Wis. Filed Dec. 22, 1924. Serial No. 757,521. 2 Claims. (Cl. 45—115.)



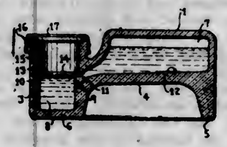
1. A table slide comprising a central member and a pair of outer members mounted on opposite sides of said central member, said central member and said outer members having cooperating end blocks, determining the maximum extension of the said slide, said central member having a groove on each side provided with a closed end, and pins removably carried by each of said outer members, and extending into said grooves and adapted to temporarily limit the extension of the slide to a value less than its maximum extension, as defined by the end blocks.

1,577,064. COMPOSITION CORK. ADOLF FISCHER, Orangeville, Md. Filed Sept. 30, 1922. Serial No. 591,649. 5 Claims. (Cl. 106—39.)



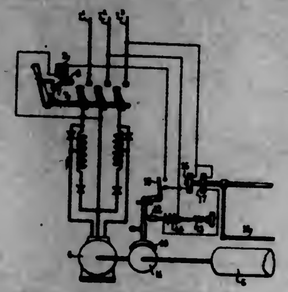
1. A composition of matter consisting of a mixture of cork, linseed oil and sulphur, and a binder, composed of glue mixture containing hexamethyleneamine.

1,577,065. LAWN BROOM. HARRY E. FULLER, Newhall, Iowa. Filed Feb. 25, 1924. Serial No. 694,874. 1 Claim. (Cl. 55—114.)



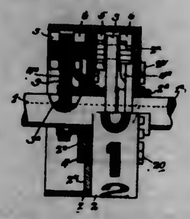
In a lawn broom and rake, the combination of a frame consisting of a plurality of complementary members, a series of spring teeth each tooth being integrally provided with a spring coil encircling said frame members and normally out of engagement therewith, a U-shaped loop formed on the inner end of said coil having a portion thereof clamped between said complementary members for securing the tooth in place with the closed end of said loop extending outwardly from said frame and encircling the teeth whereby said teeth are permitted a wide range of movement in all directions under abnormal strains, and are returned to their normal position when said strains are released, substantially as and for the purpose set forth.

1,577,066. METALLIC SHELVING. PHILIP S. MEDART and FRANK ALBACH, St. Louis, Mo., assignors to Fred Medart Manufacturing Company, St. Louis, Mo., a Corporation of Missouri. Filed Sept. 15, 1924. Serial No. 737,749. 12 Claims. (Cl. 211—27.)



1. A post for shelving units formed of a plate metal blank bent into a tubular body portion, rectangular in cross section, provided with lateral contacting webs along the seam of the body portion, and with orificed right angle plate portions at one end for fixed attachment to a shelf of the unit, each right angle plate portion having aligned relation to a web of the tubular body portion, and a clip member of a right angle plate metal formation fitting the interior of the post end and having an extension of like right angle formation extending into and secured in the interior of the body portion.

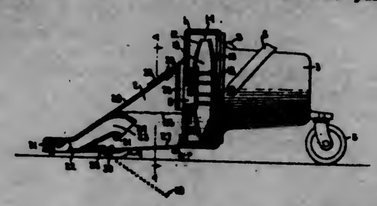
1,577,067. INK RECEPTACLE FOR FILLING FOUNTAIN PENS. OSCAR F. NILSSON and JOSEPH BACHRACH, New York, N. Y. Filed May 19, 1921. Serial No. 470,969. 2 Claims. (Cl. 120—71.)



1. Means by which a self-filling or pump fountain pen may be filled comprising a receptacle having a chamber for a large quantity of fluid and a well below the chamber for a comparatively small quantity of fluid and disposed at one side of said chamber, said receptacle having a narrow passage between the chamber and well, and a lip depending into said passage to prevent the fluid from rising above a predetermined level; and a horizontal, stationary support arranged in the well having an open-end slot terminating near the lip which permits the passage of the pen-point but prevents the pen holder from entering the liquid in the well, and admits air through said passage.

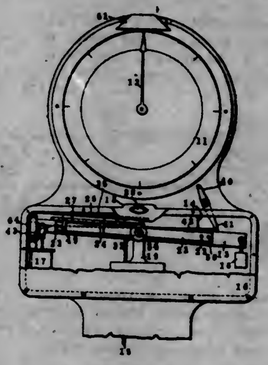
1,577,068. ELECTRICAL CONTROLLER FOR MOTOR-DRIVEN DEVICES. FREDERICK H. OSMACHNIEF, Cleveland, Ohio, assignor to The Cutler-Hammer Mfg. Co., Milwaukee, Wis., a Corporation of Wisconsin. Filed Apr. 28, 1924. Serial No. 709,356. 8 Claims. (Cl. 192—2.)

1. In a controller for motor driven rubber mills and the like provided with suitable brakes, the combination with individual electroresponsive means to respectively control energization of the motor and application of the brake, of interlocking means providing against electromagnetically controlled energization of the motor except under conditions of release of the brake.



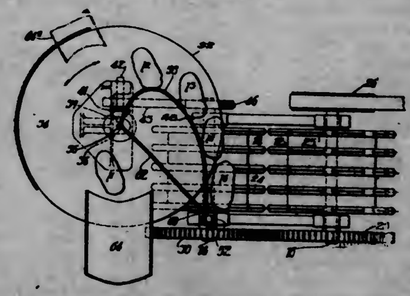
1,577,069. INTERNALLY-DRIVEN ODOMETER. JOHN K. OLSEN, Chicago, Ill., assignor to Stewart-Warner Speedometer Corporation, Chicago, Ill., a Corporation of Virginia. Filed June 26, 1922. Serial No. 570,957. 3 Claims. (Cl. 235—139.)

1. A revolution counting device comprising a shaft and dial wheels assembled thereon side by side, the dial wheels comprising each a mutilated and an unmutilated gear element in zones lateral with respect to each other, the shaft having carrying pinion supports extending between the dial wheels, carrying pinions journaled on said supports comprising each a driving and a driven gear element for cooperating respectively with the unmutilated and the mutilated gear elements of the dial wheels, the said elements of the dial wheels being of external gear or peripherally toothed type, and the web of the dial wheels being diametered to extend beyond the pinion gear element; whereby without the internal gear, the dial wheels may have lateral peripheral flanges for the dial markings, encompassing and enclosing all the gear elements.



1,577,070. SUCTION CLEANER. WILLIAM V. OAR, Cleveland, Ohio. Filed May 19, 1922. Serial No. 562,053. 1 Claim. (Cl. 15—16.)

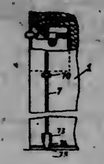
In a suction cleaner, a collecting nozzle having a downwardly facing, narrow inlet mouth, a chamber, and a pair of passageways leading from said mouth to a point intermediate between the bottom and top of said chamber, a pumping device connected to the top part of said chamber, a coarse mesh screen traversing said chamber between said passageways and said pumping



device, a cleanout door for the bottom part of said chamber, and a dust bag into which said pumping device discharges.

1,577,071. SCALE. LOUIS A. OSGOOD, St. Johnsbury, Vt., and ELMER B. WOLF, Springfield, Ohio, assignors to E. and T. Fairbanks and Company, St. Johnsbury, Vt., a Corporation of Vermont. Filed Aug. 1, 1923. Serial No. 654,086. 17 Claims. (Cl. 265—49.)

1. In a scale, the combination with a pivotally mounted beam, of a poise including a body and a bracket connected with said body and slidably engaging said beam, and a pin carried by said beam and engageable by said bracket for limiting the movement of the poise with respect to the beam.



1,577,072. FEEDER FOR BREAKERS. FRANK PARDEE, Hazleton, Pa. Filed Mar. 21, 1924. Serial No. 700,749. 6 Claims. (Cl. 198—33.)

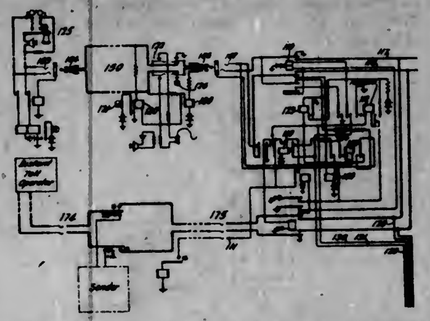
1. A feeder for discharging lumps with their greatest lengths extending in a determined direction comprising a member rotatably mounted on a substantially or ap-

proximately vertical axis and a deflector blade adapted to orient each lump as it is carried around by said member.

1,577,073. DOOR CHECK AND LATCH MECHANISM. BENJAMIN F. PERRY, Montreal, Quebec, Canada. Filed Dec. 27, 1924. Serial No. 758,461. 10 Claims. (Cl. 292—39.)

1. In a door check the combination of a latch operating mechanism with means to raise and lower a door check and means to hold the door check out of contact with the floor without affecting the normal latch operation.

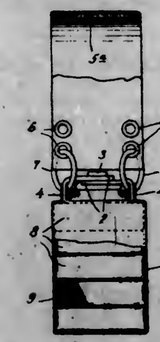
1,577,074. CONSTRUCTION MATERIAL. RAY P. PERRY, Upper Montclair, and FLOYD W. ADAMS, East Orange, N. J., assignors to The Barrett Company, a Corporation of New Jersey. Filed Mar. 18, 1921. Serial No. 453,501. 11 Claims. (Cl. 154—2.)



8. The process which comprises forming on a mandrel a layer containing felted fibrous material and waterproofing material, and applying thereto a layer containing asbestos and waterproofing material.

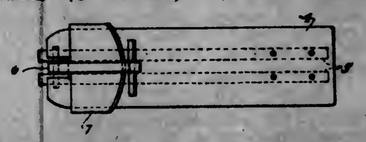
1,577,075. PROCESS OF REMOVING COLORING MATTER FROM SMOKELESS POWDER. EARLE C. PITMAN and GEORGE F. HUNTER, Parlin, N. J., assignors to E. I. du Pont de Nemours & Company, Wilmington, Del., a Corporation of Delaware. Filed Nov. 20, 1922. Serial No. 602,230. 10 Claims. (Cl. 260—148.)

1. The process of removing from pyro smokeless powder the coloring matter ordinarily present therein, which comprises subjecting said powder to the action of a dilute acid capable of decomposing insoluble coloring matter into soluble products without injuring the nitrocellulose constituent of the powder, and to the extracting action of a solvent for the resulting soluble decomposition products.



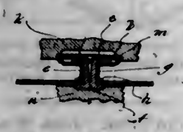
1,577,076. TELEPHONE-EXCHANGE SYSTEM. ALBERT C. POWELL, New York, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Dec. 8, 1923. Serial No. 678,141. 16 Claims. (Cl. 179—27.)

1. In a telephone exchange system, a plurality of operators' positions, a sender controlling equipment at each of said positions, a plurality of outgoing trunks, each trunk terminating at its distant end in a manual connection terminal, mechanism associable with the distant ends of said trunks for indicating the numbers of wanted lines, a plurality of senders, a plurality of sender controlling equipments, a plurality of switching units common to said operators' positions, means to operate a switching unit to establish an interconnection between a sender controlling equipment, a sender and an idle trunk,



and means to operate said mechanism over said trunk under the control of a sender in accordance with the operation of said sender controlling equipment.

1,577,077. WEIGHT DEVICE FOR USE BY PIANISTS AND THE LIKE. HUSTON RAY, New York, N. Y. Filed June 13, 1923. Serial No. 645,107. 6 Claims. (Cl. 272—67.)

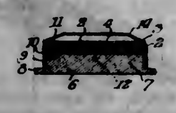


2. In a weight device for use by pianists and the like, the combination of a bail adapted to bear on top of the wrist with a bag of soft flexible material suspended therefrom under the wrist, and a series of independent weights in said bag, each having substantially the same horizontal cross section as the bag and adapted to be contained in said bag stacked on top of one another.

1,577,078. SLED. SILAS G. RICHARDS, Evanston, Ill., assignor of one-half to Edward A. Bruegel, Chicago, Ill., and one-half to Joseph Stockbridge, Chicago, Ill. Filed Mar. 24, 1924. Serial No. 701,499. 2 Claims. (Cl. 280—12.)

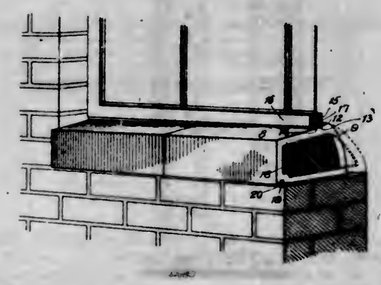
1. A sled comprising a top having a central slot in the forward portion thereof; runners under said top and closely adjacent each other; a tongue having a bar fitting loosely between said runners and arranged to operate in said slot, the runners being spaced a distance apart slightly greater than the width of said bar; a pivot pin extending between said runners and through said bar; and a shield on said bar arranged to contact with the sled top when the tongue is swung upwardly and rearwardly substantially as described.

1,577,079. BUTTON. FREDERICK N. ROSS and IRA A. LETHCO, Pontiac, Mich., assignors, by mesne assignments, to The Button Attaching Machine Co., Waterbury, Conn., a Corporation of Connecticut. Filed Dec. 3, 1923. Serial No. 678,325. 2 Claims. (Cl. 24—95.)



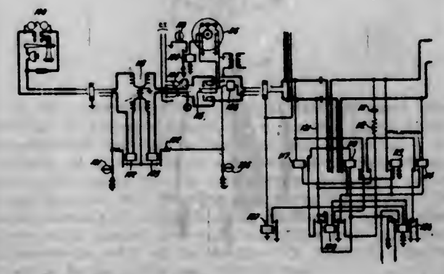
1. In a button, the combination of a button front of relatively thin gauge flexible material, a button back provided with a relatively long slender tubular neck portion, an anvil contained within the button front, said button front button back and anvil secured together to form a hollow button head with a neck, and a tack having a solid stem portion split to provide a pair of prongs, said tubular neck forming a guide for the rectilinear movement of the tack during the clinching operation, said prongs engaged within the hollow button head to reinforce the front.

1,577,080. SHAMPOO TRAY. IDA A. SCHMIDT, Los Angeles, Calif. Filed Nov. 21, 1925. Serial No. 70,493. 4 Claims. (Cl. 4—159.)



1. In combination with a shampoo tray, a strainer, having a base portion and having a peripheral flange thereon, said base portion being semi-cylindrical, apertures in the front flange of said base portion and in the bottom thereof, a pair of holding members on said strainer, said holding members each comprising a pair of pivoted arms, said arms being adapted to engage the flange on said tray.

1,577,081. INK PAD. GUSTAV J. SENGBUSCH, Milwaukee, Wis. Filed Aug. 11, 1924. Serial No. 731,259. 6 Claims. (Cl. 54.5.)



4. In an inking device for rubber stamps and the like, the combination of a base having an elevated portion, an ink pad on the upper surface of said elevated portion, a shell having a depending flange embracing the elevated portion of the base and having an inturned flange for holding the pad on the elevated portion of the base, recesses on the inner face of the depending flange and headed members on the edges of the elevated portion of the base with which said recesses detachably interlock to hold the shell on the base.

1,577,082. MULTIUNIT SILL CONSTRUCTION. CHARLES H. SIERKS, Chicago, Ill., assignor to Northwestern Terra Cotta Company, Chicago, Ill., a Corporation of Illinois. Filed Apr. 23, 1921. Serial No. 463,793. 8 Claims. (Cl. 72—98.)

1. In combination, a steel sash formed with an angular marginal portion, a plurality of sill units of selected stock sizes each having an irregular formation in its upper face opposite said marginal portion, and a calking material between the interior angle of the marginal portion and said irregular formation.

1,577,083. TELEPHONE-EXCHANGE SYSTEM. ARTHUR B. SPERRY, New York, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Nov. 6, 1924. Serial No. 748,050. 4 Claims. (Cl. 179—27.)

1. In a telephone system, a selector switch, a plurality of trunk lines arranged in groups extending from said switch, an operator's position, a sender at said position arranged to send impulses to select a trunk line in a particular group of said switch, a signal at said position, means for preventing the selection of a trunk line and for flashing said signal should all trunk lines in the desired group be busy, and means effective when one of said trunks becomes idle to cause said trunks to be tested.

1,577,084. METHOD AND APPARATUS FOR COATING PIPE. FRED M. STRECKER, Akron, Ohio. Filed May 20, 1925. Serial No. 31,727. 8 Claims. (Cl. 91—46.)

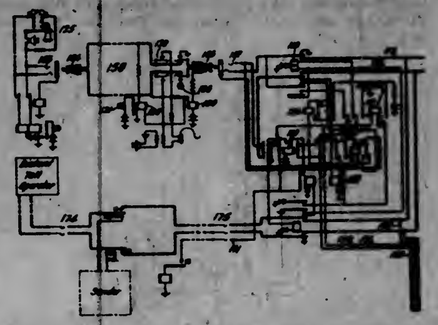
5. Apparatus for coating pipe by dipping, comprising a shell sunk into the earth, an annular tank within the shell and spaced from the wall and the bottom there-

proximately vertical axis and a deflector blade adapted to orient each lump as it is carried around by said member.

1,577,073. DOOR CHECK AND LATCH MECHANISM. BENJAMIN F. PERRY, Montreal, Quebec, Canada. Filed Dec. 27, 1924. Serial No. 758,461. 10 Claims. (Cl. 292—39.)

1. In a door check the combination of a latch operating mechanism with means to raise and lower a door check and means to hold the door check out of contact with the floor without affecting the normal latch operation.

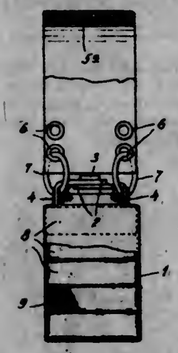
1,577,074. CONSTRUCTION MATERIAL. RAY P. PERRY, Upper Montclair, and FLOYD W. ADAMS, East Orange, N. J., assignors to The Barrett Company, a Corporation of New Jersey. Filed Mar. 18, 1921. Serial No. 453,501. 11 Claims. (Cl. 154—2.)



8. The process which comprises forming on a mandrel a layer containing felted fibrous material and waterproofing material, and applying thereto a layer containing asbestos and waterproofing material.

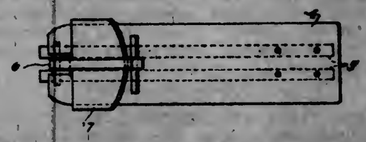
1,577,075. PROCESS OF REMOVING COLORING MATTER FROM SMOKELESS POWDER. EARLE C. PITMAN and GEORGE F. HUNTER, Parlin, N. J., assignors to E. I. du Pont de Nemours & Company, Wilmington, Del., a Corporation of Delaware. Filed Nov. 20, 1922. Serial No. 602,230. 10 Claims. (Cl. 260—148.)

1. The process of removing from pyro smokeless powder the coloring matter ordinarily present therein, which comprises subjecting said powder to the action of a dilute acid capable of decomposing insoluble coloring matter into soluble products without injuring the nitrocellulose constituent of the powder, and to the extracting action of a solvent for the resulting soluble decomposition products.



1,577,076. TELEPHONE-EXCHANGE SYSTEM. ALBERT C. POWELL, New York, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Dec. 8, 1923. Serial No. 678,141. 16 Claims. (Cl. 179—27.)

1. In a telephone exchange system, a plurality of operators' positions, a sender controlling equipment at each of said positions, a plurality of outgoing trunks, each trunk terminating at its distant end in a manual connection terminal, mechanism associable with the distant ends of said trunks for indicating the numbers of wanted lines, a plurality of senders, a plurality of sender controlling equipments, a plurality of switching units common to said operators' positions, means to operate a switching unit to establish an interconnection between a sender controlling equipment, a sender and an idle trunk,



and means to operate said mechanism over said trunk under the control of a sender in accordance with the operation of said sender controlling equipment.

1,577,077. WEIGHT DEVICE FOR USE BY PIANISTS AND THE LIKE. HUSTON RAY, New York, N. Y. Filed June 13, 1923. Serial No. 645,107. 6 Claims. (Cl. 272—67.)

2. In a weight device for use by pianists and the like, the combination of a ball adapted to bear on top of the wrist with a bag of soft flexible material suspended therefrom under the wrist, and a series of independent weights in said bag, each having substantially the same horizontal cross section as the bag and adapted to be contained in said bag stacked on top of one another.

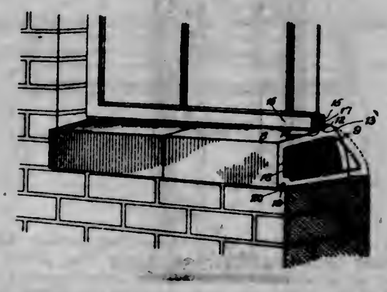
1,577,078. SLED. SILAS G. RICHARDS, Evanston, Ill., assignor of one-half to Edward A. Bruegel, Chicago, Ill., and one-half to Joseph Stockbridge, Chicago, Ill. Filed Mar. 24, 1924. Serial No. 701,430. 2 Claims. (Cl. 280—12.)

1. A sled comprising a top having a central slot in the forward portion thereof; runners under said top and closely adjacent each other; a tongue having a bar fitting loosely between said runners and arranged to operate in said slot, the runners being spaced a distance apart slightly greater than the width of said bar; a pivot pin extending between said runners and through said bar; and a shield on said bar arranged to contact with the sled top when the tongue is swung upwardly and rearwardly substantially as described.

1,577,079. BUTTON. FREDERICK N. ROSS and IRA A. LETHCO, Pontiac, Mich., assignors, by mesne assignments, to The Button Attaching Machine Co., Waterbury, Conn., a Corporation of Connecticut. Filed Dec. 3, 1923. Serial No. 676,325. 2 Claims. (Cl. 24—95.)

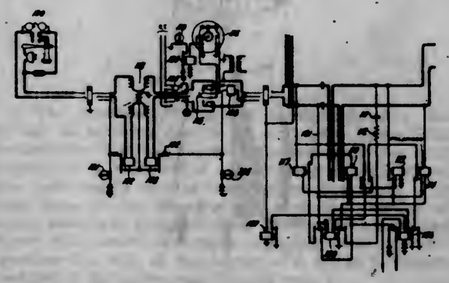
1. In a button, the combination of a button front of relatively thin gauge flexible material, a button back provided with a relatively long slender tubular neck portion, an anvil contained within the button front, said button front button back and anvil secured together to form a hollow button head with a neck, and a tack having a solid stem portion split to provide a pair of prongs, said tubular neck forming a guide for the rectilinear movement of the tack during the clinching operation, said prongs engaged within the hollow button head to reinforce the front.

1,577,080. SHAMPOO TRAY. IDA A. SCHMIDT, Los Angeles, Calif. Filed Nov. 21, 1925. Serial No. 70,493. 4 Claims. (Cl. 4—159.)



1. In combination with a shampoo tray, a strainer, having a base portion and having a peripheral flange thereon, said base portion being semi-cylindrical, apertures in the front flange of said base portion and in the bottom thereof, a pair of holding members on said strainer, said holding members each comprising a pair of pivoted arms, said arms being adapted to engage the flange on said tray.

1,577,081. INK PAD. GUSTAV J. SENGBUSCH, Milwaukee, Wis. Filed Aug. 11, 1924. Serial No. 731,259. 6 Claims. (Cl. 54.5.)

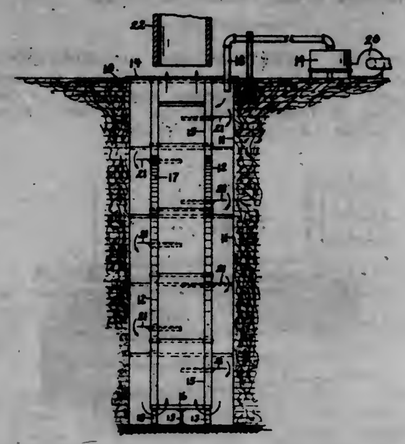


4. In an inking device for rubber stamps and the like, the combination of a base having an elevated portion, an ink pad on the upper surface of said elevated portion, a shell having a depending flange embracing the elevated portion of the base and having an inturned flange for holding the pad on the elevated portion of the base, recesses on the inner face of the depending flange and headed members on the edges of the elevated portion of the base with which said recesses detachably interlock to hold the shell on the base.

1,577,082. MULTIUNIT-SILL CONSTRUCTION. CHARLES H. SIERKS, Chicago, Ill., assignor to Northwestern Terra Cotta Company, Chicago, Ill., a Corporation of Illinois. Filed Apr. 23, 1921. Serial No. 463,793. 8 Claims. (Cl. 72—98.)

1. In combination, a steel sash formed with an angular marginal portion, a plurality of sill units of selected stock sizes each having an irregular formation in its upper face opposite said marginal portion, and a caulking material between the interior angle of the marginal portion and said irregular formation.

1,577,083. TELEPHONE-EXCHANGE SYSTEM. ARTHUR B. SPERRY, New York, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Nov. 6, 1924. Serial No. 748,050. 4 Claims. (Cl. 179—27.)



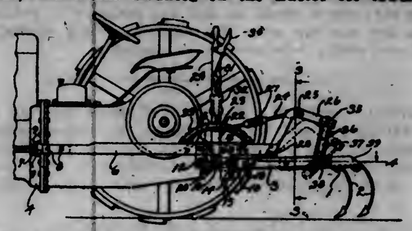
1. In a telephone system, a selector switch, a plurality of trunk lines arranged in groups extending from said switch, an operator's position, a sender at said position arranged to send impulses to select a trunk line in a particular group of said switch, a signal at said position, means for preventing the selection of a trunk line and for flashing said signal should all trunk lines in the desired group be busy, and means effective when one of said trunks becomes idle to cause said trunks to be tested.

1,577,084. METHOD AND APPARATUS FOR COATING PIPE. FRED M. STRECKER, Akron, Ohio. Filed May 29, 1925. Serial No. 31,727. 8 Claims. (Cl. 91—46.)

5. Apparatus for coating pipe by dipping, comprising a shell sunk into the earth, an annular tank within the shell and spaced from the wall and the bottom there-

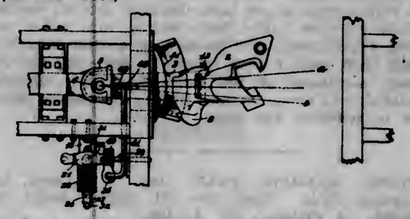
of, said tank being open at the top, and means for circulating hot gas within the shell downwardly about the tank and then upwardly about the inner side of the tank.

6. Apparatus for coating pipe by dipping, comprising a tank for providing an annular column of liquid, said tank being open at the top, and means for circulating hot gases about the tank.



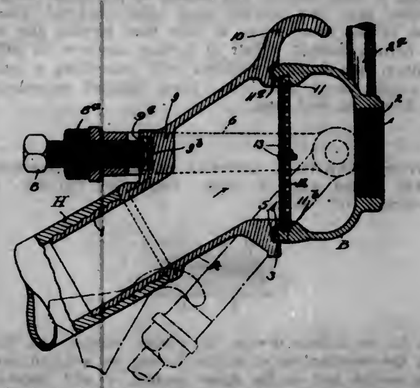
1,577,085. BODY GARMENT. LORETTA F. TIGHE, New York, N. Y. Filed May 2, 1922. Serial No. 557,877. 3 Claims. (Cl. 2—37.)

1. In a combination brassière and girdle, a front panel and a rear panel, connecting underarm panels affixed to both said front and rear panels, triangular hip panels affixed to said underarm panels and pairs of elastic side members of triangular shape affixed to said hip panels and to said front and rear panels respectively so arranged as to form substantially straight lines and provide for increasing restricted expansion from the waist portion downward.



1,577,086. ATTACHMENT FOR TRACTORS. HERBERT F. TOWNER, Santa Ana, Calif. Filed Sept. 7, 1922. Serial No. 586,593. 2 Claims. (Cl. 97—47.)

1. In an attachment for tractors, the combination of a draft structure adapted for rigid connection with a tractor, an implement frame carrying ground working tools and having arms extending forwardly, relatively fixed pivots for the forward ends of the arms with means for supporting the pivots at different selective elevations, and means mounted on the tractor for lowering



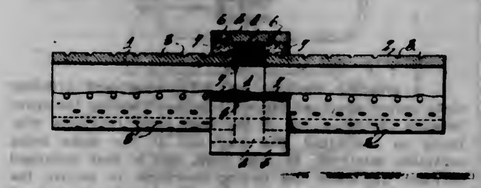
and raising said frame, said means including adjustable extensible members enabling the implement frame to be supported in a transversely tilted position.

1,577,087. CAR COUPLER. JOHN WILLISON, Cleveland, Ohio, assignor to National Malleable and Steel Castings Company, Cleveland, Ohio, a Corporation of Ohio. Filed Mar. 17, 1924. Serial No. 699,657. 6 Claims. (Cl. 213—113.)

1. In coupling mechanism, unlike and alternatively used couplers laterally displaced from each other, a pivot pin, each coupler transmitting stresses to a railway vehicle through the said pivot pin, each coupler being in non-coupling position when the other is in use, and a coupler centering device connected to one of said couplers arranged to control the movement of said coupler, the said coupler being free without restraint from said centering device to move laterally during normal coupling movements, and means for operatively disconnecting the centering device from the said coupler when the other coupler is in use.

1,577,088. FEED-WATER STRAINER FOR LOCOMOTIVES. BELVIN T. WILLISTON, Somerville, Mass., assignor to Manning, Maxwell & Moore, Inc., New York, N. Y., a Corporation of New Jersey. Filed July 25, 1924. Serial No. 728,144. Renewed Nov. 7, 1925. 9 Claims. (Cl. 210—164.)

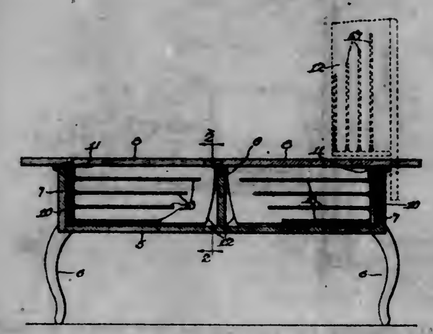
1. A strainer comprising a casing having separable sections, a member on one section movable to engage the other section for securing said sections together, one of



said sections being provided with an internal groove, and a screen or grid loosely mounted in said groove and removable therefrom after said sections have been separated by successive diametral and axial movements.

1,577,089. BEDCLOTHES SUPPORT. RUTH WHITFORD, Waterloo, N. H. Filed Oct. 20, 1924. Serial No. 744,676. 1 Claim. (Cl. 5—319.)

A bed clothes support having a frame structure, comprising a U-shaped base portion formed of a front longitudinal rod and transverse end rods, upright rods rising from the rear ends of said transverse end rods at the rear corners of the base portion, a rear longitudinal rod uniting the ends of said transverse end rods and said upright rods at their points of junction, said upright rods terminating at their upper ends in forwardly and downwardly curved top extremities, a longitudinal rod connecting said extremities of the upright rods and forming therwith a U-shaped canopy frame portion of the same length but of less width than the base portion and overhanging the rear half thereof only, and a body of flexible material closing the spaces and covering the elements of said unitary structure.



1,577,090. PIPE JOINT. HENRY LOUIS ZANDER, New Orleans, La. Filed Apr. 30, 1925. Serial No. 27,016. 1 Claim. (Cl. 285—114.)

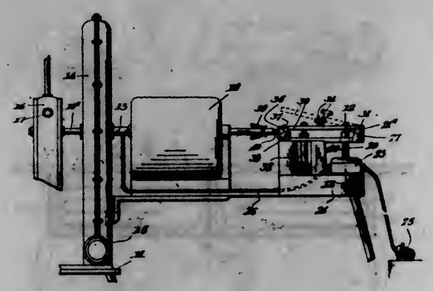
A device of the class described comprising a gasket, hollow pipe sections abutting the gasket and having staggered shallow depressions in the outer surfaces thereof, the said gasket having a central bore in alignment with the hollows of the pipe sections and being of a diameter for extending beyond the outer surfaces of the pipe sections, a sleeve adapted to fit over the gasket and extend appreciably beyond the sides thereof to provide annular pockets surrounding the pipe ends and having shallow depressions in the inner surface thereof at each side of the position of the gasket, and sealing packing in the annular pockets and extending into the surrounding depressions of pipe ends and sleeve.

1,577,091. COMBINED PIANO BENCH AND SHEET-MUSIC RACK. SVEN E. AHLSTEDT, Chicago, Ill. Filed Oct. 30, 1924. Serial No. 746,757. 1 Claim. (Cl. 45—64.)

A device of the kind described, consisting of a bench embodying supporting legs, an elongated box-like container supported thereby, a leaf section hinged to the upper portion of each end of said container and adapted normally to lie on the top thereof and to close the same, a transversely disposed member depending from each of said leaves near its hinged end, a plurality of spaced sheet-supporting spring-actuated members pivotally secured to each of said depending members and normally extended therefrom at right angles thereto, and guard members mounted one on each side of each of said leaves

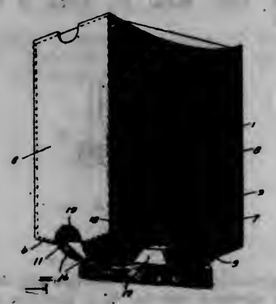
of said sheet-supporting members and depending from said leaves, said guards and said depending members being arranged with respect to said leaves so as to be located within the container when the leaves are in their normal positions.

1,577,092. BOTTLE HOLDER FOR BOTTLE-WASHING MACHINES. AXEL ANDERSSON, Lund, Sweden. Filed Feb. 13, 1925. Serial No. 8,974. 2 Claims. (Cl. 141—7.)



1. The combination with a horizontally-disposed table having an aperture therein, of a skeleton bottle holder permanently attached to the table and consisting in its entirety of a plurality of substantially-vertical, stationary arms rigidly secured intermediate their ends to the edge faces of the aperture and extending through the latter above and below the table; said arms having their lower ends turned inward to conjointly form a support whereon the edge of the mouth of a bottle in inverted position in the holder may directly rest.

1,577,093. OIL BURNER. JAMES WILLIAM ANDERSON and WILLIAM JOHN HEMPHILL, Ottawa, Ontario, and ROBERT RICHARDSON, South March, Ontario, Canada. Filed Apr. 7, 1925. Serial No. 21,943. 4 Claims. (Cl. 158—28.)

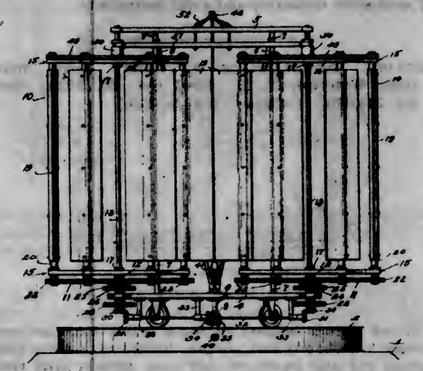


1. In an oil burner and in combination, a burner, a fan and an oil supply tank, an air line connecting the fan with the burner, a mixing chamber in the air line, a fuel line connecting the fuel tank with the mixing chamber, prime mover means for operating the fan to supply an air blast to the mixing chamber, valves operable from a distance, for regulating the supply of air and fuel to the mixing chamber simultaneously, a pump operable by the prime mover for delivering fuel under pressure to the mixing chamber, a switch spring-held in open position for controlling the operation of the prime mover, a control

valve in the fuel line spring-held in closed position and a lever arm adapted to simultaneously open said valve and close the prime mover circuit, means for automati-

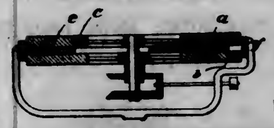
cally engaging and retaining the lever arm in an operative position and a governor automatically operable, on the prime mover stopping, to release said lever arm.

1,577,094. CONTAINER FOR FOLDED TISSUE TOILET PAPER. LELAND J. ARMS, San Francisco, Calif., assignor to R. C. Pell, jr., San Francisco, Calif. Filed Apr. 14, 1924. Serial No. 706,516. 2 Claims. (Cl. 211—29.)



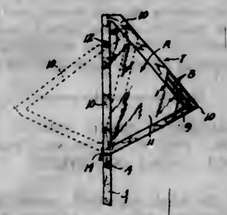
1. A box for interfolded tissue toilet paper having a bottom formed with a central slot allowing the paper to be withdrawn therethrough with flat confronting flanges depending from the margins of the slot in the box for guiding the paper and central registering recesses formed in the flanges for facilitating the manipulation of the paper.

1,577,095. COMBINATION TOOL. FRANK ARNOLD, Bridgeport, Conn. Filed Apr. 15, 1925. Serial No. 23,345. 5 Claims. (Cl. 7—11.)



1. A pocket combination tool having a handle comprising similar and oppositely disposed grip members, a back member spacing and adjoining said grip members, and a fish-hook extracting recess formed in said back member.

1,577,096. WINDMILL. ARTHUR A. AUST, Columbus, Ohio. Filed Jan. 25, 1924. Serial No. 688,572. 3 Claims. (Cl. 170—25.)



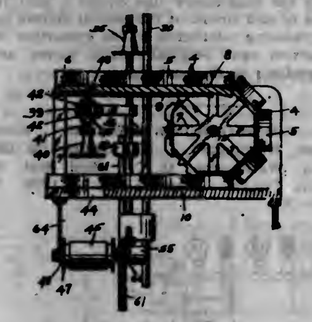
1. A wind motor comprising a vertical support, a pair of upper and lower radial frames connected with said support and rotatable in a horizontal plane axially with respect thereto, and a pair of wind mill units including vertically disposed vanes mounted for rotation about vertical axes and positioned between said frames.

1,577,097. MACHINE FOR GRINDING ROLLERS. HERMANN BARTHEL, Schweinfurt, Germany. Filed July 16, 1925. Serial No. 44,077. 3 Claims. (Cl. 51—118.)

1. A grinding machine including superposed grinding disks spaced apart, an endless band surrounding the space between the disks, one of the disks being rotatable relatively to the other disk and one of the disks being rotatable relatively to said band, and a cage arranged between the disks and having apertures to receive the articles to be ground, said cage engaging the band and being caused to rotate in a plane due to the centrifugal force exerted by said rotatable disk.

1,577,098. WINDSHIELD. EMIL T. BASTIS, Minneapolis, Minn. Filed Oct. 22, 1923. Serial No. 670,024. 7 Claims. (Cl. 296—97.)

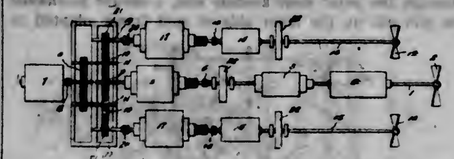
1. A vision shield for an automobile comprising a triangular prism having a transparent front side normally disposed in a vertical plane, a rear transparent laminated side normally extending at an acute angle downwardly from said vertical side, and a bottom trans-



parent side extending substantially normally to said rear side, said prism being rotatable about an axis parallel to one longitudinal edge and disposed substantially in the front side.

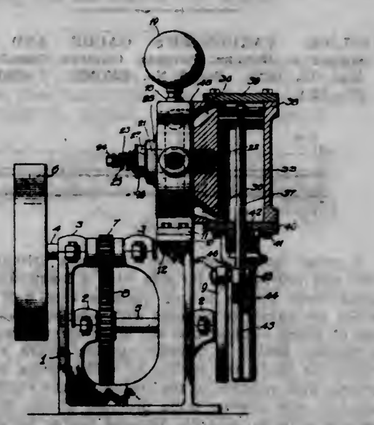
1,577,099. ADJUSTABLE INTERNAL GAUGE. JOHN BATH, Worcester, Mass. Filed Aug. 3, 1923. Serial No. 655,528. 15 Claims. (Cl. 33—178.)

1. An adjustable internal gauge comprising a casing, a shaft rotatable only in said casing and having a threaded portion, a supporting member threaded on said shaft and axially movable thereby, said member having a plurality of guide-ways therein each having a face inclined longitudinally toward the axis of the shaft, a plurality of gauge bars each having an inclined inner face adapted to contact with one of said first mentioned inclined face and each slidable in one of said guide-ways, a retaining plate rotatably mounted on an end of said shaft and engaging the ends of said bars, and means to draw said plate and bars yieldingly toward the end of said casing.



1,577,100. MOLDING APPARATUS. JOHN H. BERRY, Springfield, Ohio, assignor to The Bolmer Manufacturing Company, Springfield, Ohio, a Corporation of Ohio. Filed Dec. 26, 1924. Serial No. 758,040. 7 Claims. (Cl. 107—16.)

1. In a machine of the character described, a series of intermittently travelling molds, a frame together with means for reciprocating the same across the line of travel of said molds, a presser plunger carried by said frame, and an ejector plunger carried by said frame for ejecting the molded articles from said molds.

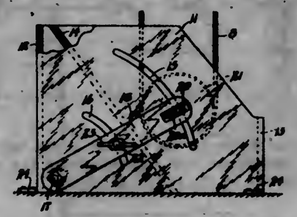


1,577,101. SHIP PROPULSION. AUGUST F. BRITZELL and CHARLES B. WHELTLE, Baltimore, Md. Filed Apr. 18, 1922, Serial No. 554,809. Renewed Oct. 21, 1925. 2 Claims. (Cl. 115—37.)

1. In combination with a ship, a driving propeller therefor, an electric motor for driving the same, an electric generator for the motor, clutch means for connecting the shaft of the generator with the shaft of the motor, an internal combustion motor, gears connecting the same with the shaft of the generator, a second generator, a shaft, clutch means for connecting said shaft with the shaft of the second generator, a gear connecting said shaft with one of the first mentioned gears, a propeller

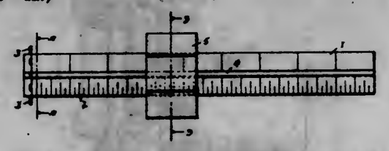
adapted to be driven by the passage of the boat through the water and means for communicating the movement of said propeller to the second generator.

1,577,102. PUMP. MELVIN BERKSHIRE, Newcomerstown, Ohio, assignor of one-half to J. S. Barnett, Albert Zimmer, and V. C. Stocker, all of Newcomerstown, Ohio. Filed Mar. 27, 1924. Serial No. 702,394. 1 Claim. (Cl. 103—159.)



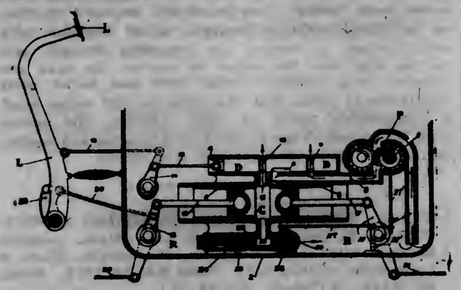
A pump of the character described comprising, a supporting frame, a stationary water head having relatively opposed semi-circular inlet and outlet ways, inlet and outlet ports communicating with intermediate portions of the inlet and outlet ways respectively and extending radially therefrom, an auxiliary port at one end of the outlet way, an air dome supported upon the head and communicating with the auxiliary port, one side wall of the water head having pairs of juxtaposed inlet and outlet ports formed therein and communicating with the opposite extremities of said semi-circular ways, said water head having a concentrically arranged opening, an oscillatable cylinder having a socket alignable with said opening, a bearing pin extending through said opening and into the socket to connect the head and cylinder, said cylinder having inlet and outlet ports registrable at times with the ports in said water head, a reciprocable piston in said cylinder, and means mounted on said frame to effect reciprocation and oscillation of the piston and cylinder respectively.

1,577,103. TENSIONING AND ANCHORING DEVICE. WILLIAM K. BROWN, Christmas Lake, Minn., assignor to Twin City Scenic Company, Minneapolis, Minn., a Corporation of Minnesota. Filed Feb. 14, 1925. Serial No. 9,148. 3 Claims. (Cl. 64—5.)



1. A tensioning and anchoring device for endless flexible members comprising a frame having a substantially flat side, said side provided with a pair of concentric arcuate slots therethrough, a swingable arm pivoted at

its lower end on the side of said frame on an axis passing through the radial centers of said arcuate slots, a transverse pin mounted on said arm and working through the outer most arcuate slot, a sheave journalled on said pin on the inner side of said frame adapted to

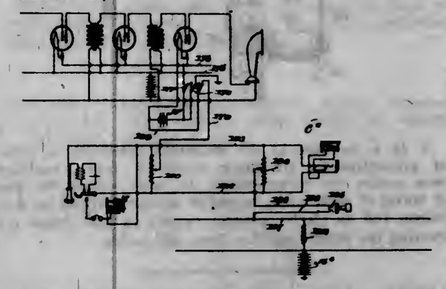


receive one of the loops of an endless flexible member, a clamping device extending through said arm and said frame and through the innermost arcuate slot adapted to rigidly secure said arm to said frame at a desired angle to the base thereof.

1,577,104. CARPENTER'S GAUGE AND SCALE. HENRY A. BUTLER, Toronto, Ontario, Canada. Filed Mar. 14, 1923. Serial No. 625,062. 1 Claim. (Cl. 33—42.)

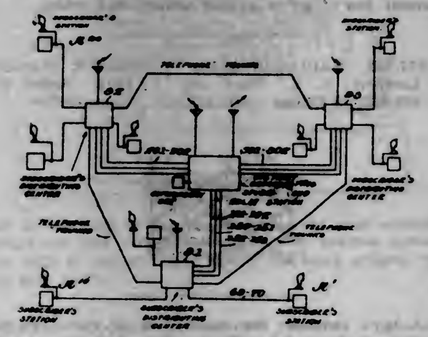
A gauge comprising a shaft having a cylindrical surface and provided at its side with a longitudinally disposed incut groove having opposite side wall surfaces which are angularly disposed with relation to each other, one of which is plane and the other curved transversely, a member having a circular opening which snugly receives the shaft, the surface of said opening being concentric with relation to the centers of the shaft and the member, said member being provided at one side of the opening with an inwardly disposed tongue having curved opposite side surfaces, one side surface of the tongue adapted to slidably engage the curved wall surface of the groove and the other side surface of the tongue adapted to frictionally engage the plane wall surface of the groove and a marking point carried by the shaft.

1,577,105. FLUID-BRAKE OPERATOR. GIUSTINO CATTANEO, Milan, Italy. Filed Oct. 23, 1922. Serial No. 596,425. 4 Claims. (Cl. 188—152.)



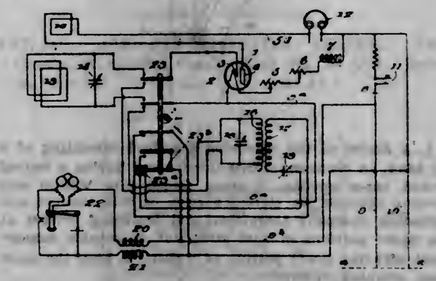
1. In a fluid brake operator of the character described, the combination, a motor driven shaft, an oil containing vessel through which the shaft passes, a casing surrounding the driven shaft within the vessel, a pump connected with the shaft within the casing, an inlet tube in communication with the casing from a point near the bottom of the vessel, a slide valve the casing of which is arranged in communication with the pump casing, a double cylinder communicating medially of its ends with the casing of the slide valve, opposed pistons operating in the cylinder, brake shoe applying members operably connected with the pistons, a manually operable lever operatively connected with the slide valve for regulating the introduction of pressure liquid into the cylinder, an operable connection between the lever and one of the pistons for effecting manual control of the brake shoe applying members when the drive shaft is idle, and means for controlling the release of pressure liquid from the cylinders.

1,577,106. RADIO DISTRIBUTING SYSTEM. EDWARD E. CLEMENT, Washington, D. C., assignor to Edward F. Colladay, Washington, D. C. Filed Sept. 25, 1924. Serial No. 739,832. Renewed Feb. 11, 1926. 3 Claims. Cl. 179—2.)



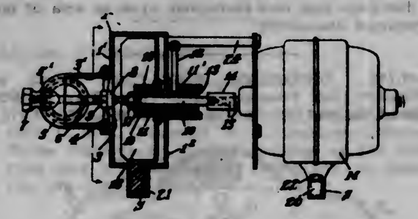
1. In a radiophone exchange system, a central station and subscribers' stations and wired line circuits interconnecting them, means to transmit modulated waves at radio frequency, means at the central station to transmit waves at heterodyning frequencies therefor, means at the subscribers' stations for receiving both frequencies, means causing them by heterodyning to produce in the subscribers' line circuit a beat frequency, and means in said circuit at the central station for detecting and rendering intelligible to the subscriber the modulations carried upon original carrier waves, and transferred therefrom to the beat waves.

1,577,107. RADIOPHONE SYSTEM. EDWARD E. CLEMENT, Washington, D. C., assignor to Edward F. Colladay, Washington, D. C. Filed Sept. 26, 1924, Serial No. 740,113. Renewed Feb. 11, 1926. 8 Claims. Cl. 179—2.)



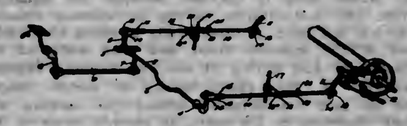
1. In a broadcasting system, a main station, a plurality of substations, means at said main station for generating and transmitting to the substations radio waves, means at the substations for receiving said waves, metallic wire circuits from the main station to the substations, phantom circuits imposed upon said wire circuits, and a centralized source of current supply for the substation receiving means, connected to said phantom circuits and distributed thereby to the several substations.

1,577,108. TRUNKING SYSTEM OF RADIODISTRIBUTION. EDWARD E. CLEMENT, Washington, D. C., assignor to Edward F. Colladay, Washington, D. C. Filed Jan. 21, 1925, Serial No. 3,861. Renewed Feb. 11, 1926. 7 Claims. (Cl. 250—6.)



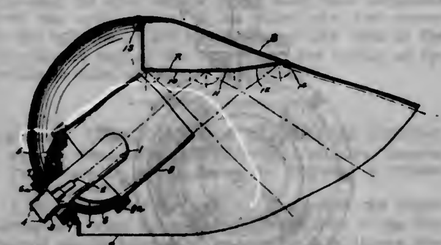
1. In a system of radio broadcast distribution, a district broadcast service station, a plurality of telephone central stations each with subscribers' substations and wire lines interconnecting them, radio broadcast transmitting means at the district station, distributing relay means at each central station for relaying the matter broadcasted from the district station onto distributing conductors at the central station at a frequency suitable for transmission over subscribers' wire lines, relay means at each central station individual to each subscriber's line, and means also at each central station for connecting a subscriber's line through its associated relay means to the said distributing conductors at that central station.

1,577,109. RADIO BROADCAST DISTRIBUTING SYSTEM. EDWARD E. CLEMENT, Washington, D. C., assignor to Edward F. Colladay, Washington, D. C. Filed Jan. 31, 1925, Serial No. 6,071. Renewed Feb. 11, 1926. 7 Claims. (Cl. 250—6.)



2. In a system of radio broadcast distribution, a central station and subscribers' stations connected thereto by line wires, a radiophone receiving set at each subscriber's station and an antenna therefor, amplifying means at the central station for each subscriber's line, means at the central station for supplying carrier current to said lines through their respective amplifying means, and means for connecting the subscriber's receiving set with either the antenna or the line.

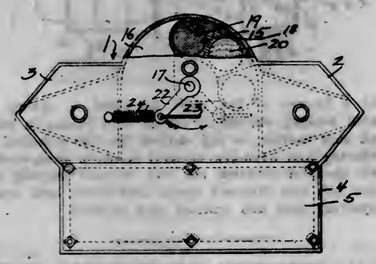
1,577,110. MOTOR BLOWER UNIT FOR METABOLISM APPARATUS OR THE LIKE. WARREN E. COLLINS, Jamaica Plain, Mass. Filed Feb. 7, 1925. Serial No. 7,660. 6 Claims. (Cl. 230—11.)



1. In a blower of the class described, a casing, an elongated bearing extending within said casing, a shaft through said bearing, a cap shaped fan hub mounted on said bearing and attached to said shaft, a compressible member disposed between the end of said bearing and said fan hub and disposed about said shaft, and means for adjusting said hub against said member.

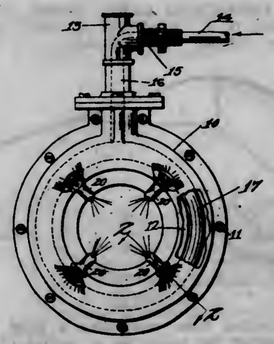
1,577,111. MECHANISM FOR OPERATING BRAKES OF MOTOR VEHICLES. THOMAS JAMES CONLEY, Woonona, New South Wales, Australia. Filed Aug. 19, 1922. Serial No. 582,945. 1 Claim. (Cl. 188—2.)

In a brake mechanism, a plurality of brake actuating levers, rods pivotally connected to said levers and extending forwardly, a transversely disposed rock shaft having upwardly extending arms pivotally connected to the forward ends of said rods, a downwardly extending arm fixed to the rock shaft and arranged intermediate the ends of the latter, a rocking foot pedal having a depending arm, a link connecting the depending arm to said downwardly extending arm, bearing members adapted to be connected to a vehicle frame and through which the rods slidably extend, sleeves mounted on said rods for adjustment axially thereof, and springs arranged between said sleeves and said bearing members for moving the rods in one direction.



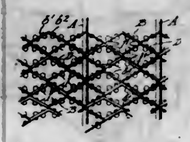
1,577,112. PROJECTING LAMP. GEORGE H. CUSHING, Washington, D. C. Filed Nov. 5, 1925. Serial No. 67,148. 6 Claims. (Cl. 240—41.)

1. A projecting lamp comprising a light source, a primary reflector for converting a portion of the rays into a beam, a tubular reflector mounted forwardly of the primary reflector and having an interior reflecting surface of varying curvature to convert the rays falling thereon into a beam, means for holding these two re-



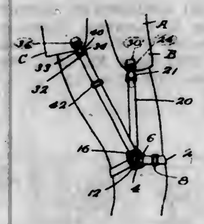
sectors in constant relationship to the light source, and a secondary reflector comprising a plurality of planes of reflection and designed and constructed to divide the rays of light falling thereon into pencils of rays and to distribute said rays exclusively upon an area of predetermined dimensions.

1,577,113. DIRECTION INDICATOR. ANGEL DE VELASCO, San Francisco, Calif. Filed May 3, 1923. Serial No. 636,491. 1 Claim. (Cl. 116—45.)



An indicating device for use in connection with the box of right and left turn signalling devices of a vehicle signalling mechanism comprising a tail light compartment whose lamp is disposed between the signalling devices, the compartment having an opening disposed above the tail lamp, a transversely disposed shaft journaled in the opposite front and rear walls of the compartment and having at one end a crank disposed exteriorly of the compartment, a sector shaped plate in said compartment behind the opening and rigidly connected to the shaft, an arcuate series of dissimilarly colored transparent disks carried by the plate for separate coaction with said opening, a spring connected to the crank for holding the shaft so that normally one of the disks registers with the said opening, and a brake pedal actuated means connected to the crank for moving the plate against the action of the spring so that various adjustments of the brake pedal when operated by the foot of the driver will adjust the plate into different positions with respect to the opening to display different colors therethrough.

1,577,114. OIL BURNER. CHARLES L. DE WALT, Worcester, Mass., assignor of one-half to Winfred S. Griffith, Worcester, Mass. Filed Sept. 9, 1924. Serial No. 736,783. 5 Claims. (Cl. 158—76.)

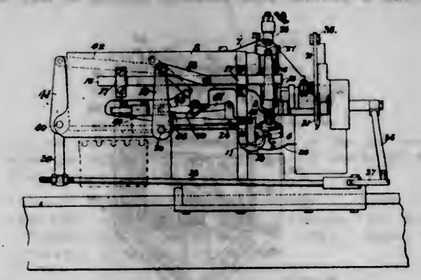


2. In a liquid fuel burner the combination with an air chamber adapted to be connected with a source of air under pressure, a fuel pipe located in said chamber and extending along it, a series of tubes extending from the fuel pipe through the wall of the air chamber and outwardly therefrom, each having a small perforation in the end, and a series of air casings communicating with the main air casing and each one surrounding a fuel tube, said air casings having means for directing air through the paths of the fuel to spray the fuel, and being inclined to the horizontal and converging to cause the several jets of air to project toward each other.

1,577,115. RADIATOR CORE. NICHOLAS S. DIAMANT, Lockport, N. Y. Filed Aug. 3, 1921. Serial No. 489,463. 9 Claims. (Cl. 257.)

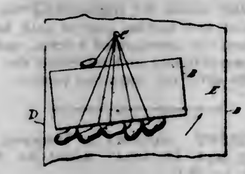
1. In a radiator, the combination of tubes for the medium to be cooled, radiating fins which engage said tubes to conduct heat therefrom, the portions of said fins which are arranged between adjacent tubes being imperforate, said fins being bent to form a plurality of pairs of equal, oppositely disposed faces, a single bent edge separating each of said faces from an adjacent face, and means at the edges of said fins for spacing said fins so that the bent edges of each fin are arranged in immediate proximity to the bent edges of adjacent fins to form air passages of substantially diamond shaped cross section.

1,577,116. SHIRT ANTICREEPER. DARSIE E. EDWARDS, Clinton, Mo., assignor of one-third to Carroll O. Edwards, Clinton, Mo. Filed Mar. 3, 1925. Serial No. 12,859. 2 Claims. (Cl. 241—1.)



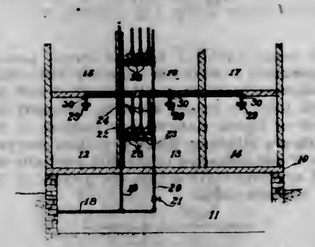
1. A device of the character described consisting of a leg band, an element secured thereto and having a slotted arched upper portion, a strap folded into V-form and running through the slotted portion of said element and extending upwardly therefrom, and fastening devices at the upper portions of said strap for detachable engagement with the lower portion of a shirt to keep the same from creeping upwardly.

1,577,117. APPARATUS FOR MAKING YARN RUGS AND SUCH LIKE. WILLIAM FELTON, Radcliffe, and CHARLES WILLIS, Pendleton, England. Filed Aug. 17, 1925. Serial No. 50,684. 9 Claims. (Cl. 112—9.)



1. In apparatus for making yarn rugs and such like provided with an attaching needle having an oscillatable gripper jaw and with plunger mechanism for looping the yarn, the combination of an actuated member movably mounted on the machine and an aperture in the said

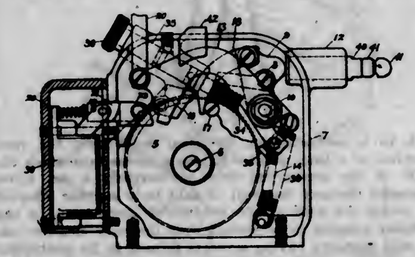
member to receive the loop formed by the plunger mechanism with a finger fixed to the apparatus and cooperating with the member to keep a part of the loop



out of the path of the needle whilst the said member brings the free ends of the yarn into position across the path of the attaching needle for being gripped by the said needle.

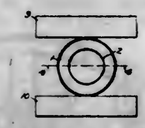
1,577,118. COCOON-UNWINDING DEVICE. VITTORIO FIORUZZI, Piacenza, Italy. Filed May 4, 1923. Serial No. 636,684. 2 Claims. (Cl. 19—3.)

1. Apparatus for culling nearly exhausted cocoons from fresh cocoons comprising a vessel arranged for the passage of a current of water therethrough, means to obstruct the passage of cocoons with said current and to form a channel at one side of said obstructing means, and means to draw the threads from the cocoons to cause fresh cocoons to lie against the upstream side of the obstructing element until they are nearly exhausted and to cause nearly exhausted cocoons to pass thereover, the current formed at one side of said obstructing element serving for the passage of cocoons which become detached by the breaking of their threads.



1,577,119. FIRE-EXTINGUISHING SYSTEM. VITO GLISCE, Waterbury, Conn. Filed Feb. 5, 1924. Serial No. 690,739. 4 Claims. (Cl. 169—16.)

1. In a fire extinguishing system for a building, a source of water supply, a water feed pipe and an auxiliary valve-controlling pipe connected to said source of water supply, a plurality of sprinkler units connected to said feed pipe, hand-operated valves for controlling the flow of water from said feed pipe to said sprinkler units respectively, said valves having operating members, nozzles on said auxiliary pipes in alinement with said operating members, said valves being simultaneously operated by a plurality of water jets from said nozzles when water is admitted to said auxiliary pipe.



1,577,120. [WITHDRAWN.]

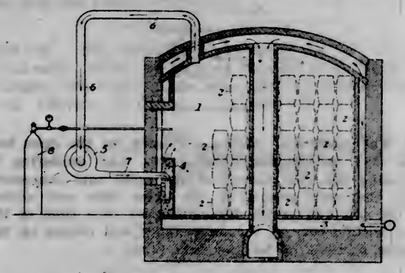
1,577,121. AUTOMATIC CONTROL DEVICE. MAXWELL H. HILL, Rochester, N. Y., assignor to Gleason Works, Rochester, N. Y., a Corporation of New York. Filed July 27, 1925. Serial No. 46,387. 8 Claims. (Cl. 192—139.)

1. In an automatic control device, a ratchet wheel, indicating means, means for initially setting said ratchet wheel thereby, a pawl for advancing said ratchet wheel, a movable member, a trip means connected to said pawl for movement therewith and means carried by the ratchet wheel for actuating said trip means into engagement with said movable member to move the same when the ratchet wheel reaches a position determined by its initial setting.

1,577,122. METHOD OF CLOSING COLLAPSIBLE TUBES. NEVIL MONROE HOPKINS, New York, N. Y., assignor to New-Mix Products, Inc., New York, N. Y., a Corporation of Delaware. Filed Oct. 1, 1923. Serial No. 666,000. 3 Claims. (Cl. 113—1.)

1. The method of making a closure for the open bottom of a bicompartment collapsible tube consisting in disposing the open bottom of the inner tube concentric with the open bottom of the outer tube and nearer to the exit end of the bicompartment tube than is the open bottom edge of the outer tube; and rolling up the bottom portions of both of said tubes.

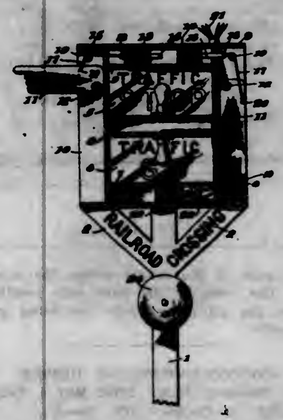
1,577,123. CONNECTER FOR ELECTRICAL CONDUCTORS. WILLIAM C. HUNT, Toronto, Ontario, Canada. Filed June 19, 1924. Serial No. 720,892. 4 Claims. (Cl. 173—268.)



1. In a connecter for electrical conductors, the combination of a body member in which the ends of the conductors may be secured; a cap adapted to be sleeved over the body member, said body member having grooves formed at opposite sides thereof and a passage connecting said grooves and said cap having a recess formed in its interior surface; and a U-shaped spring retainer extending through said passage, the legs of the retainer extending through said passage, the legs of the retainer

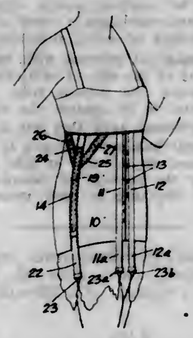
lying partially in the grooves and their ends normally engaging in said recess to prevent the separation of the cap and body member in a direction away from the conductors.

4. In a connecter for electrical conductors, the combination of a body member having a recess into which the ends of the conductors may be inserted; a set screw threaded through the wall of said body member adapted to clamp the ends of the conductors in position; a cap member adapted to be sleeved over the body member, one of said members having a recess formed in its contacting face; a spring retaining member mounted on the other of said members tending to extend into said recess to positively prevent the separation of the body member and cap member in a direction away from the conductors, said cap being formed with a removable head whereby when the head is removed the remainder of the cap may be slipped over the body member on to the conductors to permit access to the set screw.



1,577,124. REFRACTORY ARTICLE AND PROCESS OF MAKING THE SAME: ARTHUR J. JACKMAN, Forest Hills Borough, Pa., assignor to Vesuvius Crucible Company, Swissvale, Pa., a Corporation of Pennsylvania. Continuation of application Serial No. 641,754, filed May 26, 1923. This application filed Aug. 2, 1924, Serial No. 729,817. 26 Claims. (Cl. 25—157.)

1. As a new article of manufacture, a refractory article consisting principally of graphite and a vitrifiable ceramic bond, and burned prior to use to a temperature above the vitrification point of the bonding material.

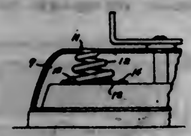


1,577,125. RAILROAD-CROSSING SIGNAL. JOHN W. JACKSON, Detroit, Mich., assignor of one-half to Ada Alberta Jackson, Brighton, Mich. Filed Apr. 9, 1923. Serial No. 630,782. 2 Claims. (Cl. 246—125.)

1. A railroad crossing signal comprising a post mounted at one side of a railroad crossing, a casing supported on said post, an upper and lower compartments having glass covers on the front and rear thereof and having indicia thereon, electric bulbs positioned in said compartments for illuminating the indicia, a pocket formed on each end of said casing, a movable hand normally received in each of

said pockets, and means for illuminating the indicia in one compartment and moving one of said hands so as to be visible upon the approach of a train, and illuminating the other compartment and returning the hand so as to not be visible after the train has passed.

1,577,126. CORSET. AUGUSTA S. JOHNSON, Brooklyn, N. Y. Filed Sept. 13, 1924. Serial No. 737,546. 2 Claims. (Cl. 2—36.)



1. In a corset having a body of elastic material, at selected portions a vertically disposed strip, for reinforcing purposes, made of elastic material and fastened to the said body by zig-zag stitching, obliquely disposed strips made of elastic material and fastened to the said body by zig-zag stitching, forming pockets therewith, at both sides of and connected to the said vertically disposed strip, and auxiliary stays within the pockets of the said obliquely disposed strips.

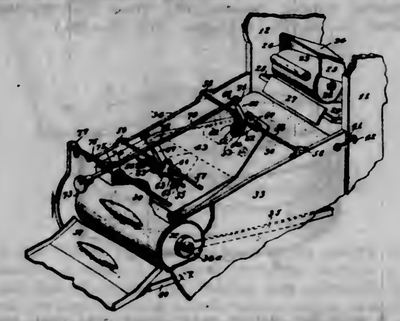
1,577,127. ATTACHMENT FOR SADIRONS. JOSEPH D. KALTENBACK and JOHN STOLL, San Francisco, Calif. Filed Oct. 24, 1923. Serial No. 670,592. 2 Claims. (Cl. 73—118.)

1. In an electric sad iron, a casing, within said casing a thermally controlled device comprising a helical thermal coil having an upward turn whose end portion

is directed toward the axis of the coil and flattened so as to constitute an effective visual indicator when the coil is expanded axially, said casing having an aperture

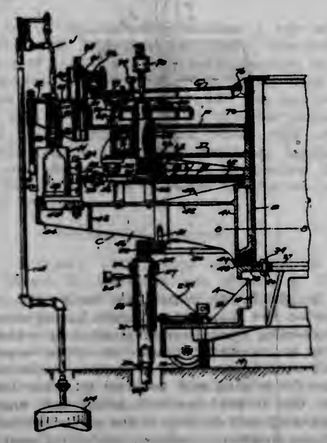
towards which the flattened portion of the coil moves when the coil is expanded and through which the flattened portion may be viewed.

1,577,128. AUTOMATIC GATE. GEORGE W. KING, Burrton, Kans. Filed Dec. 19, 1924. Serial No. 756,915. 2 Claims. (Cl. 39—35.)



1. In combination, a pair of posts, a gate hinged to one post, latch means associated with the other post and the free end of the gate, a shaft on the hinged end of the gate, a segmental plate keyed to the shaft, a lever rotatably mounted on the shaft, a chain leading from the lever to the latch means, a plunger slidable on the lever, the arcuate plate having a notch engageable by the plunger, a spring normally holding the plunger out of engagement with the notch, an arm pivoted to the lever, a link connecting one end of the arm with the plunger, a chain attached to the other end of the arm, and means for pulling the last chain, thereby swinging the arm and engaging the plunger in the notch, at the same time swinging the lever to pull the first chain so as to release the latch means and as the last chain is further pulled, the lever locked to the segmental plate by the plunger will rotate the shaft and swing the gate, means for releasably latching the gate in open position, and spring means for closing the gate.

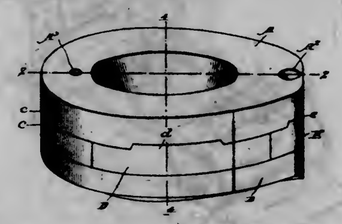
1,577,129. DOOR HOLDER. THOR KNUTSON, Minneapolis, Minn. Filed Mar. 8, 1924. Serial No. 697,742. 3 Claims. (Cl. 292—76.)



1. An article of manufacture having in combination, a comparatively flat plate adapted to be secured to the floor and spaced therefrom at its intermediate portion, said portion having a substantially circular aperture therethrough, a resilient means secured to the lower side of said plate, a rounded member secured to said means and projected upwardly into and through said aperture by said means, said member substantially fitting said aperture and being limited in its upward movement by the wall of said aperture and said plate having an upstanding shoulder adjacent said aperture.

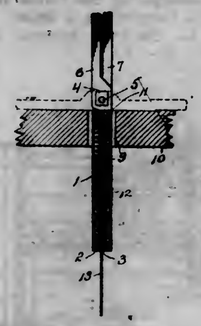
1,577,130. MACHINE FOR MOLDING BREAD LOAVES. RAYMOND J. LABEYRIE and FRANK A. IAVAGNILIO, Torrington, Conn. Filed Jan. 18, 1923. Serial No. 613,517. 1 Claim. (Cl. 107—8.)

In a machine for producing bread loaves having conical ends, a frame, a conveyor belt mounted to travel in said frame and adapted to receive successive lumps of dough, a shaper plate mounted in said frame above said belt, said plate having a lower generally flat face with a rear central concave portion which increases gradually both in depth and width from the front to the rear, the surface of the plate being imperforate, and said plate having a shallow recess in the rear edge thereof, said concave portion merging into said recess, the rear portion of said plate lying between said concave portion and the sides of the plate being wedge-shaped in longitudinal cross section.



1,577,131. BOTTLE MACHINE. RICHARD LA FRANCE, Toledo, Ohio, assignor to The Owens Bottle Company, Toledo, Ohio, a Corporation of Ohio. Filed May 24, 1919, Serial No. 299,430. Renewed Mar. 21, 1924. 7 Claims. (Cl. 49—18.)

5. In a bottle machine, the combination of divided molds, means to cause the molds to travel continuously in a closed path, automatic means for opening and clos-

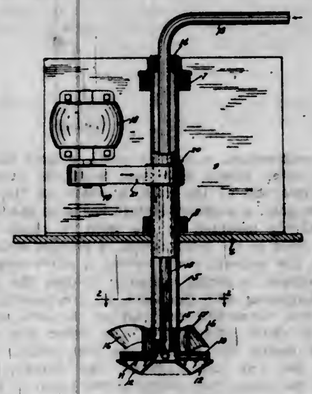


ing said molds at definite points in their travel, a blow-head, automatic means for bringing said head into engagement with said molds and causing it to travel with the molds for short periods when said molds are closed, and means actuated in response to the movement of said head to firmly lock the molds in position by their engagement with said head.

1,577,132. MOLD FOR WATER-CLOSET-BOWL RIMS. ALFRED V. LAWTON, Decatur, Ill., assignor to Adolph Mueller, trustee, Decatur, Ill. Filed June 27, 1925. Serial No. 39,978. 6 Claims. (Cl. 25—129.)

1. A mold for casting water closet bowl rims, comprising superposed outer and intermediate sections, the intermediate section contacting with one of the outer sections including a plurality of members and being engaged with said outer section by means permitting separation of said sections by lateral movement of the members of the intermediate section, the other outer section being engaged with the contacting intermediate section by means permitting relative movement between said sections in a vertical direction only.

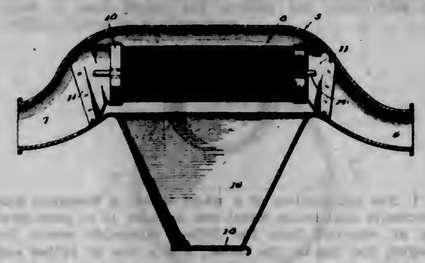
1,577,133. PLUMB-BOB-SUPPORTING MECHANISM. MICHAEL J. LEARNIHAN, Kansas City, Mo. Filed Mar. 19, 1923. Serial No. 626,030. 6 Claims. (Cl. 248—30.)



1. In a plumb bob supporting mechanism, a fulcrum member, two supporting members having means pivotally connecting them to said member by which they may swing by gravity in opposite directions respectively from the perpendicular to the horizontal, releasable holding means for holding said members in either the horizontal or the vertical position, plumb bob supporting means engaging said holding means and arranged when moved in one direction, to release the holding means from said supporting members, and means for automatically retracting said holding means to the holding position, substantially as set forth.

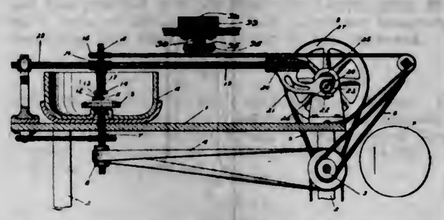
1,577,134. PAD FOR ARTIFICIAL TEETH AND METHOD OF PREPARING SAME. DANIEL G. MACKINNON, New Bern, N. C. Filed Feb. 2, 1925. Serial No. 6,370. 8 Claims. (Cl. 32—4.)

1. A pad or cushion to be worn between the gums and lower plate of artificial teeth comprising a roll of cotton bent into U-shape to fit the contour of the plate and formed at its middle portion with a lip adapted to fit over the inner edge of the plate, said lip being treated with a hardening agent to retain its form.



1,577,135. DEVICE FOR REDUCING FLUID MATERIALS TO POWDERED FORM. JOHN C. MACLACHLAN, Chicago, Ill., assignor, by mesne assignments, to Pure Products Company, Chicago, Ill., a Corporation of Illinois. Filed Mar. 19, 1919, Serial No. 283,587. Renewed Nov. 28, 1924. 3 Claims. (Cl. 159—4).

1. A rotary spraying head adapted to be disposed in a hot air chamber having in combination, a lower outwardly and upwardly flaring discharge member, a plurality of downwardly curved fan blades disposed thereabove and extending beyond the edge thereof in proximity thereto, adapted to direct a blast of air downwardly about the edge of said member, and a delivery member for said discharge member located between said flaring member and fan blades comprising a plurality of radial arms with downwardly extending outlet portions, which portions extend below the edge of the flaring member.

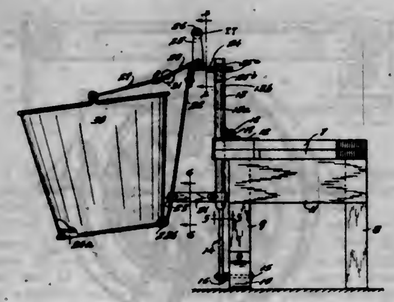


1,577,136. MATERIAL-HANDLING APPARATUS. JOHN MARKMAN, Forreston, Ill. Filed May 12, 1925. Serial No. 29,819. 4 Claims. (Cl. 209—250.)

1. A material handling apparatus comprising a body having inlet and outlet branches and bends defining an offset intermediate portion, a rotatable screen of cylindrical formation arranged in the offset intermediate portion of the body between the inlet and outlet branches, combined supporting and guide members of tubular formation having rotatable connection with the ends of said screen and supporting the same and being rigidly mounted in the ends of said offset portion and guiding the ma-

terial, and a drive shaft connected to said screen and extended thru and supported by the ends of said offset portion.

1,577,137. LENS-GRINDING MACHINE. ALBERT E. MAYNARD, Southbridge, Mass., assignor to American Optical Company, Southbridge, Mass., a Voluntary Association of Massachusetts. Filed Aug. 22, 1921. Serial No. 494,346. 4 Claims. (Cl. 51—133.)



2. The combination with a rotating lens grinding lap, of means operatively connected thereto for driving the lap, a revoluble eccentric pin carrying spindle opposed endwise to the approximate center of the lap, means operatively supporting said spindle and operatively connected with the lap driving means, and acting to shift the spindle in a direction longitudinally of the machine at right angles to the axis of the lap, means operatively connected to the lap driving means and the spindle supporting means, the latter connection causing the spindle to shift transversely of the machine at right angles to the axis of the lap, the shifting of the spindle causing the eccentric pin to move the lens block in a circuitous path, and means for varying the lateral shifting of the spindle for altering the circuitous path of the lens block.

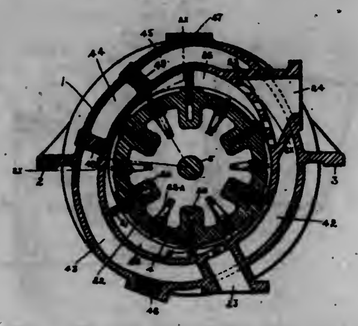
1,577,138. FASTENER. WILLIAM CLARKE S. MAYS, Edgewood, R. I., assignor to Mays Manufacturing Company, Inc., Providence, R. I., a Corporation of Rhode Island. Filed July 25, 1925. Serial No. 46,010. 3 Claims. (Cl. 24—102.)

1. A cuff fastener formed of a thin strip of bendable metal having a bridge portion lying in substantially a single plane, longitudinally extending arms arranged at an angle to said bridge portion, said bridge portion being bent or offset sharply from said arms and weakened at the bend rendering further bending of the arms where they connect the bridge portion more responsive to bending pressure than either said arms or bridge portion.

1,577,139. MILKING STOOL AND PAIL HOLDER. WILLIAM MILREATH, Lakefield, Minn. Filed May 18, 1925. Serial No. 29,947. 5 Claims. (Cl. 31—57.)

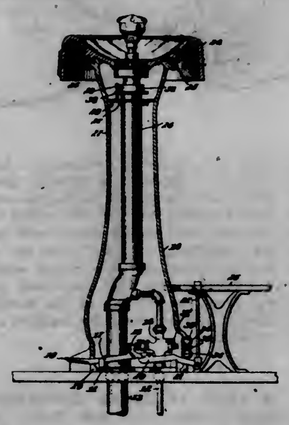
2. A pail holder and milking stool device having in combination, a stool, a standard vertically movable at one end thereof, means for holding said standard in different vertical positions, a pail holding means carried by said standard including a means swingable about a horizontal axis and having spaced portions engaging the bail of the pail, and means engaging under the edge of said pail.

1,577,140. DEHORNING IMPLEMENT. ISAAC NEWTON MITCHELL, Lolita, Tex. Filed Oct. 8, 1924. Serial No. 742,472. 5 Claims. (Cl. 128—308.)



1. In a tool of the character described, a jaw having an integral handle, a second jaw pivoted intermediate its ends to said handle, a second handle pivoted to said handle and constituting a lever of the second class, and a connection between said second handle and one end of the second jaw comprising a pivotal cross bar connected at one end to the second jaw and whose other end is movable with respect to the first mentioned handle toward and away from the fulcrum of the handles to increase the throw of the jaw when the handles are moved about their fulcrum.

1,577,141. ROTARY INTERNAL-COMBUSTION ENGINE. HUGH D. MORRISON and FRANK B. WEBB, Rochester, N. Y. Filed Dec. 6, 1920. Serial No. 428,779. 1 Claim. (Cl. 123—16.)

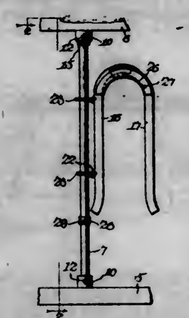


In a rotary engine, the combination of a hollow casing, a flange provided at each end of said casing on the outside thereof, a channel formed between said flanges and said casing, a ring mounted in each of said channels and forming a second channel at each end of said casing, a rotor mounted to rotate within said hollow casing, a pair of parallel flanges provided at each end of said rotor, one of each of said flanges being adapted to engage into said second channels formed in said casing and the other of each of said pair of flanges on said rotor being adapted to make frictional contact with the out-

side of said ring carried at each end of said hollow casing, piston blades mounted to slide in said rotor, and shallow pockets formed in the periphery of said rotor between said piston blades, spark plugs projecting through

said rotor into each of the pockets formed in the periphery thereof, the outline of the inside of said hollow casing being such as to compress and confine an explosive charge in said shallow pockets in the rotation of said rotor.

1,577,142. DRINKING-FOUNTAIN PEDESTAL. PHILIP MUELLER and ANTON C. SCHUERMANN, Decatur, Ill., assignors to Adolph Mueller, trustee, Decatur, Ill. Original application filed Nov. 12, 1919, Serial No. 337,490. Divided and this application filed Apr. 30, 1923. Serial No. 635,590. 2 Claims. (Cl. 137—18.)

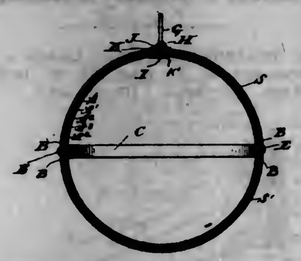


1. A pedestal for drinking fountains having a hand hole provided with vertically disposed bar receiving slots, the inner wall of said pedestal having diametrically opposed stop lugs positioned at substantially right angles to said slots, a curved cover plate for said hand hole having a central recess formed in its outer face, a locking bar having an outwardly disposed arch and adapted to pass through the slots in said pedestal and engage said lugs, and a coupling bolt threaded in said bar and freely rotatable in said plate, the head of said bolt arranged to lie wholly within said recess.

1,577,143. CUSHION TIRE. THOMAS C. MUSSEN, Toronto, Ontario, Canada. Filed Nov. 7, 1924. Serial No. 748,456. 5 Claims. (Cl. 152—8.)

1. The combination of a wheel felloe; a U-shaped substantially continuous metal rim adapted to be positioned on or removed from the felloe; releasable means for locking the rim on the felloe; and a tire of rubber and fabric built up on the rim and bridging the opening therein.

1,577,144. COW STANCHION. CARL M. OLSON, Kilbourn, Wis. Filed Aug. 24, 1925. Serial No. 52,065. 4 Claims. (Cl. 119—147.)



4. In a cow stanchion, the combination with an upright supported at its ends for back and forth adjustment, of a depending spring secured to the upper end of said upright and deflected at its lower end towards the same, for engaging one of the connections between the yoke and upright when said yoke is elevated, an inverted U-shaped yoke having laterally disposed connections loosely connected to said yoke and loosely engaging said upright, said yoke being made of two cross-sectional U-shaped pieces adjustably joined together at their upper ends, and a shield mounted so as to cover the lower portion of the juncture of said pieces.

1,577,145. REENFORCED HIGH-PRESSURE FLOAT AND PROCESS OF MANUFACTURING THE SAME. GEORGE W. OSBORN, Cleveland, Ohio. Filed Feb. 13, 1925. Serial No. 8,922. 8 Claims. (Cl. 137—104.)

2. The hereinbefore described process of constructing a high pressure sheet metal float, consisting in forming two semispherical bodies by first spinning a pair of semispherical segments from sheet metal, and thereafter spinning and superimposing thereon similar semispherical sheets of metal closely fitted to the same and to each other, until a number of independent laminations have been assembled, next bevelling outwardly the edges of the semispherical portions in each semisphere thus constructed when assembled together, approximating said edges of said pair of semispheres together and inserting the horisontal flange of a T shaped ring between them, introducing welding metal into the annular V shaped cavities thus formed between said edges and said flange and integrally uniting the same at a

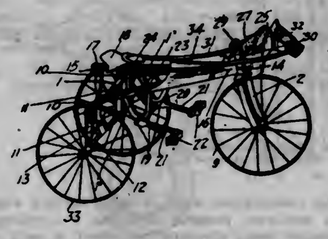
welding heat with said edges and with the sides of said flange and finally forming an external annular crown or bead by applying molten welding metal over the outer edge of said flange and uniting the same with the welding metal in said recesses.

5. A laminated hollow sheet metal float, composed of semispherical hollow bodies, each body being composed of an inner semispherical sheet metal member and closely fitting outer sheet metal laminations superimposed thereon, and a central reenforcing ring to which the edges of said laminations in said bodies are secured, said ring being provided with a central outwardly projecting flange passing between the edges of said segments, and also provided with lateral members overlapping the inner sides of said segments, and means for integrally connecting said ring to the edges of said segments.

1,577,146. MUD-GUARD BRACKET. EWALD F. PAWSAT, Maysville, Ky., assignor to Wald Manufacturing Company, Maysville, Ky., a Corporation of Kentucky. Filed Feb. 24, 1925. Serial No. 11,281. 2 Claims. (Cl. 208—141.)

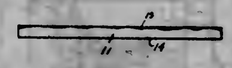
1. In combination with a mud guard bracket provided with a bolt hole intermediate its ends, a re-enforcing plate adapted to be assembled with said bracket, said plate being provided with a bolt hole adapted to register with the hole in said bracket when assembled, two pairs of opposed flanges at the ends of said plate arranged to grip said bracket to secure the plate thereon, and a pair of opposed flanges intermediate the pairs of opposed end flanges, said intermediate flanges being adapted to extend in substantially parallel relation with the edges of said bracket on opposite sides of said bolt holes.

1,577,147. TRUSS. ISAAC M. PRASS, Cincinnati, Ohio, assignor to The Ohio Truss Company, a Corporation of Ohio. Filed Feb. 2, 1925. Serial No. 6,336. 2 Claims. (Cl. 128—104.)



1. In a truss, in combination with a spring and a supporting member, the ends of said spring and member being adapted to overlap, a sleeve arranged to encircle said ends, and studs adapted to be inserted in the ends of the spring and member beyond opposite ends of the sleeve for securing the parts together.

1,577,148. FLY-CATCHING DEVICE. LOUIS A. PICAL, Parma, Ohio. Filed Mar. 27, 1925. Serial No. 18,745. 7 Claims. (Cl. 43—111.)

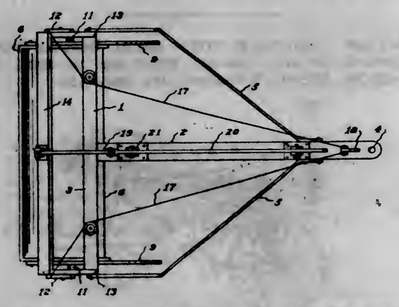


1. A device of the character described comprising a casing having an enlarged opening therein, a roller rotatably mounted at each end of said casing, a belt trained about said rollers and lying below said opening, means attached to one of said rollers for rotating the same in order to turn the belt, a drawer arranged in one end of said casing for containing a liquid adhesive, an adhesive roller positioned in said drawer, and spring means engaging said roller for holding the same in contact with said belt in order to apply adhesive thereto during the turning of said belt.

1,577,149. TRICYCLE TOY. HENRY STANLEY PLAIN, Toronto, Ontario, Canada. Filed Aug. 19, 1925. Serial No. 51,219. 3 Claims. (Cl. 208—42.)

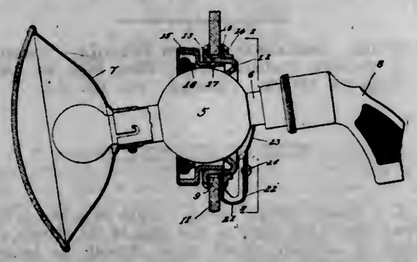
1. A tricycle toy comprising a front steering wheel and a pair of rear driving wheels, a fork in which the front wheel is mounted provided with a steering post in which the fork is journalled, a triangular frame connected at its apex to the steering post, a shaft extending between the rear driving wheels, a bar pivotally mounted in the main frame at its apex, a saddle mounted upon the free end of the bar, a rock shaft, means for supporting the rock shaft from the main frame, pedal arms and pedals mounted upon the rock shaft, means operated by alternate pressure upon the pedals and saddle for driving the rear wheels, and means for controlling the direction of the steering wheel.

1,577,150. IMITATION SHAKE SHINGLE. CHARLES E. PUTMAN, Portland, Oreg. Filed Sept. 24, 1924. Serial No. 739,630. 2 Claims. (Cl. 108—8.)



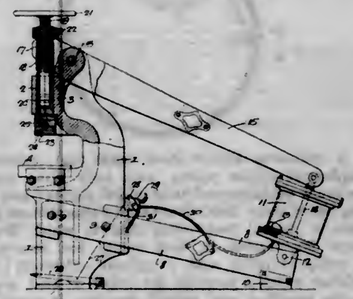
1. A tapered shingle having a plane back and a face plane toward the upper or thin edge of the shingle and fluted in smoothly curved waves thruout the exposed area toward the thick edge, whereby the thicker portions when laid as a roof or wall will simulate shake shingling and the thinner portions will insure airtightness.

1,577,151. ELECTRIC LIGHT. RICHARD C. ABBLT, Jr., Argonne, Wis. Filed Apr. 11, 1925. Serial No. 22,412. 1 Claim. (Cl. 176—26.)



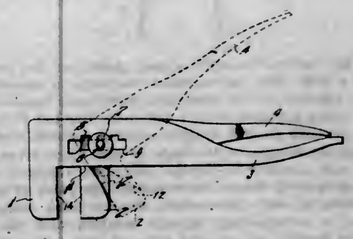
An electric light comprising a bulb, an outer contact, an inner contact, a double filament, a main lead connected to both filaments and to the inner contact, an auxiliary lead permanently connecting one filament to the other contact, an auxiliary lead connected to the other filament and having its one end free and means for connecting said free end to the outer contact, said bulb having a recess for housing the free end of said second auxiliary lead.

1,577,152. SCRAPER HITCH. JOHN ADAMS and WILLIAM H. ADAMS, Burlington, N. J. Filed Nov. 7, 1923. Serial No. 673,319. 3 Claims. (Cl. 37—140.)



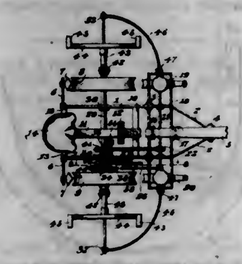
1. The combination with an earth moving scraper, of a hitch structure therefor including a coupling frame, said scraper being pivotally connected to said coupling frame, a movable frame pivotally supported relative to the scraper and the coupling frame, runners attached to said scraper, pawls pivotally carried by said movable frame, said runners provided with notches adapted to receive said pawls for holding the scraper in rigid adjusted positions.

1,577,153. MOVEMENT-LIMITING DEVICE FOR SPOTLIGHTS. GEDOR W. ALDEEN, Rockford, Ill., assignor to Fyrac Manufacturing Co., Rockford, Ill., a Corporation of Illinois. Filed Feb. 15, 1924. Serial No. 692,976. 4 Claims. (Cl. 240—61.)



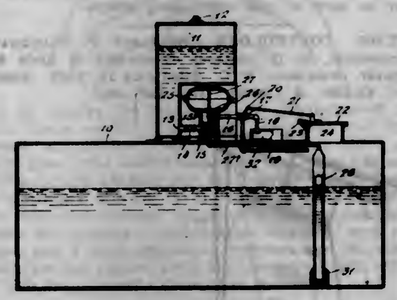
1. In combination, a support having an opening, a housing secured to the support around the opening by means including a threaded part passing through the opening and a ring-nut threaded on said part and adapted to be tightened thereon for clamping said housing to said support, a spotlight-carrying device mounted on said housing for directional movement, a stop and a stop-supporting ring positioned on said housing and clamped therewith to the support by said ring-nut.

1,577,154. PIG-IRON BREAKER. ARTHUR A. AMBLER, New Brunswick, N. J. Filed Feb. 27, 1923. Serial No. 621,629. 10 Claims. (Cl. 29—66.)



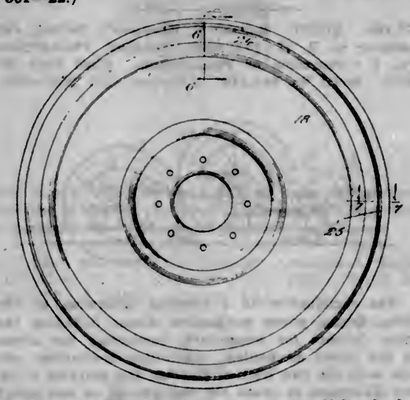
1. The combination in a breaking machine, of a frame having a floor engaging foot spaced rearward from the main body thereof; two separated supports thereon for a body to be broken; a vertically reciprocable head operative in a line between said supports; a guide for the head; a breaking tool carried by the head; and a lever pivoted to the frame for actuating said head to cause the tool to break a body mounted on the supports; and a motor for operating the lever connected with the frame at a point closely adjacent the said foot.

1,577,155. WRENCH. JOHN ANDERSON, Lincoln, Kans. Filed Oct. 21, 1924. Serial No. 744,941. 1 Claim. (Cl. 81—83.)



A wrench comprising cooperating jaw members both having handle elements, one of which elements is provided with a longitudinally disposed elongated slot with one straight edge and with the other edge provided with spaced notches, and a stud having a body portion of substantially elliptical form in cross section with its major diameter disposed transversely of the handle element when the jaws are in parallelism, said body portion of the stud being adapted to selectively engage in any one of the spaced notches, the jaw member which is a part of the handle element carrying the stud being provided with a shoulder abutting a longitudinal edge of the other handle element when the jaws are in parallelism and being further provided with a cut away portion on one side face and having an inclined wall abutting the edge of the handle element having the slot when the jaws are disposed at an angle of divergence, the body portion of the stud in such position being disengaged from the notches and with the major diameter of the stud at an inclination to and having a sliding bearing on the straight edge of the slot.

1,577,156. PLANTER. LUDWIG ASCHE, Leigh, Nebr. Filed Nov. 7, 1925. Serial No. 67,583. 2 Claims. (Cl. 111—25.)

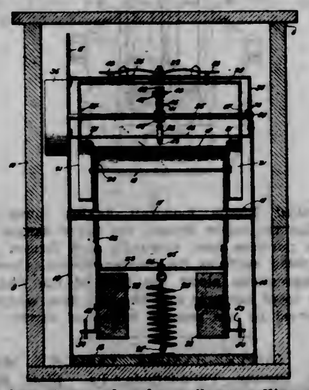


2. A planter of the type described comprising an axle, a revoluble wheel loosely mounted thereon, said wheel having the inner end of its hub toothed, a marker device fixed to the axle, a cam fixed to the axle and having one of its faces toothed for clutching engagement with said wheel in one direction and having its other face oppositely toothed, seed depositing devices including a shaft having a rock arm in the path of said cam, spring controlled means for normally urging said wheel and said cam together in driving relation when the machine is moving ahead, a toothed revoluble member loosely and slidably mounted on said axle and having a toothed face adapted to operatively engage the other face of said cam for rotation in the same direction, and means for revolving said member whereby the cam may be rotated past the one way clutch teeth of the wheel to provide for the adjustment of the cam and marker relative to the wheel.

1,577,157. METHOD AND DEVICE FOR TREATING LIQUIDS. EARL A. AVERILL, Mount Vernon, N. Y., assignor to The Superheater Company, New York, N. Y., a Corporation of Delaware. Filed Dec. 5, 1924. Serial No. 754,156. 17 Claims. (Cl. 210—29.)

1. An apparatus of the class described, comprising a tank, a metering pipe communicating with the interior of said tank, a measuring vessel the top of which is connected with said metering pipe, a reservoir open to the outside air located at a lower level than said vessel and having a connection discharging into the tank, a pipe connecting the lower portion of said vessel with said reservoir at a point below its discharge connection, said pipe, measuring vessel and metering pipe forming a unit closed to the outside air, a supply pipe leading to said reservoir at a point below its discharge connection, and a container to deliver liquid to the reservoir through said supply pipe.

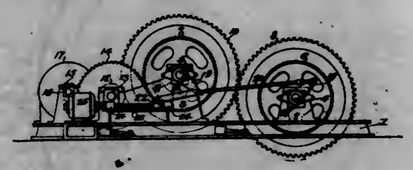
1,577,158. DEMOUNTABLE RIM STRUCTURE FOR WHEELS. WILLIAM BARBER, New York, N. Y. Filed Mar. 22, 1921. Serial No. 454,396. 12 Claims. (Cl. 301—22.)



1. In a demountable rim structure for disk wheels, a wheel disk having a hub portion and a fixed rim member, said fixed rim member having transverse depressions, means to receive different types of rims, and means for clamping the rims upon said fixed rim.

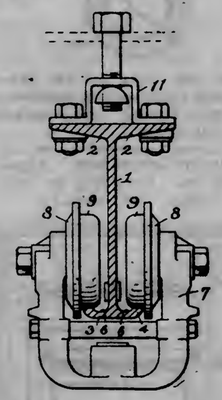
1,577,159. METALLIC REENFORCING CORE FOR GOLF-CLUB SHAFTS AND THE LIKE, AND METHOD OF MAKING THE SAME. HAROLD G. BARRETT, Wilmette, Ill., assignor to Barbarite Corporation, Chicago, Ill., a Corporation of Illinois. Filed July 17, 1925. Serial No. 44,225. 16 Claims. (Cl. 273—80.)

1. A shaft for golf clubs and the like comprising a plurality of wooden strips secured together, and a hollow longitudinally split metallic core contracted and surrounded by the said strips.



1,577,160. IMPACT RECORDER. JOHN B. BASKERVILLE, Roanoke, Va. Filed July 20, 1925. Serial No. 44,824. 11 Claims. (Cl. 234—1.)

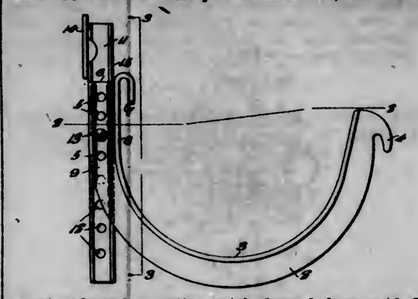
1. An impact recorder for railway rolling stock including mechanism carried by the rolling stock and embodying a movable record sheet holder and a time operated



marker, the record sheet impinging against the marker when impacts of predetermined intensity are sustained by the rolling stock.

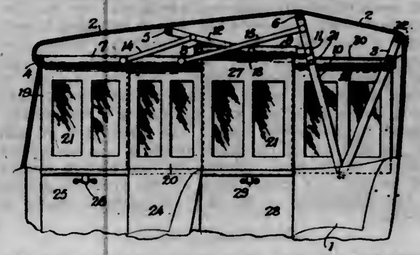
1,577,161. HOIST. ROBERT H. BEAUMONT, Radnor, Pa., assignor to R. H. Beaumont Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Sept. 30, 1921. Serial No. 504,346. 3 Claims. (Cl. 254—185.)

1. The combination in a hoisting apparatus, of two hoisting drums, power mechanism, means including two friction clutches for respectively connecting the drums with the power mechanism, controlling mechanism connected with the two friction clutches and movable in opposite directions to cause the engagement of one clutch and the release of the other clutch, and a reversible motor having a positively acting power connection with the said controlling mechanism to move it in either direction as desired, the said motor being constructed and adapted to stall when the said controlling mechanism reaches its limit of movement in either direction and the motor thereby serving to continue to apply force which serves to hold the corresponding friction clutch in engagement.



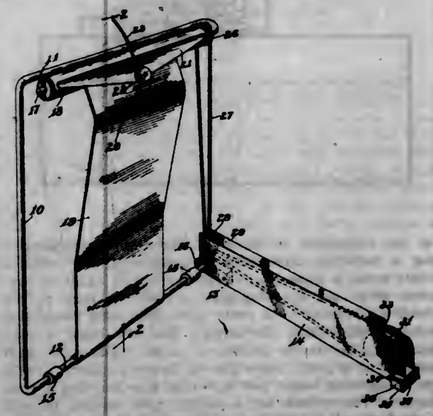
1,577,162. I-BEAM MONORAIL. EARL T. BENNINGTON, Cleveland Heights, Ohio, assignor to The Cleveland Crane and Engineering Company, Wickliffe, Ohio, a Corporation of Ohio. Filed July 6, 1925. Serial No. 41,462. 3 Claims. (Cl. 104—109.)

2. A rolled I-beam monorail having lower flanges shorter than the upper flanges, the lower flanges having their edge portions bent upwardly and formed to provide flat tread surfaces for carrier wheels, there being shallow depressions along the tops of the flanges between the tread surfaces and the web into which metal may be forced by the peening action of carrier wheels.



1,577,163. GUTTER-HANGER CIRCLE. MATTHEW RUSSELL BIMSON, Philadelphia, Pa. Filed May 13, 1925. Serial No. 29,887. 3 Claims. (Cl. 106—29.)

3. A gutter hanger circle comprising an integral flanged structure, whose flange forms a gutter seat, the heel part of which is perpendicularly arranged, a rib bent out from the heel part of said web, said rib being

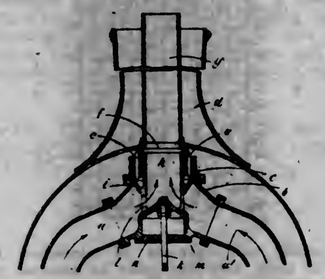


apertured, and a gutter catch formed from said flange, the material of the remaining part of the structure coextensive with the catch being sheared off.

1,577,164. AUTOMOBILE SIDE CURTAIN. LOUIS H. BISCH, Asheville, N. C. Filed Oct. 22, 1923. Serial No. 670,092. 3 Claims. (Cl. 296—143.)

3. In a collapsible top including supporting bows, a rigid side rail constituting a housing for a plurality of overlapping rollers, a roller housing pivoted at one end to said side rail and at its other end to a bow, said side rail and roller housing forming part of the top supporting frame, a roller in said roller housing overlapping the adjacent roller in the side rail, and side curtains on each of said overlapping rollers.

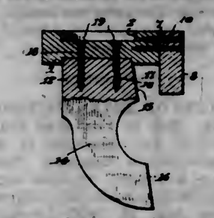
1,577,165. COPYHOLDER. BENJAMIN F. BLAKEMAN, Greensboro, N. C., assignor of one-half to Alvis W. Craver, Greensboro, N. C. Filed July 18, 1925. Serial No. 44,529. 6 Claims. (Cl. 120—30.)



1. In a copyholder, the combination of a U-shaped frame having substantially parallel legs arranged one above the other, a roller rotatably mounted on the upper leg and having a frictional surface, a spring plate secured to and extending upwardly from the lower leg and bearing against the roller to hold the copy, a line guide carried at the upper end of the plate, and means for rotating the roller in either direction to move the copy up or down.

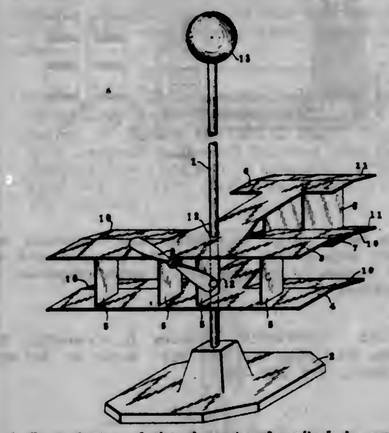
1,577,166. FIRE LIGHTER. CHARLES BLAMFIELD, Boston, Mass. Filed Sept. 16, 1925. Serial No. 56,631. 4 Claims. (Cl. 44—36.)

1. A fire lighter comprising two elongated members, and an elastic band confining them together, the band being attached to one of the members and provided with an anti-friction plate between it and the opposite surface of the other member, one of the members being adapted to carry an igniting element, and the other a friction surface, an elastic means for relatively sliding said member and thereby igniting said element, one of said members having a transverse notch, a stop adapted to enter said notch and thereby to hold the members in a set position, and means for causing said stop to discontinue its holding action after a predetermined lapse of time.



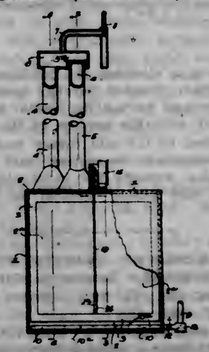
1,577,167. EXHAUST-PIPE NOZZLE FOR LOCOMOTIVES. EMILE BLUMS, Harburg-on-Elbe, Germany. Filed Nov. 3, 1925. Serial No. 66,568. 3 Claims. (Cl. 162—7.)

1. In devices for controlling the admission of exhaust steam to the chimneys of locomotives and other similar engines, the combination with two steam exhaust pipes, of a header connecting said pipes and comprising a valve chamber and an upwardly directed nozzle concentrically located in the chimney and including two concentric passages, an escape pipe connected to the nozzle and forming a continuation of one of said passages, and a valve adapted to reciprocate in the nozzle and cause the exhaust pipes to communicate with either or both the concentric passages of the nozzle.



1,577,168. PORTABLE COMBINED INK PAD AND SUPPORT. WILLIAM E. BOWERS, Baltimore, Md. Filed June 18, 1925. Serial No. 38,021. 1 Claim. (Cl. 248—20.)

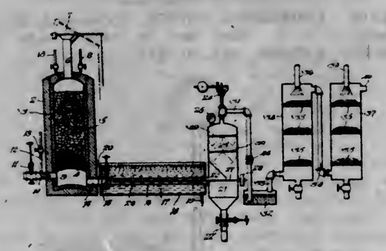
A support for an ink pad for mounting on the top edge of a receptacle comprising a substantially rectangular imperforate carrier having its upper face formed with a shallow pocket to receive the ink pad, a rectangular retaining member having its outer face positioned against and depending from the rear edge of said carrier, means for securing the upper portion of said member to the carrier, a combined supporting and locking member consisting of a head and an extension depending therefrom, said head mortised in the lower face of the carrier intermediate the ends of the longitudinal median thereof and having its rear edge spaced and inclining from the for-



ward face of said member, said edge inclining forwardly from the bottom of the head, and means for detachably securing the head and carrier together.

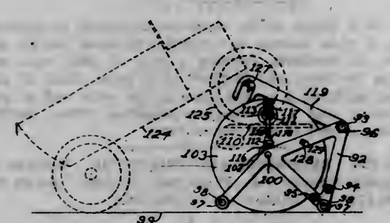
1,577,169. AMUSEMENT DEVICE. CHARLES A. BOYLE, Brooklyn, N. Y. Filed May 12, 1922. Serial No. 560,272. 3 Claims. (Cl. 46—14.)

1. In a device of the character described, in combination, a vane having downwardly-extending lifting surfaces, an extension forming a part of said vane and having its inner end disposed at a point short of said lifting surfaces, a second vane at the outer end of said extension, and a downwardly-extending lifting surface forming a part of said second vane.



1,577,170. RECORDER AND INDICATOR. HOWARD M. BROWN, Chester, Pa. Filed Mar. 17, 1920. Serial No. 366,476. 17 Claims. (Cl. 265—44.)

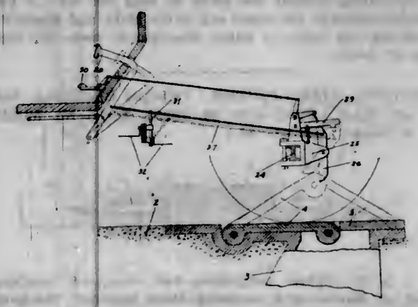
1. An indicator comprising an air-tight container having a movable wall dividing said container into two chambers, each chamber having an inlet and an exhaust



opening the exhaust openings being on the same level, means for producing similar suctions at the exhaust openings, and means for indicating the lateral displacement of the movable wall when gases of different densities are present in said chambers respectively.

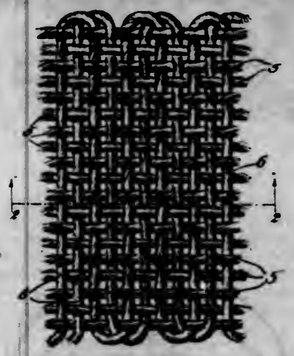
1,577,171. PROCESS OF METAL CUTTING, WELDING, OR THE LIKE. ROY H. BROWNLEE and ROY H. UHLINGER, Pittsburgh, Pa., assignors, by mesne assignments, to Carbo-Oxygen Company, Pittsburgh, Pa., a Corporation of Delaware. Original application filed June 1, 1915, Serial No. 31,441. Divided and this application filed Aug. 13, 1925. Serial No. 49,958. 6 Claims. (Cl. 148—9.)

6. A metal cutting or welding flame comprising the mixture with oxygen of a gas the major portion of which consists of hydrocarbon.



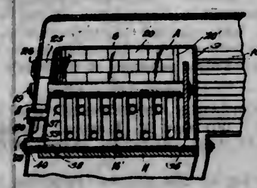
1,577,172. CONVEYER. HORACE L. CAMPBELL, St. Louis, Mo. Filed Jan. 31, 1924. Serial No. 689,638. 4 Claims. (Cl. 254—94.)

1. In a portable elevator, the combination of a rotary member; another member pivoted co-axially with said rotary member and having its pivotal movement limited by engagement with the surface of the road traversed; a holder pivoted to the said rotary member; and parallel-motion mechanism connecting said second member and said holder, whereby the inclination of said holder relatively to said second member is maintained constant.



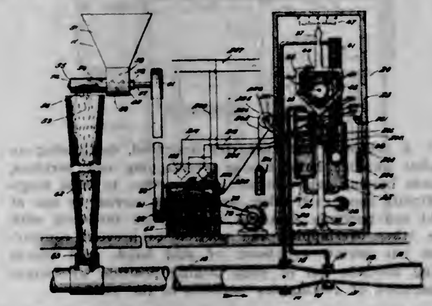
1,577,173. AUTOMATIC VEHICLE STOP FOR RAILROAD CROSSINGS. BENEDETTO CAPRA, Sacramento, Calif. Filed Aug. 11, 1925. Serial No. 49,675. 10 Claims. (Cl. 246—125.)

1. A safety-stop structure for a road vehicle at railway crossings, comprising a raisable unit mounted across the road and normally level therewith, means actuated by a train approaching the crossing for raising said unit, brake mechanism on the vehicle, a member mounted on the road vehicle for engagement with said unit when



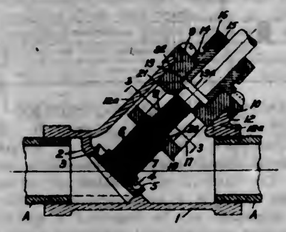
the latter is raised, and a connection between said member and the brake mechanism arranged to cause the brakes to be applied when said member engages the unit.

1,577,174. WASHCLOTH. RICHARD M. CHRISTENSEN, New York, N. Y. Filed June 24, 1925. Serial No. 39,198. 2 Claims. (Cl. 139—420.)



1. A wash cloth composed of interwoven twisted strands of hemp fiber, the twist of adjacent parallel strands extending in reverse directions.

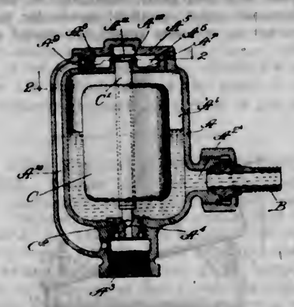
1,577,175. SMOKE AND GAS CONSUMING FIRE BOX FOR LOCOMOTIVES. JAMES A. CONNELL, Pittston, Pa. Filed July 11, 1925. Serial No. 43,014. 8 Claims. (Cl. 122—373.)



1. In a locomotive boiler, a plurality of flue tubes in the forward portion thereof, a crown sheet including a front wall receiving the flue tubes, a pair of sides, and a rear sheet, thereby forming a fire box, a grate supporting structure in the bottom of the fire box horizontally disposed, grates in the supporting structure, one to each side of the median longitudinal dimension thereof, a pair of water grates disposed vertically in the fire box and extending longitudinally thereof in spaced relation to form a combustion chamber therebetween, walls rising from the water grates to the top of the crown sheet, and a plurality of draft tubes communicating the sides of the fire box with the exterior, and a baffle plate disposed in the fire box to the front of the combustion chamber and to the rear of the plate supporting the ends of the flue tubes.

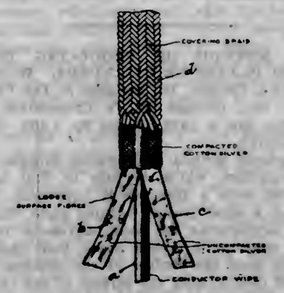
1,577,176. VARIABLE-SPEED DEVICE. FREDERICK N. CONNET, Providence, R. I., assignor to Builders Iron Foundry, Providence, R. I., a Corporation of Rhode Island. Filed May 5, 1924. Serial No. 711,304. 17 Claims. (Cl. 210—29.)

1. An apparatus for feeding a material proportionately to the rate of flow of fluid in a conduit comprising in combination a constant-speed motor, a feeding device having a driving shaft, the rate of feeding thereof being proportionate to the driven speed of said shaft, and means to vary the speed transmitted to said shaft proportionately to the rate of flow of fluid in said conduit.



1,577,177. VALVE. RUDOLPH CONRADER, Erie, Pa. Filed Dec. 12, 1924. Serial No. 755,399. 2 Claims. (Cl. 251—47.)

1. In a valve, the combination of a body having an inclined seat and an inclined bonnet projection; a valve disc operating on the seat; a screw extension on the disc; a screw-threaded stem having a screw connection with the extension; a bonnet on the bonnet projection in which the stem is rotatively mounted and locked against axial movement; and guiding means carried by the bonnet extending through the short side of the bonnet projection into the body and locking the extension against turning.

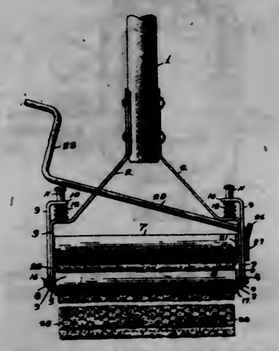


1,577,178. RADIATOR VALVE. JAMES CONROY, Chicago, Ill. Filed Dec. 22, 1921. Serial No. 534,334. 5 Claims. (Cl. 137—113.)

1. The combination of a radiator valve having a float chamber, water inlet and outlet ports communicating with such chamber, a float valve in such chamber, with a pair of independent air conduits communicating with such float chamber and with the discharge from the valve, one of such conduits lying within but normally

separated throughout its length from such float chamber, and the other conduit lying wholly outside the float chamber.

1,577,179. INSULATED WIRE AND THE METHOD OR ART OF MAKING SAME. WILLIAM E. COOK, St. George, N. Y., and MERRITT B. BRADT, Pennington, N. J., assignors to Peerless Insulated Wire and Cable Company, New York, N. Y., a Corporation of Delaware. Filed Nov. 20, 1917. Serial No. 203,055. 7 Claims. (Cl. 173—264.)

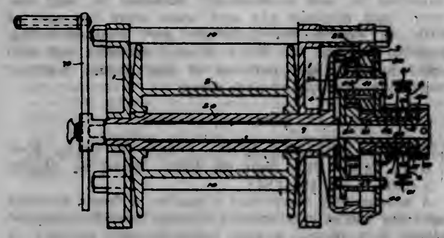


1. An insulated wire embodying therein a conductor wire, and insulation therefor consisting of a strip of lightly matted untwisted and unfelted fibrous material extending longitudinally of the wire, and a tubular braid covering and confining said fibrous material, the outer fibers of said material being enmeshed with, or entangled in, the meshes of said braid, whereby said braid is embedded in, and mechanically anchored to, said material, said material and said braid being impregnated with an electro non-conductive and weatherproofing material bonding the fibers of said material and said braid together, and portions of said fibrous material overlaying portions of said braid.

1,577,180. WRINGER MOP. FREDERICK CRAIB, Martinez, Calif. Filed Sept. 26, 1925. Serial No. 58,865. 1 Claim. (Cl. 15—116.)

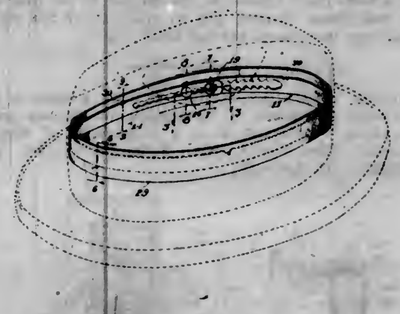
A wringer-mop comprising a handle; a frame mounted upon one end of said handle; a roller rotatably mounted within said frame; a gear mounted upon one end of said roller; a crank rotatably mounted within said frame and at an angle to said roller to prevent interference of said crank with a mopping process of said mop; a pinion mounted upon one end of said crank and engaging the gear upon the roller whereby said roller may be rotated when said crank is rotated; a second

roller rotatably, detachably and slidably mounted within said frame and adjacent and parallel to the first mentioned roller; latches slidably mounted upon the sides of the frame and detachably engaging the ends of the second mentioned roller; resilient means for moving the slidable latches to normally retain the second mentioned



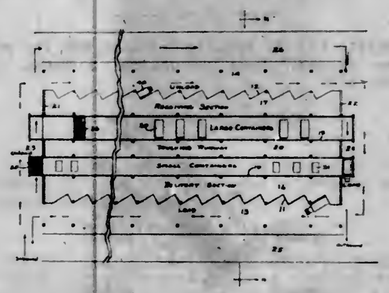
roller in engaging relation with the first mentioned roller; and a mop cloth detachably mounted between the rollers and having the ends of said mop cloth turned back and secured to the body of said cloth to provide a double thickness at said ends to prevent passage of said ends through said rollers.

1,577,181. METHOD OF PRODUCING INTAGLIO PRINTING PLATES OR CYLINDERS. WILLIAM EDWARD CROWE, Chicago, Ill., assignor to The Prismatone Company, Inc., Chicago, Ill., a Corporation of New York. Filed Jan. 9, 1925. Serial No. 1,498. 6 Claims. (Cl. 101—211.)



1. An improved method of producing intaglio printing plates or cylinders which consists in first producing an impression upon a transparent impression receiving material from a relief process printing plate, then photographically reproducing the said impression from said transparent material on carbon tissue, then applying the carbon tissue upon the surface of the printing cylinder or plate, and then etching the surface of the cylinder or plate through said carbon tissue and producing uniform depth cavities therein.

1,577,182. MULTIPLE POWER GEARING. CHARLES L. CULVER, Olalla, Wash. Filed Mar. 9, 1925. Serial No. 14,106. 6 Claims. (Cl. 74—34.)

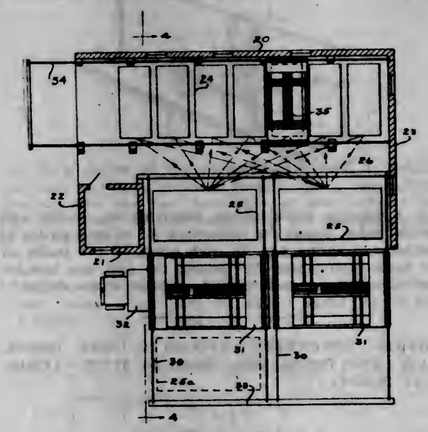


1. A power drive comprising two planetary gear trains having different speed ratios, a common planet carrier for both trains, one orbit gear being fixed and the other movable, a concentric rotative driving member and means for securing said driving member to either sun gear.

1,577,183. SHAPE-PRESERVING DEVICE FOR HATS. MARTIN W. DOWIARS, Chicago, Ill. Filed May 2, 1925. Serial No. 27,408. 9 Claims. (Cl. 2—185.)

1. A device of the character described, comprising an elastic annular band having overlapping end portions, means holding said end portions together to slide longitudinally upon each other, and means carried by one of said end portions arranged normally to interlock with the other overlapping end portion to prevent contraction but permit expansion of said band, said means being movable out of such locking position by lateral separation of overlapping portions of the band.

1,577,184. FREIGHT-TRANSFERRING SYSTEM. BENJAMIN F. FITCH, Greenwich, Conn. Filed Sept. 14, 1925. Serial No. 56,244. 21 Claims. (Cl. 214—38.)



1. The method of handling freight comprising delivering to a classification platform a loaded removable automobile body, also delivering to the platform package freight loading some of such package freight and freight received in the automobile body into another automobile body, delivering the latter loaded body intact from the platform, and delivering from the platform package freight which was obtained from the first mentioned loaded body.

1,577,185. FREIGHT-TRANSFERRING SYSTEM. BENJAMIN F. FITCH, Greenwich, Conn. Filed Sept. 30, 1925. Serial No. 59,450. 8 Claims. (Cl. 214—38.)

1. A system of handling freight by means of a plurality of sub-stations which are spaced from a point of origin and from each other, comprising bringing freight in removable automobile bodies from the point of origin

to the sub-stations, raising and transporting the bodies from automobiles at the sub-station, and depositing them, collocating the freight from such loaded bodies to empty

bodies, raising the latter bodies, transporting them and depositing them on other vehicles, and then sending the last mentioned vehicles over delivery routes.

1,577,186. PROCESS OF PRODUCING GELS FOR CATALYTIC AND ABSORBENT PURPOSES. WALTER A. PATRICK, Baltimore, Md. Filed Feb. 28, 1920. Serial No. 362,138. 4 Claims. (Cl. 23—234.)

1. In the process of preparing a hard porous gel impregnated with a catalytic agent, the step of mixing with stirring solutions of a readily hydrolisable salt of a heavy metal and a substance which will react with the acid resulting from the hydrolysis of the salt to produce a colloidal solution which will set to a hydrogel without removal of the excess acid or salt.

1,577,187. METHOD OF PREPARING CATALYTIC AGENTS. WALTER A. PATRICK, Mount Washington, Md., assignor to The Silica Gel Corporation, Baltimore, Md., a Corporation of Maryland. Filed Nov. 18, 1922. Serial No. 601,868. 16 Claims. (Cl. 23—233.)

1. The process of preparing a catalytic agent, comprising treating a hydrogel of the character described capable of being converted into material having pores of such size that the water content at 30° C. when in equilibrium with water vapor at substantially 22 mm. of mercury will be at least 21% of the weight thereof, with a dilute solution of alkali and thereafter with a solution of a salt of a metal capable of forming a catalyst by reaction with the alkali.

1,577,188. METHOD OF PREPARING CATALYTIC AGENTS. WALTER A. PATRICK, Mount Washington, Md., assignor to The Silica Gel Corporation, Baltimore, Md., a Corporation of Maryland. Filed Nov. 18, 1922. Serial No. 601,867. 6 Claims. (Cl. 23—233.)

1. The process of preparing a catalytic agent, consisting in treating a porous gel having pores of such a size that the water content at 30° C. when in equilibrium with water vapor at a partial pressure of substantially 22 mm. of mercury will be at least 21% of the weight of the gel, the pores of which at the time of treatment are substantially filled with water, with a colloidal solution of catalytic material, and removing the water.

6. A catalytic agent comprising porous silica gel having pores of such a size that the water content at 30° C. when in equilibrium with water vapor at a partial pressure of substantially 22 mm. of mercury will be at least 21% of the weight of the gel, carrying a catalytic material on the surface only of the pores at and immediately adjacent the external surface of gel particles.

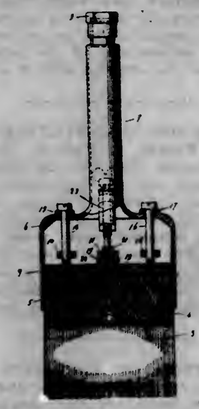
1,577,189. GELS FOR CATALYTIC AND ADSORBENT PURPOSES. WALTER A. PATRICK, Baltimore, Md. Original application filed Feb. 28, 1920, Serial No. 362,138. Divided and this application filed May 24, 1924. Serial No. 715,727. 15 Claims. (Cl. 23—233.)

1. A hard stable adsorbent and catalytic non-precipitated gel having ultramicroscopic pores comprising a composition including silica and a metallic oxide.

11. A hard glassy material having a porous structure substantially the same as silica gel and consisting of a colloidal oxide and at least one metal bearing material.

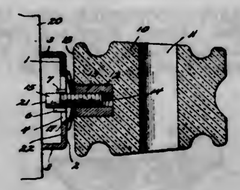
1,577,190. METHOD OF PREPARING GELS FOR CATALYTIC AND ADSORBENT PURPOSES. WALTER A. PATRICK, Baltimore, Md. Original application filed Feb. 28, 1920, Serial No. 362,138. Divided and this application filed May 24, 1924. Serial No. 715,731. 6 Claims. (Cl. 23—233.)

1. The process of preparing a hard porous gel consisting in mixing in solution, a salt of a metal, an acid, and a substance which will react with the acid to produce a colloidal solution, said reagents being of such concentrations and proportions that neither gelatinisation nor precipitation occurs immediately, but after some time the entire body of liquid hardens into a hydrogel, and treating said hydrogel to convert it into the hard porous gel.



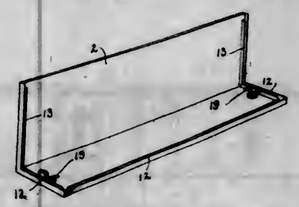
2. The process of preparing a hard porous gel consisting in mixing solutions of a salt of a metal, an acid, and a substance which will react with the acid to produce a colloidal solution, said salt, acid, and substance solutions being in proportions to give a concentration of acid after the reaction is complete of about 0.3 to 0.9 gram ions of hydrogen per litre, whereupon, neither gelatinisation nor precipitation occurs at once, but after some time the entire body of liquid hardens into a hydrogel, washing the hydrogel thus formed and thereafter removing moisture therefrom.

1,577,191. DRAFT CONNECTION FOR TEAM HARNESS HAMES. ALBERT RAHN and JOSEPH WEBER, Neustadt, Ontario, Canada. Filed Mar. 3, 1925. Serial No. 12,916. 2 Claims. (Cl. 54—30.)



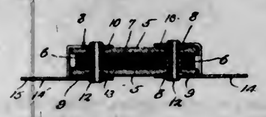
1. The combination with a hame member, of a draft connector comprising a strap adapted to be bent around the hame member to which a draft link is adapted to be connected, means having inwardly inclined faces adapted to engage the opposite outer faces of the hame as the strap is drawn therearound and the sides of the straps towards each other, and means for drawing the sides of the straps together and the inclined faces into engagement with the opposite outer edges of the hame.

1,577,192. FOUNTAIN BRUSH. ALFIO RAPISARDI, Boston, Mass. Filed Feb. 6, 1924. Serial No. 690,979. 3 Claims. (Cl. 15—138.)



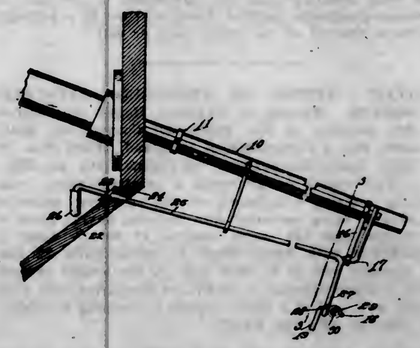
1. A fountain brush comprising, in combination, a hollow metal head, a handle connected with said head, a brush back shaped to fit in the end of said head, a body of bristles projecting from said back, screws extending through said head and into said back and serving to draw said brush firmly into engagement with said head and to secure it in its operative relationship to the head, said back having a passage therethrough for the discharge of liquid from said head into said body of bristles, a valve controlling the flow of liquid through said passage, a brace rigid with said head and serving to guide said valve, and means for adjusting said valve.

1,577,193. FASTENING DEVICE FOR INSULATORS. LYMAN C. REED, New Orleans, La., assignor to Joslyn Manufacturing & Supply Company, Chicago, Ill., a Corporation of Illinois. Filed May 1, 1924. Serial No. 710,401. 4 Claims. (Cl. 287—20.)



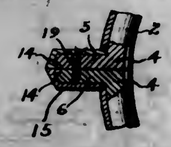
1. In a rack for insulators the combination of a support provided with a surface; a base member having an aperture and secured to said surface; a pair of lugs of different lengths associated with said aperture and projecting from said base member toward said suface; a key member adapted to pass through said aperture having a thickness less than the distance between the extreme end of the shorter of said lugs and said surface and greater than the distance between the extreme end of the longer one of said pair of lugs and said surface; and an insulator adjustably connected with said key member.

1,577,194. CAMPING TRUNK. JULES E. REBOURS, Grand Rapids, Mich. Filed Dec. 29, 1924. Serial No. 758,754. 7 Claims. (Cl. 190—12.)



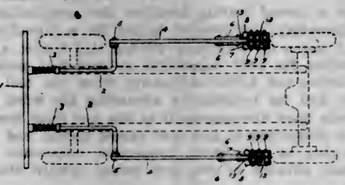
1. A camping trunk having, separable top, bottom and vertical sides, means for connecting all of said separable members, excepting one, to each other at the inside of the device and means for locking the said one member onto the other members from the outside of the device.

1,577,195. CONDENSER. RICHARD C. ROSE, Osceola, Ark. Filed Oct. 10, 1925. Serial No. 61,732. 1 Claim. (Cl. 250—41.)



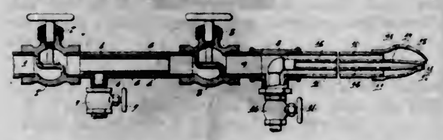
A condenser including spaced glass insulating members, said insulating members having openings disposed adjacent to the ends thereof, said openings being countersunk, tin foil plates arranged between the glass insulating members, insulating material disposed between the tin foil plates, and said clips being in circuit with the tin foil plates.

1,577,196. ACCELERATOR FOR GAS ENGINES. WILLIAM W. SCHNELLE, Chillicothe, Mo. Filed July 28, 1924. Serial No. 728,668. 1 Claim. (Cl. 74—39.)



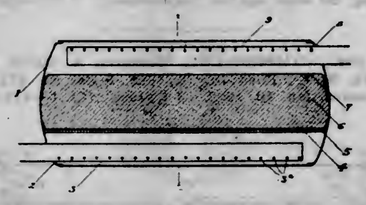
The combination with the gas rod having the lateral arm, and the throttle valve link of an automobile engine, of a bracket loosely carried by the gas rod, a rock rod having a foot-piece on one end and having its other end rotatable in said lateral arm, said rock rod having an angularly extending arm operatively connected with said throttle valve link, and an extension on the rock rod extending in a direction diametrically opposite to the angular arm and arranged to rest against the said gas rod whereby to limit rocking movement of the rock rod in one direction.

1,577,197. ZYL-COVERED SEPARABLE END PIECE. ELMER L. SCHUMACHER, Southbridge, Mass., assignor to American Optical Company, Southbridge, Mass., a Voluntary Association of Massachusetts. Filed Aug. 22, 1924. Serial No. 733,526. 4 Claims. (Cl. 88—47.)



4. In a device of the character described, a metallic end piece having a recessed portion and a non-metallic covering over one face and edges of said metallic end piece extending into and retained in the recessed portion of the end piece.

1,577,198. AUTOMATIC STOP. JOSEPH SIEGEL, Pittsfield, Mass. Filed July 30, 1925. Serial No. 47,151. 2 Claims. (Cl. 180—83.)

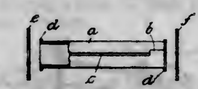


1. In a device of the class described the combination with a bumper bar, an extension bumper bar, a side rod pivotally connected to said extension bumper bar, a roller receptacle pivotally connected to said side rod, a plurality of rollers within said roller receptacle, a clamping bar, connecting rods connected to said clamping bar and the side rod, a spring connected to the clamping bar and the side rod, said spring to facilitate return of the roller receptacle to a raised or inoperative position.

1,577,199. OIL BURNER. GEORGE W. START, Portland, Oreg., assignor of one-half to George Kinnear, Portland, Oreg. Filed May 23, 1925. Serial No. 32,351. 2 Claims. (Cl. 158—75.)

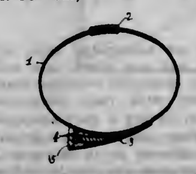
2. In crude oil burners, an oil line, an oil-throttle valve to which the same leads, a second throttle valve, a jacket pipe connecting said throttle valves, an oil feed pipe located within said jacket pipe and secured at one end within the same to form an annular chamber and to receive the oil from said oil throttle valve and deliver it into said jacket pipe at a plate remote from said oil throttle valve, a steam inlet duct with a primary steam valve for delivering steam into said jacket pipe at a place adjacent said oil throttle valve, whereby the oil and steam will mix on entering said second throttle valve, a burner nozzle, a pipe connecting said second throttle valve with said nozzle to deliver the mixture thereto, an auxiliary steam duct controlled by a separate steam throttle valve and passing through said pipe which delivers the mixture to the nozzle, said nozzle being connected with said auxiliary steam duct whereby to deliver the steam against the mixture as it issues from the nozzle to effect further atomizing of the oil and to deliver same to the place for combustion.

1,577,200. ABSORPTION APPARATUS. CLYDE L. VORRES, Charleston, W. Va., VERNON C. CANTER, Tulsa, Okla., and ROBERT W. SKOOG, Charleston, W. Va., assignors to Gasoline Recovery Corporation, a Corporation of Delaware. Filed Aug. 3, 1925. Serial No. 47,856. 7 Claims. (Cl. 183—49.)



1. An apparatus consisting of a horizontally disposed drum having an apertured disseminator arranged in the lower portion of the same near the bottom and extending along the lower part of the drum for substantially the entire length of the latter, a mechanical support in the drum rigidly secured to the latter slightly above the said disseminator, substantially stationary solid absorbent material carried by the support, a second mechanical support between the absorbent material and first mentioned support and having openings sufficiently small to prevent particles of the solid absorbent material from passing therethrough, and a second apertured disseminator extending along the upper portion of the drum above the solid absorbent.

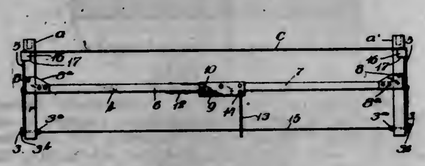
1,577,201. PROCESS FOR THE DISTILLATION OF PERSULPHURIC ACID AND OF SOLUTIONS OF PERSULPHURIC-ACID SALTS. GUSTAV BAUM, Weissentein, Austria. Filed May 5, 1924. Serial No. 711,242. 6 Claims. (Cl. 204—1.)



1. In the process for the distillation of a persulphuric acid body the step which comprises directly heating the liquid by means of alternating current, the alternations of which are lower than 500 per second.

1,577,202. SPOOL FOR PHOTOGRAPHIC-CAMERA FILMS AND SIMILAR PURPOSES. THOMAS GEORGE BARENDEN, Watford, England. Filed Mar. 26, 1925. Serial No. 18,612. 2 Claims. (Cl. 242—71.)

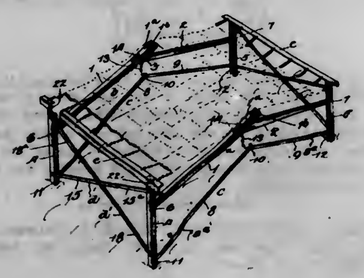
1. A metal spool such as used for photographic films comprising the combination of two end discs, a tubular body part having its ends formed with narrow flanges which abut against the end discs and are welded thereto, an inner perforated stop piece welded to one of the discs and arranged to be engaged by a long winding key where such are employed.



1,577,203. ARCH SUPPORT. ALBERT L. CRAMER, Denver, Colo. Filed Dec. 12, 1923. Serial No. 680,274. 1 Claim. (Cl. 36—71.)

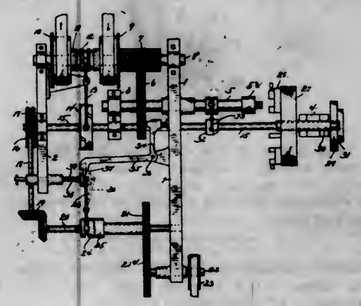
An arch supporter comprising an elastic web, a non-elastic member secured to and connecting the ends thereof, a semicircular pocket of similar elastic web secured to

the supporter opposite the connecting member, and cushioning fillers of substantially semicircular form adapted to be inserted in said pocket, the straight side of the fillers being thicker than the curved edge, said pocket having its free edge turned inwardly for forming an internal shoulder to overhang the adjacent filler to assist in retaining the same against displacement.



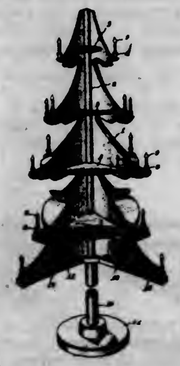
1,577,204. CAMPING COT. MANSELL A. DAVIS, New York, N. Y. Filed July 3, 1922, Serial No. 572,638. Renewed Jan. 19, 1926. 3 Claims. (Cl. 5—112.)

1. In a folding cot, two pairs of end posts, toggle connections between the posts of each pair, side bars pivotally connected at their ends to the central portions of the end posts, each side bar having an upwardly breaking hinge joint at its center, and said end posts adapted to fold against the upper sides of the side bars, flexible ties connecting the lower ends of the posts at each side of the cot, means connecting the central portions of said ties with the central portions of the side rails, and a top detachably connected to the upper ends of the end posts above their points of connection with the side bars.



2. In a folding cot, two pairs of end posts, the posts of each pair having near their upper ends and on their outer sides alined angular notches, side bars pivotally connected to the central portions of the posts, cables connecting the lower parts of the posts, bars of angular cross-section fitting removably in said notches, and a fabric secured to said latter bars, said fabric having slots through which the end posts extend.

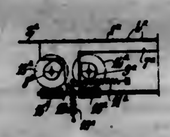
1,577,205. CAMPING COT. MANSELL A. DAVIS, Los Angeles, Calif. Filed Feb. 5, 1924. Serial No. 690,691. 8 Claims. (Cl. 5—112.)



1. A folding cot comprising side rails composed of channeled bars, and end posts, each side rail composed of two pivotally connected sections adapted to fold one within the other with their channeled sides facing, the outer section having a part adapted to overlap the inner section when the sections are unfolded, one end of each section pivoted to an end post intermediate its ends, and the end posts adapted to fold parallel with the side rail sections and against the backs thereof, and sectional tie-rods pivotally connected to the lower parts of the end posts and adapted to fold within the side rails.

1,577,206. AUTOMATIC THREAD-CUTTING-MACHINE ATTACHMENT. GEORGE S. DEMPSTER, Detroit, Mich., assignor to Roberts Brass Manufacturing Company, Detroit, Mich., a Corporation of Michigan. Filed June 6, 1923. Serial No. 643,666. 11 Claims. (Cl. 10—129.)

1. In a thread cutting machine, the combination with a reciprocatory and rotative holder for a thread cutting tool, of means for rotatively driving said holder, a rotatable holder for work engageable by said tool, means for maintaining the holder stationary when the tool is advanced, and for periodically advancing the work holder rotatively upon disengagement of the tool from the work, a drive connection to said last named means, and means for cutting off said drive connection responsive to an abnormal advance of the tool holder toward the work holder.

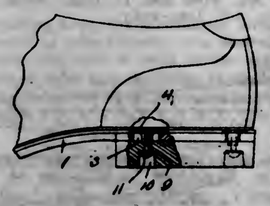


1,577,207. ARTIFICIAL CHRISTMAS TREE. WILLEM DIEPERINK-LANGERHIS, Warren, Pa. Filed Jan. 20, 1924. Serial No. 689,292. Renewed Sept. 15, 1925. 5 Claims. (Cl. 41—15.)

1. An artificial Christmas tree, comprising ornamental wings, a center post, having grooves receiving the inner edges of the wings, and a shelf located on the post and having removable interlocking engagement with all of the wings.

1,577,208. CONTROLLER FOR LUMINOUS ELECTRIC SIGNS. FREDERICK HARRY EDLES, Paris, France. Filed Oct. 25, 1923. Serial No. 670,739. 5 Claims. (Cl. 200—46.)

1. A form operated circuit switch comprising a plurality of circuit breakers, a perforate band of insulating material, the perforations of which are adapted to act upon and allow said circuit breakers to close in predetermined groups and sequences, and a driving member for said band comprising means for simultaneously engaging marginal portions of said band along the portion of its length which acts against said circuit breakers, means for moving said engaging means into operative position, means for advancing said engaging means while



engaged with said band, said engaging means being movable to disengaged position, and means for retracting said engaging means while disengaged.

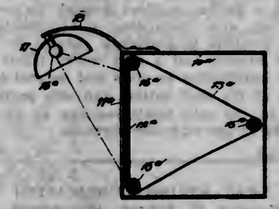
1,577,209. LIQUID GAUGE. MILLARD F. ELLIOTT, Palmyra, N. J. Filed Aug. 27, 1924. Serial No. 734,881. 2 Claims. (Cl. 73—54.)

1. An article of manufacture adapted for insertion in a gauge glass tube and comprising an elongated holder curved in cross section and provided with a supporting flange for resting upon the upper end of the tube and supporting the said article in position in the tube, and a strip of transparent material mounted in the holder, that face of the strip adjacent the holder being provided with a plurality of prisms extending longitudinally of the strip.

1,577,210. SHOE-HEEL-ATTACHING MEANS. GEORGE Y. EMERSON, Rochester, N. H. Filed Sept. 19, 1925. Serial No. 57,388. 3 Claims. (Cl. 36—42.)

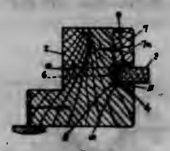
1. In a shoe including an inner sole, an outer sole having a heel portion provided with oblong slots, a plurality of nuts having laterally extending wings at one end adapted to pass through the slots so that the nuts may be turned to engage the wings between the inner and outer soles, a heel and screws passing through the heel and engaged with the nuts.

1,577,211. BALL RETAINER. PETRUS ERICKSON, Chicago, Ill., assignor, by mesne assignments, to Marlin-Rockwell Corporation, Jamestown, N. Y., a Corporation of New York. Original application filed Dec. 14, 1922, Serial No. 606,851. Divided and this application filed Dec. 6, 1923. Serial No. 678,883. 6 Claims. (Cl. 308—201.)



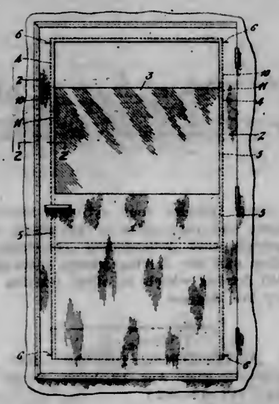
1. A ball retainer having a body, a tubular portion integral with said body and extending through an opening in the body and being integrally connected thereto by a second tubular portion extending outside the first mentioned tubular portion.

1,577,212. EIGHT-IMPULSE FOUR-CYLINDER LOCOMOTIVE. MATTHEW R. FEELEY, Scranton, Pa., assignor to B-S Manufacturing Products Corporation, Jersey City, N. J., a Corporation of New Jersey. Filed July 13, 1925. Serial No. 43,344. 6 Claims. (Cl. 105—37.)



1. An eight impulse four cylinder locomotive comprising front and rear pairs of cylinders, intercoupled driving wheels, and independent connections between the cylinders and the driving wheels disposed upon the intercoupled driving wheels in offset relation at substantially forty-five degrees.

1,577,213. ADVERTISING DEVICE. RAY S. FENNER, Newark, N. J. Filed Apr. 13, 1925. Serial No. 22,807. 4 Claims. (Cl. 40—82.)



1. An advertising device which comprises a screen having a reflecting surface, a movable perforated film adapted to move over said screen, and means for throwing light on the side of the screen over which the film moves, said light passing through said perforations whereby the perforated matter is exhibited.

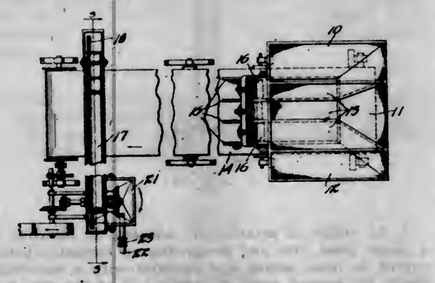
1,577,214. WINDOW MOUNTING. WILLIAM C. FISCHER, Cleveland, Ohio, assignor to The Baker-Raulang Company, Cleveland, Ohio, a Corporation of Ohio. Filed Apr. 30, 1923. Serial No. 635,439. 7 Claims. (Cl. 296—44.5.)

1. As a new article of manufacture, a resilient, molded rubber, channel shaped guide member for sliding windows, comprising a distortable bottom portion and substantially parallel side portions movable parallelly toward and away from each other, the said member having normally open depressions molded therein between the said bottom and side portions and at the side edges of the said bottom portion, the depressions being adapted to be closed as the side portions are moved parallelly toward each other, and anti-friction material lining the inner surfaces of the said bottom and side portions.

1,577,215. WINDOW MOUNTING. WILLIAM C. FISCHER, Cleveland, Ohio, assignor to The Baker-Raulang Company, Cleveland, Ohio, a Corporation of Ohio. Filed Nov. 30, 1923. Serial No. 677,665. 4 Claims. (Cl. 296—44.5.)

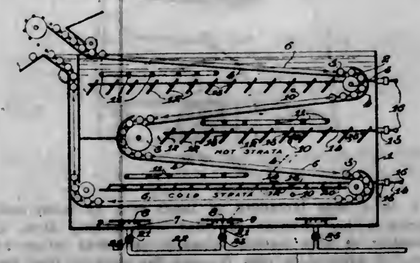
1. A guide channel member for a sliding glass window consisting of a flexible resilient member formed with a bottom portion and upstanding self-supporting longitudinal side portions to provide a channel to receive a sliding glass window and a thin woven fabric covering substantially antifriction to glass and secured to the inner surfaces of the said bottom and side portions with the threads of the said fabric running at an angle to the free edges of the said side portions.

1,577,216. LEAF-SPRING-LUBRICATING STRUCTURE. WILLIAM H. FISHER, Philadelphia, Pa., assignor of one-half to Herman Jonas, Philadelphia, Pa. Filed Feb. 16, 1924. Serial No. 693,349. 2 Claims. (Cl. 267—50.)



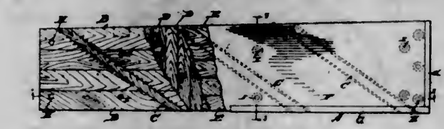
1. A laminated leaf spring comprising a plurality of spring leaves disposed in superposed relation, said spring leaves having longitudinally extending grooves cut in their undersurfaces and being provided with transversely extending ducts establishing communication between the respective grooves, said ducts positioned intermediate the ends of the grooves and lugs struck from said springs upwardly into the grooves and forming dams in said grooves for retaining a limited quantity of lubricant in portions of the grooves.

1,577,217. ART OF EXTRACTING METALLIC VALUES FROM ORES, CONCENTRATES, AND THE LIKE. HERMAN FLECK, Golden, and WILLIAM G. HALDANE, Denver, Colo. Filed Aug. 8, 1922. Serial No. 580,541. 11 Claims. (Cl. 23—19.)



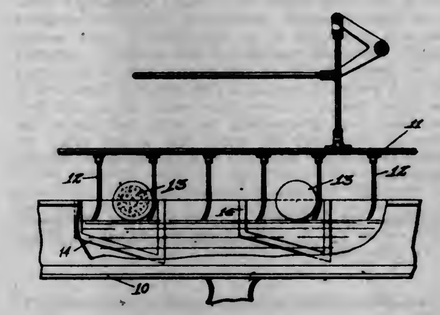
1. The improvement in the art of extracting metallic values from their containing concentrates or slimes, which consists in mixing with the mass to be treated a reagent capable of converting the contained silicon into a volatilizable compound and allowing said compound to evaporate from the mass unaccompanied by any of the sought for values present, substantially as described.

1,577,218. METHOD AND MEANS OF MIXING CONCRETE. MATTHEWS FLETCHER, Indianapolis, Ind. Filed July 14, 1925. Serial No. 43,631. 18 Claims. (Cl. 83—73.)



1. A method of mixing concrete which consists in simultaneously and continuously moving sundry ingredients in small parallel streams, disposed laterally with relation to each other, and moving forward portions of the mass transversely of the path of movement of the streams to mix and discharge the same, substantially as set forth.

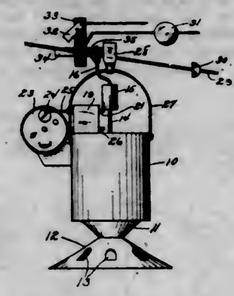
1,577,219. APPARATUS FOR COOKING AND COOLING IN SEALED RECEPTACLES. NELSON H. FOOKS, Preston, Md. Filed Mar. 11, 1925. Serial No. 14,804. 8 Claims. (Cl. 126—272.)



1. Apparatus for cooking and cooling in sealed receptacles comprising a liquid container, means for supplying heat positioned within the container and intermediate the top and bottom liquid levels, and a baffle located below the level of the heat-supplying means adapted to prevent currents in the liquid below said heating means.

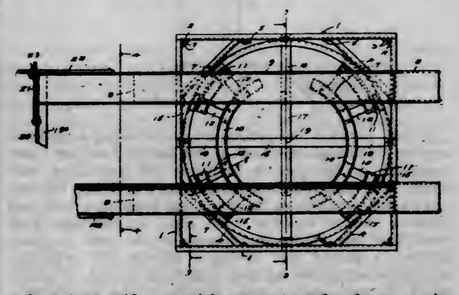
1,577,220. RUNNING BOARD FOR MOTOR VEHICLES. ISADOR LEO FRIEDLAENDER, Detroit, Mich. Filed Sept. 14, 1925. Serial No. 56,274. 2 Claims. (Cl. 280—163.)

1. In a device of the character described, a running board, comprising a plurality of longitudinally disposed jointed strips, a plurality of overlying transversely disposed jointed strips glued to said first named strips, a further plurality of overlying longitudinally disposed jointed strips glued to the adjacent strips, and a plurality of diagonally disposed concealed cleats lodged in grooves between the layers of strips, forming in all a single unit running board.



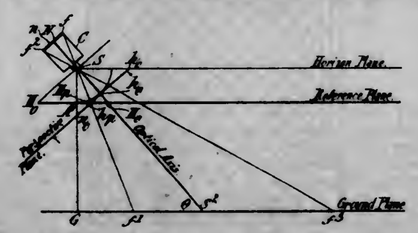
1,577,221. IMMERSING DEVICE FOR WASHING BOWLS. FRANK L. FURBUSH, Westford, Mass., assignor to C. G. Sargent's Sons Corporation, Graniteville, Mass., a Corporation of Massachusetts. Filed Sept. 15, 1924. Serial No. 737,727. 4 Claims. (Cl. 141—5.)

1. In a washing bowl, the combination with the bowl and a reciprocating rake therefor, of a float in the bowl located between two sets of teeth of the rake in position to be moved down into the liquor in the bowl by the descent of the rake and to be moved along the bowl by its reciprocation.



1,577,222. POULTRY FEEDER. FRANK H. GEBBIE and WILLIAM C. HENNINGSEN, Watertown, Wis. Filed June 9, 1924. Serial No. 718,903. 1 Claim. (Cl. 161—10.)

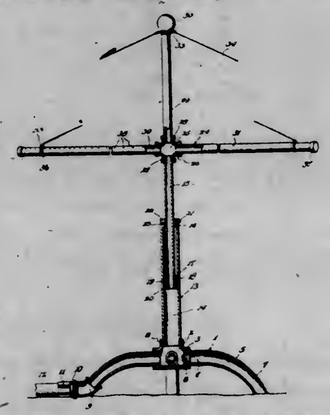
An automatically operable poultry feeder comprising a receptacle having an opening in the bottom thereof, a combined movable bottom and spreader normally closing said opening, a rod rising from the movable bottom through the receptacle, a member carried by said rod, time controlled mechanism including a normally projected trigger arranged to engage said member and support the bottom in its closed position, and adapted to be retracted at a predetermined time to allow the bottom to fall to an open position, and adjustable means



adapted to be arranged in the path of movement of said member to limit the opening movement of said bottom and thus regulate the flow of feed from the receptacle.

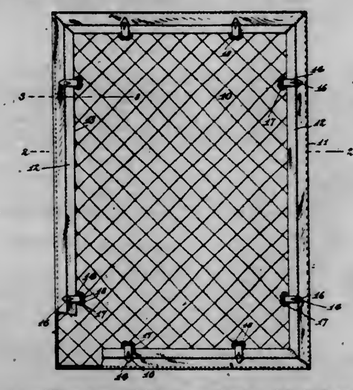
1,577,223. MOTOR-TRUCK TURNTABLE. EARL L. GLAZE, Chilesburg, Ky. Filed May 14, 1925. Serial No. 30,328. 2 Claims. (Cl. 104—44.)

1. A turn table comprising a rectangular frame, a circular track comprising semi-circular segments secured together and secured within the rectangular frame, said circular track being of channel construction and having the flanges extending inwardly of the circle, supporting members for the object to be turned comprising flanged rails, arcuate spacing members connecting said rails, and wheels carried by said spacing member and traversing the flanges on the circular track.



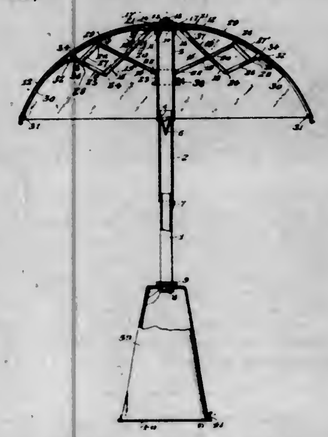
1,577,224. PHOTOGRAPHIC SURVEYING AND APPARATUS FOR USE IN CONNECTION THEREWITH. JOHN WILLIAM GORDON, London, England. Filed Nov. 3, 1922. Serial No. 598,898. 15 Claims. (Cl. 33—1.)

5. The process of land surveying by photography, which comprises forming a combined photographic and cartographic field by rectangular axes and drawing par-



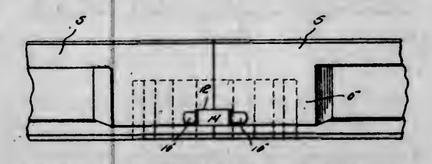
allel to one of the axes a line intersecting the other axis at a distance (sec. δ—tan θ F where θ is the angle of dip and F is the focal length of the camera), placing a photograph in said field with the point of intersection in coincidence with the optical centre of the photograph and the intersecting line in coincidence with the prime parallel through said optical centre, and plotting conjugate points of the photograph so placed, on the cartographic field.

1,577,225. ROTARY SPRINKLER. HARRY Z. GRANGER, Comstock, Nebr. Filed Jan. 21, 1925. Serial No. 3,842. 1 Claim. (Cl. 299—69.)



A lawn sprinkler comprising a base including a coupling member having an upstanding and lateral branches, legs connected to the lateral branches and extending outwardly and downwardly, one of the legs being tubular and having a fitting at its lower end forming a foot and coupling means for the hose pipe, an upright pipe coupled to the upstanding branch of the said coupling member, a second pipe having a slidable and rotatable connection with the upright pipe, and having a piston fit at its lower end therein, means on the second pipe to hold it at the required vertical adjusted position, and a sprinkler head carried by the second pipe.

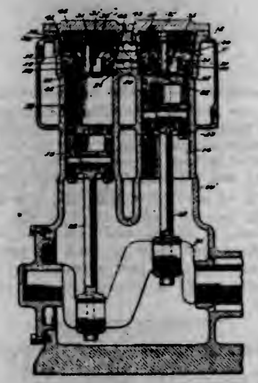
1,577,226. QUILT COVER. REBECCA GREENBERG, New York, N. Y. Filed Jan. 19, 1925. Serial No. 3,410. 3 Claims. (Cl. 5—335.)



1. A quilt cover, which comprises a fabric bag having one side partially open, a plurality of straps disposed along the edges of the open side, fastening means on the straps whereby they can be held detachably in the form of a loop, and means on the quilt to engage with said loops to hold the quilt and the cover together.

1,577,227. RIB STRUCTURE FOR FOLDING UMBRELLAS. LOUIS GREENWALD, South Heights, Pa. Filed Aug. 27, 1925. Serial No. 52,784. 3 Claims. (Cl. 135—25.)

1. A rib structure for folding umbrellas comprising an actuating collar adapted to be slidably mounted on the umbrella staff, upper lever arms adapted to be pivotally connected at their upper ends to the umbrella staff, lower lever arms pivotally connected at their lower ends to the collar, means for pivotally connecting a lower to an upper lever arm intermediate their ends, spreader ribs each consisting of an upper and a lower section slidably connected together, a link pivotally connected to the lower end of an upper arm and to the upper end of a lower rib section, a link pivotally connected to the upper end of a lower lever arm and to said first mentioned link intermediate its ends, and means for pivotally connecting the upper end of an upper rib section to an upper lever arm in proximity to its pivoted upper end.

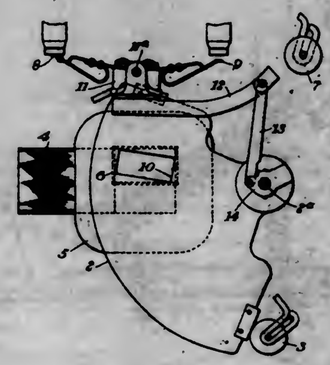


1,577,228. RAIL JOINT. JOHNN GREINER, Baltimore, Md. Filed Dec. 1, 1925. Serial No. 72,462. 1 Claim. (Cl. 238—179.)

In a joint for the meeting ends of rail sections wherein said rail sections are formed at their opposite ends with thickened web portions flush with the tread of the sections, said thickened portions being provided with spaced vertical slots terminating at one end within the thickened portion and at their opposite ends through the rail bases, spacing ribs between the slots, the outermost slots of the sections being provided with cross slots at the base of the rail sections, an interlocking bar provided at its opposite ends with locking plates interconnected through the medium of webs, said plates adapted to engage upwardly within the innermost slots of the rail section, said interlocking member being formed intermediate its ends with an additional locking plate for engagement within the outer slots of the rail

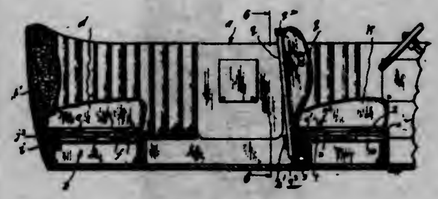
sections and being provided with a cross slot complementary to the cross slots of the outer web slots of said rail sections, and a locking member adapted to be disposed through the slots of the intermediate locking plate of said member and the cross slots of the rail sections, for maintaining the locking member in association with the slots in the rail sections, said last mentioned member being headed at one end and provided at its opposite end with fingers that are adapted to be bent at right angles with respect to the member alongside of the webs of the rails for preventing accidental disengagement of the member from said slot.

1,577,229. COMBINATION VALVE FOR REFRIGERATION AND AIR COMPRESSORS. VADEN J. HADDAWAY, Wilmington, Del. Filed May 13, 1925. Serial No. 30,070. 7 Claims. (Cl. 230—34.)



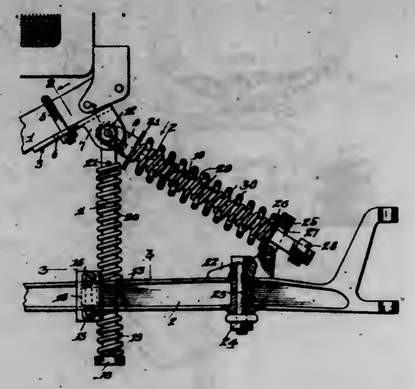
1. The combination of a valve casing having axially spaced shoulders separated by cylindrical walls of progressively increasing diameter, a partition supported by the inner shoulder, a ring on the next shoulder resting on the partition, and a cover bearing on the outermost shoulder, substantially as set forth.

1,577,230. INSULATOR AND FASTENER FOR AERIALS. EUGENE A. HIRSCHY, Brooklyn, N. Y. Filed Feb. 10, 1925. Serial No. 3,256. 4 Claims. (Cl. 173—318.)



4. A fastener for electric wires, said fastener comprising a body having means to secure it in position, and a hook-like element adapted to hold a wire, said element being returned to present a portion lying adjacent a face of the body, the bend of said hook-like element at the interior being spaced from the adjacent end of the body to accommodate a wire between said adjacent end of the body and said bend at the interior.

1,577,231. ELECTRICAL RELAY. SEBASTIAN C. HOFMANN, Champaign, Ill. Filed Nov. 21, 1924. Serial No. 751,230. 6 Claims. (Cl. 200—91.)



2. A relay comprising a winding which is at times supplied with alternating current, a vane inductively operated by alternating current in said winding, a front contact and a back contact controlled by said vane and closed respectively when said winding is energized and de-energized, the front contact being arranged to open before the back contact closes when the winding becomes de-energized and vice-versa, said vane being provided with a slot to prevent the vane occupying a position wherein both contacts are open when said winding is under-energized.

1,577,232. CONVERTIBLE SEAT FOR AUTOMOBILES. AUGUST HOLLY, Portland, Oreg. Filed June 9, 1924. Serial No. 718,881. 2 Claims. (Cl. 155—7.)
